The first Volume of the COMPANION TO THE NEWSPAPER has been closed earlier than was originally arranged. The *Annual Retrospect and Chronicle of Events* which are now published, naturally determined the completion of the present Volume; and the arrangement allows a change in the plan of the Work, the expediency of which has been established by a sufficient experience. It is, for the future, intended *to discontinue the publication of Supplements*, which have been found inconvenient; and *to enlarge the size of the Monthly Publication*. The "Companion to the Newspaper" will, therefore, consist of 24 pages instead of 16; and the additional space thus gained will, for the most part, be devoted to a "JOURNAL OF FACTS," which will not only keep the most important *political events* more completely before the reader, and form a tolerably full record of the progress of *Statistics and Public Economy*, but be a Register also of such other circumstances as may appear to demand a place in a work calculated for future reference, as well as present information. The enlarged Number will be charged 4*d.* instead of 2*d.* so that the annual cost will be 4*s.* for 288 pages. This advance of price, beyond the advance arising out of the increase of size, is rendered necessary by these circumstances. The expense of conducting this work has been greater than originally estimated, and the sale, though large, reaching to 20,000, is not a remunerating sale at the original price. The nature of the subjects treated on, interesting and important as they are, preclude the expectation that the work would attain the extensive circulation of others of a more miscellaneous nature [illegible] same Publisher. To have lessened the literary expenses, would have been to produce a Journal of inferior quality. The small advance of price, founded upon the experiment which has been made, is the just and natural course; any one which [illegible] not be objected to by those who perceive that every literary undertaking must stand or fall in proportion as the demand makes a return for the capital and labour employed in its production. If the demand had been doubled, the price would have remained the same. The present demand, with the increased price, will enable the work to be continued without any sacrifice of the character which it has attained, and with new and strenuous attempts at higher excellence.

December 31*st*, 1833.

ERRATA.

P. 43, *for* Semarang, *read* Singapore.

P. 159. The duties on East and West Indian Sugar [illegible]ed, by mistake, at 37*s.* and 27*s.*, instead of 33*s.*

professional services for which he was, in 1814, raised to the peerage, with a pension of 2000*l.* per annum. In 1816, he concluded a treaty with the Algerines, being then the Admiral on the Mediterranean station; but the treaty being almost immediately after violated, the result was the celebrated bombardment of Algiers, in which the Admiral was slightly wounded, and his coat cut in pieces by grape and musket shot. For this action he was created a Viscount; the city of London presented him with a magnificent sword; and the Powers whose subjects (1200 Christians) he had liberated, severally sent him their orders of knighthood. After suffering long from severe illness, which produced a delirium, in which the idea of an action with the Dutch fleet predominated in his mind, he rallied, or, as he said, "I have lately been going to leeward; but now I think I am working to windward again:" but he soon relapsed, and died, surrounded by his family, at Teignmouth. The body was interred with the usual honours; the ensign, shot through in many places, which flew at the mast-head of the Royal Charlotte during the action at Algiers, being used as a pall.

7. A. Herman Waithman died in his seventieth year. He was born of humble parentage, at Wrexham in North Wales, and became an orphan at the early age of four years. After having been supported at school by an uncle, he came to London, and entered into the service of a linen-draper. When of age, he commenced business at the south end of Fleet-market, where his monument now stands. Some years after, he removed to the corner of Bridge-street, and, under the excitement produced by the French Revolution, became a politician, advocating, even at that early period, a reform in Parliament,—the accomplishment of which he just lived to see. After several previous attempts to enter Parliament, he succeeded, in 1818, in supplanting Sir W. Curtis in the representation of the City; and soon after made his maiden speech on the presentation of a petition for the revision of the criminal code. In 1820 Sir W. Curtis was again returned, and Mr. Waithman excluded; but in 1826, and every subsequent election, he prevailed without difficulty. He attained the Shrievalty in 1820, and in 1823 was chosen Lord Mayor.

15. Mr. Pease, the first Quaker Member, took his seat in the House of Commons.

20. A Russian squadron arrived in the Bosphorus, and anchored near Buyukderé.

22. The pregnancy of the Duchess of Berri having been discovered, she declared that she had been privately married in Italy. This statement was received by the Carlists as a forgery of the Government, and several duels were fought in consequence, chiefly between writers in newspapers of opposite principles.

23. The Reis Effendi expresses to the Russian Ambassador the acknowledgments of the Sultan for the ready assistance granted by the Emperor; but, at the same time, requests that the Russian fleet may be directed to leave the Bosphorus with the first fair wind, as the differences with Egypt were in the course of being satisfactorily adjusted through the mediation of France.

24. The Russian Ambassador, in reply to the Reis Effendi, declares that no foreign interference could be allowed in the friendly relations between Russia and the Porte.

[illegible]. General Andrew Jackson becomes a second time President of the United States.

[illegible] works of Oporto attacked by the Miguelites, who are repulsed with much loss.

[illegible] account of the disgust felt at the dismissal of M. Dubois and [illegible]uda from their situations, for having protested against the continuance of the pensions to the Chouans, a strong effort was made in the Chamber of Peers to unseat the French Ministry.

13. The Rev. Edward Irving [illegible]d, on a charge of heresy, before the Presbytery of Annan, and [illegible] sentence of deposition passed upon him.

18. Bergeron and Beriot, charged with being concerned in the attempt to shoot the King of the French in December, acquitted by the jury.

22. New York papers of this date announce the happy termination of the alarming differences between the General Government and South Carolina, in consequence of the passing of the new Tariff Bill, by which the present duties are to be gradually reduced till they reach 20 per cent. *ad valorem*.

26. A dreadful conflagration at Manilla, the capital of the Philippines, by which 10,000 Carriboo huts were destroyed, leaving 30,000 Indians houseless, with the loss of fifty lives, and laying three miles of country waste.

29. The Bill for suppressing local disturbances in Ireland passed in the House of Commons.

— One hundred and fifty vessels, having been kept off the port by contrary winds, arrived in one day at Liverpool.

During this month, in consequence of Lord Durham's resignation of the Privy Seal, on account of illness, Lord Goderich (now Earl of Ripon) becomes Lord Privy Seal; Mr Stanley, Secretary for the Colonies; Sir John Hobhouse, Secretary for Ireland; and Mr. Ellice, Secretary-at-War.

29. Died, in his 68th year, Samuel Drew, M.A., a well-known Metaphysical writer. He was the son of a common labourer at St. Austell, in Cornwall, and at the early age of six he was taken [illegible] school and sent to work at a mill where tinners refined their [illegible] and earned twopence a day. At the age of ten he was apprenticed to a shoemaker, and in this situation acquired a taste [illegible]erature through a small publication circulated in the west-[illegible]unties, called the 'Weekly Entertainer.' Harsh treatment [illegible]d him to leave his master at the age of seventeen; but in [illegible]r 1785 he returned to St. Austell to take charge of the shoe-[illegible] business of a person who was also a bookbinder; and a metaphysical bias was subsequently given to his mind by some books which were brought to his employer to be bound. A few years after he commenced business on his own account, and while thus engaged, he prepared and published his celebrated 'Essay on the Human Soul,' which first brought him into public notice, and which, notwithstanding the dryness of the subject, has gone through five editions in this country, four in America, and has been translated into French. His work on the 'Resurrection' was similarly produced; but in 1805 he relinquished trade for the pursuits of literature, and in 1820 published a work on the 'Being and Attributes of God,' which, with his former works, procured him the honour of M.A. from Aberdeen. In the beginning of 1819, Mr. Drew removed to Liverpool, and thence to London to edit the 'Imperial Magazine,' and to exercise a general superintendence over the works of the Caxton Press,—duties which he continued to discharge until the beginning of the month in which he died.

31. Died, at Copenhagen, Erasmus Rask, the learned philologist and grammarian. He was the author of an 'Icelandic Grammar and Lexicon,' an 'Anglo-Saxon Grammar,' editions of the 'Edda of Snorro and Sæmund,' 'Essays on the Northern Languages,' 'Treatises on the Phonics of India and the Literals of Europe,' and various contributions to chronological science.

April 3. A serious riot at Frankfort, in the course of which the people, headed by the students, took the guard-house, and liberated the persons confined for political offences. Several lives were lost, and many persons wounded, in the struggle between the students and the military.

6. The Lord-Lieutenant of Ireland places the county of Kilkenny, by proclamation, under the Act for the suppression of local disturbances in Ireland.

11. Died, in his 88th year, the Rev. Rowland Hill, the celebrated Minister of Surrey Chapel, Blackfriars-road. Mr. Hill was the sixth son of Sir Rowland Hill, and uncle to Lord Hill, the present Commander-in-Chief. He was brought up for the Church, in which he received deacon's orders; and although he afterwards separated from it, he was always tenacious of his clerical character as an episcopal minister, and wished rather to be considered as a Nonconformist than a Dissenter. His familiar anecdotical style of oratory was addressed to the common people, among whom he was an eminently popular preacher. As a writer he is chiefly known by the 'Village Dialogues,' a religious work characterized by the same qualities as his preaching, and which has been surpassed by few books in popularity and extent of circulation.

— Another proclamation issued by the Lord-Lieutenant, suppressing the Association of "Irish Volunteers."

15. The new Court House and Gaol at Tain, in the county of Ross, consumed by fire. Three persons, confined for debt, perished in the flames, but all the criminals were saved.

16. M. Lionne, the editor of the Republican paper 'The Tribune,' condemned by the Chamber of Deputies in France to the maximum punishment for libel of three years' imprisonment and a fine of 10,000 francs, for having described the Chamber as *prostituted*.

18. General Santa-Anna becomes President of Mexico.

19. Died, Admiral Lord Gambier, in his 76th year, at Iver. He was the grandson of a French Protestant whom the revocation of the Edict of Nantes drove from his country. He was born in the Bahamas, of which his father was Lieutenant-Governor, and entered the navy in very early life. In 1778 he was commander of the Thunder bomb, in which he was taken by the French fleet under the Count d'Etaing. He took a very active part in the famous battle of the 1st of June, 1794; and the same year was nominated Colonel of Marines, Rear Admiral, and a Lord of the Admiralty. The last situation he frequently afterwards filled at intervals; and while in office, among other services, he compiled a code of signals, which superseded those introduced by James II. when Duke of York. In 1807 Admiral Gambier was sent to demand possession of the Danish fleet, for the successful accomplishment of which service he was raised to the Peerage, and was offered a pension of 2000*l.*, which he declined. In 1809 he was appointed to the command of the Channel fleet, a detachment of which attacked and destroyed part of the French squadron in Aix Roads. A difference of opinion between him and Lord Cochrane, on this occasion, induced him to demand a trial before a court-martial, by which he was most honourably acquitted, and received, besides, the thanks of Parliament. Lord Gambier, in his latter years, was much occupied in the affairs of the various religious societies over which he presided, and to which he was a most liberal patron.

23. The fleet of Don Pedro, being in a state of mutiny for want of pay, and on account of the dismissal of Admiral Sartorius for demanding it, Sir J. M. Doyle and Captain Crosbie were despatched on board the 'Rainha,' the former to arrest Sartorius, and the latter to supersede him. But Sir John was himself arrested and detained, and Captain Crosbie threatened with a court-martial. The differences were afterwards adjusted by a partial compliance with the demands of the fleet and the continuance of Sartorius in the command.

25. The French Chambers prorogued by the King in person. The speech described the state and prospects of the country as very cheering, as well as the state of its foreign relations, and expressed a belief that the Belgic question and the affairs of the East would be speedily and amicably settled.

26. In the House of Commons a resolution for the reduction of the malt duty carried against Ministers by a majority of ten.

29. Don Carlos issues a declaration asserting his right to the

Spanish throne, in case the King dies without male issue, and declining, therefore, to take the required oath of allegiance to the young Princess of the Asturias.

29. On the motion for the repeal of the house and window taxes in the Commons, Lord Althorp moved a counter-resolution, declaring its inexpediency, as also that of the reduction of the duty on malt, asserting that it would become necessary to supply the deficiency in the revenue by an income tax, which was carried.

— Sir John Hobhouse resigns his office, and his seat for Westminster, in consequence of being unwilling to embarrass the ministry by voting for the repeal of the assessed taxes, to which he had pledged himself to his constituents.

— Died, aged 76, Dr. Babington, the father of the London physicians, and who formed the connecting link between the departed and living philosophers of the last fifty years.

May 6. Peace concluded between the Porte and the Pasha of Egypt. The latter and his son Ibrahim are confirmed in their former dignities and territories, with the addition of Syria and the district of Adana.

9. Forty-nine persons killed by an explosion in Springwell coal-mine, five miles from Newcastle.

10. Colonel De Lacy Evans elected Member for Westminster, after a stormy contest, by a majority of 166 over Sir John Hobhouse, who had represented the city for fifteen years.

— The Duchess of Berri, on being delivered of a female child, declares herself the wife of Count Hector Luchesi Palli. When sufficiently recovered she was liberated and sent to Palermo.

13. A public meeting held in Coldbath-fields, in order to take measures for calling together a National Convention, at which about 1000 persons attended with banners, &c.; in dispersing whom, by the police, much violence was committed on both sides, and one policeman, named Robert Culley, received a wound from a dagger, of which he died.

15. Died, Mr. Kean, the celebrated tragedian, in his 46th year. He was the son of a tailor; and, after struggling through great difficulties and distresses in the early part of his career, he made his *début* on the London boards in 1814 in the character of *Shylock*, his performance of which immediately established him in that rank as an actor which he ever after maintained. His great success supplied him with the means of vicious indulgence, which he had not fortitude to decline, and by which his faculties were impaired, his health ruined, and his property dissipated. He is said to have received since 1814, in England and America, 176,000*l.*, averaging 9000*l.* a-year.

16. Mr. O'Connell was entertained at dinner by the working classes of the metropolis, who on this occasion presented him a piece of plate worth 200*l.*

20. The coroner's inquest find a verdict of 'wilful murder' against all the parties concerned in a duel fought at Exeter on the 10th, between Sir John W. Jeffcott, Chief Judge of the Vice-Admiralty Court at Sierra Leone, and Dr. Hennis, when the latter received a wound, of which he died on the 18th.

— A great popular assembly held at Birmingham in the open air, called and presided over by Mr. T. Attwood, and addressed, among others, by Mr. O'Connell, who characterized his Majesty's Ministers as 'bloody and brutal;' and a petition to the King, for their dismissal, was agreed upon.

— Plenipotentiaries of Great Britain, France, and Holland

— Mr. Littleton appointed Secretary ... Bond, in the room of Sir John Hobhouse, resigned.

— An affray between the soldiery and the inhabitants of Neustadt, in Rhenish Bavaria, while attempting to celebrate, a second time, the "festival of Hambach." Upwards of 100 persons killed; and one cavalry regiment refused to fire on the people.

31. Death of Major-General Sir John Malcolm, G.C.B., K.L.S., F.R.S. This distinguished soldier, statesman, and author, was born on the farm of Burnfoot, near Langholm, May the 2nd, 1769. He was scarcely fourteen when he was sent out to India, and rapidly made those acquirements which formed the basis of his future distinction. Having highly distinguished himself at the fall of Seringapatam in 1799, and on other occasions, he was appointed by Lord Wellesley ambassador to Persia, which had never been visited by an English ambassador since the time of Queen Elizabeth. This and his subsequent missions to that country, which were chiefly designed to counteract French influence, he discharged with ability and success. On the occasion of his last mission, the King of Persia founded the order of the Lion and Sun, on purpose to do him honour, and created him a khan and sephadar of the empire. He was knighted on his return to England in 1812; and again proceeded to India in 1816. For his conduct at the battle of Mehidpoor, he received the thanks of the East India Company, and having become a major-general, was nominated G.C.B. in 1821. The following year he returned to England, and received from the Company a grant of 1000*l.* per annum; and a vase worth 1500*l.* was presented him from those who had served under him in the war of 1818-19. In 1827, he was prevailed upon to accept the government of Bombay, and after effecting very important services, finally returned to this country in 1831. He was soon after returned to parliament for Launceston, but not succeeding in acquiring a seat after the dissolution, he withdrew altogether from public life. Mr. Canning spoke of Sir John Malcolm as "an officer whose name would be remembered in India so long as the British flag was hoisted in that country." He was the author of several works of great interest, particularly the "History of Persia;" "Memoir of Central India;" a work on the administration of British India; and the versatility of his talents are exhibited by a book of a more lively character, entitled, "Sketches of Persia." To a subscription for a monument to his memory, the Pasha of Egypt subsequently contributed 100*l.*

June 1. The King of Greece founds the "Saviour" order of knighthood.

— Died at Paris, in his fifty-ninth year, Savary, Duke of Rovigo, one of the ministers of France under Napoleon. He entered the army early; but, unlike the other military chiefs formed by the revolution, did not rise rapidly. He was aide-de-camp to Desaix in Egypt, and returned home with him; and when that brave soldier was killed, Napoleon himself adopted the care of his fortunes. He was soon appointed to preside over the private police, an office which even abler or more scrupulous men than Savary could not have filled without odium. He was necessarily implicated in the affair of the Duc d'Enghein; and it was his persuasions which induced the Prince of Asturias to cross the Pyrenees to meet Napoleon at Bayonne. For his services on this occasion he was created a duke. He was subsequently employed in a mission to Petersburg; he served with distinction in the campaign of 1809; and on the disgrace of Fouché in 1810, the portfolio of general police was intrusted to him. After the fall of Napoleon, he was not well received by Louis XVIII., and was deeply implicated in the plot for return of Bonaparte, whom, after his second fall, ... accompanied to St. Helena, but was not permi... return to France, where a council of war had co... death, he wandered about till 1819, and then be... ... the recorder of London resigned his office on account of the feeling excited by the narrow escape of a criminal named Cox from being hanged, through his inadvertence.

24. Algarve and part of Alemtejo acquired for the Queen of Portugal, with little difficulty or loss of life, by an expedition, under the orders of Admiral Napier and Count Villa Flor, which embarked this day at the mouth of the Guadiana.

25. The foundation laid, at the end of Farringdon-street, of a granite obelisk to the memory of Alderman Waithman. The column was completed by the next morning.

July 2. A battle off Cape St. Vincent, between the fleet of the Queen of Portugal (278 guns, and 2500 men) commanded by Admiral Napier, and that of Don Miguel (360 guns, and 3250 men), when the whole of the latter was captured, with the exception of a corvette and two brigs.

8. A treaty of alliance negotiated at Constantinople between Russia and the Porte. Russia engages to furnish Turkey with such forces as her exigencies may at any time require; and the Porte engages, at the demand of Russia, to close the Dardanelles against the entrance of any foreign vessels whatever.

23. Lisbon evacuated by the Miguelite garrison on the approach of Villa Flor, by whom the Miguelite general, Telles Jordao, had been defeated on the 21st. The citizens immediately liberated the persons confined for political offences, and proclaimed the queen.

— This day had been fixed on for an attempt to overthrow the Columbian government; but the plot having been discovered, sixty-five of the seventy conspirators were apprehended.

27. A smart shock of an earthquake felt in the neighbourhood of Washington, the capital of the United States.

29. Death of William Wilberforce, Esq., aged seventy-three. This distinguished opponent of slavery was the son of a merchant of Hull, and was born in that town Aug. 24th, 1759. He had only just become of age when he was returned to Parliament for Hull, in 1780; and in 1784, he was returned both for the same place and the county of York, and sat for the latter. Having become interested in the question of slavery, through the representations of Mr. Clarkson, he promised to bring the matter before the House of Commons; and soon after the assembling of Parliament, in 1787, he gave notice of his intention. He was,

however, prevented for the time by illness; and, in consequence of the number of petitions on the subject, Mr. Pitt himself brought forward a motion in his name; but nothing was done till about a year after, when Mr. Wilberforce's first motion regarding the trade in slaves was carried without a division. In 1791, his motion against the further importation of slaves into the colonies, was negatived by a majority of 75; but, in the year following, his motion, for the gradual abolition of the trade, was carried, only 85 voting against it; and in 1807, an Act, which he had been mainly instrumental in obtaining, passed for the total abolition of the trade; and he lived to see a Bill brought into Parliament by the Government, for the entire abolition of slavery itself, and which, a few weeks after his death, became a law. Mr. Wilberforce, in 1790, 1796, 1802, and 1806, was elected, without opposition, for the county of York; but in 1807 he had to encounter the opposition of the families of Fitzwilliam and Lascelles, which are each said to have expended 100,000*l.* in the contest. But Mr. Wilberforce was supported by a public subscription throughout the county; and at the termination of this unparalleled contest, stood at the head of the poll. In 1812, he was chosen for the county of York, and sat for Bramber till 1825, when he retired from public life altogether, after having sat in Parliament twenty-five years. When his death was known, the most distinguished Members of both Houses of Parliament requested that his remains might be interred in Westminster Abbey, and that they might be allowed to attend the funeral. Accordingly, on the 3rd of August, 30 Peers and 130 Commoners testified their respect for the deceased, by attending the body to the tomb.

30. The Irish Church Reform Bill passed in the Lords, by a majority of 135 to 81.

— Sir John Key, one of the City members, resigns his seat in parliament in consequence of the excitement occasioned by the discovery, that he was interested in a government contract; and that his son had been appointed to a place in the Stationery Office under a false report of his age.

August 1. Mr. R. Grant's bill, for the removal of the civil disabilities of the Jews, lost in the Lords by a majority of 104 to 54.

5. The punishment of death for burglary abolished.

9. Part of the Dublin Custom-house warehouses destroyed by fire, with property to the value of 400,000*l.*

15. The English government, and those of France and Sweden shortly after, formally recognise Donna Maria da Gloria as Queen of Portugal.

20. The Slavery Abolition Bill passed in the Lords.

26. The Bank Charter Bill passed in the Lords.

29. Parliament prorogued by the King in person. After briefly alluding to the state of foreign affairs, and recapitulating the principal labours of the session, the speech announces that it had only been necessary to make a very limited application of the powers granted to the crown for suppressing local disturbances in Ireland, the spirit of insubordination and violence having been, in a great degree, subdued in that country, the legislative Union with which it expressed a determination to preserve inviolate.

30. A dreadful conflagration at Constantinople, attributed to incendiaries, actuated by political discontent, by which upwards of 2000 houses were consumed.

31. In the heavy gale which commenced on the 29th, the ship *Amphitrite*, conveying convicts to New South Wales, and having on board thirteen females and twelve children, with a crew of sixteen persons, was driven on the Boulogne sands; and all on board, except three of the crew, perished on the return of the tide. This melancholy result appears to have been produced by the doubts of the captain and surgeon, as to their authority to allow the convicts to land, and partly by the sanatory precautions of the French authorities.

— The *Earl of Wemyss* smack, trading between Leith and London, beached off Brancaster. Eleven persons, ladies and children, were drowned in the cabin, while those who were on the deck escaped.

— A regular daily mail (Sundays excepted) established between England and France.

September 1. The queen and the charter proclaimed, and the Miguelite authorities expelled, at Bona Vista, and subsequently at the other Cape Verde Islands.

. An unsuccessful attack on Lisbon by the Miguelites in full force, under Marshal Bourmont.

. Died, aged 88, Mrs. Hannah More. This distinguished lady was one of five daughters of the schoolmaster of a charity-school, afterwards of a private school, at Bristol. When her talents became known, a subscription was raised to enable her and her sisters to establish a school of their own. Her first public productions were of a dramatic cast, of which the 'Search after Happiness' and the 'Sacred Dramas' remain in circulation. The tone of these works was written at the age of eighteen, and the character after her opinions had undergone that change which gave a religious tone to all her subsequent works. Some of the cheap Repository tracts were written by her, to stem the influence of the principles resulting from the French Revolution, and are said to have had an extensively useful effect. Mrs. More's works are very numerous, and established for her a very considerable literary reputation; while the circumstance that she had numbered Garrick, Johnson, Burke, Reynolds, &c., among her friends and correspondents, attached a powerful interest to her person. It was at one time contemplated to intrust her with the education of the Princess Charlotte; but, as she would not accept a limited control, the design was abandoned. She is said to have realized 30,000*l.* by her writings; and by her will 10,000*l.* is distributed among various religious and charitable institutions.

8. The Queen of Portugal, with the Duchess of Braganza, arrived at Portsmouth from Havre, on their way to Lisbon. They re-embarked on the 18th, having in the meantime visited their majesties at Windsor.

10. The Emperors of Russia and Austria and the Crown Prince of Prussia had an interview at Munchen Gratz, in Bohemia. Rumour attributed various objects to this congress; but none was distinctly known.

11. At this date, 20,000 persons had perished from cholera in the city of Mexico, since the 5th of August.

18. In the spring of the year 1832, the president of the United States opposed his veto to a bill by which both houses, 2 vols. 9*s.* had authorized the renewal of the charter of the United States Bank; and he now directed the government deposits to be withdrawn from that establishment.

19. The coroner's inquest found a verdict of manslaughter against twenty workmen in the Magpie mine, at Sheffield, Derbyshire, as principals, and against two other persons, as accessories before the fact, for having raised certain cuts, 1 vol. 4*s.* 6*d.* in the mine, by which three men, in the adjoining mine, were suffocated.

22. The Queen of Portugal arrived at Lisbon, and was well received by the people.

24. The corporation of Leicester refuse to authorize the town clerk to deliver up certain accounts and documents required by the Commissioners for inquiring into the State of Municipal Corporations, and decline to submit to a personal examination before them. This example was afterwards followed by the corporations of Norwich and Maidstone, and by the Merchant Tailors' Company in London.

26. The Marquis Wellesley having been appointed Lord-Lieutenant of Ireland, in the room of the Marquis of Anglesea, who had resigned on account of declining health, makes his public entry into Dublin.

27. Died, at Stapylton Grove, near Bristol, the Rajah Rammohun Roy. He was a Brahmin, born in the district of Bordouan. After studying at Benares, and travelling in Persia, he accepted employment under the East India Company, in which he attained the highest rank open to a native—that of a dewan, or revenue collector, at Bungpoor. Having made considerable attainments in language and literature, he was led to renounce and write against the religious system of India, while in his own person he maintained the simple manners of a Brahmin. He arrived in this country as a sort of ambassador from the King of Delhi; and his information is said to have materially influenced some of the provisions of the East India Company's Charter Bill.

29. Death of the King of Spain in his 45th year. The Queen Dowager assumes the regency under the will of the late King, by which she is appointed, assisted by a council, to act as regent, until the young Queen Isabella II. attains the age of eighteen.

— The Duke of Bourdeaux completed his thirteenth year, and, as the Kings of France attain their majority at this age, several Carlists of distinction resorted to Prague to tender him their homage.

October 2. After a severe conflict of three days with a tribe of barbarians, the French took the town of Boujeiah, which is said to possess the finest anchorage on the African coast.

3. The King of Holland accused of endeavouring to procrastinate the final settlement of the questions between him and Belgium, by neglecting to apply for the consent of the Germanic confederation to the territorial arrangement concerning Luxemburg.

10. The garrison of Lisbon commence offensive operations, which result in clearing the immediate neighbourhood of the Miguelite forces, who retreat upon and occupy Santarem.

15. The magistrates of Brancaster concluded their investigation of the circumstances attending the loss of the *Earl of Wemyss* smack on the 31st of August. Although culpable neglect seemed imputable to the captain, nothing transpired on which to found legal proceedings against him; but a Mr. Reeve was committed to prison on the charge of having feloniously taken and kept possession of property belonging to two of the ladies drowned. He was, however, subsequently admitted to bail by the Judges.

— The second and third bridges of the chain pier at Brighton gave way during a violent storm.

— The authority of the Queen Regent generally acknowledged in Spain, though some insurrectionary movements were made in the northern provinces in favour of Don Carlos, whose effects were confiscated in the *Madrid Gazette* of this day. The French government station 60,000 men along the Pyrenees to interfere, if needful, in behalf of the Queen.

17. Sir John Key declines to comply with a call to resign his gown as alderman of Langbourne Ward.

18. Captain Ross reached Hull on his return from his arctic expedition, after an absence of four years.

19. A Paper issued from the Colonial Office, describing the various legislative measures which yet remained to be taken, by the Colonies themselves, to carry into effect the provisions of the Slavery Abolition Bill. Being intended for the guidance of the local legislatures and authorities, it reduced the provisions of the Bill to clear and classified instructions, under the following heads:—The judicial and ministerial agency to be employed—The procedure to be observed by the special magistrates in the exercise of their jurisdiction—The divisions of the apprenticed labourers into their respective classes—The maintenance of the apprenticed labourers—The duties they are to perform, and the penalties for non-performance—The offences they may commit against the

State, and the punishment of such offences—The dissolution of apprenticeship by contract or purchase—The removal of prædial apprenticed labourers from one plantation to another—The apprenticeship of children—The alienation by sale, inheritance, or will, of the services of apprenticed labourers.

23. The Earl of Durham, at a public dinner at Gateshead, avowed himself the author of the *first* Reform Bill; but had no ...re in the preparation of the *second*, which he considered a much ...or measure.

...veral decrees of a liberal tendency appear in the *Madrid* ...ttributed to the new Home Minister, M. Burgos. One ... a partial amnesty to the liberal exiles; another pre... ...stem of internal government resembling that which ...ance; and a third appoints a commission for revising

... meetings held about this time to petition for the ...e against the payment, of the assessed taxes. This ...ued the property of a Mr Savage of the Mechanics ..., which had been seized for arrears of taxes. ... proceeded in person to make a levy on the goods ... in Oxford-street and Lisson Grove who had ... the assessed taxes. It was only requisite to enforce ...izure in the case of one person, the others either paying the demand, or allowing others to pay for them.

27. The "Royalist Volunteers" disarmed, with some bloodshed, at Madrid and other places.

— A conspiracy having been discovered, organized under the direction of Colocotroni, to overthrow the government of King Otho, martial law is proclaimed throughout Greece.

November 2. The Miguelites attack and defeat the Queen's troops at Alcazar de Sal, and regain possession of the town which they had lost, October 25th.

— Some of the streets on the banks of the Thames were laid under water to the height of several feet, by an extraordinary rise of the tide in the river.

3. The city of Hamburgh sustained considerable damage from the inundation caused by the high tide in the Elbe.

6. General Castagnon, in the Queen of Spain's service, warmly attacked near Tolosa by a numerous body of insurgents, and obliged, with Colonel El Pastor, to take shelter in St. Sebastian.

11. New differences between the Sultan and Mehemet Ali, in consequence of the backwardness of the latter in paying the stipulated tributes.

13. Shock of an earthquake at Chichester.

— Prosecutions commenced by the Earl of Durham against the *Durham Advertiser* for originating, and the *Standard* and *John Bull* newspapers for copying a libellous paragraph.

15. Dreadful irruption of water into a colliery at Workington; but of the twenty-three workmen then in the pit, all, except four, were ultimately saved.

16. Mr. T. Woolcombe of Devonport sentenced to one month's imprisonment and a fine of 100*l*., for sending a challenge to Sir E. Codrington.

18 Sir John Herschell embarks for the Cape of Good Hope for the purpose of making observations on the stars of the southern hemisphere.

20. The result of the late elections in France highly favourable to the existing government.

22. The *Gazette du Neckar*, the last liberal publication existing in Germany, suppressed by a decree of the Diet of Frankfort.

26. Information up to this date, announces the pacification of Mexico by the defeat of the insurgent generals, Duran and Arista, and the capture of the latter with many officers and men.

28. A furious hurricane at Liverpool by which much injury was done to the town, docks, and shipping; and several lives were lost by the wreck of vessels and boats on the adjacent coast. The city of Limerick was also severely visited by the same storm.

December 1. The Spanish General, Rodil, with a military force, entered Portugal, in pursuit of Don Carlos, who escaped from Miranda on his approach.

2. The Anatomy Schools at Cambridge fired by the mob, the windows broken, and some of the skeletons, models, and preparations destroyed, in consequence of the discovery that the body of a pauper, instead of being interred, had been removed to the Schools.

— Intelligence that, in consequence of the defeat by General Saarsfield of the insurgents, headed by the Curate Merino, the disturbed districts, in the northern provinces of Spain, were in the course of being brought under the authority of the Queen, accompanied with the committal of great severities by her generals.

3. The Queen-Regent of Spain offers to Don Miguel her mediation for the adjustment of the differences between him and his brother.

4 Information that the Legislature of Jamaica had received the Slavery Abolition Bill in a conciliatory spirit; declaring that they had never advocated slavery in the abstract, but as connected with their rights of property. Grenada, immediately on its reception, took the necessary measures for giving effect to the provisions of the Bill. But the Legislatures of Barbadoes, Antigua, Dominica, and St. Vincent, were much dissatisfied with the amount of the compensatory grant, and with the principle regulating its distribution; and the latter colony reserved the right of claiming further compensation than the act provides.

7. Attempted arrest, at Lisbon, of Count Taipa, the author of certain remonstratory letters to Don Pedro. He found refuge on board an English ship of war, and the peers took up his case as an infraction of their privileges.

15. Incendiary fires in various parts of the country, particularly in the eastern counties.

23. The French Chambers were opened by the king in person. The Speech commenced by a general view of the prosperity of the country. It alluded to a new law of Customs, and announced an improvement in the state of the public finances, with every promise that it would continue to follow the ascending movement of the national prosperity. In briefly alluding to foreign affairs, a hope is expressed that, through the intimate union with Great Britain, a settlement of the affairs of Holland and Belgium would be effected without compromising the tranquillity of Europe; and an assurance is given that the government will continue to watch over the preservation of peace in Turkey.

LONDON BILL OF MORTALITY FOR 1833.

The following is a general bill of the christenings and burials within the city of London and bills of mortality, from December 11, 1832, to December 10, 1833:—

	Christened.	Buried.
In the 97 parishes within the walls	835	1,336
In the 17 parishes without the walls	4,556	4,753
In the 24 out-parishes in Middlesex and Surrey, including the district churches belonging to the same	17,740	16,172
In the 10 parishes in the city and liberties of Westminster	3,959	4,316

Of the number buried were—

Still-born			934	60 and under	70	years		2551
Under 2 years of age			6261	70	—	80	—	2043
2 and under 5 years			2805	80	—	90	—	802
5	—	10	— 1145	90	—	100	—	107
10	—	20	— 970	100				3
20	—	30	— 1700	101				1
30	—	40	— 2225	102				1
40	—	50	— 2615	103				1
50	—	60	— 2412	104				1

Decrease in the burials reported this year 2029.

WORKS

PUBLISHED UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.

By CHARLES KNIGHT,

22, LUDGATE STREET, AND 13, PALL MALL EAST.

On the 19th of November was published,
THE BRITISH ALMANAC.

THE BRITISH ALMANAC of the Society for the Diffusion of Useful Knowledge, for the year 1834, contains the Calendar of Remarkable Days and Terms; list of Garden Plants in Flower, and Instructions for Gardening; Metereological Tables and Remarks; Astronomical Facts and Phenomena; Tables of the Sun, Moon, and Tides; with a Miscellaneous Register of Information connected with Government, Legislation, Commerce, and Education; and various useful Tables.

It contains Seventy-two closely-printed pages, embracing a great variety of information, adapted for all parts of the United Kingdom. Price 2*s.* 6*d.* in a Wrapper.

Also, just published, price 2*s.* 6*d.* sewed, or bound in cloth with the BRITISH ALMANAC, price 6*s.*,

The COMPANION to the ALMANAC, and YEAR-BOOK of GENERAL INFORMATION, for 1834. This work is not only a Supplement to the Society's Almanac, but a work of reference upon subjects arising out of the course of the Seasons, or the events of the Year. Its object is to illustrate the Almanac, and to condense into a small compass a great body of information essential to be known by every member of the community. The present is the seventh year of this work, and together they contain a mass of valuable information and interesting documents. Every three years they are formed into a Volume, with an Index. The first of these volumes may be had bound in cloth, price 8*s.*, and the second 8*s.* 6*d.* Each year (except 1832) may also be had, bound in cloth, with the Almanac of the same year, price 6*s.* The following are the contents of the COMPANION to the ALMANAC for 1834:—

PART I.—*Information connected with the Calendar and the Natural Phenomena of the Year; and with Natural History and Public Health.* On the Moon's Orbit—Jewish Calendar—Mahometan Calendar—Correspondence of Æras with 1831—Meetings of Scientific Bodies—Height of High Water at London Docks—Occultations of Fixed Stars—Bill of Mortality for London—Report of the Select Committee on the Vaccine Board.

PART II.—*General Information on subjects of Chronology, Geography, Statistics,* &c. Wages and Prices—Population of Ireland—Inhabited Houses, &c., of Great Britain—Bankruptcy Analysis—State of Crime in Great Britain and Ireland—Savings' Bank Annuity Tables—American Tariff—Poor Laws in America—Tables of Mortality.

PART III.—*The Legislation, Statistics, Public Improvements, and General Chronicle of* 1833. Abstracts of Important Public Acts of Parliament—Abstracts of Parliamentary Returns relating to the Finance, Commerce, Agriculture, Jurisprudence, &c. of the United Kingdom—Chronicle of Parliament for 1833—Private Bills of the Session—Notices of the Progress of Public Improvements in the Metropolis and Provinces—Chronicle of Events of the year 1833.

THE LIBRARY OF ENTERTAINING KNOWLEDGE.

Recently published, Part 44, *completing Vol. XXII.*—BRITISH MUSEUM.—ELGIN AND PHIGALEIAN MARBLES.

Since the commencement of this Series an important improvement has been made in the art of binding in cloth, by preparing linen so as to resemble morocco leather, and by stamping the title of the book upon the cover itself, in gold, instead of affixing a label. The publisher would be glad to avail himself of these inventions, which have rendered binding at once elegant and cheap; but the number of volumes of this Series already issued in plain cloth, with a label, prevents the immediate adoption of the improved mode, as far as regards those volumes which complete subjects already commenced. It is evident that a want of uniformity between the new and the old volumes of the same subject would be a material inconvenience. It is intended, therefore, to complete the *old* subjects in *plain* cloth, but to publish all *new* subjects in *fancy cloth*. The works, however, already finished being in constant demand, a *New Issue of Monthly Volumes* in fancy cloth has been commenced, so that the Entire Series may ultimately be procured in the improved style of binding. The New Issue is charged at the same price as the present, 4*s.* 6*d.* per volume.

CHRISTMAS PRESENTS.

The following WORKS, forming part of the Series, are complete; and being handsomely bound in cloth, (lettered,) are well adapted for School Prizes and Presents:—

BRITISH MUSEUM & ELGIN MARBLES, with 211 wood-cuts, 2 vols. 9*s.*
POMPEII, with 293 wood-cuts and 8 steel-plates, 2 vols. 9*s.*
PURSUIT OF KNOWLEDGE UNDER DIFFICULTIES, with 7 steel-plates, 2 vols. 9*s.*
INSECTS, with 444 wood-cuts, 3 vols. 13*s.* 6*d.*
VEGETABLE SUBSTANCES, with 210 wood-cuts, 3 vols. 13*s.* 6*d.*
NEW ZEALANDERS, with 1 steel-plate and 46 wood-cuts, 1 vol. 4*s.* 6*d.*
PARIS AND ITS HISTORICAL SCENES, with 15 steel-plates and 26 wood-cuts, 2 vols. 9*s.*

The subjects above enumerated are those only which have been completed, but twenty-two volumes of the Series have now been issued, and may be had either in parts, sewed, price 2*s.* each, or in volumes bound in cloth at 4*s.* 6*d.* each. They are all illustrated with wood-engravings. The following is a complete list of the Series:—

Vol. of the Series.	Including Parts.			Subject
1	1	and	3	Menageries, Vol. I.
2	2	„	5	Vegetable Substances, Vol. I.
3	6	„	7	Insect Architecture.
4	4	„	8	Pursuit of Knowledge, Vol. I.
5	9	„	10	New Zealanders.
6	11	„	12	Insect Transformations.
7	13	„	22	Menageries, Vol. II.
8	14	„	15	Pursuit of Knowledge, Vol. II.
9	16	„	17	Architecture of Birds.
10	18	„	19	Paris, Vol. I.
11	20	„	21	Historical Parallels, Vol. I.
12	23	„	24	Insect Miscellanies.
13	25	„	26	Pompeii, Vol. I.
14	27	„	28	Paris, Vol II.
15	29	„	30	Vegetable Substances, Vol. II.
16	31	„	32	Criminal Trials, Vol. I.
17	33	„	34	British Museum—Egyptian Antiquities, Vol. I.
18	35	„	36	Pompeii, Vol. II.
19	37	„	38	Habits of Birds.
20	39	„	40	British Museum—Elgin Marbles, Vol. I.
21	41	„	42	Vegetable Substances, Vol. III.
22	43	„	44	British Museum—Elgin Marbles, Vol. II.

THE PENNY CYCLOPÆDIA

Of the Society for the Diffusion of Useful Knowledge.

This work has now been published, with invariable regularity, since January, 1833, and the great circulation which it has attained is the best proof of the confidence of the public in the accuracy and completeness of its information. In the commencement of such an undertaking, the Editors, bearing in mind the difficulty of securing at once an efficient body of contributors, recommended to the Committee only to attempt the publication of Six Numbers in each month. Their present stock of materials, and their reliance upon their numerous coadjutors, founded upon ample experience, have induced them to desire that the work should proceed at a quicker rate. In this they feel satisfied that they only second the wishes of the great body of its purchasers.

The Committee have therefore to announce the following arrangements:—

1. That the *First Volume* of the Penny Cyclopædia, containing Eleven Parts, was concluded on the 30th of November; and published on that day, handsomely bound in cloth, lettered, at Seven Shillings and Sixpence.

2. That, commencing with December, *Two Numbers* of the work will be published *regularly every week, without Supplements*, so that sometimes Eight, and sometimes Ten Numbers will appear in each calendar month.

3. That on this day (1st of January, 1834), *Part XII.* will be published, price *Ninepence*, and the *Monthly Parts* regularly continued at that price.

4. That on September 1st, 1834, the *Second Volume*, containing Eight Ninepenny Parts, will be published, bound uniformly with Vol. I., at Seven Shillings and Sixpence;—and that the future Volumes will be completed every eight months.

PENNY MAGAZINE

Of the Society for the Diffusion of Useful Knowledge.

IN order that the Volumes may in future contain the Numbers of an entire year, the FIRST VOLUME closed with the Supplement published December 31, and is now published, with a Title and Index, bound in cloth, price 6*s*. The SECOND VOLUME is this day published, price 7*s*. 6*d*.

GALLERY OF PORTRAITS.

The 'Gallery of Portraits' published by the Society, although similar in form, and not inferior in execution, to one or two series of Portraits now publishing, is in a great degree different from any other, in the selection of those illustrious persons whose likenesses it is thought desirable to make familiar to all.

Each Number published, Monthly, consists of THREE PORTRAITS, with accompanying Biographical Memoirs, occupying upon an average twenty-four pages of letter-press. The size of the Work is Imperial Octavo, corresponding with the small-paper copies of Lodge's Portraits. The price of each Number is HALF-A-CROWN.

Nineteen Numbers have been published, and Two Volumes, each containing Eight Numbers, [illegible] each, bound in fancy cloth, and lettered, price 1*l*. 1*s*. [illegible] with gilt tops.

THE [illegible] of the streets or [illegible] the tide [illegible]

QUARTERLY JOURNAL OF EDUCATION.

This day is published, No. XIII., price 5s. sewed.

CONTENTS:—Schools at Menars—Education of Natives in India—English Boarding Schools—Physical Studies in Oxford—University of London—Public Instruction—Public Instruction in Great Britain—On the Study of Geography—National Instruction in the Canton of Zurich.—REVIEWS.—Miscellaneous; Foreign and Domestic.

The JOURNAL OF EDUCATION contains Essays on Education in general, and on the best modes of teaching particular branches of knowledge.

It also contains detailed accounts of Universities, Colleges, and Schools, with remarks on the changes that from time to time are made in the general plan of instruction and discipline in such institutions—remarks on any striking merits or defects in establishments for education, accompanying the description of their origin, constitution, and present state. Accounts of the general state of education in different countries, and the means adopted for the diffusion of instruction and the maintenance of establishments for that purpose, are also given.

Reviews of Books used in practical instruction form an important part of the Journal. The chief object of this department is to furnish teachers and learners with the means of choosing the best books for themselves and their pupils.

In order to render the Journal complete, a portion is reserved for a variety of short notices, which are not comprehended in the part already described.

Under the head of different countries, British and Foreign, are recorded short notices of the progress or foundation of Schools or Colleges, or Societies for the promotion of knowledge, and in general such intelligence as comes under the description of news of education, and is likely to interest and instruct all classes of readers.

The numbers are also published in half-yearly volumes, price 10*s*. 6*d*., bound in cloth.

THE PATENT LEAF-HOLDER.

THE principle of issuing useful information at the lowest possible price, and at short intervals, has led to a consideration of the best method of preserving, in a regular order, the separate copies of the Tracts so published. A common Portfolio will, undoubtedly, secure the numbers of such works as the "Penny Magazine" from injury; but the proper order is liable to be deranged, and they cannot in this form be read together as in a book. An ingenious mechanic has invented a little instrument to be attached to the back of a Portfolio, by which as few as two or three, or as many as forty or fifty sheets, may be held tightly together as if they were bound, the volume thus secured opening with as much ease as a sewed book. The compression can be immediately withdrawn, and a number or numbers added or subtracted without the slightest difficulty. The principle is, of course, equally applicable to music, prints, and manuscript. A patent has been taken out for this invention; and the Portfolios, with leather backs and cloth sides, may now be had of the following sizes, and at the affixed *retail* prices:—

	Iron holder.	*Brass holder.*
	s. d.	*s. d.*

Preparing for Publication,

THE MUSICAL LIBRARY,

To appear in Weekly Nos., price 4d.; and Monthly Parts, price 2s.

THE principle which has been so extensively applied in Literature and the Graphic Art, of producing works at the lowest possible point of cheapness without any abandonment of the qualities by which the popular knowledge and taste may be advanced, has yet a wide field for its employment in the department of MUSIC.

The design of the "Musical Library" is to afford the same advantage to amateurs in music, that the lovers of literature are deriving from the cheap publications for the advancement of real knowledge, that are now distributed through every part of the Empire, and are within the reach of persons of every condition. It is proposed to publish a Collection of Music, both vocal and for the pianoforte by the best masters, ancient and modern: the ancient in a state adapted to the improved condition of our musical instruments; and the modern the best, and only the best, that the continent of Europe and our own country can supply. We shall revive and put into an inviting form the compositions of the older classical masters, now only known to a few connoisseurs, keeping in mind the saying of a famous French *modiste*,—"Nothing so new as that which is forgotten;" and thus endeavour to spread widely a taste for what is excellent in the various departments of the art, and available to the purposes of private society. At the same time it will be our further object to naturalize the confessedly good productions of the newest foreign composers, especially of the German masters, by the republication, sometimes with English words, of their best vocal compositions; and also by publishing movements, or extracts complete in themselves, from such of their instrumental works as are of a length unsuited to the "Musical Library." It is also our design, occasionally, to engage composers of the first eminence to supply us with new compositions; and we shall never neglect an opportunity of giving currency to such productions of real genius as may be offered to us by those who have no means of securing extensive circulation to them, and who might be deterred from publishing them on their own account.

In the prosecution of these objects, which we may not unjustly consider likely to advance our national enjoyments, we propose to issue a NUMBER once every week, of eight music-folio Pages, to contain generally one Vocal and one Pianoforte piece at least in each, but depending on the length of the composition. The Price of each Number will be Fourpence.

A PART, containing four or five Numbers of Music, according to the number of Saturdays, will be published monthly. To these numbers will be added a *Monthly Supplement* of letter-press, comprising musical news, foreign and domestic; notices of new music; critical accounts of the more important public musical performances; with memoirs of the lives, and remarks upon the works, of eminent composers, and especially of the authors whose productions are published in the "Musical Library." The price of each Monthly Part, consisting of forty-eight folio pages, will be Two Shillings.

It may be necessary to add, that the proprietors of the "Musical Library" have secured the exclusive use of a process for printing Music which has not yet been introduced into this country; and which, for distinctness and elegance, is equal, if not superior, to the best specimens that can be produced from engraved Plates.

Orders are received by all Booksellers, and Wholesale by the Agents of "The Penny Magazine."

London: CHARLES KNIGHT, 22, Ludgate Street, and 13, Pall-Mall East.

THE CORPORATION COMMISSION AND THE MUNICIPAL COMPANIES OF LONDON.

An inquiry into the state of municipal corporations is a proceeding of vast importance, on its own account: it is still more important, as pronouncing the truth of a great principle, and as naturally leading the way to more comprehensive measures. Individual citizens who meet as individuals, meet upon equal terms; and every reasonable legislature is properly scrupulous in interfering either with their property or their conduct. Mankind seems to have been well aware, in all stages of civilization, that the principal advantages of society depend upon this forbearance. The case is quite otherwise when we come to deal with the members of artificial corporations, claiming in their corporate, not in their individual capacity, holding their property not as private property, but by a totally different, even by a perpetual tenure,—bound to duties, and insisting on rights and immunities, which have no connexion with the ordinary relations of private life. Bodies of this description are by their nature public bodies. Publicity, therefore, is their first duty. A contrary practice, however, has been so long and so suspiciously persevered in, that nothing can now be done, or even predicated, concerning them in detail, till we have a knowledge of the necessary facts; of their charters and endowments, statutes and bye-laws, trusts and privileges. The prejudice in favour of concealment had become so well established, that it was a curious but frequent complaint with Lord Eldon, that the corporation of Newcastle, in consequence of producing certain title deeds in a court of justice, once lost an estate, which was thus discovered to be none of theirs.

The distinction between corporations and individuals is too plain in itself, and too fertile in its consequences, to be misunderstood or disregarded, after it has been once brought clearly under discussion. Words and vehemence may do much; but the times are past when the people of England can be either so perplexed by casuistry, or so terrified by declamation, as to waive their right to a complete history of every foundation in the kingdom. What may be the conclusion to be drawn from the facts, will be a matter for further consideration: it is one on which an honest, and perhaps an intelligent, difference of opinion must be expected. There are at this moment immense corporate funds, and a complicated diversity of trusts and interests irregularly scattered over the country, for the purposes of municipal government, of the administration of justice, of religious instruction, of general education, and of every kind of charity. We do not say that the existing funds or objects are, in each of these cases, fully equal to the wants of the community. We are far from saying that these means are always ill directed, much less that they are always wasted, even under their present management. But there can be no manner of doubt whatever, that they do not minister to the general welfare in a fair proportion to their magnitude; nor produce a fiftieth part of the specific benefits which they were meant to produce, and which they are capable of producing, when they are systematically and judiciously applied.

The measure actually in course of execution is one of investigation only; and of investigation by consent. That being the case, the learned as well as the clamorous objections, taken at this preliminary stage, appear to be silly or fraudulent in the extreme. Christian charity would only stultify itself by affecting to believe, that a constitutional jealousy of the form of the present Commission has been felt in any quarter. What was wanted at first was a temporary pretext for frivolous and vexatious scruples on the part of political faction or conscious guilt. The temporary pretext could be only hoped to be turned to permanent account by making it the ground of some absurd prejudice; out of which, a chance might be laid hold of for more successfully renewing the cry, so lately raised in vain, against the Reform Bill. The parliament-din of corporation robbery is scarcely out of our ears, when the principle of corporate is again attempted to be confused with that of private rights. The outcry may generate and foster crude speculations concerning the title and stability of private property; but it will never divert a single reformer of corporate institutions from his onward course. In proportion as the latter assume to be of a permanent character, no sane commonwealth will countenance a general demurrer to its authority over them. The aldermen of Norwich are advertising for a concerted opposition. We can assure them that it is the most foolish policy which the direct advocates of institutions of this description can possibly pursue. A manly admission, and liberal exercise of this authority, are, according to all experience, the best security that can be afforded to corporate bodies for long life and honour. If their members were wise beyond their generation, instead of repelling the approach of inquiry and of reform, they would invite it. Thus only can the present possessors co-operate with, and carry into effect, the generous and far-sighted ambition of our politic and pious ancestors. In this manner, and in this alone, can we preserve many yet famous English institutions from adding, in the nineteenth century, another volume to the folio histories of extinct orders and obsolete foundations, once believed to be as deeply rooted, and some of them as distinguished as our own. Personally, we have a reverent sense of the services which such institutions may confer. When we read of the Wykehamist officer keeping the hands of Cromwell's troopers off the College at Winchester, we respect and we share his feelings: but there is many an institution besides, for which, with as deep feelings, and on more solemn motives, we can honestly exclaim, from the ground of our hearts, *Esto perpetua!* The thing, however, is only rational and practicable on certain terms. Unless the condition of successive adaptations is cheerfully and prudently received, the very mention of perpetuity, in connexion with man and with the works or policy of man, is a ridiculous contradiction.

The opinions of recorders, and town-clerks, and ex-crown lawyers, have been flying about the country. The oracles of the law have been indulging in more than the privileged mysteriousness of the profession, if these opinions are not to be construed into certificates against the legality of the Commission. The objection, as taken, is on the form. It might, however, have been not at all the less valid and imperative on that account; for the forms of things sometimes adhere so closely to the substance, that they are incapable of being separated with safety. But what is the amount of the offence imputed in the present instance? and is there a shadow of pretence for the imputation? A committee of the House of Commons was appointed during the last session to examine into the state of corporations. It was at first conceived that a remedial measure could be grounded upon an inquiry into a few corporations—four or five of each class. This, as the matter proceeded, was found to be impracticable. It soon appeared that complete and satisfac-

[WILLIAM CLOWES, Printer, Duke Street, Lambeth]

tory information could be collected by no other means than by a general examination of the system, to be conducted in every instance on the spot. Accordingly, the committee (of which Sir Robert Peel and other persons of the same political sentiments were members) recommended,—and the House of Commons in consequence voted,—an address to the Crown, that his Majesty would be pleased to appoint a Commission, to carry on the investigation. Under these circumstances the suggestion of any constitutional uneasiness is ludicrous. The notion of a technical illegality has been plainly the mere after-thought of counsel;—a colourable pretence, in order to gain a little time for their bewildered clients. For, in what does this notable illegality consist? Verily, in the discovery, that the authority on which the commissioners proceed is not that which it was never stated to be, and which it was never meant that it should be in the first instance,—an act of parliament. The Lords, it is alleged, were not made parties to the address. This is the amount of the charge. If it is seriously stated, it rests either upon a total misapprehension of the nature of the Commission, or upon an ignorance and misrepresentation of the usage on similar occasions; probably both. Commissions may be issued by the Crown in three ways: which of them is selected will depend on the subject, and on the probability of resistance. The first proceeds under the sanction of parliament, and has alone a general compulsory power; since it alone is derived from and represents the entire legislature. The second is issued in compliance with an address from either house of parliament; and of course, it can derive no power from the address, as against those who would be entitled to resist it if it had proceeded from the king alone. It follows that the ordinary courts of justice will redress any injury suffered under it by any of the king's subjects. But, in this case, the constitution can have suffered no injury, for which the ministers, as advisers of the Commission, are answerable to the public on impeachment. Either the Commons would not impeach, or the Lords would not condemn, the ministers who had merely been complying with their address. The last form of Commission is issued by the Crown on its own responsibility, in certain cases within its prerogative. If the supposed prerogative exists, it will be a protection to the commissioners following its authority, in a court of justice. But on this supposition, the Commons might impeach, and the Lords condemn, a minister for an improper exercise of even a lawful prerogative.

Now to apply these distinctions. Government never pretended that the control and revision of corporations was a subject lying within the discretion of the ordinary prerogative. It is agreed on all hands that parliament alone can sanction a compulsory visitation. But the advisers of the actual Commission, confident in the merits of the measure, were simple enough not to contemplate the necessity of a contentious jurisdiction. They left it, therefore, to depend for its effect, for the present, on the candour and acquiescence of those to whom it was addressed. There can be no illegality in sending messages and asking questions on these conditions. Do they constitute an impeachable offence? Supposing that ministers had taken the responsibility of issuing so guarded a commission entirely upon themselves, the formidable usurpation would scarcely have warranted an impeachment. But they have not exposed either themselves, or the sanctity of the royal name, or the credulous loyalty of the people, to whatever unknown hazards of artful encroachment and needless interference may lurk within these limits. The act of the executive, though seeking answers from those only who choose to answer voluntarily, was bottomed on the previous recommendation of a popular House of Commons. If these formalities constitute an insufficient guarantee for so limited a purpose, it is difficult to imagine the supplemental cautions against an invidious prying into his official habits, or against all causeless interruption of his repose, which the most fastidious and nervous alderman could require. This being the true nature and object of the present commission, let us see what, in point of fact, has been the usage on similar occasions. So far from it having been supposed to be illegal or unconstitutional for a government to obtain information except by act of parliament, former administrations have issued commissions of this description at their discretion; nor was the slightest symptom of dissatisfaction at any time expressed upon this account, on either side of the House, or by any portion of the public. Mr. Spring Rice lately explained this attempt at captious and equivocating mystification to his constituents at Cambridge. He instanced the commission, issued under the authority of Lord Liverpool, to investigate the practices of courts of justice. As a precedent, it is conclusive on the point. The judges of the land were summoned before that commission; among them was Lord Eldon. If the assumed jurisdiction was, in any proper sense of the word, illegal or unconstitutional, Lord Eldon made himself an accomplice, by appearing and taking part in its proceedings. The sheriffs of Dublin, however, refused to answer. A commission to inquire into courts of law was no more within the ordinary prerogative than a commission to inquire into corporations. What then? Did the government allow itself to be baffled? The only consequence was, that Mr. Goulburn was obliged to come with the case to the House of Commons. Parliament instantly turned the voluntary into a compulsory tribunal, and armed the commission with the power of overruling a resistance, the stupidity of which it would have been scarcely decent to presume. The sensible part of the clergy have been, for some time, very desirous that a precise return of the amount of their revenues should be laid before the public, for the purpose of disabusing the public of the exaggerations which have been so studiously and wilfully circulated on the subject. Nothing could be more reasonable. A commission issued accordingly. By a strange coincidence, as connected with the present question, the Lord Guilford of to day is found among the one or two reverend recusants. He stumbled upon this precious notion—that the commission was illegal; and stands out upon his technical right to withhold his portion of the information, which it is so much the wish and the interest of both church and people that everybody should give. A few insolent and suspected corporations have taken up this idle objection: and are struggling to make the most of an opportunity for further consultation over their chest of muniments, and for a contumacious defiance of the government of a reforming sovereign. Tidings of Lord Liverpool's precedent have by this time reached them in their divans: they must make speed, whether for the concealment or for the reparation of their errors; there will be but a brief interval allowed them to repent over the disgraceful alternative which they have brought upon themselves.

The speculative traders in the prejudices of their countrymen have been labouring another point. The influence of a name and of historical recollections is very great, especially with a people tenacious of constitutional traditions; but to raise the cry of corporation robbery, and to fulminate anew on the invasion of charters by the Stuart brothers, is attributing a great deal too much to our present capabilities for delusion. The inquiry instituted by William IV., at the request of the House of Commons, is directed to the ascertaining—in the first place, what are the principal trusts, originally or successively impressed upon corporations:—in the second, how far they have been faithfully complied with. If the result of such an inquiry should terminate in the exposure of abuses, and in the crimination of delinquents, or should force upon the public the conviction, that either the object or the mechanism of these institutions can be improved,—is that a ground, not of thankfulness and rejoicing, but of apprehension and reproach? Never was there a measure of which the scope was more emphatically and comprehensively the public good. No party triumph can be aided by it, but indirectly and consequentially; that, too, on one supposition only—the supposition, that it is the Tories alone, and not the Whigs, who are implicated and interested in the corruptions, which public opinion has so repeatedly denounced, and will so soon speedily destroy. This cannot be the case: the contrary is unfortunately and notoriously true. A faulty and corrupt system had been too long predominant; and is, in its nature, too contagious to entitle the Whigs to so great a compliment. The claim that the present ministers have acquired on the public confidence is this:—Originally more aristocratical in their habits, but always more popular in their opinions than their opponents, they have advanced with the times; have seen its signs, and imbibed its character. By the Reform Bill, they made it impossible that they can ever fall back upon the old track of party politics. That measure necessarily threw them into and identified them with the public cause. To this extent, it may be truly said that, in comparison with the Tories, they have acquired a new and greater interest in bringing back all our institu-

tions to purer and more public principles. If it continues to be an interest, from the benefit of which the Tories remain excluded, it will be the Tories' fault.

It requires all the self-assurance of Tory patriotism to discover a resemblance between the nature of the present Commission and that of the celebrated proceedings against corporations by the Stuarts. Day and night are not more different. It was the contrast of those proceedings to the present, and not their analogy, which made them a crisis in the history of the country. The composition of juries, and of householder constituencies, as already settled by law, will not be touched, whatever course our future legislation on corporations may happen to pursue. Yet the ambition of new modelling corporations would never have occurred to the Stuarts but on this account. They cared nothing about mayors and aldermen, tolls and charities; but a great deal about juries and parliaments—the only hope then and ever, of individuals and of the public, the last asylums for civil and religious freedom. They sought to obtain a friendly sheriff, that they might control the justice of the kingdom by means of a packed and devoted jury on political trials. They sought to transfer the offices and revenues of every borough to political partizans, in order to secure the return of the court candidate at all elections. Whether the grand jury was to find a bill against Lord Shaftesbury, or to throw it out—whether Lord Russell was to be acquitted or to be condemned,—depended on the politics of the Sheriff of London. The coincidence is not very striking between the researches in which Sir F. Palgrave and his colleagues are now engaged, aided by the zealous concurrence of the queen of corporations, the metropolis of England, and the hostile quo warranto of C. J. Saunders. Roger North divides the transactions on charters between 1682 and 1688 into three classes. 1. Quo warrantos; 2. Surrenders; 3. Regulations which partition, he says, may be marked—1. Good; 2. Indifferent; 3. Bad. There can be no more unexceptionable witness to the policy of this disgraceful era than himself. No person, also, was more interested in defending the legal proceedings comprised in his first division, since his brothers Lord Keeper Guilford (whose parts, according to Burnet, were all turned to craft) and Sir Dudley North were implicated in the advice and management of them. The account is contained in two works, called the Examen, and the Life of Lord Keeper Guilford. His notice of the case of London on the quo warranto makes it unnecessary to examine his blustering statement concerning the rest. "This great city was among the earliest that were questioned at law for forfeiture, and I shall venture to say with more of reason than any other in England." On his own shewing London, therefore, was the worst. The commonest reader of English history has it in his power to become thoroughly acquainted with the specific offences which it had committed, and the height which its enormities had reached. Two offences only are stated in the pleadings. The first was a petition to the king from the common council, complaining that the public justice of the kingdom had received interruption by the prorogation of parliament: the second was a bye-law, by which the common council levied a toll on persons coming to their market. The substantial offence which constituted the provocation to the court was none of these. R. North himself grounds the justification of the quo warranto on a single fact. The fact was neither more nor less than this,—that the grand jury had thrown out an indictment for treason against Lord Shaftesbury. "What, in the name of justice, (he exclaims,) had the government to do when Ignoramus was mounted in Cathedra, and there was a declared stop put to all state criminal law; to say nothing of the ordinary and civil course, and how factiously partial it was carried on in London and Middlesex?" It would have been more to the purpose if he had invoked the name of law than that of justice, when the real reasons of the prosecution were different (and were known to every citizen in London to be different) from those on which the prosecution nominally proceeded, and on which judgment was obtained. The regulations, on which, after judgment had been obtained upon the quo warranto, the king proposed to renew the charter, gave the crown a veto, and more than a veto, on the election of the most important city officers. R. North states, unreservedly, that the regulations were expressly intended to "obviate the recrudescence of those ignoramus abuses for the future that had been so scandalous before." The success of this experiment met the utmost wishes of the court. If a charter could be forfeited for the most trifling illegality, as by an unauthorised rate, it was extremely improbable but that a flaw of some kind or other might be found in the title of every corporation throughout the kingdom.

Quo warrantos were evidently only meant to be introductions to surrenders. This latter intrigue looked precisely the same way. The following entry in Narcissus Luttrell's "Brief Historical Relation" (July, 1684) is just what we should have expected of the principality of Durham—the see which, according to the saying of the northern circuit, the Reformation never reached. "The mayor, aldermen, and common council of the city of Durham have surrendered their charter into the hands of the Bishop of Durham, who has reserved to himself and his successors in that see, the power of approving and confirming the mayor, recorder, aldermen, and common council of the city. *O tempora!*" On recapitulating the inducements under which charters were surrendered, Roger North exhibits another celebrated character as a principal performer. "When Lord C. J. Jeffries went the northern circuit, he had taken upon him, and accordingly valued himself to the king for doing great matters towards bringing in of charters, as it was called; and, by his own contrivance (as I have very good reason to guess), to procure for himself as great an authority in the northern circuit (which he was appointed for) as was possible, the king was persuaded to present him with a ring, publicly taken from his own finger, in token of his majesty's acceptance of his most eminent services. And this by way of precursor; which being blazoned in the Gazette, his lordship went down into the country as, from the king, *Legatus a Latere*, esteemed a mighty favourite: which, together with his lofty airs, made all the charters, like the walls of Jericho, fall down before him: and he returned laden with surrenders, the spoils of towns; which, with certain other performances in that voyage, not a subject here, advanced his pretensions to favour at court." The extent to which this dabbling in corporations had been carried, and the extent to which the Tory party was committed in it, is evident from the observations made by this partial biographer upon a clause offered in the House of Commons after the revolution. It was proposed to disable all those persons who had been concerned in the surrenders and renewals of charters, from voting in elections of members to serve in parliament. On this it is stated that the humour had been so general, that the "few of any account in the nation, who were desirous to be owned for royalists, whether for real opinion, or following the example of others, or out of a gaiety of behaviour on the government side, but would all, being the greater and much more valuable part of the nation have been swept at once out of their right of election."

When the walls of Jericho (as he calls them) had fallen down, the remaining step was an easy one. It was only to enter and take possession. Whatever the advocate of the earlier policy may affect to believe, this was its direct object, and inevitable consequence. "Then this trade of charters ran to excess, and turned to an avowed practice of garbling corporations in order to carry elections to the parliament; and a committee of council was appointed to manage the regulations, as they were called; and there was an itinerant crew of the worst of men, that wrought in the towns to be regulated, under direction of the committee. These were termed regulators: and, according to their characters and designations, mayors, aldermen, recorders, common councils, and freemen, were modified and established. The Lord Chief Justice Jeffries was capitally concerned in the first of these exorbitancies, and pushes matters, through all the degrees, into those excesses I mentioned. At first it was his way of making court, but, at last, it was his shield and defence. For he and his clan, one Sir N. Butler and (I should have first said) the Lord Sunderland, were, by these practices, become so obnoxious in the reign of King James II., that, knowing they could not stand the fury of any parliament, they laboured, by manifest provocations of the people, carried on affectedly by them, at length to come to that height, as to be able to shew the king that all parliaments were impracticable, and to prevail upon him to live without any at all. And, by that means, they might continue great, and be secure; otherwise, that is, if ever there was a parliament, they must certainly fall a sacrifice to the fury of the commons. But these extremes aspersed the whole subject-matter, as well what was just as unjust, reasonable as unreasonable, all alike sufferted under the

obloquy; and none ever concerned themselves to distinguish more than if there had been no difference at all from the first to the last. And the very law itself, that is, the known legal, and (sometimes) necessary process of quo warranto came well nigh to be entirely abolished. For so men run from one extreme to another, and, as the English mode is, reform, not by restoring, or mending, but by kicking down, all at once, whatever is abused, though, in itself, never so good." By the examination of Roger North before a committee of the House of Lords, in 1689, it seems that 242 new charters were granted from the years 1682 to 1688, both inclusive. (9 State Trials, 995.)

The result of this shameful plot is no secret in English history. Tory writers acknowledge it; Tory gentlemen disdained and deplored it. Evelyn had the feelings of a cavalier. But he observes, in 1685, with evident disgust on the effect of the new charters in changing the electors; and adds, that mean persons set up gentlemen's servants, who were said to have been recommended by the court. Lord Bath alone was reported to have taken with him into Cornwall no fewer than fifteen charters: "so some call him Prince Elector."

This is the evil precedent, with the danger of whose recurrence it is sought to alarm the honest prejudices indulged in by the English people in favour of old things, and of ancient courses. Trinity College and Dr. Wordsworth might as well take fright on remembering the mandate which was served by James II. on Magdalen College and Dr. Hough. In matter and in manner, in form, in principle, and in object, what can be more unlike? The public will soon be in possession of the evidence taken by the municipal commission. For the measures which that evidence may make it necessary to propose, ministers will be answerable to God and to their country. The particular measures demand a cautious and a comprehensive consideration. But no municipal reform can be worthy of the name, unless it effectually protects the public against the wasteful appropriation of corporation property which has occurred at Cambridge; as well as against those contaminating practices by which the municipal and parliamentary elections of Leicester, Liverpool, and Norwich have been equally disgraced.

THE SHIPPING INTEREST.

WITHIN these few weeks the General Ship-Owners' Society, a powerful body composed of persons connected with the shipping interest in all the principal ports of the kingdom, have published a Report drawn up by their Committee for the past year, in which the following passage occurs in reference to the evidence respecting this branch of the national industry published in the late Report of the Select Committee of the House of Commons on Manufactures, Commerce, and Shipping:—

"The limits of a report will not admit of any detailed analysis of this remarkable testimony, nor of any elaborate reasoning on the conclusions to which it irresistibly leads; but it may safely be averred, that never were opinions more triumphantly vindicated—never were assertions more unanswerably established, than are the opinions and assertions which have been from time to time advanced on the part of the recognized organs for conveying the sentiments of British ship-owners, by the concurrent spirit and bearing of the evidence. Many of those important questions which have been most vehemently contested, must now be considered as finally set at rest. The long-continued, and still existing depression of the shipping interest—the partial production and great aggravation of distress caused by continual changes in our navigation system—the utter impossibility of the successful maintenance of an unrestricted competition with foreign navigation—the gross injustice of the imposition of peculiar and exclusive burdens on maritime commerce, for purposes purely national, while exposed to that competition—the declining quality and estimation of British tonnage—the embarrassment, decay, and ruin of the British ship-owner—may now be viewed as incontrovertible positions. Nor is the light less valuable which has been thrown on those facts, which, appearing difficult to reconcile, have heretofore been insidiously perverted to the detriment of the cause of the ship-owner, and artfully adduced to invalidate the truth of his statements. The increasing stake of an individual in shipping can no longer be advanced as conclusive evidence that the capital already embarked is profitably invested. Tenacity of pursuit of maritime commerce is shown to be perfectly compatible with long-continued loss, and to afford no proof of any present prosperity or approaching improvement. Even the production of new ships is proved, from the peculiarity of many of the circumstances by which it is induced, to be by no means inconsistent with the same apparently interminable depression. To these inferences from the recorded testimony solemnly given before a Parliamentary tribunal, your committee are especially induced to advert, because, if generally known and forcibly urged, they can scarcely fail to exercise a powerful influence on public opinion and on future measures affecting the shipping interest. That interest, it must now be perfectly obvious, is in such a condition that, while it will be the part of ship-owners to use every endeavour to adapt themselves to the altered state of the times, and of the relations of the country, foreign and domestic, it must no less plainly be the duty of the legislature and the government to afford to British navigation every relief from burden and restriction that may be compatible with the general interests of the nation, and every protection and encouragement that may not be inconsistent with national faith. British maritime commerce will not bear the hazard of further experiments; by which, not merely will its success now be compromised, but its very existence endangered. And after the publication of the mass of evidence now referred to, your committee can scarcely doubt the universal admission of the justice of that alternative for which they have long contended, though under opposition, misrepresentation, and obloquy,—either that those peculiar burdens and restrictions to which, for objects of national policy and in which he has no separate or exclusive interest, the ship-owner is exposed, should be removed; or that protection should be extended and continued to him equivalent to the disqualification created by those burdens."

From the strong and confident language here employed, we have been induced to go over, very carefully, the whole of the evidence referred to, which extends to above 250 folio pages, and consists of answers to nearly 4000 questions; and although we cannot say that we have been rewarded by an amount of information at all corresponding to the quantity of letter-press through which we have had to wade (for even when the witnesses confine themselves to matters of fact, it is wonderful how much repetition, how much contradiction, and how much uncertainty or ignorance encumber their statements); we do not regret the time and trouble we have bestowed, seeing that the investigation has left us in no sort of doubt whatever as to any of the points about which we wished to make up our minds when we entered upon it. We perfectly agree with the Ship-Owners' Society, when they say, that "many of those important questions which have been most vehemently contested must now be considered as finally set at rest." We must, however, explain ourselves. We are far from intending to characterize this evidence as affording a complete view of the subject to which it relates, or as at all calculated by itself to bring the state of the shipping interest fully or fairly before the public. That is not its value. Its value lies in its being the *case* of the opponents of our present system of commercial policy, in so far as the shipping interest is concerned. It places before us the sum of what facts and reasonings those parties have to allege in support of the clamour they have so long kept up, and of the bold assertions in which they have been in the habit of dealing. It enables us to understand the true character of all that noise. We have here the rat-tattoo with which our ears have so long been stormed, resolved, as it were, into its component elements, and can tell how much of it is due to the weight of the stroke, and how much to the emptiness of the drum.

It was natural and almost unavoidable that the evidence collected by the Committee should present only a one-sided exposition of the shipping question. Owing to causes which we shall notice presently, it is unquestionable not only that ship-owners have not for some time past been making the large profits to which they were formerly accustomed, but that, at present, their business is generally in a somewhat depressed state. In these circumstances there is of course no want of persons ready and eager to come forward with complaints of declining trade and bad times. On the other hand, there is little or no inducement for those differently circumstanced, or holding opposite opinions, to obtrude themselves upon the public attention. They have no object to attain by pressing their views. The parties who find themselves not prospering under the existing state of things, or who think that they would prosper more under another system, have, or, which is the same thing, imagine they have, a strong interest in endeavouring to bring about a change. The appointment of the Committee was the very opportunity which they panted for. It might be said to have been appointed exclusively for them. When did it happen that the croakers of the hour did not flock up in troops whenever such a funnel was opened to them through which they might

vent their melodious murmurings into the public ear? Those who wanted no change had no motive for putting themselves to the same trouble and expense. It was not more natural for the others to offer themselves to the Committee than it was for them to stay at home. They had nothing to urge and nothing to demand.

But more than this. Even if the existence of the present system had been threatened, none of the ship-owners, as such, had any interest in defending it. The utmost that can be looked for from the most reasonable among this body of persons is, that they should not be hostile to the relaxation of the old Navigation law that has taken place, and that they should see that that relaxation was unavoidable. We can hardly expect that many of them should be ardent and fondly attached partizans of the change, or particularly eager to break a lance in defence of the new arrangements whenever they may be assailed. If the whole question were, which were best for the ship-owners, perhaps the old system would deserve to be preferred to the new. At any rate, if the public interest were to be altogether thrown out of view, there are some obvious considerations which, especially with large houses already established in the trade, might naturally enough go far to recommend a return to the former exclusive arrangements. To the parties in whose favour it is maintained, a monopoly is frequently (though not always) better than an open trade. The advantages, at least, are more conspicuous and more alluring. They obtrude themselves more distinctly upon the observation, and they look something more certain and substantial than the prospects of a business to be pursued amidst the struggles of general competition. The system of a monopoly is that to which the dealer, we may say, instinctively or constitutionally clings. There his heart and its affections naturally are. And no doubt if the present body of British ship-owners could secure to themselves the same amount of carriage to and from this country which they now divide with their foreign rivals, that would be a good thing for them, whatever it might be for the rest of us. We do not believe that by any alteration of the present law this benefit could be obtained for them, even at any sacrifice on the part of the nation generally; but we are not prepared to say that, every thing but their interest being disregarded, it might not be possible, by reverting to a system of protection, to make their profits larger than they at present are. Some of the witnesses propose that bounties should be granted on the import and export of goods in British vessels. We cannot expect that British ship-owners should very violently oppose such a project as this. On the contrary, we should think it somewhat surprising, that, if there was any chance of getting a law to that effect passed, they should not almost to a man be in favour of it. We need not therefore wonder that of the witnesses who presented themselves to be examined by the Committee, nearly all were the advocates of a change in the law. Out of twenty-five only two were not opposed to the continuance of the present system. And even these two gentlemen probably would not stand out very obstinately against a return to the old restrictive system, if the legislature should attempt to force it back upon them.

But the Ship-Owners' Society are greatly mistaken if they suppose that the public will accept of this single fact, of the unanimity, or all but unanimity, of these witnesses, as proving all the strange things (and some of them are not a little strange) which they have put into their Report. It proves, in fact, nothing at all. Nobody doubted, before this evidence was published, that there were a great many more than twenty three ship-owners who held the opinions here expressed, although few probably were aware how little the said believers had to allege in favour of their creed that could recommend it to public patronage. We suppose, however, that when the opinions in question are said to be "triumphantly vindicated" by the evidence, we must understand the phrase to mean merely that they were maintained by the greater number of the persons examined; for in any other sense the boast is really too absurd to be gravely uttered.

What the evidence does prove in this direction is of very insignificant amount. It proves that freights are much lower than they have been,—that a good many ships have not proved profitable speculations,—that the same ship is not now worth the same sum in money which it was worth a few years ago,—and that in some few ports the tonnage, and also the ship-building business, have declined. Beyond these simple facts, no one of which is either new to the public, or in any respect alarming or extraordinary, we are at a loss to refer to a single fragment of information contained in this evidence which has even the semblance of helping to bear out the doctrines or assertions of the Society's Report.

It is the favourite theory of the class of reasoners to which the members of the Society belong, to attribute the changed circumstances of the shipping interest to the operation of the treaties concluded some years ago with various foreign powers, under the act of parliament known as the Reciprocity of Duties Act. This act was passed in 1823; and in the beginning of the following year, arrangements were made in conformity with its provisions, either by treaty or by an order in council, with Prussia, Sweden, Denmark, the Netherlands, and the Hanse Towns. Russia, France, the South American States, and Austria, afterwards agreed to place their intercourse with this country on a similar footing.

The ancient national policy of England seems to have afforded no protection, by means of exclusive privileges, to the shipping of the country. It is true that, in the year 1381, (the 5th of Richard II.) an act of parliament was passed, ordering, in substance, "that for increasing the shipping of England, of late much diminished, none of the king's subjects shall hereafter ship any kind of merchandize, either outward or homeward, but only in ships of the king's subjects, on forfeiture of ships and merchandize, in which ships also, the greater part of the crews shall be the king's subjects*." But this regulation does not seem to have been long observed. Indeed, the very next year we find the important modification introduced, that, where no English ships were to be had, merchants might export or import in foreign ships. A few years after (1390) it was found necessary to repeat the enactment in a new statute (the 15th Richard II. ch. 6.), by which all English merchants are bound to freight only in English ships, and not in those of foreigners; *provided the owners of English ships take reasonable gains for the freight of the same*†. It is evident that a law of this loose description could have very little effect. Accordingly, Lord Bacon, in his Life of Henry VII., in noticing a law passed in the first year of that king (1485), prohibiting the importation of Gascon or Guienne wine, except by English, Irish, or Welshmen, and in their own shipping, remarks that "almost all the ancient statutes recite, by all means, to bring in all sorts of commodities, having for end cheapness, and not looking to the point of state concerning the naval power." But even this act of Henry VII., brought in by him from his "care," Bacon tells us, "to make his realm potent at sea as well as by land," did not go the length of prohibiting the employment of foreign shipping in all circumstances. The "stranger's ship" was only to be rejected if the merchant "might have sufficient freight in the same port in a denizen's ship."

From this act we may date the commencement of the policy which went to confine both the export and import of merchandize, except in certain peculiar circumstances, to English ships, or, in other words, to give to them exclusively nearly the whole carrying-trade of the country. This system, however, although established by the law, appears to have been found too oppressive to be practically adhered to. Towards the middle of the seventeenth century it had come to pass, we are told, that the conveyance of goods into the country took place chiefly in Dutch vessels. "It had been observed with concern," says Anderson, "that the merchants of England, for several years past, had usually freighted the Hollander's shipping for bringing home their own merchandize, because their freight was at a lower rate than that of English ships. The Dutch shipping were, therefore, made use of even for importing our own American products, whilst our own shipping lay rotting in our harbours; our mariners also, for want of employment at home, went into the service of the Hollanders." It was under these circumstances, and at the impulse of national resentment, as well as on considerations of policy, that the first Navigation Act was passed by the Long Parliament in 1651. "The said Rump Parliament of England," writes the author we have just quoted, in his strange style, in which the historic and the gossiping often contend so amusingly with each other, "now made another most excellent and memorable law for the advancement of our ship-

* See Anderson's "Origin of Commerce," i. 373. (Edit. of 1787.)

† Ibid. p. 384.

ping, navigation, and plantations." This is the famous statute, which, as afterwards confirmed (in 1660) by the 12th Charles II. ch. 18., is commonly known by the name of the Navigation Act. It provided generally, that no merchandize, either of Asia, Africa, or America, should be imported into England in any but English-built ships, navigated by an English commander, and manned to the extent of three-fourths of the crew by Englishmen; and that no European merchandize should be imported in foreign ships, except such as should be brought directly from the original place of its growth or manufacture.

We shall not stop to consider whether or not this system, at the time it was introduced, came recommended by its tendency to promote certain great national objects, which were sufficient to compensate for its manifest public disadvantages in a commercial point of view. It is alleged by its admirers, that by the encouragement which it gave to the extension of maritime enterprise, it had the effect of placing the naval power of the country on a far broader and firmer basis than it ever could otherwise have attained. Sir Josiah Child, writing in 1668, declares it as his opinion that, but for the Navigation Act, the English would not have been owners of one-half of the shipping or trade, nor have employed one-half of the seamen they then had. It certainly, at any rate, accomplished its more immediate object, that of dealing a heavy blow at the maritime prosperity of Holland. It does not follow, however, that it benefited the English to the same extent to which it injured their rivals. Its inconvenience, in occasioning scarcity and dearness of foreign commodities, was very soon severely felt. "The novelty of this Navigation Act," says Anderson, who treats with very lofty contempt any doubt as to the good policy of the measure, "and the ignorance of some traders, occasioned at first loud complaints, that, although our own people had not shipping enough to import from all parts whatever they wanted, they were, nevertheless, by this law, debarred receiving due supplies of merchandize from other nations, who only could, and till then did, import them." We are told in Roger Coke's Discourse of Trade, published in 1670, that in two years after the passing of the Act of 1651, the building of ships in England became one-third dearer than before; "at which," remarks Anderson, with great scorn, "none but such a head as his would have wondered." Coke goes on to state, that at the same time seamen's wages rose so high, that the Muscovy and Greenland trades were wholly lost in consequence.

The system thus established, however, continued to be steadily acted upon down to our own day. But, besides the exclusive right of import and export, thus to a great extent granted to British shipping, the end aimed at was further attempted to be secured by a system of discriminating duties, according to which, even the commodities that were allowed to be imported in foreign vessels, were more highly taxed, when so imported, than when they were brought in those of this country. From a notion, also, that some descriptions of foreign commerce were as much to be dreaded and shunned, from their tendency to diminish private and public wealth, as others were to be sought after on the opposite account, the duties upon the importation of the same commodities were made to vary according to the country from which the commodities came, in such a manner as to have, in many instances, the effect of a complete prohibition upon the introduction of the produce of certain countries. If this had been done upon considerations having reference to the national power or safety, the proceeding, although probably grounded in all cases upon mistaken views, might have been more intelligible. We could understand, for instance, though we might not approve, a line of public policy founded upon the principle of restricting, as much as possible, the general intercourse of the people of this kingdom with those of France, one of the foreign countries with regard to which this commercial jealousy was always most strongly evidenced. But the most curious part of the absurdity was, that the objection was taken simply to the interchange of commodities between the two countries. The commerce with France, it was actually believed, could only entail a large annual pecuniary loss upon this kingdom. On the peace of Utrecht, in 1713, it was proposed that a commercial treaty should be concluded between France and England, the leading provision of which was, that as to all duties, impositions, or customs whatsoever, concerning persons, goods, merchandize, ships, freights, seamen, navigation, and commerce, each country should be placed by the other on the footing of the most favoured foreign nation; that is to say, that the duties imposed by each upon the productions of the other, should not exceed those imposed upon the same productions imported from any other country. But when the bill for carrying this treaty into effect was introduced in the House of Commons, it threw the whole country into an uproar. The motion for bringing it in, on the 14th of May, was only carried after a debate which lasted till ten o'clock the next morning. The opposition, however, on this occasion, although fierce and obstinate, was not numerically strong. But the excitement that raged out of doors eventually succeeded in drawing over so many members to the popular side, that after the bill had been carried forward several stages, it was eventually, on the 18th of June, thrown out by a majority of 194 to 185. The chief public organ by which the opposition to the measure was carried on, was a paper which appeared weekly, under the title of "The British Merchant, or Commerce Preserved." It was understood to be the production of an association of merchants; and it advocated the principles of the existing system to their utmost extent. Its authors attempted to make out that, in such a commerce between this country and France as the treaty proposed, England would incur an annual loss not much short of a million and a half sterling. This draining of our resources was to arise, to use the words of Anderson, who thinks the calculation a very able and conclusive one, "not only from the vast consumption of their alluring wines and brandies, but of numberless other articles in the manufactures of silk, lace, linen, needlework, and paper, besides fruits," &c. A writer, in his views on many other subjects, as well as on this, far a-head of his age, the celebrated Daniel Defoe, attempted to meet the mischievous nonsense of the "British Merchant," by a counter weekly publication, which he entitled "Mercator, or Commerce Retrieved." But the torrent was too furious to be stemmed by the efforts of sober reason. Anderson designates Defoe, one of the ablest and honestest political writers this country ever produced, as a tool whom the ministers found to justify their rash and wild conduct. "It was so apparent," he goes on to say, "that our trade to France had ever been a ruinous one: and that, if the British Parliament should consent to reduce the high duties and take off the prohibitions, so prudently laid on French commodities, it would effectually ruin the very best branches of our commerce, and would thereby deprive many hundred thousand manufacturers of their subsistence (which was also supported by petitions from many parts of the kingdom); that, although a great majority of that House of Commons was, in other respects, closely attached to the ministry, the bill was rejected by a majority of nine voices, after the most eminent merchants had been heard at the bar of that House, to the great joy of the whole trading part of the nation, and of all other impartial people."

The restrictive and prohibitory policy, thus successfully supported in 1713, subsisted in full vigour for more than a century longer. The first great deviation from the system was effected by the treaty concluded in 1815 with the United States of America, which, soon after the establishment of their independence, had followed our example by enacting a navigation law copied from that of the mother-country. By the treaty with America, a great deal more was conceded than had been proposed by the arrangement with France at the peace of Utrecht; for it was stipulated that, in the intercourse between the two countries, the ships of each should enjoy precisely equal privileges. It has been common to speak of Mr. (now Lord Wallace), and the late Mr. Huskisson, as having led the way in the abandonment of the old Navigation Law; but the treaty with America was concluded in the time of Lord Bexley (then Mr. Vansittart). It seems to have produced no injurious consequences which were complained of from any quarter. Nor is it even now the fashion to denounce this particular measure as having done any mischief. We do not recollect that, in the course of the evidence before us, any one of the ship-owners refer to it as having had anything to do with the alleged depression of his branch of trade. It is, as if by common consent, omitted or forgotten in his list of grievances by each.

Meanwhile, the progress both of opinions and of events was forcing on further relaxations of the old exclusive system. On the 5th of May, 1820, Mr. Baring laid before the House of Commons the memorable petition from all

the leading mercantile houses in the metropolis, in which the principles, that "freedom from restraint is calculated to give the utmost extension to foreign trade, and the best direction to the capital and industry of the country;" and that "the maxim of buying in the cheapest market, and selling in the dearest, which regulates every merchant, is strictly applicable as the best rule for the trade of the whole nation," were avowed and urged upon the legislature. In the course of the following year steps were taken to carry these doctrines into partial application by a reduction of the duties on Baltic timber, and also by the mitigation to a large extent of the provisions of the Old Navigation Law. The latter object was effected by means of five bills, introduced by Mr. Wallace, which were passed in the course of the following session. These measures gave rise to no complaints of ruin or injury to trade, any more than the treaty with America had done some years before.

But circumstances now arose which compelled a still further advance in the same direction. Up to this time, foreign countries had in general submitted to the heavy duties which we had long imposed upon the entrance of their vessels into our ports, for the protection of our own shipping, without retaliating by the adoption of a similar policy towards us. The state of Europe for a long period, during which our naval supremacy had thrown into our hands the carrying-trade of the world upon our own terms, had of course put it out of the question for other nations to make any such attempt for many years past. But, whatever may have been the reasons for the forbearance we had experienced, it now clearly appeared that it was to be continued no longer. In 1823, Prussia not only gave us notice that, if we did not change our system, she would meet it in the way that has been mentioned; but proceeded to carry her threat into execution by the actual imposition of heavy discriminating duties upon the entry of our tonnage into her harbours. These are the facts, never to be forgotten in considering this question, which made the abandonment of the whole principle of the Navigation Act a matter of absolute necessity on the part of this country. That innovation was not the voluntary experiment of Mr. Huskisson. It was a movement which we were compelled to make, unless we intended to lose our foreign trade altogether. No doubt whatever can be entertained that, if we had not taken the new position we did, the example of Prussia would have been quickly followed by every other state with which we had any commercial intercourse. What would our ship-owners have said to this state of things? What course did they take on the mere apprehension that it might possibly arrive? Why, they joined the other interests connected with the foreign trade of the country, in urging the government to avert it by the very measures against which they now cry out as having brought them to ruin. They gave Mr. Huskisson no rest until he had effected the removal of the duties imposed upon British ships on entering the ports of Prussia, by an arrangement with that power on the principle of reciprocity. And they were very well pleased that a convention upon the same principle should be concluded with every other state that would agree to the terms.

It is a curious fact, that on a former occasion, when this country had attempted the establishment of a system similar to that introduced by the Navigation Act, we were driven from the ground we had taken up precisely in the same manner as we lately were. An act of parliament passed in the first year of Queen Elizabeth (1558), repealing the laws which then prohibited the importation and exportation of merchandize in any but English ships, proceeds upon the following recital:—"That since the making of the said statutes, other sovereign princes, finding themselves aggrieved with the said Acts, as thinking that the same were made to the hurt and prejudice of their country and navy, *have made like penal laws against such as should ship out of their countries, in any other vessels than of their several countries and dominions; by reason whereof there hath not only grown great displeasure betwixt the foreign princes and kings of this realm, but also the merchants have been sore grieved and endamaged.*"

But we need not go so far back for an example of the disposition of the persons interested in our trade and shipping to prefer an intercourse with other countries upon equal terms to one clogged with discriminating duties in the foreign port. Extraordinary as it may seem, the Ship-Owners' Society themselves, in their Report for 1833, now before us, have given a prominent place among their subjects of complaint to the state of the export trade from this country to Spain, "in which," they say, "an advantage approaching to monopoly is enjoyed by Spanish shipping, in consequence of the heavy discriminating duties imposed on importations into Spain in British ships." "They have not yet," they continue, "been enabled to procure a redress of the grievance, but cannot believe that the British government will much longer permit so injurious a system to continue without recourse to those measures of protective retaliation which are provided for by the Reciprocity of Duties Act; of the alleged advantages of which act the Spanish government has hitherto refused to avail itself." What stronger testimony to the value of the Reciprocity of Duties Act can we desire than this? But if a treaty, founded upon that act with Spain would be advantageous, how is it possible that the shipping interest can have been ruined by the Reciprocity Treaties with Denmark, and Sweden, and the Netherlands, and Prussia?

Let us now, however, proceed to the facts or allegations by which this ruin is attempted to be made out. The evidence taken before the Committee of the House of Commons exhibits various accounts of ships and shipping concerns which appear to have been unsuccessful speculations. Without contesting the correctness of these statements, or even entering into any examination of their items, we have merely to remark that they cannot be considered as proving anything. Nobody doubts that such cases of bad luck may easily be found, and that they have occurred in much greater numbers than would appear from the show of them got up before the Committee. They happen in all businesses; but the shipping business, exposed as it is to uncertainties which give it more the nature of a lottery than of an ordinary investment of capital, may be expected to be peculiarly rich in great losses as well as in great gains. Some of the very accounts to which we refer, display this unsteady and fluctuating character of maritime adventure, in a manner sufficiently striking. Take, for instance, the account of the annual profits from 1816 to 1831 inclusive, on the ship Percival, of South Shields, given in by Mr. Anderson (Report, p. 452). We find the following sums (neglecting fractional parts of a pound) set against different years: 1817, 736*l.*: 1818, 1233*l.*: 1819, 558*l.*: 1820, 304*l.*: 1821, 117*l.*; 1822, 164*l.*; 1823, 664*l.*: 1828, 63*l.*; 1831, 420*l.* Numerous examples of returns equally irregular in amount might be quoted. What can be looked for in such a business except many instances both of fortunes made and fortunes lost, and, in the case of almost every house engaged in it, books violently variegated with bright and gloomy entries. "If you wished," the Committee asked Mr. Aiken of Liverpool, "to give either a flattering account of the shipping, or the reverse, you would find it very easy to put in an account showing either one or the other?" "Precisely," replied the witness; "I should only have to turn to my ledger to furnish either, or both."

It is true that many of the witnesses have no scruple in affirming that the accounts of particular ships which they hand in are only fair samples of the state of things which universally prevails. But as to that matter we must take leave to say that we have much better evidence than either the cases or the assertions of any individuals. We have facts not picked up by prejudice or passion, or to serve a purpose, from a little neighbourhood, but impartially collected from the whole kingdom, and exhibiting a representation of the entire subject, in which there is as little room for error as if it had been taken off by a process like that of the printing-press. We will enumerate a few of these general facts, properly so called, as we find them extracted from official documents in the two admirable volumes of tabular statistics lately published by the Board of Trade.

The following is an account of the number and tonnage of vessels that have been built and registered every year from 1820 to 1832 inclusive, in the British empire:—

Ships.	Tons.	Ships.	Tons.
1820.. 883..	84,582	1827..1440..	163,946
1821.. 872..	74,847	1828..1321..	140,913
1822.. 780..	67,144	1829..1150..	116,872
1823.. 817..	86,028	1830..1117..	110,130
1824..1179..	113,741	1831..1136..	119,997
1825..1539..	204,924	1832.. 980..	118,385*
1826..1719..	205,648		

* In the Table (see *Tables of Revenue, &c.* Part II., p. 49.) the numbers are 759 ships and 92,915 tons; but the ships built in the plantations have been omitted, by mistake, in the account.

This account certainly does not indicate anything like the universal ruin of the shipping interest. More especially it does not indicate that any such ruin commenced from the date of the Reciprocity Treaties. Since that change of policy the building of new ships in this country, if it has not been going on literally faster and faster every year, has at least taken place annually to a much greater extent than it ever had done before. In comparing, for instance, 1822 with 1832, we find the amount of new tonnage in the latter year not much short of double its amount in the former.

The Society, indeed, affirm that the production of new ships is proved by the evidence to be by no means inconsistent with an apparently interminable depression of the shipping trade. This is one of those facts which they well describe as "appearing difficult to reconcile;" but we cannot agree with them that it is one upon which any "valuable light," or any light at all, has been thrown by the witnesses. The truth is, that if we were to go upon the personal experience of those of the witnesses who complain of the depressed state of the trade, we should conclude that the building of ships was not going on. With two or three exceptions, all of them state that they have not themselves built or purchased any vessels lately; but, on the contrary, have been diminishing their tonnage. In the few cases in which it has been otherwise, the anomaly has taken place under circumstances which the individual is anxious to explain were peculiar and transitory. Now, this is a most important fact. It proves that the persons, whose lamentations were poured out in such abundance before the committee, do not afford in their own cases a fair representation of the general condition of the trade. The houses to which many of them belong, may be both opulent and of the highest respectability; but, from one cause or another, it is evident that their transactions do not in general exhibit the average activity with which the business of ship-building is prosecuted throughout the country. Some of them may be principally connected with branches of the business that are at present carried on with the least success, or with ports which it has partially left for other places;—some may have made their fortunes, and are gradually contracting their operations in the intention to retire. But, whatever may be the circumstances from which it may have arisen, the fact is, that *they* have in general been diminishing their tonnage; while, it is impossible to deny that, by the ship-owners of the kingdom taken as a body, new vessels have been built, and continue to be built in great numbers. The inference is inevitable, that their particular cases and the general case do not correspond.

A great depreciation has, no doubt, taken place in the value of ships. The same description of vessel is not now worth the same money which it was worth some years ago. It is impossible that this effect should not have taken place: but it has not been produced by the Reciprocity Treaties. Ships can now be built much cheaper than formerly; and that is a sufficient reason why they should be bought cheaper. The materials of which they are constructed have all fallen in price. Wood is cheaper, iron is much cheaper, so is copper, and hemp has fallen to much less than half the price it bore a few years ago. In these circumstances, the money value of all shipping property has necessarily suffered a corresponding decline. The shipping interest, while benefiting to a large extent by this fall of prices in the building and purchase of new vessels, must, of course, have sustained some loss on their previously invested capital. An individual possessed of an amount of tonnage which, in 1815, would have sold for 20,000*l.*, may find now that he cannot get more than 15,000*l.* for it. This depreciation of property must, no doubt, have produced a good deal of distress; but it is not imputable either to the Reciprocity Treaties, or to any other causes over which legislative arrangements could have exercised any control*. The same thing has taken place in regard to various other descriptions of property which nobody has ever thought of describing as having been affected by laws or treaties. An estate in land is not of the same value now that it was some years ago; estates in houses have fallen immensely in value. Holders of these descriptions of property have probably quite as much reason to complain of changed times as the ship-owners; unless a house that floats and a house that stands are not subject to the same laws of political economy, by which the market value of all capital is regulated.

We believe that this circumstance, and, perhaps, some overtrading in 1824 and 1825, will sufficiently account for any real depression under which the shipping interest may be at present suffering. There is no doubt that freights have fallen, as they could not but do when the cost of ship-building fell. They have fallen as rents have fallen. A ship is now not only more cheaply built and fitted out for sea than she was some years ago, but she is also navigated at less expense. The wages of the seamen are reduced; the price of provisions is reduced. Another circumstance very materially affecting freights is, that more voyages are made in the same time. It would also appear from the statements of some of the witnesses, that in navigation, as in other arts, improvements have taken place which have enabled the old work to be done with fewer hands than formerly. It is impossible, with all this, that freights should not have come down. The work can be done with less expenditure of labour, capital, and time, and the charge for it is reduced.

Beyond the grumbling of individuals, we find no evidence in the Report, that freights, although lower than they have been, are not such as to yield a fair profit. Many of the witnesses assert, indeed, that their returns are inadequate; but it is impossible, with the facts that are before our eyes, to believe that this is generally the case. We may appeal to the admissions of many of these complaining parties themselves. One of them, Mr. R. A. Gray, of the house of Melhuish, Gray, and Co., merchants and ship-owners, when asked, "Upon the whole, should you say that you are getting a tolerable living profit upon the shipping you are employing?" replies, "Certainly: individually, we are deriving a profit from our property embarked in ships; but, it must be understood, that we lay ourselves out to employ our vessels, by engaging occasionally in speculations for the purpose; and, although the freights may be remunerative, yet sometimes we experience a loss in our speculations to give employment to our ships: but, upon the whole, we have nothing to complain of ourselves." This is a reluctant admission, but it is not on that account the less valuable. The following are some other answers from persons holding similar opinions, which go indirectly to prove the same thing. Examination of Mr. H. Turner, ship-owner, Sunderland. "(6648.) Has there been much ship-building going on in Sunderland lately?—A great deal. (6649.) Within the last five or six years has ship-building in Sunderland increased a good deal?—It has; there are very few built upon contract; they are mostly built for the market upon speculation. (6651.) But they find purchasers when they are built?—They endeavour to do so; many of them lay a good while before they are sold; and many of them are sold under very disadvantageous circumstances, from necessity. (6652.) But still they go on building them?—Yes; to a great extent. (6653.) And of course they are bought at last?—They are, certainly; we, perhaps, have vessels lying six months after they are launched before they are sold. (6654.) Do you think that people would go on building them if they were constantly losing by them?—I would not do it myself. (6655.) Have you known instances of it?—I have known many instances of it; it was the occasion of a very heavy failure with us six months ago; a gentleman goes on building and building till at last he can go on no longer, and he fails, and he pays 2*s.* or 2*s.* 6*d.* in the pound. (6656.) And somebody else comes and takes his place?—Somebody else steps into his shoes. (6747.) Has not ship-building been going on increasing every year since the peace?—It has. (6717.) Since the peace have there not been many new ship-building establishments?—A great many." Examination of Mr. J. Young, of the house of Cuthbert, Young, and Sons, ship-owners and ship-builders, South Shields. (" 7782.) Have you engaged in shipping more largely yourself the last few years?—Yes. (7784.

* The reduction in the price of hemp, indeed, has been partly occasioned by a repeal of duties to which the article was formerly subject. But it cannot be pretended, for all that, and it never has been pretended, that this repeal of duties was not a boon to the shipping interest. The effect which it has had in bringing down the value of shipping property, is of the same nature with the effect which would be produced by the removal of the tax on paper, for instance, on the value of not only of the stocks of the dealers in that commodity, but of the property of all persons, such as printers and publishers, having large quantities of it in their possession. This effect makes the repeal, even of an objectionable tax, in many cases a thing not to be attempted without much circumspection. It ought always to be thought of when a new tax is imposed.

What increase may you have made within the last five or six years?—I should think we have added five or six sail of ships. (7785.) Is it your opinion that the business is a tolerably profitable one?—I am sorry to say it is not at present. I have made a good deal of money with shipping, but it is very difficult to make it now. (7808.) You say that you are obliged to carry on the business of ship building because you have engaged in it; what sacrifice would you be obliged to make to get out of it?—The premises, twenty years ago, cost 20,000*l.*, and we bought the greatest portion of them at the rate of 14,000*l.*, and we could not dispose of them at the present time; there are so many docks in the river that cannot be let: these are at present one-half unoccupied. (7809.) Have they not paid you over and over again?—I decline answering that question.' Examination of Mr. T. Brown ship-owner and ship-builder, on the Tyne. ("8550.) Have many people engaged in shipping in the last five or six years at Newcastle?—There has been an increase in parties engaging in ships. (8551.) Has there been any indisposition to embark fresh capital in shipping?—I think not, on the whole. (8552.) Have you observed that fresh parties have been inclined to follow that business?—I have observed that a great many parties have entered into shipping that were not before at all connected with it, within the last four or five years. (8553.) Do you think they have had reason to repent of it?—I consider they have not had reason to repent of it, if their shipping property had not suffered a depreciation beyond the fair depreciation of wear and tear; for instance, this year we get ships built cheaper than we did last year, and, therefore, ships are so much more reduced in value generally. (8555.) With the exception of that depreciation, you think they have no reason to complain?—I think it has paid a moderate rate of interest within the period of four or five years. (8579.) Have not you had many ships built in the Tyne by parties that have failed? There is only one house, to my knowledge, that failed, and who built, perhaps, half a dozen: but they were not very long in the business. In fact, the principal partner was formerly my clerk, and, his being without capital, other people advanced the money for him to build the ships for them, but, in consequence, obtained them at reduced prices."

But above all, there is the remarkable fact, acknowledged by nearly every witness who is examined as to the point, that the entire amount of the shipping of the country is in full employment. This fact, we submit, is of itself a sufficient answer to all the clamour that has been raised. "It appears to me," says Mr. R. Carter, ship-broker, speaking of the Baltic and Canadian trades (5829), "that the shipping is generally employed." Mr. John Nichols, of the firm of Nichols, Son, and Green, ship owners and brokers, is asked (5960), "Notwithstanding you get low freights, is not the shipping as fully employed now as at any period you have known it in the Mediterranean trade?" to which he answers, "We can load ships as frequently backwards and forwards; we have not so much in the port of London as we used to have, because a great deal of it has gone to Liverpool; but, taking the whole kingdom, the ships go backwards and forwards as frequently." Mr. J. Astle, ship-owner and ship broker, of Dublin, says (6862), "We do not complain of want of employment. There is no surplus quantity of shipping as far as regards ourselves, but it is a want of profit. (6863.) As far as regards Ireland (in the coasting trade) the sailing tonnage has increased, notwithstanding the steam. (6921.) There has not for the last four or five years, except in some very large ships, been a want of employment." Mr. E. Gibson, ship-owner and ship builder at Hull, on being asked by the Committee (7552), "Is it your opinion that there is an excess of tonnage in the British market beyond the actual capability of employment of that tonnage?" replies, "No, they all find employment."

It is perfectly plain, then, that the low rate of freights cannot be the effect of the foreign competition introduced by the Reciprocity Treaties. The rate of freight is what it is, simply because the persons who invest their capital in ships are contented that it should be no higher. Were foreign competition altogether excluded, and if it were possible in these circumstances (which it certainly is not) that the export and import of commodities should continue as busy as it now is, the only effect would be that domestic competition would supply the deficiency. It appears that the present number of ships is necessary; and it would, therefore, be kept up. In other words, the demand and the supply would continue the same as they now are. But, that being the case, the rate of freight would most certainly continue the same too, whatever the Ship Owners' Society may suppose. These are the two factors; this is the result. To maintain another opinion is to take up the notion of the person, who, when asked how much eleven times twelve made, replied, after a pause of consideration, that it depended upon circumstances.

But let us see if there be even any *apparent* reason in the unquestioned facts of the case for attributing the fall of freights, as the Ship Owners' Society do, to the foreign competition created by the Reciprocity Treaties. This competition, be it remembered in the first place, is only partial. The Society, and the witnesses examined before the Committee, complain that, under the present state of the law, the ship-owner receives no compensation for certain burthens and restrictions to which he is subjected, with a view to objects of national policy in which he has no exclusive interest. He is prohibited, they say, from building his ship abroad, or navigating it with a crew of foreigners. But this is altogether a mis-statement. There is nothing to prevent any person from building a ship wherever he pleases, and manning it with the natives of any country under heaven. The law merely says that, in that case, it shall not be accounted a British ship. If British ships, as the Society and their witnesses would have us believe, had no peculiar privileges attached to them, this non acknowledgment would be of no consequence. But, the fact is, that they are invested with most important privileges: and these constitute the compensation, and the sufficient compensation, for the restrictions under which they are laid. British ships have the exclusive enjoyment of all the coasting trade, and of all the trade between the mother-country and the colonies. These extensive monopolies remain untouched by any of the Reciprocity Treaties. Nay, they have of late been rendered much more valuable than ever by the addition within the last twenty years, and still more completely within the last few months, of the trade with India, from which the general body of the ship owners used formerly to be entirely excluded. The Society profess to be anxious for a system perfectly free and unartificial throughout. "If," says Mr. Powles, in his evidence before the Committee of the House of Commons, "you will let the British shipbuilder go over to Norway, take with him a few of his best workmen, and build his ships in that country, employing the people of that country, getting the timber of the country, and living upon their cheap provisions, and be exempt from the burthens which press upon him here: and if you will let the British ship owner navigate that ship with foreign seamen then you will hear no complaints of the want of protection on the part of the British ship owner." Very well: all this Mr. Powles is at perfect liberty to do now. His ship will only in that case be accounted, what it will in reality be, a foreign, and not a British ship. If it is to be admitted to a share in the trade between the different ports of this empire, so must all other foreign vessels. We, the public, will then see who will serve us cheapest in conveying commodities, not only to and from the Baltic, but to and from the Mediterranean as well, and between this island and both the East and the West Indies: nay, between London and Newcastle, between Liverpool and Dublin; in short, wherever there is occasion to traverse the sea. If there is to be no restriction, and no protection, the British ship-owner must be put on the same footing with the British stage-coach owner: the water must be as free to all as the land. Is this what the ship-owners would have? We cannot tell from the evidence before us: for we do not find that the "light" which it throws on certain subjects is by any means so "valuable" as it has appeared to the Society. But Mr. Thomas Young being asked, after a reference to this project of the removal of all restrictions, "Must not the ship-owner in this case give up all the protection he possesses in the coasting and colonial trade?" replies, "*I decline answering that question.*" Another witness, we recollect, on the admission of foreigners to share in these trades being mentioned, expresses himself as if he conceived the thing to be an unheard of absurdity—a practice that never had been and never could be tolerated by any nation. But we have already seen that, down to the passing of the Navigation Act, in the middle of the seventeenth century, Dutch ships were wont to be employed in preference to English in the trade between this country and its North American

colonies. And, what may seem still more extraordinary, foreign ships were freely employed in the coal trade, and in the inland and coasting trade generally, for a considerable time after this. It was not till the year 1685, the first of James II., that a discriminating duty was laid upon foreign tonnage thus employed, with the object of protecting our own ship-owners.

One of the witnesses, Mr. H. Tanner, of Sunderland, having indulged in some reasoning on the operation of the Reciprocity Treaties, in which he speaks of them as having thrown a number of British ships, that used to be engaged in the trade to Memel and the Baltic, out of employment, is asked by the Committee, (6628), "Do you mean to say there are fewer British ships employed in the Prussian trade than there were?" He answers, "No question of it." Now, what is the fact? The following is a statement, extracted from the tables published by the Board of Trade, of the number and tonnage of the British shipping employed in the trade between the United Kingdom and Prussia in each year from 1820 to 1832 inclusive:—

	Inwards.		Outwards.	
	Ships	Tonnage	Ships.	Tonnage.
1820	526	87,451	231	33,971
1821	452	79,590	195	31,847
1822	539	102,847	228	41,247
1823	413	81,202	138	26,427
1824	483	94,664	251	50,143
1825	981	189,214	453	89,555
1826	653	119,060	306	57,334
1827	819	150,718	431	80,322
1828	782	133,753	389	66,738
1829	741	125,918	426	74,639
1830	666	102,758	341	50,931
1831	487	83,908	303	50,792
1832	401	62,079	265	41,027

It appears from this statement that, with the exception of 1831 and 1832, there is not one of the nine years during which the Reciprocity Treaty with Prussia has been in force, in which a much larger quantity of British shipping has not been engaged in the trade with that country than is recorded to have been so engaged in the busiest year of the former system. Whatever may be the causes of the falling off during the last two years, to attribute it to the treaty would be beyond even the famous hypothesis of the fall of Tenterden steeple having occasioned the Goodwin Sands. Not only during the greater part of the time that the alleged cause is present, the effect does not follow, but its very opposite takes place.

Without examining what the cause might really be, other facts go to show that it was not one having any peculiar or exclusive bearing upon British shipping. The foreign tonnage employed in this trade suffered at the same time a still greater diminution than the British. In 1830 the foreign shipping employed in the trade inwards and outwards, between this country and Prussia, amounted to 212,779 tons. In 1831, it had fallen to 139,263 tons; and in 1832, it was still only 159,439 tons. It is manifest, therefore, that we have here the operation of some circumstances, whatever they might be, affecting the trade generally. The uneasy political state of a great part of Europe after the Revolution in Paris, and the partial suspension of commercial speculation in this country during the agitation of the Reform question, will sufficiently account for the temporary decline that appears to have taken place.

But let now take a more general view of the trade with those countries, with which our intercourse is usually said to have been most affected by the Reciprocity Treaties. The following is an account of the number of British ships that have passed the Sound each year from 1820 to 1832 inclusive:—

1820	3,597	1827	5,103
1821	2,819	1828	4,431
1822	3,099	1829	4,805
1823	3,016	1830	4,274
1824	3,502	1831	4,772
1825	5,156	1832	3,330
1826	3,739		

Here, again, it will be observed that the annual numbers since 1824, with the exception only of that for 1832, are uniformly higher than the highest of previous years. And even in 1832 the number was higher than for any year before 1824, except 1820. Upon the number of ships of all countries which have passed the Sound, there has been a falling off ever since 1829; the numbers having been 13,486 in that year, 13,212 in 1830, 12,946 in 1831, and 12,202 in 1832.

The following is an account of the number and tonnage of the British shipping employed in the trade between the United Kingdom and all parts of the world, from 1820 to 1832 inclusive:—

	Inwards.		Outwards.	
	Ships.	Tons	Ships	Tons.
1820	11,754	1,667,930*	10,102	1,519,508
1821	10,810	1,599,274	9,797	1,488,644
1822	11,087	1,664,486	10,023	1,539,260
1823	11,271	1,740,859	9,666	1,546,976
1824	11,733	1,797,320	10,157	1,657,533
1825	13,516	2,144,598	10,848	1,793,994
1826	12,473	1,950,630	10,844	1,737,125
1827	13,133	2,087,898	11,481	1,887,502
1828	13,435	2,094,257†	12,245	2,006,133
1829	13,659	2,184,585	12,636	2,063,179
1830	13,548	2,180,042	12,747	2,102,147
1831	14,488	2,367,322	13,791	2,300,731
1832	13,372	2,185,980	13,292	2,229,269

Now, after glancing over this table, what is any one to think—what it it possible that we should think—of the outcry raised by the ship-owners as to the ruin of their business, brought about by the system of reciprocity? Why, take the year of most busy and flourishing trade before the system came into operation, which is the year 1823, and the whole amount of tonnage, inwards and outwards, is little more than three millions and a quarter; in 1831, the eighth year of the system, it is not much less than four millions and three quarters. The actual increase is about 42 per cent. As to the very insignificant falling off in 1832, let it have been occasioned how it may, it is at least perfectly clear that it is not to be attributed to the competition of foreigners. The whole foreign shipping employed in the trade with the United Kingdom fell that year, as compared with the preceding year, from 1,770,656 tons to 1,291,202. This was a fall of above 27 per cent.; while that which took place on the British shipping employed was little more than 5 per cent.

This table, by the by, we may here remark, puts beyond question another fact, admitted by most of the witnesses, but denied by one or two of them, namely, that each ship now makes a greater number of voyages than it used to do. The entire quantity of our shipping has not increased within the period included in the account, and yet we see how much more work is now done by it. In other words, it is better employed than it used to be, and, if the freights are lower, there are more of them. This, at least, is the case in so far as all that range of trade is concerned with which the Reciprocity Treaties have anything to do. There has, no doubt, been a diminution of the British carrying-trade between foreign ports, to a great extent since the war, and also to some extent within the last few years. But the Reciprocity Treaties cannot be blamed for this. It is the consequence of the passage of the sea being now equally free to the ships of all nations, and of the natural growth of the marine of different foreign states in a time of peace. One thing which has cut us out of a good deal of the carrying-trade between the Mediterranean and foreign ports, which we were wont to monopolize, is the recent extirpation of the Algerines. So long as these barbarians existed, British ships were the only vessels that could navigate that sea in safety; so that the pirates might really be considered as guardians of our monopoly.

After the vapouring, in the Society's Report, about the triumphant style in which the evidence vindicates the opinions of those who have been in the habit of denouncing the reciprocity system as having been the ruin of British shipping, it is somewhat disappointing to recur to the actual examinations of the witnesses. In the first place, many of them, upon being pressed, are obliged to admit that, after all, the state of things of which they complain cannot be wholly attributed to the one cause which has been so commonly assigned. "I would not desire to be understood," says Mr. Powles (6469), "as stating that the whole of the

* These numbers are given in another place (*Tables*, part I. p. 54) 11,285 and 1,608,060. The statement given in the text is extracted from the more detailed account in pp. 53—64.

† At p. 54, these numbers are given 13,436 and 2,094,357.

depression is to be charged on the Reciprocity Acts, because it was clear to all persons acquainted with shipping, that the transition from war to peace would subject the shipping interest to a very severe trial." "To what," Mr. Astle is asked (6861), "do you attribute that, (the depression) in those trades in which we have not the competition with foreigners, which you have described to exist in the Baltic trade?" To which he answers, "I account for it partly by the introduction of steam navigation; the system of towing ships in and out of port has created stronger competition among ourselves; and then the overplus of tonnage created by making two voyages instead of one." This last allegation we do not understand. Mr. Astle afterwards adds, "I mean to say, that our ships, in consequence of the reduced rate of profit, are compelled to make two voyages instead of one." But how this can create an overplus of tonnage puzzles us. Besides, we should think that, *pro tanto*, it was anything rather than a hardship upon the ship-owner that his vessel should now make two trips where she used to make but one. Is not this precisely the same case with that of any other dealer having now two transactions where he formerly had only one? The trouble may be a little greater; but that is not usually so violently complained of. If there be any profit at all, the double voyage must be an advantage. If the business is carried on at a loss, indeed, as many of the witnesses say, the less sailing the better. But there is nothing, we suppose, to compel Mr. Astle to make the two voyages unless he pleases.

The same depression which is complained of at the present moment was also alleged to exist both in 1816 and in 1822. Some of the witnesses, before they are set right, are very much inclined to attribute the low freights of these two former periods also to the Reciprocity Treaties. When they have been obliged to assign a different cause for what took place before the Reciprocity Act passed, they still will not admit that any other than that act can have occasioned what is taking place now. Thus, Mr. H. Nelson is asked (6553), "Seeing that three distinct depressions have taken place in the shipping interest since the peace, and knowing that the Reciprocity Acts only came into operation in 1824, is it not probable that those three depressions have been connected with other circumstances foreign to the influence of the Reciprocity Acts?" His answer is, "Those before, certainly." He is further asked, "Do not you conceive it possible that there is some general cause, over-riding all other causes, which has been in operation at those three distinct periods?" To which he replies, "I think it might be over-trading *in the preceding years*." Some of the witnesses hold that the restoration of the discriminating duties would be insufficient to bring back the former prosperity; others are of opinion that it would have that effect. Among the latter is Mr. Barry, of Whitby. This gentleman is asked by the Committee, "You stated that you think the shipping interest would be re-established by a system of discriminating duties upon foreign ships in favour of British shipping. Supposing the foreign nations were to adopt a system of equivalent discriminating duties upon their side, to the disadvantage of British shipping, should we then derive the advantage you suppose?" He answers, "Yes, I think so." But when further asked, "Will you state how?" "I beg," says the witness, "to decline answering that question."

Hitherto our object has been to convict the opponents of the Reciprocity Treaties out of their own mouths, and we have therefore quoted none of the evidence except what comes from themselves. But we would strongly recommend to attention the examinations of the only two witnesses on the other side who came before the Committee—Mr. J. Aiken, of Liverpool, and Mr. T. Hedley, of Newcastle. Their statements furnish a complete refutation of many of the notions entertained by the other witnesses. Mr. Aiken says, "I have found my vessels doing well of late, and I expect soon that they will do better. In one instance the losses upon my ship amounted to a total loss; in other instances I have made at the rate of as much as 30 and 40 per cent. per annum upon my ship. We have extensive capitalists in Liverpool that have been ship-builders all their lives, and who continue to build as much as ever; and I am satisfied, from the character of the parties, that they would not do it if they did not find it answer." He also states, that although the freights in the Brazil trade are lower of late, even here British vessels of the first class are preferred, and, in general, compete successfully with foreign shipping; that he has found shipping a tolerably fair business upon the whole, or he would not have followed it up; that although in many instances his ships have not yielded him 20 per cent. per annum, yet, generally speaking, they have; and that his profits upon the whole have been such as to induce him to go on increasing his tonnage by purchase as well as by building. The following are a few of the most material passages in Mr. Hedley's evidence: "Do you consider that there has been a less inclination to engage in shipping of late than formerly? Not at all; quite the reverse; as soon as one ship is lost, another of more value is bought or built by the owner. A great number of men in other businesses have engaged in shipping at Newcastle, Shields, Sunderland, Blythe, and the neighbouring ports, and many have given all their time to it, and in the event of losing a ship, they do not return back to the trade they carried on before, but they increase the extent of their shipping.—Have you heard great complaints of the unprosperous nature of the shipping business? Not more than I have for these thirty years past. —Persons are in the habit of complaining, are they? Generally so with us.—Have you reason to believe that it has been of late a more unprosperous business than formerly? With ships of great value, perhaps, it has, but with ships that have been built the last few years, that has not been the case.—In your business, as a broker, have you lately found ships pressing greatly for freight upon the market? Certainly not, quite the contrary, we have had a difficulty in getting ships the whole of this spring, and the freights have lately been as good as formerly, taking into consideration the value of ships: 45*s.* was considered (by liberal-minded ship-owners) a remunerating freight to Quebec a few years ago, and we are now giving 37*s.* to 38*s.* between Quebec and Newcastle: and, therefore, taking into consideration the difference in the cost of the ships, I consider it a better remuneration than 45*s.* four or five years ago. My opinion is, that money cannot be employed better than in shipping. A great many of the ship-owners were formerly captains of ships, who retired from their ships soon after the war; they have never returned, and they expect the ships to support them by sending captains on board; now, if they were to go themselves, they would be amply repaid. I know there are some instances in which accounts have been made out showing considerable losses at North and South Shields; they have charged the ships with the captain's wages, but at the same time his family, as well as the owner's, have been supported out of that ship." Mr. Hedley also shows that the necessity of purchasing provisions in England for the outward voyage to the Baltic or Canada really does not impose any additional expense upon the British ship-owner which is worth considering; and he is decidedly of opinion, from reasons and calculations which he submits, that foreign ships can neither be built nor navigated cheaper than British. He says, that if he had the means of doing so, he would invest capital in shipping directly and extensively. We have no doubt he would take Mr. Cooper of Hull's ship, the Perseverance, off the hands of that gentleman, who declares (7704) that he thinks he would give her away if he could find any one to take her.

The only official document relating to the shipping trade which the Report of the Committee of the House of Commons contains, is a table presenting an account of the number and tonnage of the ships built at each of the principal ports of the North of England in each year, from 1820 to 1832 inclusive. From this statement it appears that there has been a decrease of building at Whitby, but only since 1830, the new tonnage put afloat there in 1829 having been of greater amount than in any preceding year on the list, with the exception of the years 1824 and 1826;—that at Scarborough there has been a considerable decrease since 1828;—that at Hull there has also been a decrease since the same date, although the amount built in 1832 still considerably exceeded that built in 1822, and the number of ships was 35 in the former year, having been only 25 in the latter;—that at Stockton there was little variation;—that at Liverpool, Whitehaven, and Yarmouth, there has been an increase;—that at Sunderland and Newcastle, (including North and South Shields,) at which two towns there is now built considerably more than twice the quantity of tonnage built at all the other eight ports together, there has been a large increase; and finally, that in 1832, twenty-four ships, amounting to 1,767 tons, were built at Goole, which was only established as a port in 1828. Excepting, therefore, only at Whitby, Scarborough, and Hull, the ship-building business may be considered to be in a flourishing state at

every one of these ports, and, at the most important, in a state of great and rapidly growing prosperity.

We shall conclude by a short comparative statement of the export and import trade of different ports in the kingdom, in so far as the tonnage employed is concerned, collected from accounts in the Tables published by the Board of Trade. It is a common notion that the trade with other parts of the world has been for some time past leaving London for Liverpool. This is in one sense true, inasmuch as the trade of Liverpool is certainly increasing at a more rapid rate than the trade of London. But it is not the case that the trade of London, as many people suppose, is falling off. It has been increasing too, though more slowly than that of Liverpool. The following table exhibits the amount of tonnage, British and Foreign, that has entered each port annually, since 1820:—

	London.		Liverpool.	
	British.	Foreign.	British	Foreign.
1820	655,239	122,619	228,235	166,821
1821	585,994	89,073	242,322	149,151
1822	603,167	106,099	261,137	174,607
1823	611,451	161,705	296,710	199,866
1824	607,106	264,098	327,198	174,593
1825	785,565	302,122	315,115	222,187
1826	675,026	215,254	299,037	181,907
1827	769,102	221,008	306,369	231,863
1828	767,212	195,929	340,644	179,514
1829	781,070	215,605	326,311	210,713
1830	741,229	207,500	368,268	272,463
1831	780,988	269,159	413,928	265,037
1832	639,840	154,142	397,933	227,087

The decrease here, on 1832, it will be observed, is, as usual, much greater in proportion on the Foreign than on the British tonnage. To show this fact still more strikingly we shall exhibit these two years together for ten of the other principal ports in England, Scotland, and Ireland:—

	1831.		1832.	
	British.	Foreign.	British.	Foreign
Bristol	76,807	12,387	46,871	4,352
Hull	189,388	73,547	148,701	43,960
Newcastle	68,975	33,102	80,285	31,804
Plymouth	43,286	6,824	32,183	2,910
Leith	43,216	17,156	36,279	9,919
Glasgow	8,702	1,637	8,123	51
Greenock	63,826	5,219	66,171	3,906
Cork	24,615	4,088	29,271	2,603
Belfast	22,519	5,425	26,947	2,537
Dublin	35,804	7,221	38,202	2,823

Here, in every instance, there is a falling off, and in several instances, a very large falling off, in the Foreign tonnage; there is no instance in which that diminution is not much greater than the diminution of British tonnage; and in several instances it is very great, while on the British tonnage there has been a considerable increase.

The only other ports of the trade of which we have accounts in the Official Tables from 1820, are Bristol, Hull, Glasgow, Sunderland, and Newcastle. At all of them the trade has increased since that year, but at different rates. We shall give the amount of tonnage, British and Foreign, that entered each for the two years 1820 and 1830, from which some notion may be formed of their comparative prosperity:—

	1820.		1830.	
	British.	Foreign.	British.	Foreign.
Bristol	53,919	5,652	66,479	7,818
Hull	122,488	15,747	166,263	51,015
Glasgow	1,751	——	9,000	710
Sunderland	23,917	1,651	52,579	4,572
Newcastle	54,588	11,276	58,764	35,346

For 1831, as may be seen in the preceding table, the numbers were for the most part considerably higher than for 1830. This was also the case at Sunderland (not given in that table), where, in 1831, there entered 77,252 tons of British, and 7,600 of Foreign shipping. No Foreign ships appear to have entered the port of Glasgow in 1820; but in 1821, there entered 4 vessels measuring 655 tons, and after that, down to 1827 inclusive, from 10 to 18 annually, amounting to from about 1500 to about 3000 tons in all.

MARSHALL'S STATISTICAL TABLES.

"Digest of all the Accounts relating to the Population, Productions, Revenues, Financial Operations, Manufactures, Shipping, Commerce, &c. of the United Kingdom of Great Britain and Ireland, diffused through more than six hundred volumes of Journals, Reports, and Papers, presented to Parliament during the last thirty-five years. In two Parts. Arranged by J. Marshall."

We shall always hail with satisfaction every addition to the store of our statistical knowledge, both because the acquisition of each new fact is of value in itself, and because, by its means, the worth of all our former similar acquisitions is enhanced. We cannot, therefore, be otherwise than gratified by the appearance of Mr. Marshall's laborious work, which must have occupied years of patient industry, under which he could be supported only by a sense of the usefulness of his employment. The public are deeply indebted to Mr. Marshall for thus devoting his time and mind to their service. It abates nothing from his merit that a Committee of the House of Commons, struck with the usefulness of his labours, did, after their performance, recommend the purchase of certain copies of this volume for the use of the members of the legislature. All the labour and a great part of the expense must have been incurred before the House, acting upon the recommendation of its Committee, was led to sanction that purchase, and thereby, we hope, to relieve Mr. Marshall from pecuniary loss.

The contents of Mr. Marshall's volume may, in part, be learned from its title. The matter is divided into two sections, the first of which is occupied with details of the population of the British dominions, as ascertained under the acts for its enumeration, and with summaries of the population, revenues, &c., of various states and countries in both the old and new world. The tables in which the enumeration of the inhabitants of this country is given, are classed according to the prevailing occupations of the different districts, and comparisons are drawn between the numbers at different periods in a very useful and interesting manner; the whole being presented under various aspects, so as to throw light upon several important questions of public economy. Perhaps the least useful part of this section of his work is that wherein Mr. Marshall has given statements of the number of baptisms as compared with the number of deaths. It is well known how deficient are our registers of baptisms, and, indeed, how large a portion of children born within the kingdom are never subjected to that rite. It is to be hoped that the approaching session of parliament will not be allowed to close without the passing of an act compelling the registration of the *birth* of children, not indeed as a *religious* rite, for that would in many cases be to interfere in a matter of conscience—a proceeding quite at variance with the spirit of the times;—but as a *civil* regulation. In this respect we are greatly behind our continental neighbours, who have for many years been in the use of a system of registration, forming part of the celebrated Code Napoleon, which is attended with neither hardship nor difficulty to either the parents or the registering officers, and which is found perfectly to answer the important ends for which it was designed.

The second section of the volume is occupied with tables exhibiting the financial and commercial condition of the United Kingdom. The statements are for the most part taken up from the commencement of the war in 1792. Some accounts are carried back even to an earlier period, while others, owing probably to the imperfectness of the materials, are made to commence more recently. To the same reason—the imperfect nature of the parliamentary records—it is probably owing that the commercial details in Mr. Marshall's volume are less complete than the Tables recently compiled under the authority of the Board of Trade, the appearance of which we have already noticed in our first volume (pp. 122 and 190). The printed returns, to which alone Mr. Marshall could have access, have too frequently been compiled without regard to system and without any attempt at continuity, a fact which must incalculably have increased the labour of the present compilation. In this branch of the subject—the commercial—the peculiar usefulness of Mr. Marshall's tables will be found in the returns which he gives of a date prior to 1820, the first year embraced by the Government Tables.

We take it for granted that Mr. Marshall's data are *all* drawn—so far at least as concerns these kingdoms—from parliamentary documents, but it would have been satisfactory to those who have access to these documents had he more frequently stated the particular papers from which

his different tables are respectively compiled. It is often necessary, to a right appreciation of their contents, that the person by whom they are consulted, and who would draw inferences from the facts which they disclose, should be acquainted with the date when they were compiled, in order to form some judgment of the peculiar circumstances under which they were called for by parliament. Our own experience in such matters occasions us to know, that many separate parliamentary papers must necessarily have been brought together by Mr. Marshall for the formation of single tables, which papers, having been called for at various times, to suit the passing occasion, or to support the particular views of individual members of parliament, contain points of disagreement with each other which, although apparently slight, take away in great part from the authority of the whole as data for comparison. This is an evil which, however serious, is probably beyond remedy, and which certainly neither Mr. Marshall nor any other individual could hope to overcome. We mention it, not with the view of lessening the merit of this compilation, but simply as a warning to persons who might otherwise draw inferences and deductions from it which would possibly not be borne out by facts.

Mr. Marshall supplies an important omission in the Government Tables by giving the detailed charges of collecting various branches of the public revenue. Too watchful an eye can hardly be kept upon this item of expenditure, which yet it has, for the most part, been customary to keep out of view, by bringing forward in the financial accounts only the net amount of each branch of income. We think it would be difficult to assign a good reason why any portion of the taxes should be intercepted in their way to the Exchequer. The simple, and, as it appears to us, the only correct system whereby a proper control could be maintained over the public expenditure in all its branches, would be to pay to the public accountant every penny that is collected, drawing out again from his hands the sums necessary to pay the expenses of the collection in the same manner as moneys are drawn for every other branch of the public service. It is understood that some measure is about to be introduced into parliament for the regulation of the Exchequer, and for abolishing the barbarous system which has been so long perpetuated. Let us hope that the alteration will be effectual, and that we shall no longer witness the absurdity of using, in our national account books, numerals which it is impossible to add together in columns, and a language which none but the initiated can read or understand. It is a disgrace to us that our public accounts in this department, which should form an efficient check over the financial operations of every other branch of the government, are kept in a manner of which any private merchant or trader would be ashamed.

Awarding great praise to Mr. Marshall for the patient industry which he has shown in the performance of what we must consider a useful work, we may yet take occasion to point out in what respects that work might, in our opinion, have been rendered still more useful. In the first place, a more perfect classification and arrangement of the various matters might have been easily made, and by that means the facility of reference would have been much increased. In the first section this want of arrangement is shown by placing various "statistical displays" of different foreign countries in the midst of matters applying to the United Kingdom. The same remark applies to the second section, where also we find financial and commercial statements intermixed without any seeming order. It might have been well, too, had the compiler omitted from the tables certain deductions which are the fruit of his own peculiar conceptions, and about which there is room for much controversy, while sometimes these deductions are given in a manner which might lead a cursory reader to imagine that they form part of the documents whence the tables are compiled. For instance, the table (pp. 62, 63) of the official value of goods exported in each of the eighteen years, 1814—1831, professes also to show the "excess of value exported over and above the value imported," and calculations are given whereby this excess is made to appear to amount during the eighteen years to more than 330 millions of money. No one who is conversant with the manner in which our Custom-House statements have usually been rendered to parliament would perhaps be deceived by these calculations. It has appeared advisable to the legislature to adopt certain fixed or *official* rates of value for every description of merchandize without reference to the fluctuations of markets, or to the decreasing cost of production through the adoption of improved methods of manufacture; and hence the statements thus compiled must always be at variance with the truth. The only merit indeed which is attributed to this method of computation (erroneously as we think) is, that it affords means for comparing the quantities of goods exported at different periods. Given, however, as the statement referred to is by Mr. Marshall, without any explanation whatever, as exhibiting an actual "excess of exports over imports" to so enormous an amount, it has a tendency grossly to mislead persons who are not sufficiently informed upon the subject, and who do not reflect on the little probability there is that our merchants would go on year after year making such splendid gifts to foreigners, if even the capabilities of the country would have proved adequate to supply so constant and so enormous a drain. So long as Mr. Marshall confines the expression of his peculiar doctrines and opinions to notes, we have not so great an objection to their insertion, however much we may disagree with him in his reasoning, but it is altogether a different matter when calculations are superadded to the body of the tables in a manner which makes it difficult, even for one practised in the study, to separate from the facts that part which is only assumption.

In some cases Mr. Marshall has brought together, so as to exhibit at one view, various matters which have, or are supposed to have, an influence upon each other, a plan which when pursued with judgment and a knowledge of the subject, must be useful in a very high degree. We cannot say, however, that in the volume before us the requisite degree of judgment and knowledge appear to have been always manifested in these compilations. There is at page 122, what appears to us a notable instance of this want of judgment. The statement there inserted shows for each year, from 1798 to 1832, the amount of taxation in the United Kingdom—the official and the declared value of British produce and manufactures exported—the mean value respectively of gold, wheat, and manufactures,—that is, the relative proportion between the official and the declared value—"the equivalent of taxes in ounces of gold, quarters of wheat and official value of manufactures"—the amount of parochial assessments—the average price of wheat—and the equivalent of parochial assessments in quarters of wheat. This table has been compiled with the avowed object of showing "the inordinate pressure of taxation in 1832 as compared with 1798," which effect is shown not by any reference to the amount of population and the evidences of wealth throughout the country, but by an exhibition of what is called "the equivalent of taxes in official value of manufactures," and this "equivalent" is obtained by a mystical calculation which we may defy all the pseudo-statists in Christendom to show has any solid foundation. The whole affair is a piece of mystification, which may confound, but can never convince, and which we should have deemed really too absurd for comment, but that the table has been thought deserving of praise and of insertion in a respectable daily paper, the chief merit of which does not, it is true, consist in its enlightened views on subjects of public economy.

It is to be regretted that Mr. Marshall has not availed himself of the various sources of information which were open to him for procuring statistical facts of later dates than those he has inserted regarding different countries in Europe. The public accounts of France are made up very promptly and with great precision, and might easily have been obtained for as recent a period as 1832, whereas the statement of the revenue of that country is given only for 1824. We have nothing inserted of a later date than 1826 regarding Holland and Belgium, two kingdoms in which the science of statistics is cultivated with assiduity, and where every kind of information of that kind is to be procured, carefully brought down to the most recent period. In both those countries there are public functionaries charged with the collection and arrangement of statistical facts, and every year volumes are printed and circulated by them under the sanction of their respective governments.

APPROACHING SESSION OF PARLIAMENT.

The "Notices of motions which now stand in the order book of the House of Commons, for the next session," amount

in number to a hundred and thirty-four, and fill nine folio pages in the Votes. They stand in the names of eighty-one members, one of whom, Mr. Buckingham, has eight notices; two others, Mr. O'Connell and Colonel Evans, six each; three others, Mr. Pryme, Mr. Ewart, and Mr. Wallace of Greenock, four each: six others, Mr. Wilks, Sir William Ingilby, Mr. Barron, Mr. Harvey, Mr. Faithful, and Mr. J. Murray, three each; fifteen others, Sir A. Agnew, Mr. Cayley, Mr. Ruthven, Mr. Estcourt, Mr. Robinson, Mr. Finn, Mr. Shiel, Mr. G. F. Young, Mr. Pease, Mr. E. Ruthven, Mr. Ewing, Mr. Tooke, Colonel Williams, Mr. Bish, and Mr. Rotch, two each; and the remaining fifty-four one each.

Supposing the session to last for seven months, if all these motions shall be brought on separately, there will, after allowing for the Easter recess and a few lost days, be a trifle more than one sitting for the discussion of each. As, however, there is a great deal of business, strictly belonging to the year, that must be dispatched, such as the budget, the estimates, and other matters indispensable to the regular movement of the government, and as, moreover, the list certainly does not comprise even all the measures of general policy that are likely to be introduced, either in the one house or the other, we fear many of the honourable members, who have thus bespoke a hearing for their projects and speculations, will have to be contented with a much shorter allowance. It appears to us that it would be convenient for all parties, and especially for the public, if an arrangement could be come to, founded, as far as possible, upon the principle of dividing the hundred and thirty-four threatened motions into bundles, according to their nature and objects, and then disposing of them by a dozen or half a dozen at a time. There are, at least, seventy or eighty of them which might, we think, be very commodiously assorted in this way into about a tenth of that number of packages; and they include most of those which would probably occasion the greatest trouble, if they were to be encountered singly. The others could, many of them, be made over to the morning sitting, and got through along with the petitions and the private business. We shall, in the following observations, offer a rude outline of the mode in which this marshalling of the undisciplined throng might be attempted, and shall also take occasion to intersperse a few remarks touching the principles involved in some of the more remarkable among the propositions of innovation and change with which we are about to be assailed.

If all the motions announced were to be carried, we should have change not a little. The public reforms for the year range from the constitution of parliament down to that of parish vestries. The conditions of the elective franchise are to be altered—the Septennial Act is to be repealed—the bishops are to be turned out of the House of Lords—Ireland is to have a legislature of her own sitting in College Green—a new disposition is to be made of the property of the English church according to the summary process of Mr. Faithful—the present system of patronage of livings in the Church of Scotland is to be abolished. Now we would ask, in the first place, is not all this rather too much to be properly gone about in one session? "When the hurly-burly's done," will it be well done? Supposing even that all these schemes were the wisest possible, would not their patriotic authors act with more good sense, and give themselves a better chance of speedy success, if they would not crowd and jostle one another so, but would march with some sort of order and array?

There are some of the proposed reforms, however, which, let them be brought forward as they may, must, before they are adopted, undergo a very different kind of discussion from any they have yet received. Such, in particular, are those having in view either the abolition or the degradation of the church. The partizans of this class of projects may be assured that they will not carry their point by assailing the establishment from the narrow ground on which alone they have heretofore erected their batteries. They seem to think that they shall be able to puff down the church with a little wind of doctrine. They discharge sermons at it and theological arguments. But really the question is not a theological one at all. If the theological tenets at present maintained by the church were to be abandoned to-morrow by all the world, the political foundations on which the institution really stands would remain the same as ever.

There are, we believe, seven of the announced motions of which the rights of the church, or the alteration of the law with regard to the political state of its members, are the subject. One, coming from Colonel Williams, is in very comprehensive terms. It is entitled, a "motion for the reform of the United Church of England and Ireland, as by law established; for leave to bring in a bill for that purpose; and for the appointment of a commission for its execution." Another, by Mr. Faithful, is for a "bill to regulate and render more equal the incomes of the bishops and clergy." There are no fewer than three others having for their common object the exclusion of the bishops from the House of Lords. They proceed from Sir William Ingilby, Mr. Gillon, and Mr. Rippon. It is to aid in effecting the same end, we presume, that Mr. Pryme proposes to bring in a bill to allow the clergy to sit in the House of Commons. And finally, there is Mr. Divett's motion for a "bill to abolish all compulsory levies of church rates and mortuaries in England and Wales."

We would propose that the authors of all these six last-mentioned motions should get Colonel Williams (which we dare say they might easily do) to introduce their several propositions into his bill of general reform, so that the whole subject might be taken up at once. But we must protest against the debate being carried on as if the matter to be settled were a point in divinity. We have, we believe, as much respect for the New Testament as any of those public writers who labour this argument with the most persevering expenditure of chapter and verse knowledge; but we cannot go to the epistles of St. Paul for an exposition of the English constitution. The lords spiritual, certainly, do not bear any remarkable resemblance to the apostles: we admit this without insisting that it should be proved by a series of elaborate dissertations. But it does not seem necessarily to follow, from the establishment of this point, that we ought to have no such order of men in the state as bishops. Expedient or the reverse, the admission of such an order of men to seats in the legislature, is not defended upon any pretence that the apostles enjoyed that distinction. The purpose can only be rationally considered as a purely political one. Those who object altogether to a House of Lords, may, rationally enough perhaps, dislike lords spiritual as much as lords temporal. If they can succeed in putting down the one, they may think it will be the easier afterwards to put down the other; and, as the cry of the hour happens to be especially directed against the bishops, they are very well pleased to voice it for a while in concert with many a simple enthusiast, with whose general spirit and objects they would not care to be considered as having much sympathy. But we confess we should like to see from any quarter a plain, straightforward, and cordial defence of a house of hereditary legislators, and of a hereditary monarchy, including anything like a consistent argument for ejecting the spiritual peers.

We can conceive only one principle upon which such a demonstration could be erected—the principle that birth and descent are everything, and that all the higher places in the commonwealth should be reserved for these alone. If this doctrine were admitted, there would certainly be a good reason why the bishops should not sit in the House of Peers. And there would be an equally good reason why the general body of the people should be deprived of all those other means and chances by which at present we every day see some of their number lifted to an equality with the realm's proudest hereditary nobles. If, having an order of hereditary nobility, we wish that they should form an impregnably close and over-riding aristocracy, an iron feudalism worse than that of the middle ages, then we shall call out for cutting off all those avenues of communication by which low-born men in this kingdom are wont to mount to high estate, and the institution of the church and its parliamentary prelates among the rest. But, retaining our other fundamental institutions, our hereditary monarchy, our hereditary peerage, and our laws of primogeniture,—all tending to concentrate the powers of the state in the hands of an insulated oligarchy,—should we, the people, be gainers either by the abolition of the church, or by the diminution of its property, its dignity, or its authority? Is not this peculiarly our part in the commonwealth—the estate to an interest in which the poorest man is born—the public fund which alone can never be absorbed by particular individuals or particular families? We hear much vehement declamation against the union of church and state; but the bad names which are given to this alliance, as far as we have observed, seem to have been all suggested by aversion to

the present theology of the Church of England. But the essence of the question really does not lie in a quarrel about creeds. The consideration to be looked to is this; that if we do away with the church, as one of the powers in the state, leaving everything else standing as it is, we materially change the existing balance of forces and interests; and in what direction shall we thereby weaken and in what strengthen the action of the political machine? As for the theology of the church, if it be objectionable, let it be amended; if it be too narrow, let it be liberalized; all this has been done before, and the church, as a political establishment, has remained what it was. We are, however, far from saying that even in the details of the political constitution of the church there may not be much demanding alteration and reform. A comprehensive measure of church reform is expected from his Majesty's ministers; but it will not, we imagine, be based upon the scheme of reverting to the state of things in the apostolic age. It will provide remedies for abuses that dishonour and weaken the church; and its main object, we have no doubt, will be to strengthen the institution, not to undermine it or pull it down. It will not be a measure either of destruction or of plunder, but of conservation and justice.

In connection with these menaced attacks upon the English church, we may notice Mr. Sinclair's intended motion for referring the petitions presented on the subject of lay patronage in Scotland during the last session to a select committee. The object of the Hon. Member is, we believe, to have the clergy in Scotland elected by popular suffrage. We hope the Government will not be weak enough to give any countenance to this precious project. It would, truly, operate with striking effect in mitigating sectarian animosities, in promoting the peace of parishes, and, above all, in elevating the character of the clergy! Why is it not proposed to make the clergyman altogether dependent upon his congregation—to give them the power of dismissal as well as of nomination? Both rights were originally contended for, and long exercised, among the dissenters, whose policy Mr. Sinclair appears to have taken for his model; but their directors have found it necessary of late years to do everything in their power to protect the minister once chosen against the risk of being turned off by his constituents. It is, we believe, the fact, that for a considerable time past the church courts among the Burghers (the only considerable body of dissenters there) have made it a rule in no case to give their sanction to the appointment of a clergyman without exacting from the congregation a legal bond for the payment of his stipend. The consequence is, that, although they should even go off in a swarm to another meeting-house, they do not rid themselves of the burthen of supporting their minister. We have never heard it alleged that the introduction of this practice has been productive of any bad effects on the character or usefulness of the Burgher clergy; indeed, it is universally acknowledged to have improved both their comfort and their respectability. Here then we have, to a certain extent, a recognition of the principle that the clergyman should be independent of his flock, founded upon experience of the operation of the opposite principle. We know that Mr. Sinclair is a warm friend of the established church; but he cannot fail to be aware that its overthrow is the avowed object of many of the most active agitators in favour of his proposed plan. He will see, when he brings it forward in the House of Commons, whether it will not be supported by all those Honourable Members who are known to be opposed to establishments altogether.

The most important motion in the list going directly to effect the constitution of parliament is that which stands in the name of Mr. O'Connell, who has at last given notice of a bill to accomplish the object about which he has been so long vapouring in newspapers and declaiming at public meetings,—"the re-establishment of a domestic legislature in Ireland." The motion, and another by which it is to be preceded, embodying a resolution declaratory of the means by which the destitution (?) of the parliament of Ireland was effected, &c., stand the fourth and fifth on the list of notices, so that the subject may be expected to be brought forward early in the session. There is also a counter proposition to be submitted by Mr. Bish, who is "to move an address to his Majesty, praying him to hold his Court and Parliament occasionally in that part of the United Kingdom called Ireland." We shall be curious to see whether the repeal or the itinerating scheme will have most votes. Within the limits of legislation of a more common-place description, we find several notices for an alteration of the present period during which members of the House of Commons may hold their seats. Mr. Tennyson announces in general terms a "bill for shortening the duration of parliaments." The Right Honourable Gentleman will be enabled in this way, when he brings on his motion, to take what course circumstances may seem to render most expedient, and to come forward as the advocate of either quinquennial, triennial, or annual parliaments, as he may, upon consideration, see good. Mr. Wilks, with perhaps less policy, gives notice of a "bill to prevent the duration of parliaments longer than three years;" and Colonel Evans is also to move to the same effect. On the other hand, Mr. Chichester proposes "to repeal the Septennial Act, and to limit the duration of parliaments to five years." The question of a duration of seven, five, or three years, is one as to which a difference of opinion may be expected to exist among reasonable politicians. There is one argument in favour of a long, rather than a very short, term, which we do not recollect to have seen stated. As the members of the House of Lords retain their seats for life, it would seem to be worth consideration whether there might not be danger of too much weakening the power of the representatives of the people in the state by greatly abridging the period for which they are elected. It is one of the reasons urged against the septennial law that it has tended to make the House of Commons too powerful, as against the people; but it is to be recollected that, especially since the late Reform, which has so much diminished the influence of the aristocracy in elections, the same long tenure of their seats must also have the effect of strengthening the Commons as against the Lords. The object ought to be to keep our representatives both responsible individually, and powerful as a body. We should say, for instance, that the above consideration, although there were no other reasons, was decisive against annual parliaments, which might, indeed, by an effort of convulsive energy, throw off a House of Peers altogether, but would, we think, in ordinary times, and in the steady and regular march of government, act under great disadvantages in association with that permanent body. It is worth while to consider in how far the same objection might apply to triennial parliaments.

There are a variety of other notices proposing amendments of clauses in the Reform Act—bills for preventing bribery, and expenditure of any kind, at elections—improvements in the constitution of election committees—the disfranchisement of certain boroughs, &c., which we must pass over. Mr. O'Connell announces another attempt to reform the system of reporting, by a motion "to rescind the rules of this House against the publication of the debates, and to declare that any partial or unfair report of the debates of this House be a breach of its privileges." He is also to move that the House shall in future meet at a quarter before ten in the morning, and rise at eight o'clock in the afternoon. It is kind in the Honourable Member to give himself so much trouble in setting matters to right in an assembly from which he proposes so soon to withdraw himself. A select committee to consider and revise the whole of the standing orders is also to be proposed by Mr. Buckingham. The entire number of the notices bearing upon the constitution or procedure of parliament is, we think, twenty-five.

The annual campaign against taxes and sinecures promises to be vigourously urged. Mr. Ruthven will make an effort to prevent the resolution which he carried last session from remaining a dead letter by moving for a "select committee, to inquire into the state of all sinecure places, with a view to the immediate abolition thereof, in all cases where such sinecures are not held in consequence of having been merited by public services; and also for the purpose of inquiring into the cases of any sinecurists who might be subjected to distress and difficulty by their removal from such offices; so that a reasonable relief might be afforded to them, suitable to the peculiar circumstances of each individual." Mr. Methuen has a notice nearly to the same effect, embracing "all pensions, allowances, or payments, which constitute a charge upon the public purse;" and Mr. Harvey also proposes to move for a "select committee on the pension list." On the subject of taxation we have a resolution for a commutation of taxes, standing in the name of Mr. Robinson—another, in the name of Lord Chandos, declaring the necessity of granting a reduction of taxation to the agricultural inter-

£ 361,168

seven resolutions from General Palmer in favour of the substitution for all other taxes of a "tax on realized property." To these general propositions may be added, Mr. Buckingham's resolution "for the gradual redemption of the national debt, without any increase of the present burthens of the country." We do not understand the plan as it is announced. The only motions for the repeal of particular taxes are those by Mr. Pease for the repeal of the duties upon coals exported, and upon bricks—by Sir William Ingilby for the total repeal of the tax on malt—by Mr. E. L. Bulwer for the repeal, at the earliest possible period, of the stamp-duty on newspapers—and by Sir S. Whalley for the repeal of the taxes on houses and windows by the 5th of April next. Colonel Evans also gives notice of a motion for an inquiry into the alleged inequalities, fraud, and partiality practised in assessments of the house-duty, with the object of ascertaining what amount of arrears might be recovered under the circumstances.

The only member who has announced an attack upon the corn-laws—our heaviest tax—is Mr. Fryer, who intimates his intention to bring in a bill for their repeal. Mr. Vernon has a notice of a "bill to regulate the sale of corn by weight instead of quantity." The most important motion announced on the subject of the commercial policy of the country is that which is to be made by Mr. G. F. Young for a "bill to repeal the Act 4 Geo. IV., c. 77, commonly termed the Reciprocity of Duties Act." We have discussed this subject at length in another article; and we shall only say here that Mr. Young's motion, as the honourable gentleman must himself know very well, has no chance whatever of being carried, while the statements and arguments of its supporters, if it shall really be brought forward, are most certain to receive a demolishing confutation. We confess, therefore, that we shall not be surprised if the session shall pass without the threatened discussion being brought on after all. The opponents of the Reciprocity of Duties Act had better keep their speeches for meetings at the London Tavern, or elsewhere, where all present are of their own opinion. If it is determined, however, that the motion shall be made, it would be most appropriately debated immediately after Mr. O'Connell's proposal for the Repeal of the Union. Mr. Young has a notice of another motion of a much more reasonable description, and in which he is more likely to be successful—that for a "bill to alter and amend the Act for the Registry of British Vessels." There is certainly room for reform here. Mr. Lyall also proposes to bring in a bill to repeal, among other old enactments, so much of the Act of 7 and 8 Wm. III. c. 21, as prescribes the deduction of sixpence per month from the wages of merchant seamen, for the support of Greenwich Hospital—a relief to which we admit that the shipping interest is fairly entitled. The only other important measure of commercial policy announced is, a bill to be brought forward by Mr. Ewart, "for the equalization of the duties on East and West India produce." This reform, however, to have any chance of success, ought to proceed from the Government.

In the department of general law reform, the Solicitor-General will renew his bill to take away "the Punishment of Imprisonment for Debt," which we trust will pass into a law before the termination of another session. A bill for abolishing imprisonment for debt in Scotland for sums below 10*l.* will also be introduced by Mr. Ewing. From the dissimilar state of the existing law in the two parts of the kingdom, we should suppose this measure must be founded upon somewhat different principles from that proposed by the Solicitor-General. Four notices respecting other alterations of the law of Scotland stand in the name of Mr. Wallace of Greenock. Mr. Ewart will also again introduce the bill which he brought forward last session, for enabling prisoners to make their defence by counsel or attorney. Upon the desirableness of this change in the law we have already expressed our opinion.

We have mentioned under other heads some of the most remarkable among the Irish notices—of which there are fifteen on the list—a small proportion, we fear, of the applications from the sister island that are in reserve for the session. Among the number is a notice by Mr. Barron of a motion for a select committee to inquire into how far tithes [illegible] Ireland might be restored to what the Honourable Member [illegible]tution is pleased to call their original uses—"the support of the [illegible] There are the education of the people, and the support of the [illegible]ich the [illegible]. The object of another, by Mr. Finn, is to get the [illegible] to declare its opinion, "that a tax ought to be imposed upon Irish absentee property, the produce to be expended in Ireland upon works of public utility." This is a piece of folly which we may be certain parliament will not commit.

Of the great Government departments, the Post-Office seems to have attracted the greatest share of attention from the reformers of abuses. Mr. Wallace gives notice of a "select committee, to inquire into the whole system and management of the Post-Offices of Great Britain and Ireland;" and Lord Lowther is also to propose certain resolutions, drawn up in conformity with the recommendations of the Commissioners of Revenue Inquiry, and having especially in view, we are glad to perceive, the important object of the transmission of Newspapers beyond seas. Colonel Leith Hay is to move for an inquiry into the state of the Excise Laws; and Mr. Henry Lytton Bulwer, for a "select committee, to inquire into the state of our diplomacy, with a view to see whether it may not be rendered more generally efficient."

Of the other intimations in the list, we can only enumerate a few of those that are most important or curious. Under one or other description we may class Mr. Buckingham's intended motions—for "the education of all the children of the country out of the funds of the respective religious bodies to which their parents may belong"—for the prevention of duelling—for remedying the increasing prevalence of intemperance and immorality in the principal sea-ports and large manufacturing towns—for abolishing impressment—and for repealing the usury laws. Mr. James Kennedy has also a notice on the subject of "the laws relating to contracts for the loan of money"—and Mr. Harvey another of a motion for a "select committee, to inquire into the nature and extent of the various descriptions of property which are or might be applied to the education of the people;"—so that there is a prospect of the Honourable Member for Sheffield not being left to sustain quite alone the fatigues of the somewhat extensive and varied field of legislation he has chalked out for himself. We ought also to mention here that the business of the session is to be opened by Sir Andrew Agnew, this time doubly armed, with one Sabbath-day bill, namely, for England, and another for Scotland. The abolition of military flogging, the repeal of the Foreign Enlistment Bill, and that of the Royal Marriage Act, are to be severally moved by Major Fancourt, Mr. John Murray, and Colonel Williams. Finally, Mr. Buckingham is to move for the abrogation or repeal of any law, custom, or usage, by which copies of all new publications are claimed by the Universities.

How much of all this embryo legislation may be destined to add to the bulk of our already enormous statute book, time only can tell. A large majority of the Honourable Members will, we fear, take nothing by their motions. It is tolerably clear, however, that we shall have talk enough in the coming session, however the work may get on; and after all, of the two evils, bad speeches are preferable to bad laws.

PAROCHIAL REGISTRATION.

A REPORT has appeared from a select committee, appointed last session by the House of Commons, to consider this important subject, of which it was our intention to have given a somewhat full abstract; but the length to which our article on the shipping interest has extended, in our anxiety to present a complete exposition of a question which great pains have been taken to place in a false light, which engages much of the public attention, and which it is understood is about to be brought before parliament early in the approaching session, has made it impossible to find room in our present Number for anything beyond a notice of the general conclusion at which the committee have arrived.

The report, after a detail of the previous attempts that have been made to effect the object to which it refers, recommends "that a national civil registration of births, marriages, and deaths, should be established; that such registration should equally include all ranks of society, and religionists of every class; that in the forms such improvements should be made, as, avoiding perplexity and needless multiplication of statements, might direct inquirers to the parents or last ancestor of each person recorded, and assist medical and statistical inquirers in useful research; that a parochial arrangement should be continued; that a duplicate of each register should always be kept; that such duplicate should be periodically transmitted to the metropolis, where

a general national office should be formed, a superintending authority should exist, and alphabetical and accurate indexes and abstracts should be prepared; that the parochial charges should be defrayed by moderate salaries or small fees, payable by respectable inhabitants, and out of the rates for persons in more indigent circumstances, or receiving relief; while the metropolitan office would be supported by payments on searches, and an allowance of 1*d.* on every entry which each parish should send." Three propositions are submitted as to who should be the registrar in each parish: the first, that a new civil officer should be appointed to act as such; the second, that the clergyman should perform the duty; the third, that a registrar should be annually or triennially elected by the inhabitants. As to which of these suggestions should be adopted, they decline to decide. Upon another important point they express themselves as follows:—"Your committee are convinced that a register of deaths (and even if the malady and cause of mortality be inserted) will be easily attained by prohibiting interment without entry; and that even the labouring and most illiterate among the people will perceive the benefits of the design, and will, as in France, and Geneva, and Belgium, and on the Continent, cheerfully help, rather than obstruct the improvement, and especially if information be required from midwives, and parochial assistance be withheld for children whose birth shall not be inscribed."

THE REVENUE.

I.—An Abstract of the Net Produce of the Revenue of Great Britain in the Years ended 5th of January, 1833, and 5th of January, 1834, showing the Increase or Decrease on each head thereof.

	Year ended January 5, 1833.	Year ended January 5, 1834.
	£	£
Customs	15,559,882	14,946,988
Excise	14,657,221	14,840,962
Stamps	6,515,344	6,498,686
Taxes	4,943,885	4,892,058
Post Office	1,323,000	1,386,000
Miscellaneous	59,853	57,133
Total Ordinary Revenue	43,059,185	42,621,827
Imprest and other Monies, including Repayments of Advances for Public Works	320,154	315,018
Total Income	43,379,339	42,936,845
The Amount applied to the Consolidated Fund	27,231,875	27,843,959
Ditto to pay off Exchequer Bills charged on Sugar Duty	2,619,199	3,410,022
Ditto as part of the Ways and Means of the year	13,528,265	11,682,864
Total	43,379,339	42,936,845
Decrease on the Year	£442,494	

II.—Income and Charge of the Consolidated Fund, in the Quarters ended the 5th of January, 1833 and 1834.

INCOME.	Qrs. ended January 5, 1833.	Qrs. ended January 5, 1834.
	£	£
Customs—Consolidated Duties	2,775,507	2,664,469
Sugar applicable to the Consolidated Fund	. .	501,692
Total Customs	2,775,507	3,166,161
Excise	3,966,488	4,264,493
Stamps	1,575,955	1,575,112
Taxes	1,902,823	1,808,701
Post Office	338,000	324,000
Miscellaneous	49,133	56,973
	10,607,906	11,195,440
To Cash brought to this Account to replace the like sum issued, or to be issued, out of the Consolidated Fund in Ireland, for Supply and other Services	236,144	376,578
	10,844,050	11,572,018

CHARGE.	Qrs. ended January 5, 1833.	Qrs. ended January 5, 1834.
	£	£
Permanent Debt	7,829,249	7,814,839
Terminable Annuities	428,833	482,605
Interest on Exchequer Bills issued to meet the charge on the Consolidated Fund	6,965	9,358
Sinking Fund	116,848	259,483
The Civil List	127,500	127,500
Other charges on the Consolidated Fund, including Civil Government Services formerly paid out of the Civil List, or the Hereditary Revenues of the Crown	324,333	336,224
Total Charge	8,833,728	9,030,000
The Surplus	2,010,322	2,542,018
	10,844,050	11,572,018
The Amount of Exchequer Bills issued to meet the charge on the Consolidated Fund for the Quarter ended and paid off out of the growing produce of that Fund for the Quarter ended October 10, 1833	.. ..	4,497,059
The Amount issued in the Quarter ended January 5, 1834, in part of the sums granted by Parliament out of the Consolidated Fund for Supply Services	2,887,941	—
The Surplus of the Consolidated Fund, Quarter ended January 5, 1834	2,542,018	345,923
The probable amount of Exchequer Bills required to meet the charge on the Consolidated Fund, Quarter ended January 5, 1834	.. ..	4,842,982

FRENCH AND ENGLISH COINAGE.

Money Coined in France according to the Decimal System, to the 31st of December, 1832.

	Gold, denominative value.	Silver, denominative value
COINED.	Francs.	Francs.
To the 31st Dec., 1831	1,020,285,620	2,365,015,234
During the year 1832	2,011,000	142,117,038
Totals	1,022,296,620	2,507,132,272
IMPRESS.		
Napoléon Bonaparte	528,024,440	887,830,055
Louis XVIII.	389,333,060	614,830,109
Charles X.	52,918,920	632,511,320
Louis Philippe	52,020,200	371,960,787
Similar Totals	1,022,296,620	2,507,132,272

Total denominative value of the gold and silver coined to the 31st December, 1832 . 3,529,428,892f.

Note relative to the copper and billon in circulation from 1726 to 1794.

		Francs.
There had been coined in billon		300,075
In copper		10,244,394
In bell-metal		19,232,543
Law of the 15th August, 1795, in copper		4,385,411
——— 24th October, 1796, ditto		9,927,371
——— 17th February, 1799, ditto		9,324,918
——— 15th September, 1807, billion	3,286,226	
Blockade of Strasburg	175,133	
		3,461,359
	Total	56,876,071

The following is the state of the English coinage during the period which we have had under consideration:—

From 1805 to 1814 there was coined at the English Mint in gold		£2,279,386
In silver		871
		2,280,257
From 1814 to 1832, both inclusive, there was coined in gold	£50,961,995	
In silver, from 1814 to 1829, both inclusive	9,118,906	
		60,080,911
		£62,361,168

And therefore during the period from 1805 to 1814 the French coinage exceeded the English in the sum of 53,882,158*l.*; and during the period from 1814 to 1832 the French coinage exceeded the English in the sum of 23,758,094*l.*

The total of the French coinage from 1805 to 1814 being		£56,162,415
And the total of the English coinage during the same period being		2,280,257
		58,442,672
And the total of the French coinage from 1814 to 1832 being	£83,839,005	
And the total of the English coinage during the same period being	60,080,911	
		143,919,916
This gives a grand total of for the coinage of France and Great Britain from 1805 to 1832, both inclusive.—"Times."		£202,362,588

STATISTICS OF FRANCE.

From the Annuaire du Bureau des Longitudes.

In 1831, there were throughout France 246,238 marriages; there were born 986,709 children; and the deaths amounted to 802,761; showing an increase in the population of 183,948. During the fifteen years from 1817 to 1831 inclusive, there were 14,532,178 births: of which 7,041,247 were of females, and 7,490,931 of males.

Of Paris, the return is for the year 1832. In that year there were celebrated 6,767 marriages; of which 5,315 were between bachelors and spinsters, 894 between widowers and spinsters, 347 between bachelors and widows, and 211 between widowers and widows.

The births amounted to 26,823; of which 13,494 were of males, and 12,789 of females. In 1831, the number of births had been considerably greater, having reached in that year the number of 29,530. In 1832, the legitimate children born in private houses were 8515 males and 8029 females, and the illegitimate were 2420 males and 2291 females. The legitimate children born in hospitals were 258 males and 244 females, and the illegitimate 2301 males and 2225 females. The number of acknowledged natural children was 2157, and of those abandoned 7080.

In consequence of the prevalence of the cholera, the number of deaths greatly exceeded the usual average. In 1831, they were 25,996; in 1832, they amounted in the whole to 44,463; of which 18,602 were attributed to the above-mentioned cause. Deaths from the effects of small-pox had, however, decreased; this year there being only 386, while in 1831 there were 482.

The consumption of the principal articles is considerably less than in the preceding year, most probably arising from the prevailing sickness and increased mortality of the season. The quantities of the different articles are stated as follows:—oxen, 68,408; cows, 15,290; calves, 60,237: sheep, 306,227; hogs, 67,241. The produce of poultry and game sold amounted to 6,660,590 francs; of fresh-water fish, 399,967 francs; of oysters, 731,590 francs; of butter, 9,196,274 francs; of eggs, 4,053,959 francs. The consumption of wine amounted to 595,585 hectolitres; of brandy, to 27,794 hectolitres; of beer, to 78,948 hectolitres; and of grapes, to 1,356,318 lbs. The consumption of hay amounted to 7,755,592 trusses; of straw to 11,511,976 trusses; and of oats to 893,873 hectolitres.

AMERICAN STATISTICS.

THE United States of America are at this moment in the enviable and most unusual condition of being able to liquidate every farthing of their public debt. By standing in this favourable position, they are enabled to adopt a system of custom-house duties without regard to its effect upon the public revenue, and hence it becomes exceedingly interesting to watch the progress of their foreign commerce. It were greatly to be wished that the advantages of their present financial situation could have been pushed to the extent of which they are susceptible, by the abolition of all custom-house duties and regulations; and that no particular interests should have been fostered under which it is now thought incumbent upon the States to support, by placing restrictions upon various objects of foreign productions, which might otherwise be brought ruinously into competition with their domestic manufactures.

This subject has already occasioned a very serious disagreement between those states which profit by the restrictions, and those others which feel aggrieved by them, and although the question has for a time been disposed of by a compromise between the opposite interests, it does not seem probable that the present tariff will be long acquiesced in by the southern or agricultural states of the Union, but that a series of alterations will be introduced from time to time which will have the effect of disturbing the foreign commercial relations of the Union.

The following table exhibits the value of the imports and exports of each state and territory of the Union during the year, which ended on the 30th September, 1832, the public accounts of the United States being always made up to that day in every year:—

STATES AND TERRITORIES.	VALUE OF IMPORTS.			VALUE OF EXPORTS.		
	In American Vessels.	In Foreign Vessels	Total.	Domestic Produce.	Foreign Produce.	Total Value of Exports.
Maine	988,043	135,283	1,123,326	907,286	74,157	981,443
New Hampshire	115,051	120	151,171	115,582	. . .	115,582

Virginia	422,052	131,587	553,639	4,493,916	16,734	4,510,650
North Carolina	195,590	19,594	215,184	338,246	3,795	342,041
South Carolina	597,953	615,772	1,213,725	7,685,833	66,898	7,752,731
Georgia	138,697	114,720	253,417	5,514,681	1,202	5,515,883
Alabama	245,408	61,437	306,845	2,733,554	2,833	2,736,387
Louisiana	5,446,225	3,425,428	8,871,653	14,105,118	2,425,812	16,530,930
Ohio	11,224	1,168	12,392	58,394	. . .	58,394
Florida Territory	77,791	29,996	107,787	62,636	3,080	65,716
Michigan Territory	22,648	. . .	22,648	9,234	. . .	9,234
Total Value in Dollars	90,298,229	10,731,037	101,029,266	63,137,470	24,039,473	87,176,943

The Value of the Domestic Produce Exported is stated as follows:—

	Dollars.
Derived from the Sea	2,558,538
from the Forest	4,247,794
Product of Animals	3,179,822
From Agriculture—Vegetable Food, Flour, Wheat, Rice, Indian Corn, &c.	8,352,494
Cotton	31,764,682
Tobacco	5,999,769
Flax Seed, Hops, Brown Sugar, &c.	159,726
Manufactures	6,461,764
Articles not enumerated	353,181
Total	63,137,470

The trade with this kingdom and its dependencies, during the year above stated, amounted in round numbers to the following amounts:—

Value of Imports	43,500,000 dollars.
Value of Exports, domestic produce	33,750,000
foreign produce	3,500,000

POPULATION OF THE UNITED STATES,

According to five Enumerations, taken from the Official Revision.

STATES.	1790.	1800.	1810.	1820.	1830.
Maine	96,540	151,714	228,705	298,335	399,955

POLITICAL RETROSPECT FOR JANUARY, 1834.

GREAT BRITAIN.

Our domestic history for the past month, as is usual when parliament is not sitting, has been marked by few events of note.

The new year came heralded, not ominously, we trust, by alarms of war, for which the public mind had been little prepared by any preceding signs. In consequence of the new relations recently entered into by Turkey with her old enemy Russia, it is understood that both France and England had conceived themselves called upon to make ready for the defence of interests of their own, which appeared to be threatened by the attitude that Russia had assumed. Accordingly, the naval squadrons of both in the Mediterranean were reinforced; and for a short time considerable apprehension was entertained as to what might be the result. The cloud, however, has since passed away almost as suddenly as it arose. It is said that the interference of Austria was exerted with effect in inducing the Autocrat to give such explanations and assurances as satisfied the two powers that they might with propriety suspend their hostile demonstrations. We shall state in our notice of French affairs what took place on the subject in the Chamber of Deputies. The fleets of the two nations have, in the mean time, returned from the Archipelago—the English to Malta and the French to Toulon.

This rumour of approaching war in the East still subsisted, when the public journals came forth with an announcement that we were also likely to be immediately engaged in hostilities in the West of Europe. Pressing applications are said to have been made by the ministers of Donna Maria in Portugal for aid from this country against Don Miguel; and it is acknowledged that some difference of opinion prevailed in the Cabinet as to the course to be followed. For the present, however, it seems to be decided that we shall not interfere; and the report of the Portuguese war has gone down like the other. The funds were slightly depressed during the existence of these apprehensions.

As the meeting of parliament draws near, some movements begin to be made in regard to various subjects likely soon to come before the legislature. Associations to effect the repeal of the Corn Laws have been formed in different parts of the country; and the new power of cheap periodical

publication has also been set in action to diffuse and advocate the views of their members. Meetings have again been held in several of the London parishes, and deputations sent to Lord Althorpe and Lord Melbourne, with the object of forcing the removal of the house and window taxes. In the agricultural districts the question of the commutation of tithes has been taken up with great eagerness; and there is every reason to believe that a settlement of it will be forced upon the government in the course of the ensuing session. An arrangement for the extinction of this most objectionable impost will probably, indeed, occupy a conspicuous place in the general plan of church reform which ministers are pledged to bring forward.

A veil still hangs, to a considerable extent, over the state and operations of the trades' unions, and those other associations of the labouring classes in towns, which have for some time past given rise to a good deal both of inconvenience and uneasiness. The battle, however, which the operatives have been waging with their masters by means of *strikes* in particular trades has not of late been carried on with the spirit of determination which was manifested some months ago, and certainly not with any results calculated to inspire its promoters with new hopes of ultimate success. An event, in every view of the most gratifying character, has occured within the last few days, in the open rejection by a body of mechanics in Sheffield of overtures which had been pressed upon them to engage in a scheme having nothing less for its end than the upsetting of the whole fabric of society as at present constituted, that its ruins might be made use of to erect another upon certain new principles, full indeed of promise, but hitherto lamentably barren of performance in every case in which their application has been tried. The Sheffield mechanics, after an examination of this new system, have not only declined having anything to do with it, or with the means by which it appears that its establishment is now to be attempted, but have exposed the folly and shallowness of the whole project, in a letter addressed to Mr. Owen, which, both for the talent with which it is composed and the spirit it breathes, deserves to be written in characters of gold. It is from the pen of Mr. Ebenezer Elliot, the distinguished author of the "Corn Law Rhymes" and other literary productions, which, mechanic as he is, place him high among the writers and men of genius of his day. The excellent qualities both of heart and head which Mr. Owen possesses, and of which they had had ample experience, are admitted and dwelt upon by Mr. Elliot and his friends with just admiration; but their sense of his philanthropic intentions does not blind them to the fallacies by which the worthy enthusiast is so strangely misled, or to the dangerous character of the advice which, under the influence of his mistaken views, he has of late been urging upon the operatives. The visionary nature of his promised regeneration is laid bare in so effective a style by a few home thrusts of Mr. Elliot's sharp and searching pen, that the dullest or most mystified eye can hardly fail to see the cheat.

The inquiry into the state of municipal corporations has been actively prosecuted during the month both in England and Ireland. The most remarkable incident that has occurred in connexion with this subject, is the publication of a circular by one of the aldermen of Norwich, calling upon the other civic functionaries throughout the kingdom to unite with him in resisting the threatened reform. The contest with parliament is to be carried on, it seems, by means of a committee of representatives or delegates from the different corporations, which is to sit in London.

The renewal of incendiarism in the agricultural districts had excited considerable uneasiness for some time before the close of the year; and during the past month there have been several fires, not only in Northamptonshire, Norfolk, and other more distant districts, but also in some of the counties in the immediate neighbourhood of the metropolis. Some instances of the infamous practice have also occurred in Forfarshire in Scotland—being the first, we believe, which has been known in that end of the island. Upon the whole, however, the cases appear to be scattered and quite unconnected—so that there seems to be no reason for apprehending that the crime is about to assume any very serious form.

In Ireland agitation has been carried on with great activity through the instrumentality both of the press and of public meetings by the leaders of the repeal faction; while, in various parts of the country, what is called predial agitation has been distinguishing itself by its usual course of violence and blood. A good many barbarous outrages have also been committed in some places by members of the trades' unions on persons obnoxious to these combinations. The political proceedings which have excited the greatest attention have been those connected with the case of Mr. Barrett, the editor of the "Dublin Pilot" newspaper, who had been found guilty of publishing a libel in reprinting one of Mr. O'Connell's inflammatory effusions which had originally appeared in a London journal. The Attorney-General intimated to Mr. Barrett that he should not be called up for judgment if he would supply the crown with the means of prosecuting the author of the libel; but this offer was declined, and Mr. Barrett was sentenced to imprisonment for six months and a fine of 100*l.* A prosecution is also pending against the proprietor of another Dublin newspaper, the "Evening Mail," for the publication of the same matter.

Intelligence from the West Indies has been for some time looked for with much interest, from the anxiety felt as to the reception of the measure for the emancipation of the slaves by the legislatures of the different islands. The speech delivered by Lord Mulgrave, on proroguing the legislative assembly of Jamaica, on the 18th of December, has arrived within these few days, and from this we learn that the assembly had, after long debating, adopted the new law. It would, appear, however, that considerable doubts had been expressed by many of the members, and were generally entertained in the colony, as to how the scheme would work in practice—especially while the negroes were passing through their proposed intermediate state of apprenticed labourers. It is understood that in compliance with an address from the legislature of Antigua, permission has been given by his majesty, that in that colony the slaves shall all be finally emancipated on the 1st of August next. Should this experiment prove successful, it is far from improbable that the example may be followed generally in the other islands.

FRANCE.

In our retrospect of 1833, published on the 1st of January of this year, we mentioned that the two Chambers met on the 23rd of December last, when the session was opened by King Louis Philippe in person. Nothing has since occurred to make us change our opinion, already expressed, that the ministry is gaining strength, and that the principles of moderation and constitutional monarchy are likely to obtain in France. M. Berenger, who was the fourth Vice President of the Chamber of Deputies in the former session, has, indeed, been again elected to that office, to the exclusion of the *Procureur-Général*, M. Persil, the ministerial candidate; but this vote can only be taken as expressive of the unpopularity of M. Persil as an individual, or at most of those prosecutions of the press of which he is understood to have been the adviser, as he has always certainly been the zealous agent and defender. M. Berenger's politics are those of the ministry.

The speech from the throne was sufficiently vague and generalized. The tranquillity of France had not been disturbed, but as "insensate passions and culpable manœuvres *were* still at work to undermine the foundation of social order, (the Republicans are probably more alluded to than the Carlists,) an inceasing vigilance was still essential. Popular instruction had received a salutary impulse—the public revenue had continued to improve—new laws of customs had been established. In Portugal, Donna Maria, and in Spain, Isabella II. had been acknowledged.

In the general debate on the Address, the clause of the King's speech which excited most interest was that relating to Turkey. His Majesty had merely said, "The Ottoman empire has been threatened with great perils—I have been anxious to hasten a pacification at once called for by the interests of France and the stability of European order—I shall continue my efforts to secure its preservation." In the course of the discussion, Baron Bignon, the chairman, as we should express it, of the committee which had prepared the draft of the Address, made a remarkable speech. He reviewed the conduct of Russia towards Poland, and denounced it as subversive of the treaties to which Russia was pledged. Assuming the prophetic tone, he spoke of the future triumphs of the Poles over their oppressors. In his view the dangers of Turkey were the direct consequence of the annihilation of Poland. He boldly asserted (but we

may doubt the fact) that in 1808 the late Emperor Alexander proposed to give up Spain, Portugal, Italy, Dalmatia, Bosnia, Albania, the Morea, and the Grecian islands to France, provided Napoleon would consent to his seizing Constantinople and the Dardanelles. According to M. Bignon, Alexander said that the Turkish capital would be merely a country town to him, and the Dardanelles the key to his house. On the same showing, Napoleon, magnanimously or politically, always turned a deaf ear to the proposal.

M. Bignon, however, did not confine himself to Russia and Turkey; he referred to the conduct and aims of Austria in Italy, and to the designs of Prussia as to the German confederation, at whose head she had placed herself. He said that the Congress now assembling at Vienna would add new links to the chain of the policy of these powers, and that their success would be treachery against France. He urged the necessity of being prepared for a hostile struggle; spoke with little respect of the partitioning or apportioning treaties of 1815, and more than hinted at the necessity of coming to a re-adjustment of the European territory.

The Duke de Broglie thanked M. Bignon for his oration, the sentiments of which were those of the Duke himself, and of his colleagues in office. A few days, however, after this decided approbation, de Broglie, seeing that he had gone too far, explained away nearly all that he had said in relation to Bignon's speech. Having thus placed himself in a false position the Duke resigned, but was shortly after *prevailed upon* by the King to remain in office. As yet the operations against Russia have been confined to words—loud, indeed, and deep, but still only words!

On New-Year's-Day the Russian ambassador, Pozzo di Borgo, delivered an address to Louis Philippe; it was complimentary—breathing nothing but peace and amity, and so was the King's reply. From a variety of Parisian newspapers published since the commencement of the year, we gather that there exist in France one party anxious to draw the sword and throw away the scabbard, and another equally anxious to make it appear that France is duped by England, who aims at drawing her into a war for the exclusive benefit of English interests.

In the same journals there are some lengthy discussions on a ministerial project of law for modelling a peculiar council of state, which, it is said, is to have a judiciary as well as administrative faculty, and, among other things, the entire management of the Admiralty Court.

The Minister of Finance, M. Humann, has produced his budget for 1834, from which it appears that the estimated expenditure of the state is 41,200,000*l.*—the revenue 39,860,000*l.* Thus there is a deficit of 1,340,000*l.*, which deficit being added to certain arrears, renders necessary a loan of 3,000,000*l.*

M. Thiers, the Minister of Commerce who lately visited England, is prosecuting his plans for the enlargement of the liberty of trade. An event has just occurred which is well calculated to impress the French people with the necessity of at least a partial change in their custom-house duties. Government having determined that rail-roads should be made at once, and on a grand scale, engineers were appointed, who surveyed six great lines of road from Paris to the departments, and prepared the requisite estimates. Everything seems to have been satisfactorily arranged upon paper, when the masters of the iron-works and forges humbly represented that it was utterly out of their power to furnish the quantity of iron necessary, or anything like that quantity, unless they were allowed some years to prepare it. This may probably induce a reduction of the import duty on foreign iron; and great and striking incidents like this, which must necessarily occur as nations extend their enterprise and civilization, will no doubt forcibly impel governments into the right paths, and gradually unshackle commerce in every part of the world. France, moreover, must have foreign coals to work advantageously the iron, when she gets it, for her own coal-mines are deficient both in quantity and quality. At this moment, next to Russia and Turkey, iron and coals appear to be the subjects that occupy the greatest share of the attention of public writers in France.

SPAIN.

Since the end of last year the Carlist faction have gained no advantages by means of arms, although they have maintained, and still maintain, a desultory guerilla warfare in the Biscayan provinces and in Navarre. They are, for the present, evidently unable to make head against the queen's party and supporters; and it appears to us that Don Carlos has lost an opportunity which will not again occur, and has proved, by his skulking in Portugal instead of throwing himself among his partisans, that he is not a man capable of achieving a crown through dangers and difficulties. It is worthy of remark, that these partisans of a despot are, and have for many ages been, of all the Spaniards those who have enjoyed the greatest share of civil liberty. The municipal and other privileges of the Guipuscoans and their neighbours were guaranteed in treaties by the Spanish sovereigns, and have ever been maintained by a bold people exceedingly jealous of encroachments on their liberty. How then arises the anomaly that the free are for the tyrant? Simply from these two circumstances,—1st, that the Biscayan provinces have received pledges from the Carlists that the *statu quo* of things shall be observed, and that they shall be maintained in all their exclusive privileges and advantages; and 2dly, that the queen-regent's government acting on a system of centralization and uniformity of administration, seemed to threaten that it would reduce the said privileged provinces to the same political level as the rest of the Spanish kingdom. If, instead of reducing the free to the level of the hitherto oppressed provinces, government could raise the oppressed to the level of the free, still allowing the latter (what indeed they deserve by their spirited and constant struggle for their rights) the enjoyment of some honorary distinctions and of some local laws and usages, we believe that the hardy guerillas, now in the mountains for Don Carlos, would soon return to their homes and become the peaceful subjects of the young queen. From the change that has just taken place in the queen's cabinet, it is certain that something of this sort will be done. We only fear that the generalizing spirit of the liberals may induce them to withhold the particular, but trifling concessions that may flatter and secure the people of the Biscayan provinces and of Navarre.

On the 30th of December, Zavallo, a Carlist chief, attacked a body of the Queen's troops commanded by Valdez al Durango in Biscay; but the affair was of slight importance. About the same time the priest Merino, who was endeavouring to revolutionize Castile, was beaten up; several of his adherents were shot, and he himself escaped with difficulty into Portugal, where he joined Don Carlos.

At the commencement of the year, a royal decree, dated the 28th of December, 1833, was carefully distributed through the kingdom. This decree declared the Council of Regency, which was nominated by King Ferdinand, in his will, to be the first and highest in the kingdom, and it allotted to each of its members an annual salary of about 3000*l.* This irremoveable and irresponsible Council was thus conciliated. At the same time, Xavier de Burgos, Minister of the Interior, published a list of provincial governors, to be placed according to the new territorial division of the kingdom. The chief secretaries of these important functionaries were also named, and almost without an exception, from the classes that had severely suffered from their adherence to the constitution of 1820. These appointments were intended to show an increasing desire on the part of the Zea Bermudez ministry to conciliate the liberals. But all this, and more, would not do—the fall of that ministry was determined upon. The inhabitants of Barcelona, which has long been one of the most liberal cities in Spain, held a meeting in the first week of January, at which it was carried by acclamation, that they should ask for a change of ministry, a disavowal of the absolute manifesto promulgated after Ferdinand's death, and the establishment of a constitutional form of government.

Llander, the Captain-General of the province (Catalonia), forwarded a respectful, but energetic, demand in this sense to the Queen-Regent of Spain, in the name of the province, in his own name, and in that of 45,000 armed men at his disposal. The letter containing this demand having been returned unopened, was sent back to the Queen under another cover without any additional communication. It was stated that other Captain-Generals were prepared to follow the same impulse, and demand the dismissal of the existing ministry.

Indeed, almost simultaneously with this proceeding, Quesada made precisely the same demand in Old Castile.

Catalonia and other parts of the kingdom also intimated their resolution of paying no taxes until their desires were complied with. Consequently, on the 14th of January Zea Bermudez and three of the subordinate ministers who were supposed to be most firmly attached to his peculiar system of government, were dismissed, and Martinez de la Rosa, a literary character, a well-known liberal, and a sufferer from the overthrow of the Constitution of 1820, was raised to the post of Minister of Foreign Affairs, which was one of the offices held by Zea Bermudez.

Xavier de Burgos the liberally disposed Minister of the Interior, and Zarco del Valle, who is also considered as one disposed to act cordially with the new Cabinet, remain in office. Burgos, as the oldest member of the Cabinet, is for the time Premier. It is anticipated that the first great acts of this new ministry will be the convocation of the Cortes, and the issuing of an amnesty for all political offences, which shall include every Spaniard omitted in the preceding amnesties given by Ferdinand and the Queen-Regent.

The Marquis of Las Amarillas, one of the members of the Council of Regency appointed by Ferdinand, is said to have been the adviser of the young widow queen in these difficult circumstances, and it is also believed that he is disposed to forward the views of the men appointed to office by his recommendation. If all this be true, and if he have really recommended the new members of the Cabinet, we may consider this as a guarantee of future moderation and wisdom on the part of government.

Las Amarillas is considered by those who know him well, as a nobleman who unites more of the qualities necessary to conciliate parties and to rescue Spain from anarchy, than any other individual or any other score of individuals who have as yet appeared upon the political arena of that country. He is a grandee—one of the highest nobility—a circumstance which may seem unimportant to some, but which is of immense importance in a country like Spain; his estates are great; by his connexions and private friendships he can attach to the system he adopts a powerful body both of the nobility and clergy; at the same time, he entertains liberal views, is anxious for the establishment of a constitutional monarchy, is a favourite with the middling classes, of an amiable, and popular, and at the same time of a firm, decided character.

PORTUGAL.

THE unnatural conflict which has reduced this country to a most wretched condition is still undecided. The royal brothers occupy the same positions in which we left them at the close of the year. Don Miguel's stronghold is still Santarem, and his partisans have gained some trifling advantages over the Pedroites near Oporto. In Lisbon, Don Pedro has added other proofs, which were not wanted, of his being unfit for government, and has got into a quarrel with some leading members of the Portuguese nobility. The Count of Taipa published a letter, in which he called upon Don Pedro to summon the Cortes and adopt a wiser policy. Seeing his first letter disregarded, he wrote and circulated a second, inveighing more especially against the proceedings of the ecclesiastical commission established by Pedro for the suppression of monasteries, &c. The priest, a favourite of Don Pedro's, who was president of this commission, denounced the Count as an agent of Don Miguel, and obtained a summary order for his arrest—for even in such a mode are matters managed by the Constitutional ex-emperor! The Count Taipa was actually arrested, but on his way to prison he contrived to escape to the house of a nobleman, his friend, who threatened to shoot the officers of police that pursued him. From this opportune asylum the Count retreated to Admiral Parker's flag-ship, the Asia, which was in the Tagus; and nine of his brother peers protested against the insult offered and the breach of the privileges of the peerage. Don Pedro declared he knew nothing of the proceeding, and promised that proper satisfaction should be given to the parties injured. Instead, however, of giving this satisfaction, he added to the irritation of the nine noblemen and their numerous friends, by styling their protest a *petition*. These peers then went to the palace to remonstrate with him in person, but they were refused admittance. The Duke of Terceira, trembling for his imprudent master, insisted on having an audience, and presented in writing the sentiments of the peers on his violation of the Charter. The tardy answer of Don Pedro was, that when the Cortes met the whole affair should be investigated.

In the meantime Don Miguel has rejected an offer of mediation formally made to him by the Queen Regent of Spain, whose ambassador had an interview with him at Santarem. The Spanish General Rodil, countenanced by the Pedroites, has made two incursions into Portugal in search of Don Carlos,—in the second of these he penetrated as far as Braganza, and captured some of the pretender's junta. Naval preparations in England, to be placed under the command of Captain Elliot, who is to do for Don Miguel what Napier has done for Don Pedro, are said to be in progress, and by the last advices from Lisbon, it should appear that the Pedroite fleet was getting ready to sail for our coasts and intercept this new expedition at its first starting.

In the interior of Portugal Don Miguel has been successful in his endeavours to recruit his army, and his cause seems to be still dear to the priest and monk directed peasantry.

The official gazette of Don Pedro and his Lisbon ministry has put forth an amnesty for all such partisans of Don Miguel as choose to profess allegiance to Donna Maria; but, strange to say, this document has neither the name of Don Pedro, nor that of any one member of his government, attached to it. In affairs of such life and death importance, it is not reasonable to suppose that the Miguelites will overlook any official informality, or be *duped* by anything less than a regularly signed and sealed document—if indeed (as is suspected in many quarters) *treachery* is contemplated by Don Pedro.

For ourselves, we doubt the propriety of any foreign interference in this disgusting quarrel; but, most assuredly, if any interference be resorted to, the first thing to insist upon is, that Don Pedro be removed as far from Portugal as Don Miguel.

GERMANY.

THE most important event in relation to our own interests which we have to notice in this great but divided country, is the rapid extension of a fiscal and commercial confederacy amongst the different states which compose it. By this measure, which has long been in preparation, all duties for goods passing from one confederate state to another, are to be abolished. As far as this clause goes, the measure may be considered as one of unmixed advantage to the parties concerned, or such of the German States as have joined, or will join, this commercial league. But there is another great clause which imposes the adoption of a tariff fixed by Prussia, and an increased scale of duties on all goods of whatsoever kind, imported from countries which have not joined the confederacy. The policy of this second clause, even as regards the interest of such states as may adhere to the system, is very questionable, whilst, inasmuch as relates to the interests of England, it is held by mercantile men to be a measure of unmixed and absolute mischief.

The great German power that has originated and headed this confederacy is Prussia. She has pursued the project with great earnestness and perseverance, making use, it should appear, of threats as well as arguments with those minor states that have shown reluctance or tardiness to adopt the new system.

Bavaria, Saxony, Wurtemburg, and a number of the small states, have already joined the confederacy; the accession of Mecklenburg is counted upon as certain, and it is expected ultimately that the rest of Germany, including Hamburgh and the other free cities, will be compelled to follow their example and adopt the onerous Prussian tariff.

The trade of Hamburgh is indeed already sadly circumscribed by the new regulations, having no open market left save Sweden, Baden, and Switzerland; at the same time, it is asserted on the authority of the agent of a Yorkshire woollen-house, resident in that city, that Prussia, seeing how she has closed the *débouches* of Hamburgh, and is reducing her to extremities, will not now admit her to the *advantages* of the confederacy unless she pay a sum nearly equivalent to 500,000*l.* The duties levied by the new tariff on foreign manufactures throughout the whole of the German commercial confederation, fall so heavily on most of our woollen and cotton goods as to amount to a prohibition. Our hardware goods are also seriously burdened.

It appears that manufactured woollens are to pay nearly 1*s.* per lb. weight, and manufactured cottons 1*s.* 6*d.* per lb.

weight. The high cotton yarns may still be exported from this country, but on the high or fine yarns the new duties will be prohibitory.

The reply of Prussia and her confederates to the complaints of the British manufacturer and merchant, is, that England persists in almost excluding their timber and their corn—the most important of their produce, by the enormous duties she lays upon both, and that she has, in fact, provoked and justified a retaliation.

Considerable agitation is still kept alive in several of the states of Northern Germany, by the overt desire on one part to extend the liberty of the press, and indeed liberty generally, and by the only partially revealed anxiety on the other part, to circumscribe the degree of freedom those states now possess. Great events may be in preparation, but as yet none have occurred, except the success and prospect of further progress of the Prussian trade confederacy. Some curious paragraphs have appeared in the Prussian and other German newspapers, importing that in former times, during the existence of the Polish nation, territories lawfully belonging to Prussia had been encroached upon and retained by the Poles—that these encroachments are now the subject of discussion between the courts of Berlin and St. Petersburg, and that it is confidently expected the justice of the Emperor Nicholas will restore to Prussia all that the injustice of the ancient Polish republic deprived her of.

The matter, as yet, is somewhat obscure; but are we to suspect that Russia is about to purchase the aid and close alliance of Prussia by another slice from the loaf of Poland?

The congress of Vienna held its first sitting on the 12th of January, but, as yet, we are entirely ignorant of its proceedings.

SWITZERLAND.

A Swiss commission to regulate commercial affairs has assembled at the manufacturing town of Zurich. Its proceedings have been characterised by good judgment. It has published a declaration that the Swiss will maintain, without change or limitation, the system of free-trade—that they will neither join the French line of customs, nor the Prussian customs confederacy, nor, indeed, any foreign line of customs whatever—that they will do all they can to bring about the application of the principles of free-trade—that they will negociate with such of the neighbouring states as may be so disposed, with the view and understanding of disposing of the products of the land, and of the cattle of Switzerland, under the fewest possible restrictions, and of obtaining, on their part, the free, unburdened purchase of corn, and of regulating the mutually advantageous traffic of the frontiers and markets.

The system established is unexceptionable, but we imagine the Swiss will find it rather difficult to work it out with good or large effect. They are hemmed in by countries that seem nearly all disposed to act on a different system; nor can Switzerland receive a bale of cotton, a hogshead of sugar, or export a cheese, or a yard of her manufactures, without its passing through some of these neighbouring states, who have the power to load imports and exports with heavy transit duties.

After a long and rather stormy debate, in which there was much said about the laws of hospitality and the generosity of the Swiss character, on the one side, and some exasperation (that arose from the fact of some of the Polish refugees having taken an active part on the popular side in the conflicts between Basle town and Basle country) shown on the other, the Diet determined, that all such Poles as could not prove that they had the means of supporting themselves, or that they had some friend or friends who would be answerable for the change of their support, should be obliged to leave the territories of Switzerland within a certain specified time.

UNITED STATES.

The congress was opened on the 3rd of December last. The President's message, as usual, commenced with congratulations on the great prosperity of the country. It then detailed the actual state of foreign relations, stated particularly that the question with Great Britain, about the north-eastern boundary, was likely to be settled speedily; and in mentioning the establishment by our government, of light-houses on the Bahamas, President Jackson took the opportunity of expressing his good-will to this country in the following terms:—

"These works, when completed, together with some which the United States have constructed on the western side of the Gulf of Florida, will contribute essentially to the safety of the navigation in that sea. This joint participation of establishments, interesting to humanity and beneficial to commerce, is worthy of two enlightened nations, and indicates feelings which cannot fail to have a happy influence upon their political relations. It is gratifying to the friends of both to perceive that the intercourse between the two people is becoming daily more extensive, and that sentiments of mutual good-will have grown up befitting their common origin, justifying the hope, that by wise councils on each side, not only unsettled questions may be satisfactorily terminated, but new causes of misunderstanding prevented."

The part of the message relating to France, who has delayed to discharge the first instalment of the amount settled by treaty as being due to citizens of the United States for injuries inflicted by France on their commerce, was in a less amiable tone. A minister-plenipotentiary had been sent to Paris to expedite this business; Spain and Portugal had pledged themselves to indemnify the American merchants for similar injuries, and the King of Naples had been earnestly applied to on the same grounds. A treaty of commerce, though not a very satisfactory one, had been concluded with Belgium. With the Emperor of Russia they were on very friendly terms, and a treaty of navigation and commerce had been ratified since the last meeting of congress. With regard to finances, the whole remaining debt of the United States would be reduced by the 1st of January 1834, to 4,760,082 dollars; and it was expected that the revenue of the current year, added to a balance already in the Treasury, would discharge this remnant of debt within the year. It must be remarked, however, that this applies only to the general government debt, and that the separate states of the union have all debts of their own, some of which are sufficiently heavy. President Jackson then alluded at great length to the United States Bank question, and explained and justified the conduct of government on that head.

The remaining topics of the message were—improvements in the army, navy, and Post-Office—the exertions to remove the wild Indian tribes beyond the Mississippi—the necessity of precautions against accidents in steam-boats—and the proposed change in the manner of electing the President and Vice-President. This change will render the election more direct and popular.

From American papers which have been received down to the 25th of December, it appears that the most important discussions in congress have been those relative to the national bank. For an exposition of the grounds of this dispute we refer to our last retrospect. The bank, made to congress a formal complaint, importing that its chartered rights had been violated: but, on a division, this memorial was rejected by a very large majority, and the business referred to the Committee of Ways and Means. This decision is supposed to indicate the strength of the parties in the House of Representatives, and to prove that the bank has little chance of succeeding against the government.

SOUTH AMERICA.

The only intelligence received from the turbulent states in this part of the world, is from Mexico. It is however important, as it informs us that Santa-Anna, who was President of the Republic last September, is still at the head of affairs, and that there has been no new attempt at revolution for several months. According to a North American paper, Santa-Anna had been successful in his endeavours to restore order. After beating his opponents in the field he had banished Bustamente, who had been president before him, and General Terran, together with a number of factious priests. His government had taken possession of the mass of church property (a measure, we should think, likely to lead to another revolution), and proposed to discharge with it their home and foreign debts. They also contemplated an entire change in the Mexican custom-house department—a sort of porto franco was to be established with spacious warehouses, wherein goods might

be deposited and taken out either for home use or for exportation. When exported, drawbacks were to be allowed upon them. The payment of duties in paper, had been already suspended. In consequence of these and other measures, and of the prospect there was of tranquillity being maintained, the government stocks had risen very considerably. The president Santa Anna, who seemed to be friendly to rational liberty, had retired to the country to recruit his health, which had suffered much during his arduous campaigns against Generals Terran and Arista.

CHRONICLE OF OCCURRENCES.

December 18. The Water-Witch, a very fine steam-vessel, recently built at an expense of 12,000*l.*, was lost this night in a fog off Ballyhale on the coast of Wexford. Through the exertions of the boatmen and the peasantry, in the midst of great peril and difficulty, the loss of life was confined to three females and a gentleman; and to three of the crew who, in the first instance, had endeavoured to escape in a boat.

21. The Haubetz Anker, a fine Norwegian ship, was dashed to pieces in a storm off the French coast near Boulogne. The crew all perished. They were seen for two hours clinging to the bowsprit by thousands of spectators, who could render them no assistance for want of a life-boat, which after the loss of the Amphitrite should have been immediately provided. The English Royal Humane Society, at the half-yearly meeting, held January 8th, 1834, announced its determination to establish a station at Boulogne.

29. The Duke of Braganza publicly pardoned, in the name of the Queen, 300 Miguelite soldiers who had been captured by the Constitutional troops.

30. Died in his 77th year, William Sotheby, Esq. the distinguished translator of Homer, and of Wieland's Oberon.

— The Dutch States-General begins to exhibit dissatisfaction at the enormous expense resulting from the King's determination to keep up the army on a war footing. At the latter end of December, the Budget was not adopted without long debates, and then only by a majority of four; and afterwards a Supplementary C[illegible] to defray the expenditure of 1833, was refused by a majority of 31 to 19.

The "Spectator" for Dece[illegible]rtance in a[illegible]grant, to cover [illegible] of taxes are great; by his [illegible] of a

ships he can attend, to [illegible]ember 28th, has a very curious tabular view of the number of times each Member of the House of Commons spoke during the last Session, and how many columns and lines in the "Mirror of Parliament" his speeches occupied. Upwards of 11,000 speeches were delivered, and the six most frequent speakers were:—

	Times.	Cols.	Lines.
Lord Althorp	1026	387	22
Mr. O'Connell	647	388	88
Mr. Hume	601	253	73
Mr. E. G. Stanley	292	192	2
Mr. Cobbett	261	151	88
Sir Robert Peel	106	132	26

Jan. 6. At the commencement of the sittings of the Chamber of Deputies in France, it appeared that the principal opposition speakers, although hostile to the present ministry, were friendly to the existing dynasty and institutions. This day M. d'Argenson and M. Audry de Puyraveau, when charged with having signed a manifesto of the republican "Society of the Rights of Man," took occasion to avow republican sentiments, and expressed their adhesion to the political system of Robespierre. A predilection for a Republic was also, less unequivocally, expressed by M. Garnier Pages and General Lafayette. These declarations appear to have been received by the Chamber with some agitation, but more amusement.

9. It is stated in the New York papers, received this day, that the Secretary of the Treasury had recently drawn upon the branch bank at Louisville for 30,000 dollars, but as the government had but 6,000 in deposit there, the draught was dishonoured and returned under protest.

12. Died in his 75th year, Lord Grenville, Chancellor of the University of Oxford, and Auditor of the Exchequer. This nobleman had successively filled some of the highest offices of state, having been Speaker of the House of Commons, Secretary of State for Foreign Affairs, and First Lord of the Treasury in 1807.

22. Reports of a money panic, attended with several failures to a large amount in the United States; resulting from the struggle between the government and the bank.

23. The "Suabian Mercury" states that a great many Englishmen have made purchases of land in Greece, and among them Sir Pulteney Malcolm, who has bought a very fine estate in the environs of Athens. The Admiral also built a very large house, which he has since sold to king Otho for a considerable profit, and with the money has bought the seven islands called the Petales to the south-west of Eubœa. A number of Maltese have entered Greece as artisans and agriculturists, who are much wanted in that country.

Lord Howick has been appointed Under Secretary of the Home Department in the room of the late Mr. George Lamb.

The Treasury has directed the Stamp-office to deposit in the British Museum all the files of newspapers which it accumulates, taking care that none be lost.

There has probably been no quarter of the year within the memory of man in which the loss of shipping has been so great as in the last. For nearly three months we have had perpetual storms, and these not partial in their devastations, but felt all along the coasts of England, Scotland, and Ireland, as well as on both sides of the British Channel, and on the shores of the German Ocean. It is not possible to form any very correct estimate of the number of ships lost or of their value, and it is still more difficult to estimate the values of their cargoes. Many hundred thousands of pounds will, however, we fear, be necessary to cover the loss; and, whether it falls to the underwriters or to the owners, the destruction of property is frightful, though far less so than the loss of life with which it has been attended. (*Liverpool Times.*) Galignani's Messenger states, that at Boulogne alone no less than 300 children have lost their fathers since the commencement of the herring season.

Several Indiamen, and many other large vessels with passengers, have been detained at Portsmouth by contrary winds for the last two months. The innkeepers are reaping, to use the newspaper phrase, an abundant harvest. They will pray for a continuance of bad winds now, as they used to pray for war formerly. In the mean time the capital of the country is wasting; and if the innkeepers thrive, somebody else is suffering. This is not wholesome profit.

The "Kingston Herald" notices a most extraordinary fact which occurred during the late storm on Lake Erie. A channel was made through Long Point, 300 yards wide, and from 11 to 15 feet deep. It was in contemplation to cut a canal at this place, the expenses of which were estimated at 12,000*l.* The "York Courier" confirms this extraordinary intelligence, stating that the storm made a breach through the point near the main land, converted the peninsula into an island, and actually made a canal of 400 yards wide and 8 or 10 feet deep, almost at the very point where the proposed canal was to have been cut; and rendered nothing else now necessary in order to secure a safe channel for vessels and a good harbour on both sides, than the construction of a pier on the west side, to prevent the channel from being filled up with sand.

The "Protagateur" [illegible] states that during the last year [illegible] Calais [illegible] 24,000 persons embarked at Dover for the Continent, of whom 19,000 landed at Calais.

The number of emigrants to Canada, in the last three years, amounts to 133,970, and the markets for British manufactures have increased in a greater ratio than the population. During the last year, 1035 British vessels, amounting to 279,704 tons, navigated by 12,243 seamen, have entered the port of Quebec alone. This astonishing trade has increased from 69 vessels, navigated by 731 seamen, in the year 1805. A million and a half of value in British manufactures has paid duties of import.

The Polish refugees in Switzerland have received permission from the French Government to join their countrymen in France.

The sum of 125,000*l.* has been awarded to Admiral Napier's fleet as prize-money for the capture of the Miguelite fleet; to be paid in three instalments, in eighteen months.

At Evreux, lately, a surgeon, in bleeding a patient, having pricked an artery by which amputation was rendered necessary, the tribunal of the town condemned the unskilful operator to pay the sufferer 800 francs as damages, and to settle on him an annual pension of 100 francs.

A great many works of art continue to be discoverd at Pompeii. Some very fine paintings have recently been found. Vesuvius, which has not for several months past been completely tranquil, has begun to throw out a great quantity of lava.

On the 15th of February will be published, of an uniform size with the "Companion to the Newspaper," price 4*d.*, containing 24 folio pages, and to be continued on the Middle Saturday of each month,

THE PRINTING MACHINE;

A REVIEW FOR THE MANY.

"What the PRINTING PRESS did for the instruction of the masses in the fifteenth century, the PRINTING-MACHINE is doing in the nineteenth. Each represents an era in the diffusion of knowledge; and each may be taken as a *symbol* of the intellectual character of the age of its employment."—*Penny Magazine.*

PROPOSED ALTERATIONS IN THE FRENCH TARIFF.

THE attention of men engaged in commercial pursuits and connected with manufacturing industry in this country, has for some time past been directed with anxiety towards the issue of certain negotiations which were understood to be on foot for the establishment of a commercial treaty between the governments of France and England. Such a treaty, based upon mutual concessions and established upon the obvious interests of both countries, would, more than any other circumstance, tend to draw closer together those ties of political harmony which now so happily, for the general peace and welfare of the world, unite the two powers. It was hoped that the clouds of national prejudice had been so far dispersed from both sides of the narrow channel that divides them, as to show not only that the notion in which the present generation was nurtured, of each country being the *natural enemy* of the other, was unworthy of our common nature, but that their geographical position, as well as the dissimilarity of their productions and pursuits, pointed each out to the other as its best and its most *natural customer*.

It was known that two gentlemen had been for some time accredited by our government, who had exerted themselves, during their protracted visits to the capital and provinces of France, in endeavouring to convince—not the French government, for it was hoped and believed that its members needed not to be convinced—but the thinking portion of the agricultural, commercial, and manufacturing interests in France, that it would be better to give us their superabundant wine, and silk, and oil, in exchange for our superabundant cottons, and woollens, and hardwares, than to go on producing the latter articles for themselves at a cost which, although it offered a powerful temptation to the contraband trador, and thus kept down the profits of the producers, yet caused the prices to be grievously severe to the great body of consumers throughout the country.

The hopes thus excited were considerably strengthened by the visit made during the last parliamentary recess to the capital of France, by that one among our ministers who is supposed to be most practically conversant with commercial questions, as well as by various semi-official hints which were allowed from time to time to drop from certain authorized organs of the French government, favourable to the accomplishment of the object so much desired.

These hopes are now—for a time at least—put to flight by the *projet de loi*, presented on the 3d of February to the Chamber of Deputies by the French minister of commerce and public works; as well as by the argumentative *Exposé des Motifs*, whereby the intended alterations are accompanied. We propose very briefly to state, in what the few and comparatively immaterial alterations projected consist, and the kind of reasoning by which the continuance of the exclusive system is sought to be justified by the French minister, limiting ourselves to the notice of those articles which appear likely to have an influence upon the commercial industry of the United Kingdom.

The most important relaxation of the French commercial system, which is now proposed by the minister for adoption, consists in the admission, at certain rates of duty, of a few articles, the importation of which has hitherto been strictly prohibited. The principal articles of this list which affect England are—

Cotton Twist and Yarn above a certain degree of fineness.
Iron Cables.
Rum.
White India Handkerchiefs, known to our merchants as Corahs.

The articles interesting to us, as to which it is proposed to *diminish* the duty, are—

Wool, combed and uncombed.
Iron in bars.
Tin, unwrought.

On the other hand, a list is given of articles upon which it is intended to augment the duties. Among these, linen yarn is the only matter likely to affect British industry. We shall state as concisely as possible the nature and amount of the alterations above specified, and endeavour to point out in what manner and degree each of them is likely to affect the commercial relations of the two countries.

The importation of cotton twist and yarn, of all qualities, has hitherto been wholly prohibited by law in France. This prohibition it has been found altogether impossible practically to maintain, because the French spinners have been unable to produce the higher numbers—that is, the finer qualities—of the yarns necessary for the manufacture of muslins and bobbin-net. These articles have been also strictly prohibited by the French tariff, but they have been considered so necessary by the French people, that the government of that country has all along been obliged to act the demoralizing part, of being an accessary to crime by conniving—even to open toleration—at the trade of the smuggler. What says the *Exposé* of the minister—which is now before us—upon this subject? "The manufacture of tulle and of muslin has increased in France to a great degree. This branch of industry requires fine yarns, finer than those ordinarily made in France. The legal prohibition interdicting all cotton yarn without distinction, the manufacturers of tulle and of muslin procure what they require from the smuggler. The practice has become so notorious, that it is avowed and even tolerated. Is it proper, in order to protect the spinner, to deprive a flourishing branch of industry of its material, and to condemn it to exist only by means of an expensive and demoralizing fraud?"

This is not by any means a new grievance in France. It existed, in fact, before the return of the Bourbons; the advance on our prices necessary to defray the risk and expenses of the smuggler then amounting to between 60 and 70 per cent., and yet that enormous difference in price was found insufficient to stimulate the French spinners to a successful rivalry with the mills of Manchester. At the return of peace, the expenses of smuggling fell to from 18 to 25 per cent., the rate depending upon the value of the goods in proportion to their bulk, and at these rates it is possible to make a regular assurance of the value against the risk of seizure on the part of the revenue officers. As a proof of this fact, we may quote a passage from a masterly paper drawn up by the Chamber of Commerce of Lyons, in answer to a series of questions addressed, in August last year, by the minister of commerce to that body in common with all the similar associations in France.

In replying to the question, What should be the conditions and the rate of duties imposed? the Chamber answers—

"Illicit trade, which holds the balance in its hand, is here the safest and the easiest guide to follow.

"Whenever a duty shall be such that it does not hinder

[WILLIAM CLOWES, Printer, Duke Street, Lambeth.]

smuggling, whenever it can be asserted that, by the payment of a premium, persons may be found willing to undertake the fraudulent introduction of merchandise, the proper and reasonable rate of duty will have been passed.

"The best proof that can be offered that our present tariff is for the most part too high, and that its prohibitions are unreasonable, is this: that smuggling on a large scale, organized smuggling, is followed, like any other source of industry, without exciting that sentiment of reprobation which should attach to all illicit actions; that it has its regular counting-houses, that its prices are bargained for (*débattus*), and public. Everybody knows that the Cachemires of India may be introduced at the charge of 10 per cent.; watches and jewellery for 5 to 12 per cent.; cotton yarn for 18 to 25 per cent.; English tulle (bobbin net) for 15 to 18 per cent.; and that more bulky tissues may be insured for 15 to 25 per cent."

With these facts before its eyes, and acknowledged by the French government to exist, how does it propose to remedy the evil? By admitting the finer qualities of yarn and twist, beginning with No. 170, at duties of eight francs and ten francs per kilogramme respectively. These duties, calculated on the highest qualities, of which but little comparatively will be required, amount to about 12 or 13 per cent. on the present cost at Manchester; but on the lowest numbers, the importation of which it is proposed to legalize, and of which the bulk of the shipments will be composed, the duty will greatly exceed the smuggling charge, being from 35 to 40 per cent. on the value. Hitherto cotton yarns of foreign manufacture, being prohibited, were liable to seizure wherever they could be found within the kingdom, but hereafter the smuggler will have only to pass the frontier in order to complete his risk, and will consequently be enabled to carry on his business upon lower terms than at present. As if to aid the illicit trader in this course, the French government proposes that cotton yarns shall have a mark attached to them when passed by the custom house officers, the form and particulars of which mark shall be determined by a royal ordinance, and published, in order, we suppose, that it may be more successfully counterfeited!

The prohibition of iron cables, which is now removed, has hitherto been altogether nominal. It was permitted to place them in *entrepôt* at all the ports of the kingdom, and permission was never refused to a vessel to provide herself thence, with an article so essential to her safety, upon the payment of about the same rate of duty—50 francs per 100 kilogrammes—about 20*l.* per ton, which it is now proposed to levy on importation.

In a country where brandy is produced so abundantly, so good, and at so low a price as in France, rum is an article of pure luxury, and its consumption can never become an object of much importance. By the existing regulations, this, not being a production of European origin, cannot legally be imported into France from England, and the principal effect likely to follow from its admission at all, seems to be the facilitating of the operations of the contraband trader.

The same remark applies to the remaining article from which the prohibition to import has been removed, viz., plain India handkerchiefs. These are to be subjected to a duty of 16 francs per kilogramme; and as a piece of seven handkerchiefs, now worth 18*s.*, weighs about 14½ ounces, this duty is equivalent to 5*s.* 3*d.* per piece, or about 30 per cent.—also beyond the smuggler's charge. Taking into consideration these two facts, that the importation cannot legally be made from London, where a large quantity of these goods are always kept in *entrepôt*, and that the contraband trader will be able to undersell those who would pay the duty, we may fairly predict that but few pieces of these India handkerchiefs will pass through the French custom-houses.

To those who look upon commercial questions simply as matters of loss or gain, it may appear of little moment by what means the amount of the nation's trading is increased. We are not of this number, but hold that commerce cannot ally itself to crime without losing all its proper dignity, and without being converted from one of the chief blessings of civilization into a fertile source of moral degradation. Upon this subject it has been remarked that, "independently of the enormous expense attending establishments for the prevention of illicit trading, governments appear to be under a moral obligation to remove, as far as possible, all incentives to the commission of the crime of smuggling. The opinion that infractions of revenue laws are, at most, but venial offences, is one very generally held among the uneducated, and, judging from the encouragement afforded to smugglers the idea is not by any means confined to that class. If, however, crimes are to be estimated with reference to their probable influence upon the general well-being of society, the smuggler's calling can by no means be considered harmless; since, by familiarizing him with violations of the law in one of its codes or branches, it tends to break down the barriers which should restrain him in regard to moral observances generally, and in truth, a laxity of practice in this so esteemed venial fault is found to lead from one step to another, through various gradations of crime, until the mind and heart become, at length, wholly corrupt and brutalised, and murders the most cruel and atrocious, perpetrated in defending the objects of their criminal traffic, are too often the melancholy consequences." *

The articles interesting to English commerce already admissible into France, as to which it is proposed to lower the rates of duty, are next to be noticed. The first that we shall mention is wool.

It was for a very long time, and indeed until a recent period (1826), considered to be the true policy of this country to prohibit the exportation of wool of British growth, with the idea that, as this was of a peculiar quality admirably fitted for certain descriptions of manufacture, we should, by retaining the wool, secure the possession of the manufacture also. It was felt, however, that for this country, which is so peculiarly indebted to foreign lands for a large proportion of the raw materials of manufacture, to countenance a course so selfish, might be fraught with inconvenient if not dangerous consequences, and the prohibition is but little likely to be again enforced. For the same article (wool), but of a different quality, we are ourselves indeed dependent in a great degree upon foreign supply. In the year 1832, we imported, principally from Germany, upwards of twenty-eight millions of pounds, and exported of British wool, about four millions of pounds, almost all of which went to France and the Netherlands. In 1833 the importation of foreign wool, reached the unprecedented quantity of 38½ millions of pounds. We have at present no means of ascertaining the amount of British wool exported last year, any further than the statement of the declared value, which amounted, in 1832, to 219,650*l.*, and in 1833, to 334,678*l.* It must be borne in mind, however, that, owing to the great activity of our woollen manufactures all through the last year, and, to a short supply of home-grown wool, from natural causes, the price has advanced since 1832 most materially—indeed to almost double the former price, so that the increased value is no proof of there having been an increased quantity exported. We have mentioned these facts, having reason to believe that a good deal of misapprehension is afloat upon the subject. Foreign wool, when imported from any British possession, is admitted free of duty, and when brought from foreign countries to the United Kingdom, pays only the nominal rate of a half-penny per pound when under the value of one shilling, and of one penny per pound when above that value.

The duty hitherto chargeable upon the importation of wool into France has been, since 1822, fixed as high as 33 per cent. It is now proposed to abate one-third of that rate. It is very remarkable that while, in this country, the agricultural interest is protected against every other, for reasons which are not far to seek, but into which we shall not now enter, in France it is sought to remove the few commercial restrictions which have been imposed with the view of encouraging the occupiers of the soil. We learn from the '*Exposé*' of the minister of commerce, that 'the duty upon wool was conceived in 1822, not in order to encourage a production already sufficiently developed by previous circumstances, but to assure a monopoly price to the great producers. Futile attempt!' says the '*Exposé*;' 'a duty cannot be effective against the natural course of things, against internal competition. Prices have not ceased to fall, the intention of the duty has not been fulfilled, and dreadful effects have been produced by it. Shut out from the markets of France by this heavy impost, the wool of Spain has fallen, at rates cheaper than it would otherwise have done, into the hands of the English and Belgians, and our manufacturers of cloth have in consequence met with

* Treatise on the Silk Manufacture, Lardner's "Cabinet Cyclopædia," p. 85.

the most powerful competition in all the markets of the world.'

How far a reduction of the duty (which will still enhance the cost of the material more than one-fifth) will have the effect of restoring prosperity to the cloth manufacture of France, remains to be seen. We should not be sanguine as to the result.

The question of the admission of English iron into France is one that has of late been very greatly agitated in that country. It has been argued that a system which, in order to foster a branch of domestic industry, compels every man throughout the kingdom to pay double for every implement or article of convenience in the construction of which iron is used, is a system at once of folly and injustice. The French government avows a different belief, and insists upon the policy of continuing a protection in favour of one branch of industry at the expense of all the others, because some day or other, through the possible discovery of coal in the same district with their iron ore, or through the decreasing expense of transporting fuel, iron may be produced in France at a cost equally cheap with the price at which it can be imported. In the meanwhile, it is calculated that iron, the produce of France, can be sold at about 37 francs per 100 kilogrammes, while English iron can be imported for 15 francs, the duty on importation being 27·50 francs or upwards of 180 per cent, and it is thence conceded that the duty upon foreign wrought iron bars may be reduced five francs, 'but not all at once, and only in five years successively, beginning on the 1st of July 1835.' The only alteration affecting cast-iron is one of regulation. Hitherto that material could not be imported except in masses, the weight of which was at least 400 kilogrammes (about 8 cwt.) It is now intended to admit masses weighing as little as 2·5 kilogrammes or half a hundred weight.

It is proposed to reduce the duty on English unwrought tin to 2 francs per 100 kilogrammes, but as the rate chargeable on tin the produce of India is at the same time to be fixed as low as 50 centimes for the like quantity, it is not very probable that Cornwall will much benefit by the reduction.

A very great degree of interest has been excited in France upon the subject of the importation duty on coals, and a commission was appointed at the close of last year by the government to inquire into the matter. This commission has made its report in the form of a goodly quarto volume, and the result is the determination to leave the duty at its present exorbitant rate. The only concession that it is proposed to make in regard to coals, is in favour of one particular class of consumers. French steam-boats, whether the property of the government or of individuals, are to be allowed to take on board for use foreign coals from the *Entrepôt*, on payment of the duty chargeable on re exportation, the rate of which is merely nominal, being a small fraction beyond one penny per ton.

The French government does not dissemble the great importance of having cheap coals, but it considers of greater importance the encouragement of a branch of industry which, to bring a small and doubtful profit to a few, must be highly detrimental to the great bulk of the nation. The '*Exposé*' before us gives evidence of feelings of the greatest jealousy towards this country, on account of her superiority in machinery, and, above all, in steam machinery. What is it that has mainly contributed to the perfection of these machines, if it be not the low price at which coal is procurable for working them? At present every species of industry is starved in most parts of France for want of cheap fuel, a fact of which no one is better convinced than the minister who drew this '*Exposé*;' and there is something so unsatisfactory in the reasons given for maintaining so injurious a monopoly, that we cannot help imagining the existence of some other reason, which, although more potent, is of too exclusively selfish a character to be put forth in an official paper. It is well known that among the most powerful men at present in France, many are proprietors of forests and plantations which would be greatly reduced in value, if any cheaper combustible were brought generally within the reach of the people.

The French minister asserts that the high price of coal does not proceed from any scarcity of the article, nor from any peculiar difficulty in working the mines, nor from any insufficiency of skill and energy on the part of the miners, but solely from the insufficiency of the means of transport. If this plausible reason were the real motive that actuates the government in the matter, what would be the course of action which reason should prompt them to adopt? Would it not be to admit foreign coals and foreign iron at moderate duties, or even free of duty, until it shall have fulfilled one of the important ends of government, by providing good and sufficient rail-roads or canals for transporting the produce of the soil and of the mines? This, we are convinced, would be the course adopted, if some powerful, but sinister and selfish interest were not exerted to the contrary, and we have no hesitation in believing, that by the adoption of this course, the ultimate prosperity of the coal and iron mines of France would be more certainly and more promptly attained, than by persisting in the present system of exclusion.

It is amusing to find in a laboured argument, avowedly put forth as an apology for the continuance of the restrictive system, such a passage as the following, which is translated literally from the 19th and 20th pages of the '*Exposé*:' —'This, then, is one of the cases where it is worth while to avail ourselves of the aid of a tariff for the purpose of naturalizing among us a new branch of industry. That is true, it may be said, but is not the duty under the protection of which it is sought to foster the production of iron too high? Is it not distressing to agriculture, to navigation, to all the arts, to pay thirty and thirty-two francs for iron which the English, without our tariff, would give us for sixteen and even for thirteen francs? We allow it; and, to give to this reasoning all its force, we will not dissemble in regard to the low price at which England would supply us with iron.

'In the first place, we should reply to the oft-repeated complaint on the part of agriculture and navigation, that it is not just, for it may be said to agriculture, that all classes are, for its protection, made to pay dearer for wool and for cattle: to navigation, that it also is protected by high discriminating duties; that every kind of industry which in the same way is protected, is equally the cause, in its turn, of the dearness of our produce: that there is no one class to which the others may not address the same complaint; that this recriminating logic is not sound, because to be just it would require that every one should be relieved from duties imposed for the protection of the others. It would then remain to be asked, if, in the face of all other nations, it is proper to be without duties upon grain, upon cattle, upon cotton goods, on iron, on machinery, on coals; and if having thus obtained one of the necessary conditions of cheapness by having provisions, clothes, and the raw material of manufactures at the lowest price, we could nevertheless believe that we had obtained all the circumstances necessary for success; and if having neither the experience of the English, nor their capital, nor *their immense means of transport*, we could, notwithstanding, compete with them in the generality of manufactures. When every interest shall have acquiesced in the simultaneous repeal of all duties, and iron, for example, deprived of the duty by which it is protected, shall have no longer to bear on its part the burden of the duties which protect agriculture and navigation, then we may act, not only with a regard to the interest of a single branch of industry, but with a regard to all, without exception.'

'Unsatisfactory as is the very inconsiderable modification now proposed in the French system of foreign commerce, we nevertheless hail it as the commencement of a better order of things. In spite of the hollow and laboured reasoning whereby M. Thiers seeks to defend the continuance of the protective system, we cannot but hope that better things are in store against no very distant day; that if the Chambers are brought to yield this little now, they may yield a little more next year; and that when only good shall be seen to follow from these successive relaxations, some large and comprehensive measure may be brought about which will be—which *must* be—advantageous to both countries, if settled upon a basis of fairness and mutual concession. By late accounts, however, we observe that there is now little expectation that even the *projet de loi* we have been examining will be adopted in the present session.

CREDIT, ITS GOOD AND ITS EVIL.

The old superstition on the subject of money, which so long enthralled both commercial speculation and commercial practice, is far from being yet extinct. There is still among the multitude a disposition to regard that convenient instrument as an original and independent power. Until very

lately it was, we may say, the universal belief that money was the only wealth of nations. Absurd as the proposition sounds, when thus directly and simply stated, nothing is more certain than that to this full extent it was really held and acted upon. It was contended, or rather it was laid down, and nobody disputed it, that the commerce of the country upon the whole, or any branch of it in particular, was advantageous or the reverse, merely according as it took money out of, or brought money into, the country. The evidence of a profitable state of trade was deemed to be the excess of the exports over the imports, because, in that case, it was thought that the difference due to us from foreigners would have to be paid by them in money. Upon this principle the commerce with France, for instance, was denounced as publicly injurious, inasmuch as we took more commodities from the French than they took from us; and the legislature, hallooed on by the great majority of the nation, and especially of the mercantile classes, took all manner of pains to discourage that trade, and to diminish it as far as possible.

The notion lying at the foundation of this theory would appear to be, that, commercially speaking at least, money is the end for the attainment of which all other commodities are but the instruments. But the very opposite of this is the truth; for money is evidently of no use except as an instrument or means by which we are enabled to procure something else.

In a scientific view, money is merely a commodity of the same nature, and subject precisely to the same laws of production and distribution with all other commodities. It serves a certain purpose, just as corn does, or houses, or hats, or hobbyhorses. The use of corn is to serve as food; the use of money is to serve as an instrument of exchange. As we carry hats on our heads to protect us from the sun, so we carry money in our pockets to purchase hats, or whatever other article we may want. As in the case of other commodities, the demand for money will always correspond precisely to the existing extent of the need which it is fitted to supply. It never can be greater than this need. It is easy, indeed, to conceive a state of things in which there would be too little money in the country; but it is equally easy to conceive a state of things in which there would be too much. There is but a certain quantity requisite; and as long as things are left to their natural operation, this quantity can no more be permanently exceeded than it can be fallen short of. As there cannot long be an over-production of hats, or a glut of that article in the market, so there cannot long be more money in the country than is required by the single purpose to which money can be applied. We say, the single purpose; for although the popular notion is that money can do everything, it can, in fact, do only one thing. It can merely facilitate exchanges. Instead of being possessed of universal powers, it is the most limited in its use of all commodities whatsoever. A hat, for instance, would make a much better half-crown than a half-crown would make a hat.

Money is only one of the forms of wealth, as hats are another of the forms of wealth. We commonly speak of the price of a hat in money, but there is no reason in the nature of the thing why we should not speak as well of the price of money in hats. What is meant when we say that the price of any article is so much money, is merely that the article and the sum of money named have the same market value, or will, at the moment, command the same amount of labour or of anything which labour produces.

But there is another misconception connected with this subject which is also still entertained by many persons. It is imagined that Credit is a species of wealth. The sums of money due by the public to individuals, and by one set of individuals to another, have all been counted as forming so much of an addition to the property or capital of the nation. Our debts have been represented as our riches.

As in all other popular errors, so in this, there is a shadow of truth. It is certain that if every debt in the country should be converted into a promissory-note, or bill of exchange, and if these obligations could be made universally or very extensively negociable, the paper-money thus created and sent into circulation would perform the main function of any other kind of money. It might depend upon a variety of circumstances whether it would altogether displace a previously existing metallic currency, or would only reduce its amount, or would simply form an addition to it, the gold and silver and the paper circulating together. All that we can say generally is, that to the extent to which the amount of the currency would be raised, prices would rise also. There would be so much more money in the country than there was before. But that would be all. There would not be more wealth to the value of a single farthing. A hat might now sell for 20*s.* instead of for 15*s.*, but the 20*s.* of the new currency would not be of more value than 15*s.* of the old. It would not purchase a better article of any other kind, any more than it would a better hat. There might be other advantages in the enlarged currency, but it would not in itself make any addition to the national wealth.

For obvious reasons, however, the written obligations of one private individual to another could never be made to circulate as a common currency: and it is only a small proportion of such obligations that, in any circumstances, could obtain even a very limited circulation. Accordingly, of the vast number of debts that are contracted in such a country as this, but very few, comparatively, are ever reduced to the form of written obligations. What use could a grocer make of the promissory-note of any poor man who might have got into his books to the amount of some two or three pounds? Yet if an account were to be taken of all the debts now or usually outstanding throughout the kingdom, there can be no doubt that by far the greater part of the total amount would be found to consist, not perhaps of separate sums so small as this, but yet of claims that are just as entirely excluded from ever being made the basis of a paper currency, of even the most limited circulation. Such debts, so far from augmenting the real wealth of the country, have no direct and general operation even upon the value of money, or upon prices.

The partial and indirect action, however, of our extensive system of credit, apart from any effect that may be produced by the bills and other negociable paper which it sends into circulation, must be very great and various; and we shall now endeavour to point out how it chiefly makes itself felt.

Credit, as we have said, can add nothing to the real capital or property of the country: but it forms nevertheless a most important auxiliary in many of the operations by which both the usefulness and the growth of capital are promoted. It is not, like capital, the blood in the veins of the body politic: but it is often the stimulus that quickens the circulation of that vital element, or the invigorating influence that aids the processes by which it is fed. Capital might sometimes be frost-bound and stagnant, did not credit, as it were, lend the heat to thaw it, and set it flowing. Suppose the case of a country in which all credit was prohibited. Every capitalist there, if he invested his capital at all, must take the management of it into his own hands; but it does not follow that the possessor of capital should necessarily possess also the ability to manage it better than any one else could. He may be incapable of employing it successfully at all. If so, he will either not invest it, or, if he does, he will lose it. In either case, there is both private and public waste. Again, in that country, there may be much skill and capacity for the profitable management of capital in the hands of persons having no capital of their own. By the prohibition against credit, such persons are deprived of all opportunity of exercising the talent and activity with which they are endowed—at least in the manner in which they might be most efficiently exercised. In this way, also, are inflicted both private injury and public loss. On the other hand, under a law permitting and protecting credit, the capital in the community is brought into combination with the skill in the community, and the result is the most productive application of both.

This is the great benefit of credit. It also of course tends materially to facilitate transactions of exchange in general, by the temporary accommodation which it affords, or the provision which it makes for the negociation of such transactions without any immediate advance of money on the part of purchasers. The working of the system in this way can hardly, however, be considered as more than a convenience at best. It does no doubt stimulate trade; but a great part of the artificial activity which is thus produced is unhealthy and injurious. We fear that, upon the whole, and in the long run, the custom of selling on credit does more to waste capital than to increase it. We speak in reference to that description of credit-dealing which is conducted in the most regular manner, and upon principles so fixed that the value of the accommodation given in each transaction can be certainly calculated and allowed for. This is the system that prevails generally among persons in business;

and it is undoubtedly another sort of thing altogether from the utterly unregulated, we had almost said unprincipled, contest to get as much out of each other as they can by means of credit-dealing, which takes place in so many cases between a tradesman and his private customers. But even this better form of the practice is fraught with much evil. If it could be generally done away with, trade would be in a sounder state, and the public would be more cheaply served. The merchant or tradesman who purchases his goods from the manufacturer on credit, must of necessity pay for them at a higher rate than if he were to come into the market with money; and the difference must ultimately be paid by the public. He who purchases with ready money, pays nothing for temporary accommodation, and nothing for risk. He pays for the goods only. Had the other two ingredients entered into and enhanced the price, the quality of the goods would not have been in any degree improved, nor would they have been at all more valuable either to himself or to his customers; yet, owing to the practice that generally prevails, of dealers themselves purchasing on credit, and so paying for the risk and the accommodation, as well as for the goods, consumers also, to whom these two things are perfectly useless, are obliged to pay for them. If, by a shower of gold from heaven, or some other means, all dealers could be put in possession of a sufficiency of capital to enable them to make their purchases with ready money, who will deny that it would be better, both for them and for the public that that should become the general practice? Commodities would be generally cheaper, and much destruction of capital would be prevented. Enterprise and speculation would no doubt be somewhat checked, but we believe the public interest would, upon the whole, be decidedly a gainer.

The paper which passes between merchants in their dealings upon credit, even although it enjoys only a very limited circulation, must have some effect as a currency. It must either form an addition to the regular currency of the country, in which case it will have the effect of slightly elevating prices; or, more probably, it serves as a substitute for an equivalent amount of regular currency that would be wanted if this did not exist. In the latter case, supposing the displaced currency to be metallic, the substitution of the paper, which has no intrinsic value, must be considered as in so far an economical arrangement; but the saving thus occasioned to the country can be but very trifling. A similar saving, but to a much greater amount, on the quantity of coin necessary to be maintained in circulation, is probably occasioned by the vast number of credit transactions which take place in common life, although the obligations thereby incurred are never converted into the form of negociable paper. Buying and selling on credit must enable us to dispense with a great deal of specie which would have to be kept up, if every transaction were to be accompanied with a payment in ready money. If the practice of dealing on trust were to become universal, we might do without a currency altogether. The getting rid of the expense of so useful an instrument, however, would be a poor and any thing but a profitable piece of economy. We are strongly disposed to think that we lose much more than we gain, even by the partial degree in which we avoid the application of the instrument, and diminish the cost of upholding it, through the extent to which we actually do carry the practice of dealing on credit.

Attention has of late years been repeatedly called by writers on public economy, to the evils resulting from the growing prevalence of this practice in private life. A select committee of the House of Commons was even appointed some years ago, to take the subject into consideration; and a Report which they made was printed by order of the House. Various plans have also been proposed for the correction of the mischief. Among these, one that has attracted a good deal of notice, is that brought forward in a pamphlet by Mr. Archibald Rosser, solicitor, with the somewhat startling title of "Credit Pernicious," the first edition of which appeared in 1823, and the second since the beginning of the present year. Mr. Rosser's proposition is, "That in a great variety of cases, simple contract debts, between forty shillings and one hundred pounds, shall not be recoverable by any suit or process whatsoever."

The pamphlet contains an exposition, which is very just and striking in many respects, of the inconveniences and serious evils flowing from the prevailing state of things. The author then proceeds to point out the operation of the credit system in raising the price of commodities. It does this, in the great majority of cases, not only to those purchasers who avail themselves of the accommodation of the system, but also to a certain, if not to the same extent, to those who pay ready money. There can be no doubt, for instance, that even those tailors who have both a ready money and a credit price, raise the former as well as the latter beyond the due amount, in order to meet the bad debts to which the practice of selling on credit exposes them. The quality of some of the articles of ordinary consumption, Mr. Rosser shows, is also deteriorated generally by the operation of the same pernicious practice.

Some curious information in regard to the credit system, as it operates at present in many of our large manufacturing towns, is given in the evidence delivered by Mr. H. W. Sefton of Stockport, before the late committee of the House of Commons on manufactures, commerce, and shipping. The witness states that he should think that one-half of the commodities purchased by the labouring population of Stockport for domestic purposes of every kind, is purchased on credit—that the length of credit given by the retail shopkeepers in the town, who sell food, is generally from week to week, and that the difference in the price charged according as articles are bought on credit in this way, or with money in hand, is as much as from 2*s.* to 4*s.* in the pound. "But," he continues, "I estimate it in more ways than merely by the money paid. When a person begins with a huckster, he is generally more inclined to consume above his income than when he has to pay ready money; he generally gets bound to the huckster, and when it is so he cannot always insist upon having the weight, or an article of proper quality, and it is always higher in price besides." "With respect to the credit system," he afterwards says, "I will state how it is carried on as to clothing: the clothing is generally bought from Scotchmen who travel; they call upon the families once in three weeks, and I should think that one half of the population get their clothing in that way; there are some families that will deal with three, or four, or five of those men. I know one firm of this description in Manchester which employs five travellers: one traveller has in Stockport 360 customers, and in Manchester 1100, and I believe that the others are doing an equal amount of business; and, I believe there are in Manchester upwards of twenty such firms as those, besides others of a subordinate character, and the receipts average half-a-crown every three weeks from each family; they range from 2*s.* to 7*s.* or 8*s.*; and from this you will be able to form an idea of the magnitude of the credit system among the people. If I were to give a Scotchman an order when he called, he would upon the following Saturday send it to me, and the next day he calls. Afterwards I begin to pay from 2*s.* to 10*s.* at a time, according to the amount of the order." The people, the witness thinks, are better clothed than they were; but the price they pay to these itinerant dealers is very much higher than they could have the same articles for from the shops in the town. "I have it from undoubted authority," he says, "that the lowest per centage they put on is 50, and some of them go as high as 100. The shops would not practise it (the credit system). There are shops that will lay an article by when you begin to pay for it, but you have not the article till you have paid the whole. Again, the system of credit has called into existence a new class of men; they will undertake to take any other person to a ready money shop, where he shall purchase any article he thinks proper; the person who takes him will pass his word for the payment, and he pays the shopkeeper, and the regular run is 2*d.* per 1*s.* for his agency; but of course there is an understanding between him and the shopkeeper besides." If the purchase is to the amount of about 1*l.*, it will be expected to be paid at the rate of about 1*s.* or 2*s.* a week. Such loans are generally repaid. It often happens that lookers-over in factories will negotiate these purchases for their hands, in consequence of which, of course, they have them under their control. The practice altogether is rather of recent origin, and the witness considers it disadvantageous, and attributes it to anxiety on the part of the people to go beyond their means.

It is evident indeed that such a mode of purchasing as that last described must be destructive of all frugality and prudence. Persons are, in the first place, tempted to indulge in an expenditure beyond their means by the solicitations of the seller, who comes to them instead of waiting till they come to him, and by the delusive easiness of the rate

of repayment; and then they are kept ever after in enthralment and difficulties by a weekly tax, which is from half as much again to twice as much in amount as the sum, by saving which every week they might have obtained the same quantity of goods. Supposing the whole debt to be on an average discharged in ten weeks, they are in fact paying on whatever they purchase in this way from 250 to 500 per cent. per annum; for the accommodation which they receive. If, for instance, a family spends 5*l.* with the chapman in the year, the only advantage they have is that they obtain, as it were, the loan of that sum for ten weeks, and for this loan, instead of the highest legal interest, which is about 1*s.*, they pay from 25*s.* to 50*s.* If their dealings are more extensive, as they no doubt are in many cases, the sum which they every year throw away, or lose, is so much greater.

But for this part of the ruinous operation of the credit system, Mr. Rosser's plan would provide no remedy. By withdrawing the protection of the law only from debts amounting to more than forty shillings, he would leave the parties in by far the greater number of such transactions as those on which we have been commenting, in the same position in which they now stand. The creditor would still have his action against his debtor. We do not know whether it is from having overlooked this extensive portion of the domain of the credit system, or from holding that the operation of the system here is either not objectionable, or not capable of correction, that the author has confined his attention altogether to another division of the subject. The credit which he seems to be chiefly anxious to put down, is that which is received by quite another class of customers—the persons who run accounts with shopkeepers and tradesmen, not from one Saturday to the next, but for months, or even years. There can be no doubt that this practice is carried on to an immense extent, and also that it is a great social evil: nor does the blame of encouraging and upholding it lie with buyers more than with sellers. In many cases it would appear that the latter rely upon it as one of their regular sources of profit. They prefer the high, though more uncertain, returns of a credit business, to the moderate charges, and more strict punctuality as to the quality and quantity of the goods they supply, to which they are tied down when they sell for ready money. Mr. Rosser states, that he has heard that some retail tradesmen at the west end of the town, will not sell at all except upon credit; and every one must have experienced the occasional reluctance of dealers to be paid for every article as they send it in, and their preference for book accounts.

We think, however, that the exceptions with which Mr. Rosser has clogged his plan, in order to confine it to this particular description of credit transactions, would alone make its application impracticable. He admits (p. 37) that buyers and sellers would use their utmost endeavours to evade the proposed law, and that the greatest ingenuity would have to be exerted to word the clauses so plainly and fully, as that they should meet every possible case. A great book has been declared to be a great evil, but the worst of great books are big acts of parliament. Mr. Rosser's act, we fear, would be a goodly folio. To search it in regard to any particular case, would be a labour both of time and muscle. It would be such a popular directory for the guidance of individuals and families, on a single point of every day practice, as it would take them the whole day to consult whenever they wanted its assistance; and, after all, it would be as defective as it was cumbrous. Cases would be constantly arising in which its provisions would fail to vindicate and protect its principle. In the first place, we are to have the abolition of legal protection to debts, only "in a great variety of cases," within the specified limits as to amount. The variety of ways in which debts may be incurred is so great, indeed so infinite, that they wholly defy classification. But even (which would be the simplest mode) if it should be laid down as the general rule, that no debts of a certain amount should be recoverable, and the exceptions should be particularized, the latter would have to be very carefully guarded indeed to prevent them from affording shelter to many transactions they were never intended to include. This is the way in which a law is evaded. A prohibited act, which has, to a certain extent, a common character with another that is permitted, is in general, without much difficulty, so disguised by the concealment of the points of difference, or the apparent addition of the deficient points of resemblance, that it is impossible to prevent it from passing for that other. Thus the law says no higher interest than five per cent. shall be received for money lent, but money is nevertheless lent every day at much higher interest; and by various easy devices, the illegal is made to assume the appearance of the legal species of lending. Were the lending of money to be prohibited altogether, the one species at least would not have this opportunity of screening itself under the name of the other. All, or nearly all, laws are in some degree liable to be thus defeated, but some are much more so than others; and such a law as Mr. Rosser proposes, would, we think, be peculiarly exposed to be so violated and set at nought. The exception which he would make of debts below forty shillings, would of itself open boundless facilities of escaping from the general rule. Any debt above that amount, it is evident, might be easily chopped down into fragments, each within the legal dimensions; and how could it be clearly established, in many cases, that these were not really so many separate and independent claims? Of course the creditor would take care, throughout the whole recorded history of the transaction, to give them that appearance. With a very little management, he might so conduct his operations as to set the statute at defiance. But such laws are never merely inoperative. They are active nuisances, and for the most part as fruitful in evil, as they are powerless for good. We do not think the lawyers would suffer, as Mr. Rosser seems to apprehend, nor the common informers either, by the act of parliament which he would have passed. It would provide them both with business in abundance; and, what with the attempts of creditors to bring all the accounts on their books within the forty-shilling category, and the counter struggles of dishonest or desperate debtors to get a footing on some one of the "great variety of cases" protected from suit and process, would keep the country constantly ringing with litigation.

If we are to have any law of this description, it must be at least simple and precise. In this view we very much prefer to Mr. Rosser's proposition that which has been advanced by Mr. Macculloch, (see "Dictionary of Commerce," Article Credit,) namely, to take away all action for debts under a given sum, as 40*l.* or 50*l.*, with the single exception of claims for wages or for labour done under executory contracts. This would be at least a clear regulation, and one which would rarely admit of being evaded; for it is evident that although a large claim might be easily divided into a number of claims each under 40*s.*, a debt, the total of which was below a certain amount, could hardly be made to appear to exceed that amount. A debt of 10*l.*, for instance, might be made, with a little management, to take the appearance of five debts of 2*l.* each, but could not by any contrivance be swelled into the resemblance of a debt of 50*l.*

Notwithstanding the eminent authority, however, on which this innovation is recommended, we doubt its expediency. We admit, to the full extent, the evils that have been alleged to attach to the existing system of unrestricted credit. And we have no scruples about the right of society to refuse its recognition of debts under a certain amount, or of any other compacts between individuals, which shall be deemed to be in their general nature injurious. But we apprehend public opinion would scarcely tolerate certain of the results, outraging all sense of natural justice, which the working of the new law would produce. Let it be recollected what would be the relative situation of the two parties in every instance in which a debtor should, under such a law, resist the claim of his creditor. That protected debtor would be the basest of scoundrels. He would not only be a person who had broken faith, and who had received and used another man's property for which he refused to make any return, but he would be one of the parties—most probably the principal party—in a scheme for violating the law, who afterwards came forward to take advantage of his own wrong. If such cases were brought before juries, we are persuaded the plaintiff would often obtain a verdict in the very face of the law. It is difficult enough to prevent such verdicts being returned in some of those cases in which the law at present says that debts shall not be recovered—as for goods, not necessaries, supplied to a minor or to a married woman, without the knowledge of her husband. But the feeling of sympathy for the creditor would be infinitely stronger in such a case as that we are now supposing.

Further, we apprehend that instead of generally putting down the present practice of buying and selling on credit,

the proposed law would only aggravate its worst evils. The principle of such a law, it appears to us, would be very nearly the same with that of the law which refuses to recognise loans of money where the rate of interest is higher than 5 per cent. Has that law put down what is called usury? Everybody knows that it has not. But in the case of every loan for which usurious interest would have been demanded at any rate, it has occasioned an increase of the usury. The borrower must pay for the additional risk to which the law subjects the lender. So we conceive it would happen with a law making debts under 50*l.*, or any other sum irrecoverable by suit or process. Dealing on credit would certainly be thereby rendered a somewhat more hazardous trade than it is at present, but it is vain to think that it would be put a stop to. There would be only one risk more—and that not a very formidable one—added to those by which it is now attended. Every man who gives away his goods, except for ready money, necessarily runs a considerable chance of never receiving any return. Sudden misfortunes may put it out of the power of the most honest debtor to discharge his obligations. Death may remove him, and sweep away, at the same time, all the resources of those he leaves behind him; or he may turn out a rascal, and either run away, or, by some other trick, as by taking refuge in the Fleet, for instance, bid his creditor defiance. Are tradesmen not, even as the law now stands, sufficiently accustomed to irrecoverable debts? Does the chance of incurring such debts at all frighten them from giving credit? On the contrary, do they not count upon that chance as merely one of the natural risks of their business, and regulate their general charges so as to meet it? Why should it be supposed that they would not act in the same way if their present risks were to be, by a change of the law, somewhat increased? Is the law, as it now stands, really so available a protection that they would be left much more defenceless than they are if the proposed alteration were to take place? Sea voyages, we conceive, would still continue to be made, even although the dangers of shipwreck were to become considerably greater than they now are. The only difference would be that the charges for insurance would be higher. And so dealing on credit, we apprehend, would still be practised even in spite of some increase of the risks attending it. The effect would merely be, that the premium paid by the customer for the accommodation which he sought, would be raised. Improvident persons would not be kept out of tradesmen's books; they would only be better fleeced.

We believe that the only rational and safe remedy for the evils of the credit-system, which the law can apply, is to be afforded, not by altogether depriving the creditor of his right to recover his debt, but by restricting the exercise of that right to its legitimate object. Whatever reasons of general policy might be urged in favour of taking from persons who are prevailed upon to lend their goods or money to others all right of recovering the stipulated price from those who chose to refuse it, the common sense of mankind would revolt against the injustice perpetrated under such a system in each particular case. But a creditor would not be thought to be hardly used, if, in enforcing his claim, he were limited within certain reasonable and distinctly defined bounds. For instance, nobody in the present day would demand that a creditor should be allowed to take the life of his debtor, if there was not property enough to satisfy his claim. "If a debtor," said the Roman law of the Twelve Tables "refuses to pay his debt, and can find no security, his creditor may carry him home, and either tie him by the neck, or put irons upon his feet, provided the chain does not weigh above fifteen pounds; but it may be lighter, if he pleases. The creditor may keep his debtor prisoner for sixty days. If in this time the debtor does not find means to pay him, he that detains him shall bring him out before the people three market-days, and proclaim the sum of which he is defrauded. If the debtor be insolvent to several creditors, let his body be cut in pieces on the third market day. It may be cut into more or fewer pieces with impunity; or, if his creditors consent to it, let him be sold to foreigners beyond the Tiber."* The proposal of giving such a power as this to creditors would now be heard with universal horror. It would be felt to be the grossest absurdity to maintain that they acquired a right, in any circumstances, to touch the lives of their debtors, by having entrusted them with goods or money. Ought they to be considered to have any better right to touch the personal liberty of their debtors? Does that form any portion of the fund on which they can be fairly regarded as having placed their expectations of repayment when they trusted their property out of their own hands? On the principle alone that the law should do as much as it can to uphold the dignity of human nature, we would not suffer a man to sell himself into bondage to another by any contract whatever. We would therefore abolish altogether imprisonment for debt, and keep that infliction exclusively for its proper use—the punishment of crime. We would have no punishment whatever for a man's inability to pay his debts. That mere misfortune is no proper subject for punishment. We would consider the creditor as having no claim against the debtor himself, but only against his property. It was indisputably to that alone—believed to be either already realized, or likely eventually to be so—that the creditor trusted for payment when he parted with his goods. To that, therefore, let him be confined when he proceeds to exact what is due to him. Proceeding upon the same views, we would go a step further; and as we would not allow either the life or the liberty of the debtor to be violated, so we would protect likewise so much of his property as should be evidently necessary to enable him to obtain a subsistence for himself and his family. The tools of the workman's trade should certainly be exempt from seizure; and also, we think, the more indispensable articles of the furniture of his house—the beds on which he and his children sleep, the chairs and tables from which they take their meals, and the cooking utensils with which they prepare them. By these changes, and others in the same spirit, we would mitigate whatever is unnecessarily harsh in the provisions of the existing law; but we should look to other influences rather than to any that the law could exert, for the correction of such mere habits of improvidence as may prevail among any class of the people, and the protection of individuals from the inconveniences naturally consequent upon their own voluntary acts.

In the mean time, we are happy to observe that Sir John Campbell has already given notice of his intention again to bring forward in the House of Commons, during the present session, the important bill for the amendment of the law of debtor and creditor, which, owing to the press of business, was withdrawn last session, after it had passed the second reading. We have already given an account of the leading provisions of this measure, (see "Companion," vol. i. p. 91,) and pointed out the amount of the improvements which it will effect. It is proposed to take away from the creditor the right of arresting the person of his debtor either on mesne or final process, (that is, either before or after a judgment obtained,) and, in exchange, to give him the power, which he has not at present, of seizing his property. Arrest of the debtor is only to be permitted when the creditor shall make oath that he believes he is about to abscond; and any debtor who has been thus arrested may bring an action for damages, which the defendant can only meet by showing that he had probable cause for that belief. The passing of this act will be the greatest reform of the law that has been effected in modern times.

* As translated in "Hooke's Roman History," b. ii. c. 27.

STATE OF CRIME IN FRANCE.

Among all the inquiries of a statistical nature which can engage our attention, the actual and comparative state of the community in regard to crime is one of the most important, and is alike interesting to the legislator, the philosopher, and the philanthropist.

To the first of these three classes of persons, knowledge upon this subject would seem to be of the very highest degree of interest. Without such knowledge, how can it be possible to originate any enlightened system of legislation for the reformation of public morals; to apportion punishment to offences in a manner calculated for their prevention; or even to be assured that the very measures which are adopted for checking one description of offence, may not tend to promote the commission of others? The advantage which knowledge upon this subject is calculated to confer upon philosophers and men who study to promote the happiness of their species, will be found in the superior means with which it provides them for attaining their highest object, that of enlightening the world upon points of the very first importance to the

well-being and the progress of society, and of proposing checks of a description different from those which are within the immediate province of the legislature.

It is only of very recent date that our government has thought it desirable to collect and to put forth, with the stamp of its authority, general information upon matters of a statistical nature: but for many years past measures have been taken for obtaining returns from each county of England, and more recently of Ireland and Scotland, which partially show the situation of the community in regard to crime. Compared with the information procured upon many other points affecting the internal interests of the country, these returns have been entitled to commendation. So far as they have gone, the amount of information they contain has been given in a very lucid manner, and we have been enabled, by means of the annual and septennial statements laid before parliament, to judge with tolerable accuracy regarding the moral health of the entire body politic. To this point we must, however, restrict our praise of the criminal returns hitherto presented to parliament. The description we are about to give of a report made to the King of the French, by the Keeper of the Seals and Minister of Justice in France, will show in what respects our own returns upon the same subject are defective, and will serve the very important end of pointing out the course which should be adopted for supplying their deficiencies.

It is not our intention on this occasion to institute any very lengthened comparison between the state of crime in France and England, although we cannot forbear to notice some of the more prominent points of this part of the subject which have presented themselves to us in the course of our examination. In general, the different classification of crimes, the dissimilar constitution of the criminal tribunals, and the different manner in which the course of justice is pursued in the two countries, would render such a comparison not only difficult to make, but also of comparatively small value when presented.

In the report which is prefixed to the tables, and which serves as a commentary upon the facts disclosed by them, we learn that the proportion which the number of persons accused before the criminal tribunals in 1831 bore to the whole population of France was as 1 to 4,281 inhabitants, while in England and Wales during the same year the proportion was as high as 1 in 707 inhabitants. But among the latter the majority of cases are such as in France would have been brought before inferior tribunals, and if allowance is made for these cases, the disproportion will be very greatly altered. The total number of convictions in this country were in 1831 in the proportion of 1 to 1005 of the population; and if from these we take away those cases of petty delinquences which in France would have appeared before the correctional tribunals, and which were punished here by short terms of imprisonment, the proportion will be still further and most importantly reduced to 1 person in 3087. If the descriptions of offences which form the larger portion of crimes in England be taken into the account in estimating the proportion of delinquents in France, the proportion which the accused will bear to the whole population of the latter country is raised to 1 in 1280.

But there is another and a more important point as to which it may be useful to compare the two countries, and that is the nature of the crimes for which punishment was awarded. In England, the proportion of offences against the person, compared with those against property, of which prisoners were convicted, was in 1831 as 1 to 33, while in France that proportion was as 1 to 4½; and comparing the two countries in this respect we find the actual number of offences against the person to be as 37 in France to 20 in England; while of the graver crimes, such as murder, attempts to murder, parricide, infanticide, poisoning, and rape, the numbers are 532 in France, or 1 in 61,205 of the population; while in England the actual numbers are only 170, or 1 in 81,732 of the population. The convictions for murder under its different forms in France were 303; while in England they did not exceed 14; the proportion between the two countries being as 1 to 21.64; while the proportion between their respective populations is in the ratio of 1 to 2.34. It appears, therefore, that in France 1 out of every 107,463 was guilty of murder in the course of the year; while in England no more than 1 out of every 992,469 persons was convicted of that most serious offence.

It may be thought worthy of remark that upon a calculation of the number of women accused of crimes in the two countries, the proportion which they bear to the whole number accused in France is as 16$\frac{1}{16}$ to 100, and in England as 15½ to 100.

We shall now proceed to describe, as briefly as the nature of the subject will permit, the different heads of information given in the French tables, where it will be seen that every fact is brought to view which bears upon the question. The whole is, besides, stated with such minuteness of detail, as furnishes the means for inquiring into and solving questions connected with the public morals to a degree which cannot fail to be most importantly useful to the government of France, and which would, doubtless, be equally useful to every other country by whom the like details should be collected.

The tables in which all these particulars are given, are arranged under different classes and heads. In the first class we find every particular relating to accusations before the superior tribunals. The tables in the second class relate to persons accused before the correctional tribunals. The third class, which is extremely important, has reference to relapsed criminals—those who appear not for the first time at the bar of justice. The fourth class embraces cases of simple police; and the fifth class contains various minute details, which our limits will not allow us to notice, such as the particulars of unfounded accusations, the number of accidental deaths, of suicides, of duels, with their results, &c.

The first class presents us with sixty-four tables, in which we find the number of persons accused, acquitted, and convicted, with a statement of the nature of their crimes and the punishments awarded in each court of every department in the kingdom, crimes committed against the person being distinguished throughout from those committed against property. We have likewise tables which give the distinction of the sex of criminals, with every particular of the crimes for which they were condemned, their respective sentences, and the departments in which they were tried. Another distinction is made with regard to the ages of criminals, who are ranged in fourteen different classes, commencing with those under 16, and ending with those above 80 years of age. The bulk of delinquents in France appear to be persons between the ages of 16 and 35. Only 127 out of 7,606 who were brought before the superior tribunals in 1831 were under 16 years old, and 2,443 were *above* 35, leaving 5,036 persons of ages between those two periods. Placing out of view, for an obvious reason, those under 16 years of age, it does not appear from the table before us that the period of life has much, if any, influence as regards the proportions in which different descriptions of offences are committed. Of the 7,606 accusations just mentioned, 2046 were for crimes against the person, and 5,560 against property. Of the former kind, 1348 were charged against persons between 16 and 35; while 662 were against older, and 18 against younger, persons; the true proportion for the two larger classes would have been 1365 and 663. These tables we consider of very great importance, especially when taken in connexion with another, wherein those who were accused and either acquitted or convicted are classed according to the amount of education, if any, which had been imparted to them. In this last-mentioned table we find a statement of the numbers who could neither read nor write; of those who could read or write imperfectly; of those who could read and write well; and of those who had received a degree of instruction superior to mere reading and writing. At a period when "the schoolmaster is abroad," that must surely be a most interesting inquiry which enables us to ascertain the connexion between ignorance and depravity; and if, as we have no doubt it will prove when such inquiries shall have been made and followed up for some time in England, it should appear that instruction is, in some degree, and that not a slight degree, a preservative from crime, such a fact may doubtless be expected to quicken the efforts of individuals for the spread of knowledge among the people, while it will offer an additional and most cogent reason for the government to take up the cause of national education, as one of the greatest blessings which it can impart. Those who deny the advantages of education for the people, will not be able to draw any arguments to support their views from the tables under examination. Out of 7604 persons accused (the returns are incomplete as regards 2) 4600 were unable to read or to write, 2047 knew how to read or to write very imperfectly, while only 767 were able to read and write well, and not more than 190 had received a degree of instruction beyond

mere reading and writing, 53 of these being political offences, and hardly, therefore, strictly admissible into the catalogue of moral crimes. It is a remarkable fact, that while only 11 well educated persons were charged with the crime of forging commercial documents, exactly double that number were similarly accused who could write very imperfectly. Our limits will not permit us to go into details upon this interesting subject, but we cannot forbear further stating that of 4578 accusations of robbery, 3105 were against persons wholly without education, 1127 against persons who had received the lowest degree of instruction, no more than 314 against those who could read and write well, and only 32 against persons more perfectly educated. If we examine this table with reference to the number of convictions rather than of accusations, the result will be found still more triumphant in favour of imparting knowledge; the numbers in the respective classes being 2100, 735, 193, and 17.

The French tables further present us with the civil condition of persons accused, telling us, with reference to each description of offence, how many were unmarried, how many were married, and what proportion of the latter class had children. Other divisions of this table are not at all applicable to our own country; these relate to the birth-place and domicile of the persons accused, distinguishing those who were born in the department where they were tried, from those who were differently circumstanced. There are, however, columns in which are recorded the facts whether the accused persons were born out of wedlock, or whether they were themselves the parents of illegitimate children, and considering that this lapse from moral rectitude does not elsewhere find a place in the tables, it becomes valuable to know the particular crimes cognisable by the tribunals of which such persons were accused.

The proportion which the number of the accused bears to the entire population of the kingdom has already been stated. We have also a similar calculation with reference to each separate department, and a table comparing each department with the others in this important particular, a description of information which is calculated to lead to the happiest results, by inducing inquiry into the means whereby such different proportions may have been brought about.

The influence of the various seasons upon the moral habitudes of men, is a question which has sometimes been raised. It is perhaps more curious than useful, as it seems difficult to legislate for each month of the year; nor do the tables in the volume before us, which enter upon this inquiry, seem calculated to throw much light upon it. Of 1321 offences committed against the person during the year, the largest number (134) occurs in the month of August, and the smallest number (77) in the following month;—this great disparity occurring with reference to crimes connected with bodily violence. Of 4019 crimes against property, the largest number (351) occurs in January, and the smallest number (276) in July; but this difference can hardly be attributed to the influence of the season, since February produced only 277 accusations, while August produced 323. At any rate, we require to have statements extended over a much larger space than one year, ere we can hope to arrive at any facts connected with this part of the subject, that can have a beneficial effect upon our endeavours for the removal or lessening of crime.

Inquiry has been made by the authorities in France as to the causes which appear to have incited to the graver class of offences; and if our space would permit, we should go somewhat into particulars in examining the tables which furnish us with the result of the inquiry, and which, while they present an interesting index to the national character, seem most clearly to point out, in many cases, the course of legislation which would be best calculated to arrest or to check the progress of that class of offences.

With this all-important object in view, perhaps the most useful tables of the whole collection are those which relate to relapsed criminals (*accusés en récidive.*) In these tables we are presented not only with the numbers accused for the second, third, fourth, fifth, sixth, and seventh times, and of those who have undergone even a greater number of convictions, but we have likewise statements of the crimes for which their former punishments were awarded, as well as of the nature and degree of those punishments. There is also a table explaining the length of time which elapsed from the expiration of their former sentences before they again appeared before the tribunals, their ages at both periods, and the degree of instruction which had been imparted to them. To judge from these tables, we should conclude that women are less incorrigible than men, for while the proportion borne by the former sex to the whole number accused of crimes, is, as already stated, as 16$\frac{1}{6}$ to 100, the number of females prosecuted, after a former conviction, is not in a greater proportion to the whole than 12 in each hundred.

To obtain from them the full amount of advantage which such documents as those we have been examining are capable of yielding, it is necessary to be furnished with the means for comparing the records of one period with another, and to be made acquainted with such intermediate alterations of the laws as are calculated to operate upon the moral tendencies of the people. If, at some future period, we should be able to obtain such data with regard to France, we may be induced to return to the subject, with the hope of suggesting some practical good to society. In the meantime we have perhaps said enough to shew the vast, the paramount importance of the subject to every country; and if we should have succeeded in awakening attention towards it in any persons enabled, from their station or occupation, to assist in the production of a more complete body of criminal statistics as regards our own nation than we at present possess, we shall have been instrumental towards producing an incalculable blessing to our own and to future generations.

THE IRON TRADE.

The evidence taken by the late committee on manufactures furnishes us with some information on the present state of the iron trade, the principal heads of which, along with a few additional facts collected from other sources, we shall endeavour to arrange in the present paper.

The manufacture of iron is supposed to have been carried on in this island on a small scale in the time of the Romans; and some mines in the forest of Dean, in Gloucestershire, are known to have been wrought when the Normans came over in the middle of the eleventh century. We have not much information, however, as to the progress of the manufacture until we arrive at a comparatively recent period. We had certainly begun to export iron before the middle of the fourteenth century. A statute forbidding its exportation was passed in 1351 (28 Edward III. chap. v). It prohibited all iron made in England, and also all iron imported, from being carried out of the realm, on pain of forfeiting double the value of the metal. In a later age, we find great apprehension beginning to be felt on account of the waste of wood occasioned by the consumption of the iron-works—a proof that the manufacture had become considerable, and was fast extending itself. In 1581 (the 23d of Elizabeth), it was enacted by parliament, that no new iron-work should be erected within twenty-two miles of London, nor within fourteen miles of the river Thames, nor in certain parts of Sussex; and that no wood within the limits described should be converted to coal (that is, charcoal) or other fuel for the making of iron. And in 1585, another act was passed, forbidding any new iron-works to be erected in any part of the counties of Surrey, Kent, or Sussex; or the employment for fuel to iron-works, of the bodies of any timber trees which measured one foot square at the stub.

The destruction of the woods of the country excited the greater alarm, in consequence of the formation of a powerful navy having now become so primary an object of the national policy. We are now much more indebted to our iron manufactures than to our woods, for the preservation of our naval ascendancy. In the beginning of the seventeenth century, however, the important discovery was made by Edward, Lord Dudley, of the method of smelting iron by means of pit-coal; but this invention did not come into general use till many years after its introduction. We find complaints made in the reign of James I., that the iron trade was, in consequence of the scarcity of wood, falling into decay in certain parts of the country, where it had formerly been extensively carried on. Even so long as a century afterwards, although the manufacture appears to have greatly extended in the interim, it is spoken of as occasioning a vast destruction of timber. A tract published in 1719, quoted in Anderson's 'History of Commerce,' states, "that the iron manufacture of England, which is deemed the third of the kingdom, employs 200,000 persons; that the waste and destruction of the woods in the counties of

Warwick, Stafford, Worcester, Hereford, Monmouth, Gloucester, and Salop, by these iron-works, is not to be imagined; that within these sixty years, Ireland was better stocked with oak timber than we now are, but the iron-works since set up there, have, in a few years, swept away the wood to that degree, that they have not small stuff enough left to produce bark for their tanning, nor timber for common uses; insomuch, that at present they are forced to have bark from England, and building-timber from Norway, &c., and to suffer their large hides to be exported, untanned, to Holland, Germany, &c.' It is further stated by this writer, that England then imported about 20,000 tons of iron annually from foreign parts, the price of which, at 12*l.* per ton, amounted to 240,000*l.* The timber annually imported cost 200,000*l.* more. Twenty years later the same complaints are made. "It was computed," Anderson writes under the year 1737, "that England makes annually at home about 18,000 tons of bar iron; the quantity of which it was said we could not increase, by reason of our woods being so far exhausted as to have greatly enhanced the price of cord wood, used in the refining of iron-stone." At this time, the whole amount of the iron imported from abroad, was still estimated at about 20,000 tons annually, of which 15,000 tons were from Sweden, and the remainder from Russia. The price of the foreign metal, however, seems to have fallen, the 15,000 tons brought from Sweden being stated to cost only about 150,000*l.* The exports of wrought iron from this country then amounted to between 3000 and 3500 tons annually. Strong efforts had for a long time been made by the mercantile interest to induce parliament to grant permission for the erection of iron-works in the American colonies, where the metal was found in abundance, and the exportation of the produce thence to England; but the opposition of the proprietors of the iron-works and of the woodlands, succeeded in effectually resisting this reasonable proposal.

Not long after this time, however, Lord Dudley's invention came at last to be generally adopted*. This change seems very speedily to have given a great impulse to the manufacture; and it has ever since been almost constantly on the advance. It appears, from an account printed in the "Companion to the Almanac" for 1829, which is stated to be extracted from official documents, that while the whole iron (pig) made in England and Wales† in 1740, was only 17,000 tons annually, from 59 furnaces, the quantities manufactured in Great Britain, at the under-mentioned periods, were, in

	Tons.		Furnaces.
1788‡	68,000	from	85
1796	125,000	—	121
1806	250,000§	—	—
1820	400,000	—	—
1827	690,000	—	284

Of the 690,000 tons made in 1827, there were produced in

South Wales .	272,000	from	90
Staffordshire .	226,000	—	95
Shropshire . .	78,000	—	31
Yorkshire . .	63,000	—	24
Scotland . .	36,500	—	18
North Wales .	24,000	—	12
Derbyshire . .	20,500	—	14
	690,000		284

Of the entire quantity, it is stated that about 207,000 tons is used as cast-iron, and all consumed in Great Britain and Ireland, with the exception of about 17,000 tons exported to France and the West Indies. The remaining 483,000 tons are made into malleable or bar-iron, as it is called, taking the shape of bars, bolts, rods, sheets, &c.

We have seen, that down to 1737, our imports of foreign iron amounted to about 20,000 tons annually. In 1781, it is stated that above 50,000 tons were imported from Russia and Sweden; but that the yearly importation, on an average, of the twelve preceding years had not exceeded 26,000 tons from Russia, and 16,000 from Sweden, or 42,000 tons in all*. According to Mr. Macculloch, the quantity imported, on an average of the five years ending with 1805, was about 34,000 tons. Since 1822 (see "Official Tables," vol. i. p. 114), it has varied from about 14,000 to about 18,000 tons. In 1825, it was 23,657 tons. The foreign iron now brought into this country, is almost all from Sweden, and is principally manufactured into steel. It pays a duty of 30*s.* per ton, or of 2*s.* 6*d.* if brought from any British possession. Foreign pig iron pays a duty of 10*s.* per ton, but of that the quantity imported is very trifling.

Mr. Macculloch states that in 1767 the whole iron exported from Great Britain amounted only to 11,000 tons; and that on an average of the three years ending with 1806, the quantity had only risen to 28,000 tons. In 1829 it appears, by a parliamentary paper which he has printed, that it amounted to nearly 110,000 tons, or about ten times the quantity exported in 1767. "Supposing," adds the author, "the total quantity of pig iron at present produced in Great Britain to amount to 700,000 tons a year, and to be worth, at an average, 6*l.* a ton, its total value will be equal to 4,200,000*l.*, and the additional labour expended in forming the pig iron into bar iron—that is, into bars, bolts, rods, &c.—may probably add about 1,200,000*l.* more to its value; making it worth, in all, about 5,400,000*l.*"

These brief notices respecting the rise and progress of the trade will be sufficient to introduce the details which we shall now proceed to collect, chiefly from the evidence delivered before the late committee.

The persons connected with the iron manufacture, who were examined by the committee, were Mr. S. Walker, of Gospel Oak, in Staffordshire; Mr. W. Mathews, of Corbyn's Hill, in the parish of King's Swinford, near Dudley; Mr. A. Hill, of the Plymouth Works at Merthyr Tydvil; and Mr. W. H. Sparrow, of Bilston, in Staffordshire. We shall endeavour to digest the most material facts mentioned by these witnesses, under distinct heads; but it will be unnecessary to encumber the statement by a reference, in every instance, either to the name of the witness or to the number of the question.

I. The proportions of the different materials used in the production of iron, according to Mr. Hill, are of iron-stone (the ore) about 3½ tons, of coal about 2½ or 3 tons, and of limestone about 15 hundred weight. The coal is not now, at least in all cases, previously reduced to coke. About 3½ tons of coal, besides, are used for the engine, in the production, we presume, of the quantity of iron made from the above materials, which appears to be a ton. Mr. Walker states that the quantity of coals required varies with the time of the year, from 3¼ to 4 tons, exclusive of what is required for the engine. In Scotland he had heard that, five or six years ago, they were using about 6 or 7 tons. The price of ironstone, Mr. Mathews says, is from 1*s.* to 2*s.* a ton, according to the quality of the mine, and its particular situation. He thinks there is no appearance of a falling off in the supply of minerals for the iron-works in his part of the country, except in particular situations; and in other situations there is an appearance of a more abundant supply. In some parts the coal field has been discovered to be wider than it was supposed to be formerly. The price of limestone, according to Mr. Hill, is about 2*s.*, and that of coal about 3*s.* per ton. Mr. Mathews, however, states that the coal which he uses for his furnaces costs him from 4*s.* to 6*s.*; or at least that that is its value, and the price for which he sells it when he can get a sale for it.

II. In his part of the country Mr. Mathews says the iron-trade is generally carried on either by purchases of the mines, payable by instalments, or by mineral leases, running from twenty-one to forty-two years. A royalty, or rated duty, is paid to the proprietor of the mine by the tenant, upon each of the materials employed in the manufacture. In Staffordshire 2*s.* per ton is usually paid upon the coal, 1*s.* 6*d.* upon the ironstone, and 6*d.* upon the limestone. Mr. Mathews states that although the royalty varies considerably, according to the circumstances, situation, and

* Mr. Macculloch, on the authority of the Report of the committee of the House of Commons on Patents, in 1828, says about 1740. According, however, to the author of the article Iron-making, in the "Supplement to the Encyclopædia Britannica," it was not till 1750 that "pit-coal became a general and profitable substitute for charcoal and wood in the blast furnace."

† Erroneously stated to be in Great Britain. See the particular account in the "Supplement to the Encyclopædia Britannica," vol. v. p. 117.

‡ Mr. Macculloch gives 22,000 tons as the quantity made in Great Britain in 1750.

§ From 169 furnaces, according to Mr. Macculloch.

* Continuation of Anderson's History of Commerce, to 1789, vol. iv. p. 395.

quality of the estate, it may amount to from 9*s.* to 14*s.* upon every ton of pig iron manufactured. It appears that of late from 7*s.* 6*d.* to 8*s.* is the common amount of the entire royalty upon the ton of bar iron in South Wales. In 1824 or 1825, the British Iron Company took some mines in that district, on a contract, to pay at the rate of 12*s.* on the ton of bar iron; but it is believed that they have since had the rate reduced to 8*s.* Sometimes the royalties are taken upon a proportion of the actual sales; but, generally, there is a fixed royalty, which the tenant is bound to pay whether he manufactures to the corresponding extent or not. The tenants of some mines, however, instead of royalties, pay a rent.

III. Of 12,000 tons of pig iron made annually by Mr. Walker with four blast furnaces, a considerable part is manufactured into wrought iron: another portion is used in the manufacture of tinned plates; and a further portion is made into castings of various kinds, including machinery and ordnance. The waste upon 20,000 tons of pig iron, in manufacturing it into wrought iron, may be from 2000 to 3000 tons. Mr. Walker sells a good deal of the iron he makes in his own immediate neighbourhood, to the manufacturers of Birmingham, Wolverhampton, and other towns. He exports very little. Mr Mathews is of opinion that seven-eighths of all the English iron made is consumed by the manufactures and agriculture of this country. A great deal of economy has of late years been introduced into every part of the iron manufacture, and means have been found to obtain larger quantities of metal from the furnaces. Mr Hill states that, putting wages out of consideration, he thinks that iron may be now manufactured 10*s* a ton cheaper than in 1825. Of the improvements which have been made on the process of smelting, the most striking is the application of hot air, which enables coal to be used in the furnace without having been previously converted into coke. The saving from the substitution of coal for coke, Mr. Hill estimates at from 3*s.* to 3*s* 6*d.* on the ton of bar iron. Mr. Mathews, however, states that this improvement has been applied with greater effect in Scotland than in Staffordshire, and that its utility is confined to one particular species of iron, which forms only about a tenth part of the whole quantity manufactured. The effect, he says, has been to diminish the difference of price between the forge iron and foundry iron. The invention, though not applied to any considerable extent, has been introduced for some time in Staffordshire, but not always. Mr. Walker says, with the intention of using raw coal instead of coke. He believes the benefit to be still doubtful, dependent, as it is, in some degree, on the quality of the coal employed. The inventor has taken out a patent, and of course demands a rent for the use of his process.

IV. It has been sometimes asserted that the iron now made in England is of inferior quality to what it was some years ago: but Mr. Hill, when examined upon this point, declares his opinion to be distinctly that the quality is improved. In the quantity of iron produced there is no doubt that there has been a falling off in the course of the last five years; though it is impossible to ascertain exactly to what amount. Mr. Walker states the following to have been the quantities of iron produced throughout the United Kingdom in the undermentioned years, on the authority of different persons whose inquiries into the subject had been made with great care: —

	Tons.						
1823	441,000	price	£3	17	6	making	£1,708,875
1825	613,000	—	7	0	0	—	4,291,000
1828	702,000	—	4	4	0	—	2,948,000
1830	653,000	—	3	13	0	—	2,285,000
1831	590,000	—	3	6	0	—	1,943,000
1832	500,000	—	3	0	0	—	1,500,000

In Staffordshire alone, according to Mr. Mathews, there was made 133,590 tons in 1823; 171,735 in 1825; and 212,601 in 1830. In July 1831 production was going on at the rate of 203,580 tons annually; but by October it had fallen to the rate of 184,850 tons. In 1827, Mr. Hill says the quantity made throughout the kingdom fell off; but the greatest quantity ever made was in 1828. The following is a list extracted from the evidence of Mr. Mathews of the average prices of raw pig iron from 1801:—

	Per ton.				Per ton.	
1801	£6	15	0	1803	£6	0	0
1802	6	0	0	1804	5	16	6
1805	6	8	0	1819	6	2	6
1806	6	15	0	1820	4	10	0
1807	6	1	3	1821	4	0	0
1808	6	5	0	1822	3	15	0
1809	6	5	0	1823	4	0	0
1810	6	6	0	1824	5	0	0
1811	6	5	0	1825	7	10	0
1812	5	10	0	1826	5	0	0
1813	5	2	6	1827	4	10	0
1814	6	0	0	1828	6	0	0
1815	5	0	0	1829	3	12	6
1816	3	15	0	1830	3	8	9
1817	4	5	0	1831	3	1	10
1818	5	10	0	1832	3	0	0

By the end of July 1833, the price had risen to 3*l.* 15*s*, the advance having commenced about eight or nine months before. These prices, it will be observed, differ considerably from those quoted above for some of the years from the evidence of Mr. Walker That gentleman states the price in July last at 4*l.* per ton. The prices of bar iron from 1825 are given by Mr. Hill as follows: in 1825, 12*l.*: in 1826 it was for a short time as high as 14*l* a ton: in 1827, 10*l.*; in 1828, from 8*l* to 8*l.* 10*s.*: in 1829, 7*l* 10*s*: in 1830, 6*l.*, and afterwards 5*l.* 10*s.*: in 1831, 5*l.*, and afterwards 5*l* 5*s.*; and in 1832, 4*l.* 15*s.* This was the lowest price for which it was sold in that year. The price at the end of July 1833 was 6*l.* 5*s.* These were the six months' credit prices at Cardiff, the shipping port for all the iron made at Merthyr Tydvil, the expenses of conveying the metal thither and putting it on board ship being about 5*s.* per ton. These lists of prices may be compared with the following table of the highest and lowest prices of pig and bar iron in the London market in the months of January and July of every year from 1813 inclusive, which we have extracted from the Official Tables of the Board of Trade:—

	Pig iron							Bar iron.						
1813	£7	0	0	to	£9	0	0	£14	0	0	to	£15	0	0
1814	7	0	0	—	9	0	0	14	0	0	—	15	0	0
1815	7	0	0	—	9	0	0	11	0	0	—	15	0	0
1816	7	0	0	—	9	0	0	11	0	0	—	11	0	0
1817	6	10	0	—	8	0	0	9	0	0	—	11	0	0
1818	6	10	0	—	9	10	0	12	15	0	—	15	0	0
1819	8	0	0	—	9	10	0	12	10	0	—	14	0	0
1820	6	10	0	—	9	10	0	10	0	0	—	13	0	0
1821	6	10	0	—	7	10	0	9	9	0	—	10	10	0
1822	5	0	0	—	7	0	0	8	10	0	—	9	10	0
1823	6	0	0	—	6	10	0	8	10	0	—	9	0	0
1824	6	0	0	—	7	0	0	8	10	0	—	9	10	0
1825	10	10	0	—	11	0	0	13	0	0	—	15	0	0
1826	8	0	0	—	9	0	0	10	0	0	—	12	0	0
1827	6	0	0	—	8	10	0	9	10	0	—	11	0	0
1828	4	15	0	—	7	0	0	8	7	6	—	9	10	0
1829	4	0	0	—	5	0	0	7	5	0	—	8	10	0
1830	5	0	0	—	5	15	0	7	0	0	—	7	5	0
1831	4	15	0	—	5	0	0	6	5	0	—	7	0	0

The expenses of freight, wharfage, &c., from Staffordshire to either London, Liverpool, or Hull are reckoned at about 1*l.* per ton.

V. Mr. Mathews is asked by the Committee what would be the cost of erecting an iron work capable of manufacturing 300 tons of iron per week, and consisting of the requisite quantity of iron-stone and of coal mines opened, with a sufficient number of furnaces, materials for working them, refineries, forges, mills, and the necessary quantity of rooms and all other appendages. He answers that he thinks such an iron-work might, under favourable circumstances, be erected in Staffordshire for 150,000*l*: and there are many situations, he adds, in that country that would enable a man to erect an iron-work of the capacity stated, for less than the sum named. He had before said, indeed, that the thing might in some cases be done for 50,000*l*. The estimate includes, we suppose, the purchase of the mines. It is expressly stated to include the expense of opening them; but not the formation of railways, the numerous canals in Staffordshire rendering any considerable outlay upon that head unnecessary. The ordinary calculation, according to Mr. Hill, is that for an iron-work to produce 100 tons of manufactured iron (that is, bar iron) per week, it would require an outlay of capital of above 100,000*l.*; and he says that, according to his own experience, this estimate is not far from the truth. He speaks of both fixed and floating capital, including the stock and iron-stone, and other things

necessary to carry on the work. He afterwards states that he believes iron can be produced in South Wales from 5 to 10 per cent. cheaper than in Staffordshire.

VI. An account of the quantities of British iron exported in each year from 1820 inclusive, in the forms of pig iron, cast iron, bar iron, bolt and rod iron, iron ware, wrought iron (including anchors and grapnels, hoops, nails, and all other sorts except ordnance), old iron for re-manufacture, unwrought steel, hardwares and cutlery, may be found in the Official Tables of the Board of Trade. It is too long to be here extracted; but in order to convey a general notion of the foreign trade in iron, we shall state the entire quantities of the different descriptions that were exported in each of the years 1831 and 1832. Omitting fractions of tons, the account stands as under:—

	1831. Tons.	1832. Tons.
Pig iron	12,111	17,566
Cast iron	10,361	12,495
Bar iron	64,012	74,024
Bolt and rod iron	6,191	6,938
Iron wire	538	666
Wrought iron:—		
Anchors and grapnels	1,004	1,606
Hoops	8,229	9,417
Nails	4,361	4,317
All other sorts except ordnance	14,013	18,595
Old iron for re-manufacture	1,413	773
Unwrought steel	1,207	1,112

The following are the countries to which the principal descriptions were sent in 1832:—

	Pig iron.	Cast iron.	Bar iron.	Bolt and Rod iron
Russia	57	2	153	2
Sweden	—	41	11	2
Norway	—	1	39	26
Denmark	580	87	525	125
Prussia	75	7	117	137
Germany	477	198	4,252	816
Netherlands	1,986	196	6,291	338
France	2,759	316	1,556	99
Portugal, Azores, Madeira	20	63	1,518	1,119
Spain and Canaries	91	180	314	92
Gibraltar	—	33	593	27
Italy	420	94	9,174	1,659
Malta	126	85	477	—
Ionian Islands	—	19	133	—
Turkey & continental Greece	48	145	4,453	331
Morea and Greek Islands	—	—	596	—
Asia	322	594	18,159	1,167
Africa	1,691	506	2,492	6
British North America	1,167	2,099	4,601	330
British West Indies	55	807	444	55
Foreign West Indies	10	373	658	10
United States	8,195	5,837	14,871	403
Brazil	—	424	912	88
Rest of South America and Mexico	—	218	1,169	10
Guernsey, Jersey, Alderney, and Man	253	98	503	85

The duties imposed upon British iron in foreign countries are now almost universally such as would altogether exclude it, were it not that the article can be produced in this country probably at a cheaper rate than in any other part of the world. Mr. Hill states that he does not know any foreign country to which British iron can be sent without being subject to a duty of considerably more than 100 per cent., while in some instances the duty amounts to three or four times the cost of the article here. In the United States of America, the duty is 6*l.* 10*s.* per ton upon bar iron. In France, it varies from 10*l.* up to 20*l.*, or at least to 18*l.* Upon British pig iron, one of the witnesses states the French duty to be about 3*l.*, another about 4*l.* 10*s.* A higher duty is imposed in France upon what is there termed sea-borne iron (of course including British) than upon iron brought into the country by inland navigation. Both in France and America British iron is subject to much higher duties than the iron of either Sweden or Russia. The Americans vindicate this distinction on the ground that British iron is manufactured by rolling, and that of Sweden and Russia by hammering. The French ground their preference on the fact that British iron is made with coal, and Swedish and Russian iron with charcoal. There is much difference of opinion, we believe, as to whether iron of foreign manufacture derives any superiority from this latter circumstance. The King of Naples has also lately imposed an additional duty upon British iron; and it was understood that the government of Hanover proposed to lay a duty of about a rix-dollar on the hundred weight of iron brought from this country; that from Sweden being taxed only at the rate of 4*d.* on the hundred weight. No doubt can be entertained that if the new commercial arrangements which are believed to be contemplated for the different German states under the auspices of Prussia shall be carried into effect, the exclusion, as far as possible, of British iron from that market, will be one of the objects aimed at.

Some information respecting foreign iron and steel is to be found in the evidence of Mr. Jackson, a hardware manufacturer in Sheffield. He states that the French have of late made great progress in the manufacture of steel, but still that they are unable to compete with this country either in that or in the manufacture of iron. If it were not for their high protecting duties, the French steel-manufactories could not exist. The Swedish iron, and especially that from the Danemore mines, is the iron used in this country for making the best steel. The Danemore iron, however, is a monopoly, and its price consequently excessively high; (last year it was 41*l.* per ton) in consequence of which various other Swedish and Russian irons have been extensively substituted for it of late years, and for most of the purposes for which steel is employed are found to be sufficiently good. The marks of the Danemore iron have also been counterfeited. As to the manufacture of iron generally in Sweden, Mr. Jackson believes it to have considerably improved of late years. Swedish manufacturers have visited this country, and have adopted many of our processes. The steel manufacturers of the Duchy of De Berg in Prussia, have considerable iron mines in their own neighbourhood; but the quality is inferior to the iron in the neighbourhood of Siegen in Styria, and Ensdorf in Bavaria, which accordingly they purchase and mix with their own metal with great advantage. The steel they make is, in many respects, inferior to ours; in consequence of which we send to Germany considerable quantities of cast steel for the use of the manufacturers of edged tools; but for other purposes their steel possesses more toughness and flexibility than the English. A considerable part of the steel manufactured in France is from the iron of the country, though some is made from Swedish iron; but the French steel is not to be compared to that made in England. Some English steel is made by the admixture of English iron with a small portion of foreign iron. The process of steel-making has been improved of late years, so that with the same expense of fuel steel can now be produced both in greater quantity and of better quality than formerly. Oak is the best wood for making the charcoal. It is usually made from the smaller branches of trees, or of inferior wood which is unfit for other purposes.

VII. The workmen employed in iron-works, except the common labourers, are usually paid by the ton. The fall of wages from 1826 to the period of greatest depression in 1832, Mr. Hill estimates at from 30 to 40 per cent.; wages had since risen 10 or 12 per cent. Last summer the following were about the weekly earnings of the different descriptions of workmen at Merthyr Tydvil: a miner, 12*s.*; a collier, from 11*s.* to 12*s.*; filler, (employed at the furnace,) from 15*s.* to 16*s.*; refiner, 20*s.*; pudler, 20*s.*; pudler's assistant, 10*s.*; roller, from 18*s.* to 20*s.*; founder, 16*s.* or 17*s.*; mason, 16*s.*; carpenter, 16*s.* All the men are also found in coal, for which they pay 1*s.* a-week, receiving three or three and a half hundred weights. For their cottages, with which many of them are also provided, they pay a rent, at the highest, of about 5*s.* or 6*s.* a-month. Mr. Mathews, differing from the generality of his neighbours, pays his men by the day. To an able-bodied labourer he gives 13*s.* a-week; to the men employed in the iron-stone pits, 2*s.* 6*d.* a-day; to the colliers, 3*s.* 6*d.* and two quarts of beer; to the keeper, (a person employed about the furnace,) 30*s.* a-week; to a carpenter, 3*s.* or 4*s.* a-day; to a blacksmith, from 2*s.* 4*d.* to 3*s.* 6*d.*; to a mason, from 2*s.* 6*d.* to 3*s.* 6*d.*; to a founder, or moulder, from 2*s.* 6*d.* to 4*s.* Among 400 or 500 persons employed, about 50 are boys, from nine to fourteen or fifteen years of age, mostly the children of the workmen. They are employed in the pits and mines to deposit the iron-stone, and to attend to the fires and various light jobs about the furnaces, to fill the boxes, barrows, &c.,

for the men. They receive from 3*s.* to 7*s.* or 8*s.* a-week. "They work," says Mr. Mathews, "their own time; if they are tired they go home, and their fathers do their business; but generally they work six or seven hours, and sometimes eight or ten; they work and play pretty much as they like, subject to the control of their parents." The men receive about a ton of coal a-month, for which they pay 4*s.* or 5*s.* when a charge is made at all; but they often procure it for nothing, by stealing it. The colliers who work in the pits have an allowance of coal as a conventional right. For their cottages they pay from 2*s.* to 3*s.* a-week. The houses usually consist of a kitchen, two bed-rooms, and a brewhouse although the people seldom now brew their own beer. The colliers are commonly an orderly race of men, although of late years there have been some riots on account of wages. Those which took place about three years ago at Merthyr Tydvil were very serious: Mr. Hall says he has little doubt the lives lost must have been between twenty and thirty. He thinks, however, that the disturbances were occasioned rather by political excitement, the work of agitators from Wigan in Lancashire, and from Birmingham, than by any apprehensions about a reduction of wages. There had been no reduction for a year and a quarter before that time, nor was any then attempted. Very extensive trades unions, Mr. Mathews says, have for some years past been formed among the men. The colliers at Corbyn's Hill live pretty well, and are, from the severity of their work, obliged to do so. They have meat most days. A certain extent of work, which they do at a time, they call a stint, and most of them can accomplish this in eight hours, though there are some who can finish it in six, while it takes others nine or ten. There is not much drunkenness among the workpeople at iron-works. "All the workmen," says Mr. Mathews, "are a moral race of men; they are almost all sectarians; they attend chapel on the Sunday, and a great degree of order and regularity usually prevails among the men during Sunday." The district is full of schools, many of them national schools, and any poor workman may generally get his children educated free of expense. A great number of the grown up workmen, however, can neither read nor write; and there is not, generally, a very strong desire to have their children educated. The younger class of workmen can, for the most part, read pretty well: "they can read their Bibles; they are not very good scribes." Mr. Mathews pays his men once a fortnight; but they draw at the end of the week if they want it. Formerly it was very much the custom to pay the men their wages in truck; and the practice is still continued to a limited extent by means of various devices, notwithstanding the late Act of Parliament. Some establishments in which this used to be done, the witness says, were conducted with respectability, and he does not think that the condition of the men in such works was at all deteriorated by the truck system. He is of opinion that had it not been for that system the working classes would have suffered still more than they did.

VIII. The evidence offered to the committee as to the general condition and prospects of the iron trade was somewhat diffuse, but its tenor and amount may be stated in a single sentence. All the witnesses assert, that notwithstanding the exercise of unprecedented economy, and the advantages derived from improvements in various processes of the manufacture, the trade had, from 1828 till the beginning of last year, been in a state of great and constantly increasing depression, and that, at least during the year 1832, it had ceased to be carried on at any profit whatever. Yet no doubt can be entertained that the regular annual consumption of iron has been gradually increasing. Steam-engines and steam-boats, gas and water works, railroads, and machinery generally, have all formed constantly enlarging sources of demand. During the period that has elapsed since the termination of the war, the use of all articles made of iron has been extending; and we have seen that the export of the different descriptions of the metal is now four times as great as it was thirty years ago. In these circumstances it is impossible to believe that the price could have fallen as it has been doing till lately, if the increase of production had not more than kept pace with the increase of consumption. There must have been a good deal of what is properly called over-production. We do not say that the over production has taken place contemporaneously with the depression; but the one has preceded the other in the order of time, as the cause is wont to precede its effect. The over-production appears to have taken place in the interval from 1824 to the close of 1828; for these four years of extravagant trading, the manufacturers have since paid the natural penalty in the low prices which have ensued. The period of depression has certainly been a protracted one; but it has not lasted longer than the antecedent period of over-production. These facts, in substance, are not denied by the witnesses themselves, all of whom acknowledge that there was more iron manufactured in 1828 than there ever had been in any one year before. Up to this time, also, there can be no doubt that large sums were invested in the trade, and that iron-works continued to be purchased and taken on lease at constantly increasing prices or rents. The sums then invested could very probably, in few cases, if in any, have been recovered had the properties been brought to market in 1832. It is admitted, however, that although it might have been difficult to find a tenant for an iron-work during a considerable part of that year, such concerns were easily let in the beginning of the year following. "There is always," says Mr. Mathews, "a disposition to get out of business when it is unprofitable, and that disposition has been felt in Staffordshire; but when the trade seems looking up, that disposition ceases, and I apprehend that now there is no such disposition in Staffordshire." The iron manufacturers have not, like the shipowners, any reciprocity treaties to rail against; but it is a great comfort to people to trace their grievances to the government; and we find, accordingly, that this interest too has its theory constructed upon the common principle. It is, that the late distress in the trade has been all occasioned by the restoration of a metallic currency. This doctrine seems to be all but universally adopted by the trade. In a set of resolutions agreed upon at a meeting of the Staffordshire manufacturers in October 1831, as well as in the speculations of all the witnesses examined by the committee, the change in the currency is put forward as the great cause of the depression and distress so long experienced. It is difficult to understand this unanimity, unless we are to suppose there is some natural jealousy in iron of gold and silver. We imagine, however, that the three metals must now make up their minds to agree as well as they can; and we trust there is, at length, a fair prospect that they may for the future flourish together.

THE GLASGOW LOTTERY.

In the year 1808, a Committee of the House of Commons, appointed to examine into the "Laws respecting Lotteries," concluded their Second Report with the following remarkable expressions:—

"Your committee find, that by the effects of the lottery, even under its present restrictions, idleness, dissipation, and poverty are increased, the most sacred and confidential trusts are betrayed, domestic comfort is destroyed, madness often created, crimes, subjecting the perpetrators of them to the punishment of death, are committed, and even suicide itself is produced, as will fully appear by the evidence submitted to the House. Such have been the constant and fatal attendants upon state lotteries, and such your committee have too good ground to fear will be their invariable attendants so long as they are suffered, under whatever checks or regulations, to exist.

"No mode of raising money appears to your committee so burdensome, so pernicious, and so unproductive; no species of adventure is known, where the chances are so great against the adventurer; none where the infatuation is more powerful, lasting, and destructive.

"In the lower classes of society the persons engaged, whether successful or unfortunate, are, generally speaking, either immediately or ultimately tempted to their ruin; and there is scarcely any condition of life so destitute and abandoned, that its distresses have not been aggravated by this allurement to gaming, held forth by the state.

"Your committee are conscious that they are far from having exhausted all the grounds upon which it might be urged, that the lottery ought not to be resorted to as a financial resource. The reasoning upon them appears to your committee to apply with peculiar force to the situation, the habits, and all the circumstances of a great manufacturing and commercial nation, in which it must be dangerous, in the highest degree, to diffuse a spirit of speculation, whereby the mind is misled from those habits of continued industry

which ensure the acquisition of comfort and independence, to delusive dreams of sudden and enormous wealth, which most generally end in abject poverty and complete ruin."

In the face of this just denunciation of the evils of lotteries the government persisted, for many years, in raising some quarter of a million annually by a species of taxation, whose contributions, to use the forcible words of M. Say, were in most cases taken "from the bread of misery, if not from the fruit of crime." At length Mr. Robinson, now Lord Ripon, had the honour of producing a budget without the item of a lottery in its ways and means; and the nuisance was destroyed by acclamation.

At the latter end of the year 1831, however, the people of this metropolis were astonished to witness the opening of lottery-offices in every quarter. From Regent-street to the Bank, shops re-appeared with red placards on their doors, and mystical bits of paper in their windows. As much capital had evidently rushed to this gainful trade, as would have built another Crockford's;—but instead of ottomans and mirrors it displayed itself in mahogany sashes and newspaper puffs. The demon was at work again, not to seduce the peer into a premature arrangement with the Jews, but to conduct the mechanic and the servant, by a shorter cut than the gin-shop, into the fangs of the pawnbroker. There was no concealment in the matter. The Glasgow Lottery paraded its impudent face in mid-day. Explanations were at length demanded in the House of Commons; and they ended in the Chancellor of the Exchequer acknowledging that the legislature, which had solemnly resolved that the state should no longer be permitted to raise money out of the crimes and follies of the people, had suffered itself to be *swindled* into the sanction of a lottery scheme, by a knot of obscure adventurers coming to parliament with their town motto on their lips—"Let Glasgow flourish!" and whispering in the same breath—"May fools be as plenty as blackberries!"

The act of parliament, which has again let loose upon the people of this country the evils of licensed and public gambling, is entitled "An Act to amend certain Acts passed in the reign of his late Majesty King George IV., for opening a street from the Cross of Glasgow to Monteith Row." (1st and 2d William IV. cap. 8.) This seems an innocent act enough; but as the people, and especially their legislators, ought to know what mischief may lurk in a private bill, we quote the section, by which authority is given by the law to call up from their long sleep the old ministers of the state lottery, the Bishes and Webbs, and other evil spirits ready to do the bidding of the tempter:—

"And be it further enacted, that the said commissioners for the time being shall be, and they are hereby authorized and empowered, from time to time, at any general or special general meeting assembled, to divide and *allot* the whole, or any part, of the said property, of and in the same street, or pertaining and belonging, or addebted and owing to them, the said commissioners, into as many separate and distinct portions, of such extent, amount, or value, either in property or money, and in such proportions as to such meeting or meetings shall seem fit; and thereafter, and as often as such division and *allotment* shall be made, it shall be in the power of the said commissioners, and of their committee of management, for the time being, to cause or procure the property or funds so *allotted* and divided, to be distributed among the shareholders, who at the date of such distribution shall be entitled to any share or shares, by LOT, in such manner as the said shareholders, for the time being, at a general meeting assembled, shall have approved of, and to convey to the party or parties so acquiring right, the portion or portions of such property, to be acquired as aforesaid; which conveyance or conveyances, being completed in the manner directed by the said recited acts, shall be good and effectual rights in favour of such party or parties."

Now, under this clause, a lottery has been established, very much more disadvantageous to the adventurers than the old state lottery, because there are no regulations to prevent those who swindled the parliament into a sanction of their project, from swindling the purchasers of their tickets in the drawing of the prizes. There is no guarantee, as we used to have under the old system, of a public drawing, before public commissioners, that the thing will be as fairly administered as a gambling transaction can be administered. We have no guarantee for the honesty of the parties, who have smuggled this bill through parliament, but the following *scheme*:—

"The third and last Glasgow Lottery, being the only lottery that is to be drawn by authority of parliament. Whereas by the act of 1st and 2d William IV. cap. 8, power and authority were given to the Commissioners of the Glasgow Improvement Company, incorporated by the 5th George IV. cap. 69, to divide and distribute the property, funds, and assets of the said company, among the shareholders thereof, by lot; and also to divide the shares, and to create, issue, and sell as many new shares as may be necessary to complete the engagements of the said company:—This is to give notice, that by virtue of the power vested in them by the said recited acts of parliament, the commissioners have apportioned all the remaining property and assets of the company, consisting of freehold lands and houses, into 2,036 lots of various estimated amounts of value, as set forth in the following scheme; and that they (the commissioners) will distribute the same by lot among the proprietors of the company, whose shares are numbered from 1 to 10,000, both inclusive, class A, according to the form and in the manner prescribed by the acts for regulating the drawing of the benefit lots in state lotteries, at Coopers'-hall, London, all in one day, 22d July, 1834.

"SCHEME.

2,036 lots.				Value 55,004 0 10

"The shares of the above company, divided agreeably to the directions of the act, are now on sale; and the fortunate holders of any of the above lots, will have the option of taking the property or receiving the value in money, as set forth in the above scheme—subject only to a discount of 5 per cent. on the lots above 100*l*. By this guarantee, the public are assured of the intrinsic value of each lot in the scheme: and every inconvenience is obviated that might be expected to arise from the acquisition of distant property."

This, then, is the scheme: let us analyse it:—

Value as given in the Scheme	£55,004 0 10
Deduct 5 per cent. upon 41,800*l*., the amount of the Lots above 100*l*.	2,090 0 0
Value of the Prizes as set forth by the Schemers	£52,914 0 10

There are 10,000 tickets in each drawing; which tickets, on the 25th of February, were selling at 13*l*. 13*s*. The amount of 10,000, at 13*l*. 13*s*., is 136,500*l*.; but the price of one-sixteenth share is 19*s*. 6*d*., which gives a money payment of 15*l*. 12*s*. per ticket. The average may be taken, therefore, at 14*l*. 12*s*. 6*d*. per ticket, which gives an amount of 146,250*l*. to be paid by the public for property valued at 52,914*l*. 0*s*. 10*d*. The game is very nearly *three* to *one* against the *pigeon*. It has been estimated, in a sensible

exposure of this transaction, entitled "A Letter to Lord Althorp upon the Glasgow Lottery," that the amount cleared, or to be cleared, above the value of the property disposed of by lot, is 270,000*l.* Two lotteries of 10,000 tickets each have already been drawn; the third, of which we have given the scheme, remains to be drawn.

The Glasgow people, probably, got only the estimated value of their houses and cellars—gain enough for them. The surplus 270,000*l.* has gone into the pockets of the gentry who have opened lottery shops from Regent Street to the Bank. In whatever way the money has been spent by the public in this delusion, the national capital is just as much wasted in profitless expenditure as if it had been wasted in fires or wars. The capital employed unprofitably has been so much robbed from the capital that would have been employed profitably. The funds for the support of industry have become funds for the support of vice.

We wish the public had been deluded to ten times the amount of 270,000*l.* We wish the projectors and managers of this legal fraud had been impudent enough to show that the chances were ten to one against the adventurers, instead of three to one. The bubble would have been sooner at an end. On the contrary, the traders in human credulity are taking courage. Parliament has been weak enough to say, that because the bill for establishing the Glasgow lottery passed through the two houses without notice, the evil *must* go on. Parliament ought to have said, "Let us repeal the fraudulent bill in twenty-four hours, by suspending the standing orders; and let us make it penal to attempt any such imposture in future." Parliament has not said so; and, taking heart, the lottery-office keepers begin to trust that their old trade may be revived in all its glory. The member for Leominster, a most disinterested legislator on the subject of lotteries, has addressed the following letter to the "Dublin Evening Post," which letter has, by some lucky chance, contrived to find its way into many of our English papers:—

"*To the Editor of the Dublin Evening Post.*

"Sir,—Having been a constant reader of your journal since you were pleased to notice my proposed plan for the holding of 'occasional parliaments in Dublin,' an article on lotteries, which has recently appeared in it, has come under my observation. As this is a subject upon which *I may be presumed capable of affording some information*, I address you. In the article in question, you state that the Hamburgh lotteries are the cause of annually withdrawing from the country a large sum of money. This is certainly the case; but you do not mention the Guernsey lotteries, or it may be that you did not know, that in that island they are continually recurring, while sales of the tickets, to a *considerable extent*, are had in England. In addition to these and the Hamburgh lotteries, there are various minor lotteries, or, as they are called, 'little-goes,' drawn in London, the schemes of which permit the adventure of very small sums.

"When state lotteries formed a branch of our taxation, an officer was especially appointed by Government to prosecute all persons concerned in these little-goes; and, as you state, the importation of foreign tickets was strictly prohibited, as a measure of protection to the revenue. In the present condition of our finances, with the opinion prevailing that the minister proposes relinquishing some portion of the assessed taxes, it is not impossible but lotteries may be revived. But if this measure be not had recourse to in aid of the revenue, their use for *local purposes* might, as you suggest, be rendered highly beneficial, as there could be some hundreds of thousands annually obtained by VOLUNTARY TAXATION, which I should suggest ought to be placed under the control of the Government, to allow for the improvement of such parts of the United Kingdom as they might think proper.

"While upon the subject, permit me to observe, that the passing of the act for the Glasgow lottery was wholly unknown to myself, and those parties who have promoted the sale of the shares, until many months after it had received the sanction of the legislature; and that the Glasgow commissioners have been enabled, by its means, to repay to the treasury a large sum of money, borrowed for the improvement of their great commercial city. I am, Sir,

"Your obedient humble servant,

"T. BISH.

"No. 2, St. James's Square, London,
"January 25, 1834."

"*** Since writing the above, I have had a scheme and *tickets* of a French lottery sent me, which, no doubt, has been brought forward here, owing to the immense sale of the Hamburgh lottery; therefore, by discontinuing lotteries here, we are sending thousands out of the country to enrich foreigners, instead of aiding our own people."

We are glad that the nation has been enlightened upon this subject, by a gentleman "presumed capable of affording some information." We are glad to *know* that the Hamburgh, and the Guernsey, and the French lotteries sell their tickets largely in the United Kingdom, because we trust that not many weeks will pass, before the advertising and sale of such tickets here shall be deemed contrary to law, and heavy penalties be enforced, under a new statute, "as a measure of protection" to the morals of the people, as such penalties were formerly enforced as a "measure of protection to the revenue." "By discontinuing lotteries here," says the admirable political economist who represents Leominster, "we are sending thousands out of the country to enrich foreigners instead of aiding our own people." Those who buy Hamburgh and French lottery-tickets doubtless give some of our hard-wares and broad-cloths for the pleasure of being cheated; and those who cheat them are enriched to the extent of the folly amongst those who are fools enough to part with the useful products of their industry, to rely upon the miserable chances of a game, to which *rouge et noir* is honesty itself. Mr. Bish would put an end to this generosity towards foreigners upon a *small* scale, by establishing lotteries again, upon a *large* scale, "*for the aid of our own people.*" The *scheme* is a good scheme. "Our own people" will be prodigiously aided when they are taught, by their rulers, to expect from luck what a man can only win by talents and industry; to seek for their gains in the losses of others, (for in a lottery, as in all other gambling, one man's gain is another man's loss,) instead of relying upon their own honest labour. This is the real curse of lotteries—infinitely greater in its amount of evil, than the mere plunder of the adventurers either by the state or by individuals. Mr. Bish says, "In the present condition of our finances, with the opinion prevailing that the minister proposes relinquishing some portion of the assessed taxes, *it is not impossible but lotteries may be revived.*" Mr. Bish does not understand the temper of the English people any more than he does political economy. The minister who would dare again to propose a state lottery, would be *impeached*; the legislator who publicly advocates a state lottery deserves——to be sent to school. Let him learn that the only real support for the revenue of a state, is the *industry* of the people; and that their industry is represented, first, by their power of consuming those taxable commodities in which their comforts are concerned; and, secondly, by their power of accumulating capital for the support of future industry beyond their own consumption. The man who contributed to the state by the voluntary taxation of a lottery-ticket, spent the funds by which he would have contributed to the state and his own comfort in the purchase of soap, or candles, or glass, or paper. The man who wasted his capital in being cheated at a game where the chances were more than two to one against him, paralyzed that capacity for industry which gave the state its only lasting sinews of prosperity. His gambling contributions to the state conducted him, in many cases, to the workhouse or the prison. What the state gained by lotteries was spent, ten times over, upon the additional candidates for the tread-mill which lotteries created.

THE BUDGET.

On the 14th of February, exactly ten days after the opening of the session of parliament, the Chancellor of the Exchequer made that description of statement to the House of Commons on the subject of the public finances, which is known under the quaint name prefixed to this article. The period chosen by him for making this exposition is peculiarly, and even unprecedentedly, early; but there are many reasons which render this promptness a measure of prudence and propriety on the part of the minister, apart even from the consideration that the country has a right to expect that information in many respects so important should not be kept back for a day longer than the public interest may require it to be withheld.

After giving a rapid sketch of our financial condition

during each of the last three years, upon which part of the subject it is not necessary for us now to enter, his lordship proceeded to describe our actual state, which must be considered in a high degree satisfactory, as proving the great and increasing resources of the country. Notwithstanding the repeal of taxes last year to an extent which relieved the people from the payment of 1,545,000*l.*, the actual surplus of income over expenditure in the year ended January 5, 1834, amounted to 1,513,083*l.* In congratulating the House upon this result, Lord Althorp took occasion to remark upon the fact that, notwithstanding the continued reduction of taxes, the improvement in the remaining branches of our revenue has constantly been such as not only to prevent deficiency in the public income, but to show a continued augmentation.

In addition to the surplus revenue of one million and a half just noticed, the Chancellor of the Exchequer announces the gratifying fact of a reduction to the amount of half a million in the estimates for the present financial year, as compared with that about to expire. He also announces another source from which a considerable increase of revenue may be expected to arise during the present year, and that without imposing any fresh burden on the people. His lordship alludes to the alteration adopted in the system of taking the duty upon tea, at fixed rates for so much per pound, instead of levying it, as heretofore, by a per centage on the sale prices. The fixed rates now adopted appear to have been so calculated as to yield an equal amount of revenue with the former per centage duty, on the supposition that the same quantity of tea would be purchased by the public. It is, however, reasonably expected that, by destroying the monopoly of the East India Company in this article of necessary consumption, the price will be so far reduced as to cause an increased use for it on the part of the people, in which case, by fixing the rates at so much per pound, the revenue cannot fail, in the ordinary course of things, to be benefited. The quantity of tea upon which consumption duties are paid at present, exceeds thirty-one millions and a half of pounds annually, yielding a revenue of three millions and a half. It is supposed that this quantity will be so far increased by the probable reduction in price, that the Exchequer will benefit by that means to the amount of 600,000*l.*

Admitting that Lord Althorp's view is correct, this, together with the surplus income and diminished estimates, will give him a sum equal to 2,600,000*l.* beyond the financial wants of the year. Against this amount is placed the interest upon the sum to be paid as compensation to West India proprietors under the act of last session for abolishing slavery. This charge is taken at 800,000*l.* As certainly not more than one-half of the amount of this compensation will be called for during the present year, it argues great caution on the part of the Chancellor of the Exchequer to take the whole charge in respect of it at once into his calculations. This will reduce the actual estimated surplus to 1,800,000*l.*, a surplus which assuredly warrants the expectation of a further removal of the public burdens. This expectation it is proposed to realize by the remission of the tax on inhabited houses, amounting, after the partial reduction of last year, to 1,170,000*l.* per annum.

The bill for the repeal of the house duty is not to be introduced immediately. By waiting for that purpose until other questions for granting relief to the agricultural interest, and of which notices have been given by several members, shall be disposed of, his lordship may reckon upon assistance towards defeating those questions from many representatives whose constituents are more particularly interested in the repeal of the house-tax. If that repeal were once accomplished, there are many among this number whose constituents might rather urge them to a contrary course, which might be extremely embarrassing. It is already argued on the part of the country members, that this measure is unduly favourable to the inhabitants of towns; but as every man must occupy a house, it is difficult to see how this objection can be well founded, unless upon the supposition, that the towns have hitherto borne more than their fair share of the burden, which fact alone would afford a fair argument in favour of its removal. Unpopularity may be a valid argument against the propriety of any tax, but partiality in its operation is assuredly one much stronger.

Lord Althorp has left himself ample means, after the house-tax shall be abolished, for repealing some trifling duties which press upon the springs of industry with a weight out of all proportion greater than the amount they yield to the public coffers, and we have some reason to hope, from a passage in his speech, that he will avail himself of the present opportunity for doing so.

PUBLIC PETITIONS.

THE Committee of the House of Commons for the classification of petitions, has issued two reports on the petitions presented up to February 14. The following abstract of their contents is prepared, and will be continued, on the same principle as those furnished by the "Companion to the Newspaper" in the course of the last session.

	No. of Petitions.	No. of Sigs.
Ecclesiastical.		
Against lay patronage in Scotland	5	3,883
For relief of Protestant Dissenters	10	1,698
Against	1	60
Against the subversion of the Established Church	3	344
For reform in the Established Church	1	131
Against alteration of the Liturgy	1	915
For the better observance of the Sabbath	3	874
Against tithes in England	11	917
Against tithes in Ireland	2	325
Taxes.		
Against the house and window taxes	3	156
Against the malt tax	1	76
For poor-laws in Ireland	1	165
Miscellaneous.		
For repeal of the Union with Ireland	2	4,449
Against the present regulation of the China trade	1	52
For investigation and reform in the medical and surgical professions	1	43
Other miscellaneous petitions	16	349

PRIVATE BILLS.

ON Wednesday, Feb. 5, the House of Commons made the usual resolutions respecting the introduction of private bills. It was resolved: that the House would not receive any petition for private bills after Feb 21; that no private bill be read the first time after Monday, March 24; and that no report of such bills would be received after Monday, May 26.

The following is the list of petitions for private bills, and progress therein, Session 1834, Feb. 21:—

Petitions presented	192
Bills read first time	22
Bills read second time	9

Abstract of the above Bills.

I. AGRICULTURE—

23 Inclosure Bills; of which there are one for Bedfordshire, one for Berkshire, three for Cambridge, one for Derby, two for Dorsetshire, one for Durham, four for Gloucester, one for Hants, one for Northampton, one for Oxford, two for Somerset, one for Stafford, one for Tipperary, two for Wilts, one for York.

2 Drainage.

II. COMPANIES, &c—

1 British American Land.
1 British Iron.
1 Leicester Insurance.
1 London and Westminster Bank.
1 Marine Assurance.
1 Marine Insurance.
1 Marine Society.
1 Ocean Assurance.
1 St George's Hospital Incorporation.
1 Suffolk Insurance.
1 United Kingdom Life Assurance.

III. IMPROVEMENTS OF TOWNS AND DISTRICTS—

9 General Improvements.
31 Churches, Markets, Bridges, Gaols, Cemeteries, &c.
10 Local Water Works.
5 Local Gas Works.
12 Municipal Regulations,—Vestries, Police, &c.

IV. INTERNAL COMMUNICATIONS—

47 Roads.
6 Canals.
17 Railways.

v. NAVIGATION—
15 Improvement of Harbours, &c.
2 Docks.
1 Pier.
1 General Steam Navigation.

ABSTRACT OF PARLIAMENTARY PAPERS.

THE following is the Account of the National Income and Expenditure for the past year, drawn up at the Treasury, and printed by order of the House of Commons. The items, it will be observed, differ from those in the Statement published in our last Number; but the results nearly correspond.

Income:—	£.
Customs	16,208,940
Excise	16,543,711
Stamps	6,928,309
Taxes	4,692,058
Post office	1,513,800
Miscellaneous	83,779
Receipts not of the ordinary revenue	100,726
Total of income	46,271,326

Expenditure:—	£.
Charge of the funded deb	27,742,738
Interest on Exchequer bills	779,769
Civil list	510,000
Pensions	509,163
Courts of justice	377,966
Perpetual salaries, miscellaneous charges on the consolidated fund, mint, and hemp and flax bounties	566,342
Army	6,590,061
Navy	4,360,235
Ordnance	1,314,806
Miscellaneous, chargeable upon annual parliamentary grants	2,007,158
Total	44,758,242
Excess of Income over Expenditure for the year	1,513,083

Produce of Customs Duties in the United Kingdom.—The following is the account of the gross and net produce of those duties in the year ending January 5, 1834, as compared with that of the preceding year:—

	1832. £.	1833. £.
Gross receipt of duties inwards	19,396,263	18,193,032
" outwards	122,922	136,290
Total gross receipt	19,519,185	18,329,322
Payments out of gross receipt for drawbacks and bounties on British refined sugar	954,941	504,797
Drawbacks and bounties on other articles	169,243	186,805
Allowances on quantities over entered, damages, &c.	63,407	59,716
Total payment out of gross receipts	1,187,591	751,318
Net receipt of Customs duties	18,331,594	17,578,004

Vessels entered Inwards and cleared Outwards in the Ports of the United Kingdom.

STATISTICS, TRADE, &c.

Trade of the Canadas in 1833.—We take the following particulars relating to this subject from the abstract given in the "Times" of the statements in Neilson's old "Quebec Gazette."

Exports. Flour: the average price had been, per barrel, 28*s.* 9*d.* for fine, and 30*s.* for superfine. The demand had been maintained throughout the season, and 12,000 barrels remained in store for home consumption. The demand for Indian meal had not realized expectation, and the price for the kiln-dried had never exceeded 18*s.* per barrel. The wheat crops in Lower Canada had been of poor quality, and in many parts there was a total failure. It sold for 5*s.* 9*d.* to 5*s.* 10*d.* per minot (about 60 lb.). In Upper Canada the harvest had been more abundant, and the prices averaged from 6*s.* to 6*s.* 3*d.* per minot. Ashes had been dull of sale, being 22*s.* to 22*s.* 6*d.* per cwt. for pots, and 25*s.* to 25*s.* 6*d.* for pearls. The quantity had only been 35,000 barrels, being nearly 11,000 less than in 1832: but the most important branch of Canadian export, timber, had been in a most flourishing condition, and the prospects highly satisfactory for the ensuing year. The arrivals during the year were 1007 vessels, measuring 271,147 tons, being far greater than in any preceding season. Fourteen square-rigged vessels are in progress of building; two of them are of 650 tons each, and supposed to be intended for the China trade.

Imports. The importation of tallow had been unusually small. The supply of coals exceeded that of any former year, keeping pace with the increased consumption of the country, in which it was rapidly superseding the use of wood in private houses. The prices were, for the best Newcastle coal, 18*s.* to 20*s.* per chaldron by the cargo; Smith's coal, 15*s.* to 17*s.*; and Scotch coal, from 18*s.* to 22*s.* 6*d.* The importation of coffee had been limited owing to the low price of inferior teas, which had been very abundant. Brandy and gin had been received in considerable quantities, and the latter had sold at from 4*s.* 6*d.* to 5*s* 5*d.* per gallon. Rum (Jamaica) was selling at 5*s.* to 5*s* 3*d.* per gallon; and Leward and Demerara at 4*s.* to 4*s.* 3*d.* The quantity imported had been 2000 puncheons less than the average of the two preceding years, and the stock would be exhausted before the next opening of the navigation. The supply of sugar had been very moderate, and Muscovado had advanced to 50*s.* and 52*s.* 6*d.* per cwt. Business in broad cloths, &c, had not been done in its usual spirit. Herrings had been abundantly supplied, and sold at 18*s.* to 18*s.* 6*d.* per barrel. Madeira and port had met a ready sale; and sherry was in some demand at low prices.

The average consumption of rum in the Canadas is reported to be rather over than under 10,000 puncheons, fluctuating materially with a high or low price. Ten years ago the consumption of Muscovado sugar scarcely exceeded 12,000 hogsheads; but that of the last year is reported to be thrice that quantity, and the price had maintained itself.

The importation of molasses had been about 300 casks short of the consumption; but the stock on hand was sufficient to meet the deficiency. The consumption of brandy had greatly increased since 1831, previous to which year it amounted to 700 pipes annually. Brandy having been considered a safeguard against the cholera, there was a great demand for it in 1832, which produced in 1833 a heavy import of 2000 pipes, in consequence of which the price declined. Up to 1830, the consumption of gin was 550 pipes; it had not been more until 1833, in which year it was greater than ever previously known.

Population of Russia.—The return of the population of the Russian empire for the year 1832 (which includes only the inhabitants of the Greek religion) states the number of births to have been:—males, 992,663; females, 932,442; total, 1,925,105. Deaths, males, 615,956; females, 594,691; total, 1,210,647. Excess of births, 714,458. Marriages, 375,301.

Spanish Revenue.—The abstract of the Spanish revenue, for the year 1832, is officially stated as follows:—

	Reals.
Tithes	10,600,000
Rentas provinciales	130,000,000
Tobacco monopoly and Custom-house duties	90,000,000
Salt	60,000,000
Miscellaneous taxes, &c.	120,000,000
Stamps	20,000,000
Doors and windows	60,000,000
Branches of revenue specially adjudged to the sinking fund	80,000,000
Total	600,000,000

In the official statement of expenditure, the civil list and the foreign department, which form the first article, are combined. The account stands as follows:—

	Reals.
Casa real y estado	62,000,000
The marine	42,000,000
The finance department and the pension list	80,000,000
The war department	240,000,000
The department of grace and justice	18,000,000
The sinking fund, including the foreign debt	208,000,000
Total	650,000,000

POLITICAL RETROSPECT FOR FEBRUARY, 1834.

GREAT BRITAIN.

THE domestic events of the month consist almost exclusively of the proceedings of parliament, which was opened on the 4th by a speech from the throne.

His Majesty began by expressing his reliance on the firmness of the members of both houses, in supporting on its ancient foundations, and in the just distribution of its powers, the established constitution of the state. He then congratulated them on the manner in which the colonies had received the great measure of the preceding session, the act for the abolition of slavery, and the progress already made in carrying it into execution by the legislature of Jamaica, which he said afforded just ground for anticipating the happiest results. In adverting to the subjects that awaited their consideration, he stated that he would order to be laid before them the reports from the commissions appointed to inquire into the state of the municipal corporations, into the administration and effect of the poor-laws, and into ecclesiastical revenues and patronage in England and Wales, by which they would be enabled to judge of the nature and extent of any existing defects and abuses, and in what manner the necessary corrections might, in due season, be safely and beneficially applied. His Majesty then expressed the confidence he had in the continued success of his endeavours to preserve the blessings of peace, much assisted as he had been in the maintenance of that policy by the good understanding subsisting between the government of this country and that of France. He regretted that no settlement had yet been effected between Holland and Belgium, and that the civil war in Portugal still continued; but should carefully watch for any opportunity of assisting in the establishment of peace and security in these countries. He had recognised the succession of the infant daughter of the late King of Spain. As to Turkey, his Majesty said, "It will be my object to prevent any change in the relations of that empire with other powers which might affect its future stability and independence." On the subject of the national finances, a confident belief was expressed that the state of the revenue, as compared with the expenditure, would be found satisfactory. The continuance of distress among the proprietors and occupiers of land was lamented; but both the internal tranquillity of the country, and the state of its commerce and manufactures, were described as affording the most encouraging prospects of future improvement. The early consideration of such a final adjustment of tithes in Ireland was recommended, as might extinguish all just causes of complaint, without injury to the rights and pro-

perty of any class, or to any institutions in church or state. The state of all parts of Ireland was stated to present a much more favourable appearance than at any period during the last year. "But I have seen," his Majesty continued, "with feelings of deep regret and just indignation, the continuance of attempts to excite the people of that country to demand a repeal of the Legislative Union. This bond of our national strength and safety I have already declared my fixed and unalterable resolution, under the blessing of Divine Providence, to maintain inviolate by all the means in my power." Referring to the effects of the manner in which the popular feeling had been appealed to on that question, he said, in conclusion—"To none more than to the deluded instruments of the agitation thus perniciously excited, is the continuance of such a spirit productive of the most ruinous consequences; and the united and vigorous exertions of the loyal and well-affected, in aid of the government, are imperiously required to put an end to a system of excitement and violence which, while it continues, is destructive of the peace of society, and, if successful, must inevitably prove fatal to the power and safety of the United Kingdom."

On the same evening debates on the Address took place in both houses. In the House of Lords, after it had been moved by the Duke of Sutherland and seconded by Lord Howard of Effingham, the Duke of Wellington rose and attacked the conduct which the government had pursued in regard both to the dispute between Holland and Belgium, and to the civil war in Portugal. There was nothing new in any of his Grace's objections; and they were very completely repelled by Lord Grey, in a masterly speech, in which he showed that, in both the cases referred to, the present administration had merely adhered to, and followed up the policy which had been begun by their predecessors. The Address was then carried unanimously. In the Commons the Address was moved by Mr. Shaw Lefevre, and seconded by Mr. Morrison, in speeches from which all irritating topics were excluded. This abstinence gave a tone to the rest of the debate. The opposition to the Address was led by Colonel Evans, who began by stating that until he had heard of the distress prevailing in the agricultural districts from the King's speech, he had not been aware of its existence, after which he proceeded to inveigh against the window-tax. Mr. Hume followed, and, having attacked the Address on somewhat different grounds, proposed an amendment on that part of it relating to the Established Church, which, on a division, was lost by a majority of 191 to 39. Another clause, proposed by the same honourable member, pledging the House to large reductions of expenditure, was negatived without a division; as was likewise one proposed by Mr. O'Connell for the extinction of tithes in Ireland, not only in name, but in substance, as a provision for the Established Church. Mr. O'Connell then moved the omission of the three last paragraphs of the Address, being the passage relating to the agitation for the repeal of the Irish Union, after a short and not very interesting debate, on which a division took place, when the numbers were 23 for the amendment and 189 against it. It appears from the votes, that on this, the first day of the meeting of the House, sixty-one notices of motions were given by different members.

Although the affairs of Ireland had of course occupied a portion of the debate on the Address, that country had scarcely formed the subject either of such exclusive or of such warm discussion on that occasion as had been generally expected. A matter connected with Ireland, however, well calculated to excite the public attention, was brought forward on the following evening. In replying to some observations of Mr. Littleton, Mr. O'Connell took the opportunity of referring to a speech delivered on the 22d of October, by Mr. Hill, to his constituents at Hull, in which the honourable gentleman had related a story of an Irish member who had spoken and voted against the Coercion Bill of last session, having nevertheless gone to ministers and pressed them to pass the measure. A report of Mr. Hill's speech had been given in a Hull paper immediately after its delivery; and the passage in question had been copied into most of the London and country journals within the next three weeks; but no notice was taken of it in Ireland till Mr. O'Connell's attention was called to the subject by a private letter addressed to him from Hull. To this he replied in a newspaper address to the electors of that borough, in which he declared the story to be an unfounded calumny, denounced Mr. Hill as its fabricator, and called upon the constituents of that gentleman to demand his resignation. Mr. Hill took no notice of this characteristic effusion, but intimated in the newspapers that if any Irish member of parliament would write to him on the subject, he should receive an answer, distinctly stating whether or no he was the individual who had been referred to in the speech. Many Irish members in consequence applied to Mr. Hill, and obtained his assurances that the charge had not been intended to apply to them. In this state the affair was when it was introduced into the House of Commons, as above stated, by Mr. O'Connell. The honourable and learned gentleman concluded his remarks by asking Lord Althorp whether such a communication as that spoken of by Mr. Hill had ever been made by an Irish member to his lordship or to any other member of the government. Lord Althorp's reply was, that certainly no such communication had ever been made to any cabinet minister, but that he had reason to believe that more than one Irish member, who voted against the Coercion Bill, had in private held very different language: and on being afterwards asked by Mr. Sheil if he was one of those members, his lordship answered that he was. This statement of course produced a great sensation. Mr. Sheil, in the most solemn manner, protested his innocence. Immediately afterwards Mr. O'Connell rose, and said, that if he had used any harsh expressions upon a former occasion to the honourable member for Hull, he now fully and perfectly retracted them. If more than that were required of him, he was willing to grant it. He tendered every satisfaction in his power both in that House and out of it. He now felt that the honourable member for Hull was perfectly justified in making the observation which he had made; at the same time he professed to place the most perfect confidence in Mr. Sheil's asseverations. The matter ended for this evening in, first, the committal of both Lord Althorp and Mr. Sheil to the custody of the Serjeant-at-Arms, and then their liberation, after each had promised that he would neither take any active steps himself, nor respond to any hostile message, if such should be resorted to in consequence of what had passed. The same pledge was required of, and given by, Mr. Hill.

It was the general understanding, however, that the imputation on Mr. Sheil demanded inquiry; and accordingly, on the following Monday (the 10th) Mr. O'Connell moved the appointment of a select committee for that purpose. In the course of his speech the honourable and learned gentleman took occasion to retract his retractation so earnestly offered to Mr. Hill a few evenings before, stating that he had been too hasty in making the admissions he had then done. In replying to this renewed attack, Mr. Hill showed by reference to a letter published by Mr. F. O'Connor, the member for the county of Cork, and to the report of a public meeting held at Clondalkin near Dublin, that the report implicating Mr. Sheil had been current before the close of the last session, and that Mr. O'Connell had been perfectly aware of this when he had accused him of having invented it and given the first utterance to it, towards the end of October, at Hull. To this Mr. O'Connell attempted no answer. The motion for the appointment of a committee was carried by a majority of 192 to 54. On the following Friday the committee gave in their report. They stated that they had examined two witnesses, and were about to examine others, when Mr. Hill, finding the testimony already heard very different from what he had expected, had intimated that he had come to the conviction that the charge which he had been led to make against Mr. Sheil had no foundation in fact; that he had made it on the persuasion that he had received it on undeniable evidence; but that he now expressed his sorrow for having ever contributed to give it circulation. The committee added, that neither of the witnesses who appeared before them deposed to any facts calculated to bear out the allegation against Mr. Sheil; nor did their testimony go to impeach his character and honour in any way or as to any matter whatever. They at the same time expressed their full confidence that Mr. Hill had acted under a sincere, though mistaken, persuasion. They derived, they said, this confidence as well from the tone of generous regret which characterized his communication at the close of their proceeding, as from the candid admissions, and the evident anxiety to avoid all exaggeration and mis-statement, which they had observed throughout his testimony, as delivered in their presence.

On the 13th, before the above affair had been thus dis-

posed of, another Irish question was brought before the House by Mr. O'Connell, in a motion for a select committee to inquire into the conduct of Mr. Baron Smith, in respect of his neglect of duty as a judge, and the introduction of political topics in his charges to grand juries, which, after a long and interesting debate, was carried by a majority of 167 to 74. There was, however, among the supporters of the motion very great difference of opinion as to certain important points which the House would have been called upon to decide if it had proceeded further in the business. Mr. Littleton, after having made up his mind to oppose the inquiry, and having intimated to the friends of Baron Smith, and to that judge himself, that such was the determination of the government, gave his consent to the motion on finding that the words with which the original notice had concluded, "with a view to his removal from the Bench," had been omitted; yet the Chancellor of the Exchequer and the Solicitor-General both declared, that if Mr. O'Connell's charges should be proved, in their opinion removal ought to follow. Lord Althorp also intimated that he believed they would be proved, and that had he not thought so he would not have given his consent to the appointment of the committee. Mr. Stanley and Lord John Russell, again, argued that the charges, even if borne out, would not justify removal, although they nevertheless demanded inquiry. Sir James Graham dissented altogether from his colleagues and voted against the motion. For some days no further steps were taken by Mr. O'Connell; but at last, on being asked when he intended to name his committee, he appointed Monday, the 24th, for that purpose. In the mean time, however, the subject was again submitted to the House on the 21st by Sir Edward Knatchbull, who moved that the order for the committee should be discharged, and, after a long and warm debate, carried his motion by a majority of 161 to 155.

On the 14th, the House having resolved itself into a committee of ways and means, Lord Althorp delivered a general explanation of his financial plans for the year. We have given the particulars of this statement in another place. A short debate arose in reference to some of the points of the scheme; but as it was announced in the mean time merely for the consideration of the House, the objections to it did not assume the form of any distinct proposition.

The Navy Estimates were brought forward on the 17th by Sir James Graham. The entire number of hands proposed to be kept up is 18,500 seamen, 1000 boys, and 9000 marines, the boys being substituted for half their number of seamen reduced. The reduction of expenditure, as compared with the estimates of last year, is 181,000*l*. A reduction of the number of hands to 25,000 was proposed by Mr. Hume; but the amendment was negatived by 196 to 20. Another brought forward by Mr. Ruthven for abolishing two of the five Lords of the Admiralty, and reducing the salary of the first Lord, was also lost, there being only 29 votes in its favour, and 160 against it.

A very interesting discussion took place the following evening on a motion made by Mr. Harvey for "a select committee to inquire into the consideration of each grant in the pension list." This proposition was met by the Chancellor of the Exchequer with an amendment declaratory of the successive reductions that had been made in the amount of the charge for pensions, and referring to several recent acts of the legislature legalizing the existing provisions for that object. It was also declared to be "the bounden duty of the responsible advisers of the Crown to recommend to his Majesty for grants of pensions on the civil list, only such persons as have just claims on the royal beneficence, or who by their personal services to the Crown, by the performance of duties to the public, or by their useful discoveries in science, and attainments in literature and the arts, have merited the gracious consideration of their Sovereign, and the gratitude of their country." Mr. Harvey, however, very nearly carried his motion, the numbers on the division being 182 for, and 190 against it. The subject was one on which a strong popular feeling had been excited; and many of the names on the lately published list of pensions were well calculated to bring into general odium the corrupt, or at any rate the heedless, system which seems heretofore to have prevailed in the dispensation of the royal bounty. At the same time it does not clearly appear that any good would have been effected by such an inquiry as was proposed. Some of the supporters of the motion, indeed, talked of depriving of their pensions all such persons as should fail to establish any good claim to them on the score of public services or deserts; but it is not likely that for the sake of saving a few thousand pounds per annum the nation would, on reflection, have been brought to give its assent to a course of proceeding, running, to say the least of it, so very close upon an infringement of the great social principle which declares, that acts legally done by the recognised and competent authorities of the state must be held binding upon the community.

On Thursday, the 20th, Mr. Littleton brought forward the plan of the government for the extinction of the tithe system in Ireland. We shall take a future opportunity of detailing at length the particulars of this important measure. At present we shall only state that its object is to abolish tithe altogether as a permanent burden upon the land, by giving to the landlords the power of redeeming their properties from the impost by a single payment, the amount of which is to be regulated upon certain fixed principles of adjudication. The landlord, it is proposed, shall have the advantage of purchasing his exemption at somewhat less than its full value, the consequent diminution of returns being compensated to the clergy by the relief which they will have from the trouble and expense of collection, and from the other annoyances connected with the present system. The sums thus obtained are to be formed, in the first instance, into a common fund, from which stipends are to be paid to the clergy, corresponding to the amount of their present incomes; but eventually it is intended that the money shall be invested in land for each incumbent. The Irish clergy will, therefore, in future form a body of landlords, only having each a life-rent instead of a perpetual right of property in the soil. In the mean time it is proposed that composition for tithes in Ireland shall be abolished after the 1st day of November in the present year, in consideration of an annual land-tax to be granted to his Majesty, payable by the persons who would have been liable to such composition for tithes, and of equal amount. This was the motion with which Mr. Littleton concluded his speech. It was warmly opposed by Mr. O'Connell and other members; and after the debate had proceeded for some time, Mr. H. Grattan moved an amendment, the most material clause of which was, that the tax to be in future collected in lieu of tithes should be lighter in amount than that now raised. The motion, wrapping up in this delicate phraseology a proposition for permitting the Irish landlords to put a portion of the tithes into their own pockets, was not, however, much to the taste of the house. It was rejected on a division by a majority of 219 to 42. Another amendment, afterwards moved by Mr. O'Dwyer, was also lost, 66 voting for, and 190 against it.

The only other important discussion which we have to notice is that which took place on the 21st, when the Marquis of Chandos called the attention of the House to the distress of the agriculturists, and moved the following resolution;—"That in any reduction of the burdens of the country which it might be practicable to effect by the remission of taxes, a due regard be had to the distressed condition of the agricultural interest, as adverted to in his Majesty's speech." The debate which took place was rendered remarkable by a declaration from Mr. O'Connell, of his opinion that the interest of the national debt ought to be reduced one-sixth now, and if that should not be sufficient, as much more at the end of twelve months, and by the castigation which this frank avowal met with from Sir Robert Peel. "There would be a great cry," Mr. O'Connell had said, "among the fundholders, but the thing must be done, in spite of the cant of national faith." "The cant!" exclaimed Sir Robert Peel, turning round to the honourable and learned gentleman, "I thank thee, Jew, for teaching me that word." If Ireland, he continued, by the repeal of the Union, should obtain her own parliament, the House might now judge of the principles likely to prevail in an assembly where the influence of the honourable and learned gentleman would probably be predominant. The motion of Lord Chandos was only lost by a majority of 4, the numbers being 202 for, and 206 against it. Sir Edward Knatchbull's motion on the subject of the inquiry into the conduct of Baron Smith, which has been already noticed, occupied the House during the remainder of the evening.

In the House of Lords there has been no debate of any interest, since that on the first day of the session.

In the course of the month numerous meetings have taken place throughout the country, both among the dissenters

and among the adherents to the established church, with a view of eliciting expressions of public opinion on the matters likely to enter into the expected ministerial plan of ecclesiastical reform. Deputations have also been sent to the prime minister by both parties. The question of the repeal of the house and window taxes has been agitated at different meetings in the metropolis. In the beginning of the month a meeting was held at the Crown and Anchor, on the subject of the repeal of the corn-laws, when resolutions in favour of that object were carried unanimously. A few days ago an attempt was made to commence the agitation in this country of the Irish repeal question; but although some of the most notorious parliamentary and other advocates of the cause attended and spoke, the success they met with does not seem to have been very encouraging.

FRANCE.

Though there has been much violent discussion in the chambers, and some outrageous displays of party feeling in the courts of justice, few events of lasting importance have occurred in this country.

Judging from all recent occurrences, and the attitude of the government and people of France, we think it may be concluded that the system of moderation is triumphing alike over the ultra liberals and the ultra-royalists. The last, indeed, are now scarcely to be mentioned as a party. Much of this state of things, which in our opinion is the happiest state for France, has indisputably been brought about by the address, talents, and firmness of character of Louis Philippe. His government may be far short of perfection: but, without him, what would have been the condition of France and of all Europe? It is the very madness of party in those who deprecate the impracticable violence of the democratic spirit, to continue, as they do, in this country and elsewhere, to represent the King of the French as a caitiff that ought to be hurled from his throne. Can they not see that there is nothing between him and the horrors of a prolonged revolution?

At the opening of the chambers, Marshal Soult, as minister of war, proposed that the army should be raised to 370,000 men; but on the representations of a committee of the Chamber of Deputies, he deducted 60,000 from the number he before considered necessary. It appears that these 60,000 men would have burdened the budget with one million and a half sterling.

In the course of an altercation in the chambers, M. Dulong, an ultra liberal member, called General Bugeaud the *Duchess of Berry's gaoler*. A duel, in which M. Dulong fell, was the consequence. A public funeral and procession to the cemetery of *Père la Chaise* was attended by General Lafayette, and many other persons of strong political opinions. An insurrection, or, at least, an affray was expected; but the government took every necessary precaution to preserve order, which seems scarcely to have been interrupted.

No inconsiderable portion of the time of the chambers and of the government has been occupied by the subject of newspapers and the press. On the 1st of February, the "Tribune," the "Quotidienne," and the "Corsaire," were seized for their animadversions on an article in the "Journal des Débats," which designated Louis Philippe the most honest man in his dominions. The "National" was subjected to a ministerial prosecution; and it is complained, that by an infraction of an article regarding the liberty of the press, in the new charter of 1830, the proprietors of this paper were tried and condemned by the judges and not by a jury. The conductors of the "Quotidienne" were also brought to trial for having inserted in their paper a letter written by Count Kergorlay, refusing his (the Count's) allegiance to Louis Philippe, but enthusiastically professing it to the Duchess of Berry's son, as Henry V., and legitimate king of France. In this cause, M. Berryer, the partizan, counsellor, and somewhile companion of the Duchess of Berry in La Vendée, acted as counsel for the defendants, and displayed even more of the spirit of the Carlist party than was shown in the ridiculous article that led to the prosecution. Count Kergorlay was also tried; but, it is said, *because* both the Count and the paper were tried by jury, both were acquitted. But we have not yet done with newspaper warfare. A proposition was made in the Chamber of Deputies to prosecute M. Cabet, a member, for an article in the "Populaire," which journal is his own property, and chiefly written by himself. M. Cabet made a curious defence, and accused ministers of having taken into their pay another paper, of questionable morality, commonly styled "Figaro," but by M. C., in addition, "the infamous journal of an infamous government." A violent altercation, full of personalities, ensued. M. D'Argout, the minister of the interior, went so far in reply, that a duel was expected between him and the newspaper member, but very properly friends, and the house generally, interfered on this occasion. It was decided, however, by a considerable majority of votes, that M. Cabet should be prosecuted for his article.

The attention of the chambers was also called to the number of penny and halfpenny publications, many of which, exhibiting an infamous compound of obscenity and sedition, are constantly hawked about the streets of Paris, and exposed in every direction. Without much difficulty, ministers procured a law prohibiting the sale of papers or pamphlets in the streets by vendors not furnished with a government license. By withdrawing this license from such as shall sell any things offensive to morality, and contrary to public order, it is calculated that an end may be put to a dangerous and disgraceful practice which has too long obtained. The evil character of some of these low-priced sheets has not been, and, in fact, scarcely can be exaggerated; but we doubt whether it would be a measure of wisdom to impose a stamp-duty on *all* these cheap publications to check the sins of *part* of them. Would it not happen in France as it has happened in England? Would not the good destroy and outlive the bad? As it is, we believe the "Magasin Pittoresque," and other meritorious works of that nature, are widely circulated in the departments, whilst the seditious and immoral works are almost confined to Paris, Lyons, and one or two others of the great cities. Must, then, the great body of the people in the provinces, not procure innocent amusement and information for two *sous*, because a minority in the capital can purchase indecency, sedition, and blasphemy, for the same sum? We believe, however, that the clause relating to the general stamp duty here alluded to, has been struck out of the bill.

On the 13th of February, M. Thiers, the minister of commerce and public works, produced to the chambers his project of a law for the partial alteration of the French custom-house system. This was preceded by an exposition of the former systems, and of the one now proposed, after mature deliberation, as the best adapted to secure both the agricultural and manufacturing interests of the kingdom. But we have already treated this subject at length, at p. 25 of our present Number.

SPAIN.

We mentioned in our last monthly retrospect, that it was expected that one of the first acts of the new ministry would be the convocation of the Cortes. This important measure has not yet taken place, but it is generally asserted that the government of the Queen Regent has been diligently employed in preparing the way for it. Neither the Cortes of 1812, nor that of 1820, was called together or constituted according to the old laws of Spain, and it is now assumed, that, by referring to, and scrupulously observing, those old laws and constitutional forms, the two estates—the nobility and church—may be reconciled and identified with the liberal system.

Ministers have, therefore, been seeking for precedents in old times for the mode of convocation; and this circumstance, added to the fact that the measures proposed must be submitted to the council of Castille, to the council of state, and to that of regency, may account for a little delay. It is better that this great step be taken wisely than hastily. As we expect, however, very soon to receive the intelligence of the Cortes being called to Madrid, with all the important details of their formation, we need merely say, at present, that there are to be two chambers, or an upper and a lower house.

In the meanwhile, the public press of Spain is acting with quite as much freedom as any existing European constitution tolerates. At Madrid, newspapers, reviews, and other periodical works have sprung up, and continue to flourish. We are induced to believe, what we warmly hope, that these productions will show more moderation, practicability, and political wisdom, than generally characterized those which inundated the Spanish capital in 1821, 1822, and 1823.

The insurrection in the northern provinces still continues, and though the Carlists have not gained possession of any considerable town or fortress, they seem to have lost little or no ground during the last month. They are said to be in such strength on the coast between St. Sebastian and Tolosa as to have established a regular custom-house line, where they impose duties on all goods passing thence into the interior. Don Carlos, however, for whom they are in arms, still skulks in Portugal, and Count Torreno has been sent by the Queen Regent from Madrid to Santarem, to require from Dom Miguel the immediate expulsion of the pretender. The queen could scarcely have expected this demand to be complied with. Indeed, there has been a talk at Madrid of effecting the expulsion of Don Carlos by sending two Spanish columns, of 6000 men each, across the Portuguese frontier. But the queen's troops have still work to do within her own territories, and the lamentable state of her finances prevents, for the moment, any considerable augmentation of the army. A correspondent of the "Times" describes her forces now in the field as very badly dressed and equipped, but of late years every Spanish corps would have had this appearance in the eyes of one only accustomed to see the armies of the north of Europe.

The few battles which have taken place in the Biscayan provinces and in Navarre, as they have led to no great result, would scarcely merit notice, but for the ferocity with which they have been fought. It appears to be resolved on both sides to give no quarter. The successes of the queen's arms have thus all cost very dear, and have been sullied by cruelty. But she has not been uniformly successful. Valdez and El Pastor, two of the most devoted of her commanders, were severely checked on different points at the beginning of February. At Madrid, a commission has been appointed to examine the terms on which all Spanish loans since 1823 have been contracted, the expected result of which is to recommend to the present government an attempt to compound with some of them on the ground that they were, *ab principio*, unfair and usurious. We believe, indeed, that the terms of some of these loans raised at Paris were such as astonished financiers; but, in spite of this, we doubt whether the shareholders will readily submit to a reduction of their claims. Are the Cortes loans to be acknowledged by the Spanish court, and to be settled by composition in the same manner?

An extensive change is taking place among the diplomatic and consular agents; all the ambassadors and others who have identified themselves with the old absolute system being recalled, and their places filled by men of more liberal notions. It is said that Labrador, while representing the Spanish court at Rome, has been intriguing in favour of Don Carlos, and this, from our previous knowledge of that diplomatist's character and tastes, we can easily credit.

It appears the government of the Queen Regent has granted a complete amnesty, with immediate permission to return to their homes, to all the ex-deputies of the Cortes, assembled by the revolution of 1820, who may now be in exile in consequence of opinions expressed by them in their capacity of deputies.

Among the new ambassadors appointed by the court of Madrid are Count Florida Blanca to England, and the Duke de Frias to France.

PORTUGAL.

IN Lisbon the preparations for the assembling of the national Cortes are in rapid progress. A convent has been fitted up for the peers, and a new wing is adding for the chamber of deputies.

The military operations, though still indecisive, appear to have been, on the whole, favourable to the Pedroites. Marshal Saldanha, who was detached from the main body of Donna Maria's army before Santarem with a corps of considerable force, has taken the town of Leiria from the Miguelites. Here, again, success has been accompanied by horrible cruelty. The garrison, consisting of about 1500 men, made so little resistance, that on the Pedroite side there was only one man wounded, and yet the greater part of the Miguelites were put to the sword.

After some skirmishing between detachments of the two armies, Saldanha entered Torres Novas in force, and here also, according to the general's own despatches, his troops slaughtered the fugitive Miguelites with savage fury. All chivalrous feeling, all magnanimity and mercy towards a fallen foe, are banished from this unnatural warfare. The taking of Leiria by Saldanha was expected to lead to the immediate fall of Coimbra, where the Miguelites are said to possess no good means of defence. Saldanha, indeed, calculated not only on this event, but on being soon able to drive Dom Miguel and his main army back upon Elvas, where they would be obliged to consume their resources, and would also be hard pressed by the Spaniards. As yet, however, Coimbra has not fallen, and Dom Miguel remains at his old position, Santarem, which is at the distance of only two days' march from Lisbon. Indeed, his partizans have since had the spirit to make two attacks on the Pedroites in one day. One of these was on Saldanha's forces, the other on the troops commanded by the Duke of Terceira. Meanwhile, it is said the Miguelites have suffered great privations, and that now they are almost reduced to despair *by the want of tobacco*. This last will not appear a trivial circumstance to those who are acquainted with the habits of the Portuguese or Spanish soldier. An epidemic disease and sickness have also prevailed at Santarem. The Infanta Donna Maria, the sister alike of Dom Pedro and Dom Miguel, has been among the victims. It is supposed by some that a letter sent from Santarem to the court at Lisbon, and which was returned by Dom Pedro unopened, merely contained an announcement of this death. On learning the melancholy event, the court put on mourning, and Dom Pedro appeared to be deeply affected; but Dom Miguel is said to have been seen a few days after the decease of his sister galloping on a white charger along the lines at Santarem in apparent unconcern.

Fresh protests have appeared against the government of Dom Pedro at Lisbon, and elsewhere. A certain Da Cunha declares, that during the ex emperor's stay at Oporto and at Lisbon, he has sacrificed more victims to arbitrary power than Dom Miguel has done during his whole reign. Much of this is, no doubt, the exaggeration of an enemy; but, from facts and the state of public feeling at Lisbon, we are inclined to believe that Dom Pedro has much to learn before he can obtain the character of a constitutional sovereign.

It is stated in recent letters from Lisbon, that the command of the Pedroite army before Santarem has been taken from the Duke of Terceira and given to Sir Thomas Stubbs.

GERMANY.

THE Congress assembled at Vienna proceeds in jealous mystery. We have scarcely heard even a conjecture as to the measures contemplated or the matters discussed, except that Prince Metternich's opening speech alluded entirely to the internal affairs of Germany.

A treaty has, however, appeared in the Vienna papers, signed by the Emperor of Austria, the Emperor of Russia, and the King of Prussia, the three co-partitioners of Poland, by which these sovereigns engage that persons who commit *high treason* and crimes of the like nature in the Polish dominions appertaining to either of the three powers, shall be refused asylum or protection in the dominions belonging to the other two.

The Baron de Wessenburg, the Austrian minister to the conference for the settlement of the Dutch and Belgian question, has been recalled by his court, in consequence, it is said, of Lord Palmerston's having refused to reopen the discussion, or rather to go back and discuss over again matters already settled as the basis of the arrangement of those difficult affairs.

The Duchy of Baden has refused to join the German commercial league headed by Prussia, and the government of Nassau, by concluding a commercial treaty with France, has raised another impediment to the new continental system.

At Nuremberg in Bavaria, 2800 men have been raised for the service of King Otho, and of these 1700 have safely arrived in Greece.

SWITZERLAND.

WE regret to state that the tranquillity of a very interesting part of this country has been disturbed by turbulent men who had enjoyed its hospitality. A number of political

refugees, chiefly Poles and Italians, who were for some short time settled at Carouge, a village belonging to the very small canton of Geneva, and not a mile from the gates of that city, gave some uneasiness to the government, by allying themselves with a body of disaffected persons who wanted to imitate the example set them at Basle and other parts of Switzerland, and split the miniature state, which is not so large as an English parish, into two, Geneva Town and Geneva Country. This uneasiness on the part of the Genevese government was increased by intelligence received, that foreign refugees from other parts were arriving on the shores of the lake in great numbers, and with the intention of striking a blow. This blow, however, was not directed against Geneva, but to the opposite coasts of Savoy, and was intended to revolutionize the country on both sides the Alps, and hurl the present King of Sardinia from his throne. The numbers are differently stated, but it appears that about 400 men, Poles, Piedmontese, other Italians, and a few of them German and French, crossed the lake at different points and concentrated near Villegrande in Savoy. They were commanded by the Polish General Romarino, who expected two other generals of his own country to join him. The Savoyards, who are a poor, in some instances an oppressed, but a contented people, remarkably averse to revolution, instead of joining their standard, looked on in passive astonishment or fled. Romarino then recommended a retreat: some rushed back to their boats in the greatest confusion, and made their way across the lake; the rest were set upon by some of the King of Sardinia's dragoons and carbiniers, and with their General Romarino retreated with loss and difficulty to the Genevese territory, across the frontier of which the royalist troops, of course, did not follow them. Here, however, it became the imperative duty of the Genevese government to disarm them. To this end the *contingents* or militia of the little canton were drawn out. On the arrival of their partizans from Carouge, and some disaffected mechanics from Geneva, the refugees refused to lay down their arms, and breaking through the militia, marched on to Geneva, with the hope of an insurrection in that city. But Geneva remained perfectly quiet, and another portion of the militia under arms within the town, assumed an attitude that was not to be trifled with. With the assistance of some militia from the contiguous canton of Vaud, the Genevese have been enabled to dispose of these troublesome strangers for the present; but if these madmen persist in such conduct, where are they to expect a place of refuge? Now that their wild plan has failed, they talk of treachery, and, with their apologists, assume that they were blinded and led into it by the emissaries of the Holy Alliance, which wishes to establish a pretext by which the Polish, Italian, and other refugees may be expelled from *most* of the countries of Europe, and rendered objects of dislike and suspicion in *all!*

RUSSIA.

The emperor has been legislating for school masters: in this as in many other respects, he is a much less liberal sovereign than his friend Sultan Mahmoud. A law has been published which must inevitably have the effect of checking the progress of education in the country of Europe, which, next to Turkey, most requires education. No school is permitted to be opened, and no individual, under severe penalties, is to give private instruction without a formal license from government. All schools and places of education whatsoever are to be placed under the surveillance of what will, in fact, form a part of the Russian police.

We may expect that Nicholas, in another ukase, will prescribe the books that are to be read by the Muscovites of the rising generation, from the primer to the political catechism of passive obedience,—at which last point, we suppose, education is to stop.

Reports, which seem worthy of credit, state that a new treaty, between the Emperor and the Sultan, more favourable to Turkey than that of Adrianople, was signed at St. Petersburg on the 27th of January. By this new arrangement Russia is to lessen the debt already due by the Porte, to relinquish a portion of Moldavia and Wallachia immediately, and ultimately to restore the whole of those principalities.

TURKEY.

As far as his internal government is concerned, the Sultan seems just now to be acting wisely. He is freeing commerce from the nightmares that oppressed it in the shape of monopolies; that upon olive oil has been removed, and several others have been almost entirely abolished. He is founding some schools at Constantinople on the Lancasterian system, where instruction will be placed within the reach of the poorer orders. He has permitted his Christian subjects to build new churches.

On the other hand, the Pasha of Egypt is said to be oppressing his new subjects in Syria with excessive taxation, and he is carrying on a desolating war for the subjugation of the island of Candia, where the Turkish and the Greek population seem equally opposed to him. His admiral, Osman Noureddin Pasha, has fled from his service and arrived at Constantinople, where he has been received with distinction. Osman, who has had the advantage of a European education, enjoys the reputation of being a well-informed, clever man, of very polished manners.

SOUTH AMERICA.

At the moment when, from the changes in the politics of Spain, there is a prospect that that country will soon grant the long and most uselessly withheld recognition of the independence of the South American States, we doubly regret to see that part of the world again overclouded with discord and anarchy: but so it is. Since we last wrote, intelligence has been received that insurrection or civil war was again raging in Mexico, Chili, and Brazil. In the first of these states, the president Santa Anna has been recalled from the country, whither he had retired to recruit his health, which had been impaired in previous campaigns, to take the field again and command another army, with which his success seemed rather doubtful. We have no certain details in relation to the present parties or factions in either of these three restless states, but in Brazil it appears that the throne of Dom Pedro's infant son is in jeopardy.

CHRONICLE OF EVENTS.

December 19.—The accounts from Persia, which announce the death of Abbas Meerza, the eldest son of the Shah, add, that the Shah himself was dangerously ill, and the news of his death daily looked for. But should that event happen no disturbance was anticipated, as every thing authorized the hope that the son of Abbas Meerza would succeed his grandfather without opposition.

January 12. The Captains-General of Catalonia and Castile, Llauder and Quesada have expressed their satisfaction with the change in the Spanish ministry, and have sent in their adhesion to the new order of things. In Navarre, General Valdez is said to have routed a considerable body of Carlist insurgents.

14. At this date the differences between Don Pedro and his peers had been made up. The Duke of Terceira had been despatched to take the command of the army before Santarem, while Saldanha had orders to clear the country of the Miguelites at the head of 5000 men.

15. Saldanha at the head of a strong detachment entered Leira.

20. At an interview between the deputation of the Nottingham meeting of Dissenters and Earl Grey, his lordship is stated to have declared the disposition of himself and colleagues to relieve the Dissenters from the disabilities connected with marriage, burial, registration, and such matters; but said that he would give his strenuous opposition to every attempt to remove the establishment; considering it the sacred duty of every government to maintain an establishment of religion.

21. A controversial meeting was held at the Burton Rooms, when the doctrines of St. Simonianism were advocated by Dr. Prati, and those of Mr. Robert Owen by himself. The latter, in his speech, took occasion to announce, that, although there was not yet one rational man on earth, the time of human regeneration would very speedily commence.

25. Lord Althorp declined to receive a deputation of the Westminster Central Committee for the repeal of the assessed taxes, stating that he had already received deputations on the subject from almost every quarter of the metropolis, and that ministers had already determined on the course to be pursued with regard to the taxes question.

25. About twenty minutes before 3 o'clock this morning, a slight and rather violent trembling of the earth was felt at Portsmouth.

effects were more apparent at Chichester, Emsworth, Havant, and Purbrook, where in many of the houses the convulsive motion shook the furniture, and appeared to threaten destruction to the premises. A shock of similar violence and duration was felt at Portsmouth about twenty years since.

26. "The Allgemeine Zeitung" states, that on account of the recent law upon the press in Greece, exacting heavy pecuniary security from the editors of journals, none have appeared in that country, information concerning which is therefore only obtainable from private sources.

27. The Chamber of Deputies awarded pensions to the widows of Generals Jourdan and Decaen, but refused them to those of Daumesnil and Gerard, alleging, that the latter officers had not rendered distinguished military services to their country.

29. The lower parts of Wapping, Shadwell, Limehouse, Lambeth, and the Strand, were flooded, about 4 o'clock this morning, by an overflow of the Thames. Much corn in the warehouses was damaged and carried away. Many poor families, whose dwellings were inundated, suffered severely. In some houses the inmates were awakened by the water coming into their beds. Watermen were employed to take the people from one street to another in Shadwell and Wapping. On Tower Wharf the water rose so high as to reach the cellars in the interior of the Tower where some Government stores were deposited. Many of the decayed stones of the piers of Blackfriars Bridge were carried away. This overflow seems to have been owing to the sudden change of the wind from the south-west to the north-east, and the addition of the land-waters occasioned by the late heavy and long continued rains.

— The Duke of Wellington was unanimously elected Chancellor of the University of Oxford, in the room of the late Lord Grenville. Sir Robert Peel had previously declined to be nominated. The ceremony of the installation took place at Apsley House on the 7th of February.

— The court of King's Bench sentenced a fishmonger to pay a fine of 50*l.* for selling unsound fish in July last. He had been twice let off for similar offences on the payment of costs. It was the first prosecution of the kind on record.

30. Information from Calcutta states, that a most destructive earthquake had occurred at Katmendoo and its vicinity, by which 10,000 houses and from 600 to 800 persons were destroyed in the several towns of the valley, and it was feared that the mischief would be extended far beyond its limits. The drought in various parts of India continued. In the Alwas country the heat was excessive; the cattle had died in great numbers, and the whole country was covered with decaying bones and carcases.

31. This day a meeting was held at the Crown and Anchor tavern, "for the purpose of deciding on the most efficient means of obtaining a removal of the bread tax grievance;" when it was resolved to petition Parliament for "the removal of the existing duties on foreign corn, by such assigned gradations as to the wisdom of the legislature shall seem meet."

— A convention has been made between France and Belgium, whereby it is agreed that all fugitives, for crimes and offences not political, are to be reciprocally delivered up by each country.

Feb. 1. Captain Augustus Wathen, of the 15th or King's Hussars, having been charged with insubordinate and unofficer-like conduct, tending to the injury of military discipline, by his commanding officer, Lieut.-Col. Lord Brudenell, was brought to trial before a Court Martial, held at Cork. The Court, in declaring Capt. Wathen honourably acquitted of each and of all the charges, strongly animadverted on the system of espionage which the accuser had established in his regiment; in consequence of which, his Majesty, in approving and confirming the finding of the court, directed the removal of Lord Brudenell from his command.

— The wind having at last shifted to the northward, it is calculated that at least 900 vessels will have simultaneously set sail from the various ports in the Channel, and from Bristol, the Welch ports, Liverpool, and Ireland. Many of these outward-bound vessels have been detained since the middle of November; and the loss by the detention will be very great to the merchants and shipowners.

— The Frankfort Gazette states, after accounts from St. Petersburg of this date, that a caravan of 328 camels had set out from Orenburgh, and another of 1212 camels from Troitzt, with goods to the amount of 746,423 rubles, both destined for Bucharia.

3. Messrs. Telford and Palmer, the engineers, have arrived at Dover, for the purpose of surveying the harbour, and reporting their opinion on its present state, which is so bad that for the last three months it has frequently been impracticable, for a week together, for vessels to enter. This has arisen, it appears, chiefly from the effect produced by the tides and heavy seas on the shingle of which the beach is for the most part composed.

4. Four convicts belonging to the hulks at Woolwich, died after a few hours' illness, in consequence of having eaten a considerable quantity of hemlock, which they mistook for wild celery.

— 6. In an action near Vittoria, between El Pastor and the Carlist in-[illegible] the former suffered a defeat, and sustained much loss in some [illegible] subsequent actions of doubtful result. No quarter was given on either [illegible] armies.

— On digging for the purpose of draining a pasture belonging to [illegible] also, a slaughthateau de la Millière, canton of Cauhé, in the Vienne, a subterranean vault, filled with gunpowder, was discovered, sufficient in quantity to load ten carts. This deposit must have been made at a very distant period, as the surface is covered with trees, some of which are apparently upwards of one hundred years old.

14. Lord Teignmouth died at the advanced age of 83. His Lordship was formerly Governor-General of India, and President of the British and Foreign Bible Society, from the period of its institution. As an author, his principal work is a "Life of Sir William Jones," with whom he was intimately acquainted.

15. All business suspended at Lyons, in consequence of a general strike of the workmen for higher wages. The original strike was begun among the working weavers of a certain description of shawls and shagged articles; but in consequence of the combination among the different classes of workmen, the stoppage of one led to the suspension of all.

19. Mr. Baron Bayley retired from the Exchequer bench, and has been created a baronet.

— Mr. Wombwell's celebrated lion, Wallace, and a tigress, escaped from the caravan at Worksworth, on the way to Newhaven fair. The lion, after having destroyed several cattle and sheep, and killed one man, was secured by the able management of the keepers, but not until it had received some severe wounds. Every exertion was made to secure the tigress; but this object could not be effected until she had killed a woman with a child in her arms, and a boy about eleven years of age; and had herself been so severely wounded as not to be expected to recover.

The Postmaster-General has determined on abolishing the whole of the privileges enjoyed by the clerks of the post-office, as regards the transmission of a dealing in newspapers, whether English or foreign. The privileges will cease, so far as English newspapers, and the circulation of them in the United Kingdom, are concerned, on the 5th of April next. A compensation is proposed to be made to the clerks of the post-office only in those cases where their privileges, as in the instance of foreign newspapers, are sanctioned by an Act of Parliament.

The Home-Office lately issued a paper, directing one of the magistrates at each of the metropolitan police-offices, to examine personally the public-houses and gin-shops in their respective districts, in order to ascertain whether they have all the necessary convenience for a working man to cook his dinner.

Lay meetings have been extensively held throughout the country this month, for the purpose of resolving on declarations of attachment to the established church.

The sum of 1300*l.* has been raised by subscription for the erection of a suitable monument in St. Paul's Cathedral, to the memory of the late Dr. Babington.

Letters from Sydney New South Wales, of the 17th of August, state the arrival there of the first vessel with free female settlers, 215 in number; and the result of the experiment is highly satisfactory In three days, no less than 180 of them were engaged; and there was no doubt that the whole of them would in a few days be provided for.

Papers from Freemantle, Western Australia, have been received to the 21st of August. They exhibit astonishingly high prices in articles of ordinary consumption: mutton being 1*s.* 6*d.* per lb.; fowls, 5*s* each; fresh butter, 3*s* per lb.; potatoes, 4*d.* per lb.; pork, 1*s*, 6*d.* per lb.; eggs, 4*s.* per dozen; hay, 10*l.* per ton; and vegetables 3*d.* per dish. There was no fresh beef.

At Martinique it appears that an attempt has been made by a party of free mulattoes, to excite the slaves of that island to rebellion; they had even proceeded so far as to set fire to estates, several of which were destroyed. The event was accompanied by a serious loss of life, 50 or 60 having been killed, and 180 taken prisoners with arms in their hands.

The details of the Slavery Emancipation Bill have been promulgated throughout the Island of Mauritius, and appear to have given general satisfaction.

Some disturbance took place at Trinidad during the Christmas holidays, in consequence of the Negroes refusing to work, without alleging any reason for the refusal. The military were called out, and the ringleaders, who were taken at Bon Accord, were punished; but at Cedar Hill a violent struggle ensued in consequence of the Negroes endeavouring to prevent any of their party from being taken; eight, however, were secured. A cane plantation on the last mentioned estate was set fire to, and five acres destroyed before it could be got under. Order was ultimately restored.

M. Bourrienne, the author of the well-known "Memoirs," which give by far the clearest insight into the true character of Napoleon Bonaparte, died lately at Caen in a mad-house.

On Sunday the 16th February, the well-known Mr. John Thelwall died at Bath. He had commenced a series of lectures on elocution, when he was interrupted by the disorder which proved fatal to him.

REPORT OF THE POOR LAW COMMISSIONERS.

THE subject of the English poor laws, including their history as well as their present state, was treated at considerable length in the 'Supplement to the Companion to the Newspaper for July, 1833. The present paper, therefore, will be mainly devoted to an exposition of the measures proposed to his Majesty by the Poor Law Commissioners, with a view to remedy the principal evils of the existing system.

Before entering upon the subject, we wish to say a few words respecting that feature in its character to which the present report mainly owes its superiority over all preceding reports—the evidence upon which it is based. Under former inquiries the witnesses were few, and chiefly drawn from particular classes. For example,— of the thirty-three witnesses (a number considerably above the average) examined before the Lords Committee of 1830-1, about two thirds are composed of magistrates and farmers, the classes who to many appear interested in a mal administration of the poor-laws. As compared with the above, the character of the evidence collected under the present commission may be best gathered from the words of the report itself.

"All evidence is necessarily subject to error, from the ignorance, forgetfulness, or misrepresentation of the witnesses, and necessarily tinged by their opinions and prejudices. But in proportion as the number of witnesses is increased, those sources of error have a tendency to compensate one another, and general results are afforded more to be depended upon than the testimony of a few witnesses, however unexceptionable. The evidence contained in our Appendix comes from every county and every town, and from a very large proportion of even the villages in England. It is derived from many thousand witnesses, of every rank and of every profession and employment, members of the two Houses of Parliament, clergymen, country gentlemen, magistrates, farmers, manufacturers, shopkeepers, artisans, and peasants, differing in every conceivable degree in education, habits, and interests, and agreeing only in their practical experience as to the matters in question, in their general description both of the mode in which the laws for the relief of the poor are administered, and of the consequences which have already resulted from that administration, and in their anticipation of certain further consequences from its continuance." *

It may be proper here to add, that of the Appendix above alluded to, one part alone, Appendix (B), extends to nearly 6000 folio pages. It consists of a Digest of the answers to the queries circulated over the country by the Commissioners, arranged in such a manner that the answer to any one of the fifty-three questions may be read as a separate subject, without the attention being distracted by the intervention of other matter, the answers from each parish recurring in the same portion of each page; and it contains, perhaps, the most extensive, authentic, and valuable body of statistical information ever collected in this country, not even excepting Doomsday book, upon which the Commissioners appointed by William I were employed six years, while the Commissioners of William IV. have scarcely consumed a fourth of that time upon their more arduous and, in a moral point of view, far more important undertaking.

Allusion has been made above to the magistrates and farmers in the capacity of witnesses. It is shown in the evidence collected under the commission to be a not uncommon impression among the farmers that they profit by the allowance system in getting their labour partly paid for by others. This is certainly one of the primary and transient effects of the system. But the farmer's advantage is but temporary, for the ultimate and permanent effects are the destruction of the labourer's skill and industry, and the insecurity and diminished return of his employer's capital; in a word, the demoralization of the labourer and the ruin of the farmer.

The case of the magistrates is ably and impartially stated in the following passages of the report:—

"Our Appendix contains many complaints of the conduct of magistrates. It is to be observed that much of this is *ex-parte* evidence, which the persons complained of had no opportunity of contradicting or explaining, and that the overseers, from whom it was principally derived, may be supposed to have been anxious that the blame of mal-administration should rest on any persons but themselves. It must be acknowledged, however, that in so large a body as the magistracy of England and Wales, invested with powers so extensive and so uncontrolled, cases of misconduct must from time to time arise. Admitting, as we are anxious to admit, the general integrity and intelligence of the magistracy, and the importance of their services in the administration of justice, we yet cannot doubt that there are to be found among more than two thousand persons some exceptions to the general character. But we believe these exceptions to be rare, and that in a great majority of instances, so great as to form the general rule, the magistrates have exercised the powers delegated to them by the poor-laws, not wisely indeed, or beneficially, but still with benevolent and honest intentions, and that the mischief which they have done was not the result of self-interest or partiality, or timidity or negligence, but was in part the necessary consequence of their social position, and of the jurisdiction which was confided to them, and in part arose from the errors respecting the nature of pauperism and relief which prevailed among all classes at the time when the allowance system and the scale were first introduced, and still appear to prevail among the majority. Under the influence of such opinions even good intentions may become mischievous. A more dangerous instrument cannot be conceived, than a public officer, supported and impelled by benevolent sympathies, armed with power from which there is no appeal, and misapprehending the consequences of its exercise."*

The principle which the Commissioners adopt as the basis of their proposed remedial measures, and it is one that will be admitted by all except those who desire to live on the labour of others, is that the condition of the person receiving relief shall not be made so eligible as that of the independent labourer of the lowest class. The report states, as the result of the extensive inquiries made under this commission into the circumstances of the labouring classes, that the agricultural labourers, when in employment, in common with the other classes of labourers throughout the country, have greatly advanced in condition—consequently, a condition worse than that of the independent agricultural labourer, may nevertheless be a condition above that in which the great body of English labourers have lived in times that have always been considered prosperous.

* Report, p. 3. The octavo edition will also be quoted throughout this article, as being more easy of access. Octavo edit. p. 5.

* Report, p. 83; octavo edit. p. 150.

[WILLIAM CLOWES, Printer, Duke Street, Lambeth.]

The evidence quoted in the report shows that the specific effects of the application of this principle have been, 1. The conversion of paupers into independent labourers, and the reduction of rates; 2. The rise of wages; 3. The diminution of improvident marriages; 4. The increased content of the labourers, and the diminution of crime.

This principle then being admitted, it was next to be considered what should be the general mode of legislation founded upon it. Here the Commissioners have taken their stand upon the ground of experience, and submit—

"That those modes of administering relief which have been tried wholly or partially, and have produced beneficial effects in some districts, be introduced, with modifications according to local circumstances, and carried into complete execution in all."*

The following are the chief specific measures which they recommend for effecting these purposes. We shall devote as large a space as our limits permit to the exposition of those that, from their importance, may most appear to demand it.

"I. That except as to medical attendance, and subject to the exception respecting apprenticeship hereinafter stated, all relief whatever to the able-bodied persons or to their families, otherwise than in well-regulated workhouses (*i.e.*, places where they may be set to work according to the spirit and intention of the 43d of Elizabeth), shall be declared unlawful, and shall cease, in manner and at periods hereafter specified; and that all relief afforded in respect of children under the age of 16, shall be considered as afforded to their parents."

The Select Committee of the Commons, for 1828, went far in the suggestion of remedies for the existing evils. They recommend the refusal of allowance to labourers in aid of wages—one fruitful source of mischief. They also state that the success of their proposed amendments would depend, *in many cases*, on the adoption of a well-regulated system of workhouse industry. But the exceptions made to the application of their rule (of refusing allowance) are sufficient to neutralize, in a great degree, the benefits likely to arise from their otherwise excellent recommendations. One of the exceptions is temporary illness. Now, though a man cannot counterfeit old age, he can counterfeit sickness or infirmity, as is repeatedly shown in the evidence of the present Commission.† And it is the peculiar characteristic of this Commission, that its inquiries have ascertained and made manifest to all who are capable of being convinced by evidence, that the system of well-regulated workhouses is the only plan by which their principle of granting relief to the indigent can be carried into full effect.

It is here proper to notice the distinction made by the Commissioners between *poverty* and *indigence*. By indigence is meant the state of a person unable to labour, or unable to obtain, in return for his labour, the means of subsistence. By poverty, the state of one who, in order to obtain a mere subsistence, is forced to have recourse to labour. It is for the relief of the former alone that a compulsory provision can be contemplated by any rational legislator. To attempt an eleemosynary provision for the latter, would be to attempt to reverse the laws of nature—to go against that decree of Providence which says that man shall live by the sweat of his brow. A cry has been got up, by those demagogues who subsist on the confusion of ideas which they produce in the minds of their dupes, with the purpose of working one of the fallacies of confusion, by confounding the words poor and indigent. They represent the recommendation of the Commissioners as an attempt to make poverty penal,—to deprive the poor of their rights, and to treat them with cruelty. The poor are greatly obliged to them, however the indigent may feel on the occasion. Now, be it understood, that within the term poor are comprehended all those who have no accumulated labour or capital to live on; who live, in short, on the labour, whether daily, weekly, quarterly, or yearly, of their hands or their heads. Would it not be doing the poor, as thus defined, a very important service to draw a broad line of distinction between them and those improvident, dissolute, and idle persons who desire to live on the labour of others? Under the present system all are alike degraded. No prudence, no diligence avails. No love of independence is sufficient to secure independence, as the following cases fully show. They also most forcibly show with how much indulgence the vices of the present race of labourers ought to be received, since they must be considered as the victims of a system almost unparalleled in the annals of mankind for its demoralizing power. They make us wonder rather that, in defiance of that system, such instances should still be to be found, than that the labourer abandons virtues of which this is the reward, and would lead us to infer, with Turgot, that man must have about him a natural goodness that is above the influence of all that bad institutions can do.

"The case of a man who has worked for me, will show the effect of the parish system in preventing frugal habits. This is a hard-working, industrious man, named William Williams. He is married, and had saved some money, to the amount of about 70*l.*, and had two cows; he had also a sow and ten pigs. He had got a cottage well furnished: he was a member of a benefit club at Meopham, from which he received 8*s.* a-week when he was ill. He was beginning to learn to read and write, and sent his children to the Sunday school. He had a legacy of about 46*l.*, but he got his other money together by saving from his fair wages as a waggoner. Some circumstances occurred, which obliged me to part with him. The consequence of this labouring man having been frugal and saved money, and got the cows, was, that no one would employ him, although his superior character as a workman was well known in the parish. He told me at the time I was obliged to part with him, 'Whilst I have these things, I shall get no work; I must part with them all: I must be reduced to a state of beggary before any one will employ me.' I was compelled to part with him at Michaelmas: he has not yet got work, and he has no chance of getting any until he has become a pauper; for until then, the paupers will be preferred to him. He cannot get work in his own parish, and he will not be allowed to get any in other parishes. Another instance of the same kind occurred amongst my workmen. Thomas Hardy, the brother-in-law of the same man, was an excellent workman, discharged under similar circumstances; he has a very industrious wife. They have got two cows, a well-furnished cottage, and a pig and fowls. Now he cannot get work, because he has property. The pauper will be preferred to him, and he can qualify himself for it only by becoming a pauper. If he attempts to get work elsewhere, he is told that they do not want to fix him on the parish. Both these are fine young men, and as excellent labourers as I could wish to have. The latter labouring man mentioned another instance, of a labouring man in another parish (Henstead), who had once had more property than he, but was obliged to consume it all, and is now working on the roads."*

The following case is of the same nature:—"An industrious young man, who had been a soldier, and married a wife abroad, was discharged: he returned to his parish (Westbury), but did not apply for relief. His wife, who is a respectable woman, with himself, slept on straw; they endured the greatest privation rather than go to the parish. At length he got regular employ, at 9*s.* per week. He now became comfortable: he furnished his house, and everything was going on well, till the stem commenced, when he was informed he could not be employed any longer: and he could not get labour till he consented to be stemmed at 3*s.* per week, for which he labours about three days. He is now off the parish again by his industry, but he told me the stem was 4*l.* out of his pocket last year, only for labour."†

Under the system of poor-law administration proposed by the Commissioners, there is no danger of men like these having to enter a workhouse. The proper resources of such men against sickness and other casualties are savings' banks and friendly societies; and the cases which those cannot provide against are the fitting occasions for the exercise of charity.

The view of the subject given above is fully borne out by the following evidence which expresses the sentiments of a large proportion of the most respectable mechanics:

Launcelot Snowdon examined,—

"Are you acquainted with the operative classes?—Yes, having been a journeyman printer twenty years, and one half of the time foreman, and having been in different situations in our own societies, as well as connected with various other societies of operatives, I believe I am well acquainted with them.

* Report, p. 146; octavo edit. p 261.

† See particularly p. 153 of the Report—evidence of Mr. Tidd Pratt.

* Report, p. 45, evidence of Mr. Hickson; octavo edit. p. 78.

† Report, p. 124; octavo edit. p. 221.

"In what way do they regard the fact of any one of their body receiving parochial relief?—I know that none but the worst characters would ever think of applying for parish relief; and that the respectable workmen consider it disgraceful. The other day, a list of those who received out-door parish relief was brought to a printing-office to be printed. One of the men saw on the list the name and address of one of the journeymen in the same office. This man was challenged with the fact, which he did not attempt to deny. He had been receiving as much as 6*s.* or 8*s.* a week out-door relief, during two years, for four children, although he had been in receipt of 36*s.* a week steady wages during the same time. The men stated the circumstance to the employer, and he was discharged.

"Did they request that he might be discharged?—The proceeding was tantamount to that, and of course the master acceded.

"Suppose the whole of the relief were regulated by an independent, or, say a Government authority, on a fixed rule, that of not rendering the condition of the pauper within the workhouse so good as that of the lowest class of workmen living by his labour out of the house?—That of course. No reasonable man would, I should conceive, expect to have his condition in the workhouse bettered. I think a Government authority would be much the best, as the parish officers are now, in ninety-nine cases out of a hundred, interested parties." *

Again:—"Do you find any effect produced by men obtaining parochial relief readily, when they are out of work, or have anything the matter with them?—I have always seen that men who have had parish relief have been very careless of work and of their money ever afterwards. It has also acted very mischievously on benefit societies, as these men would never contribute to them. We had a large and very good society of our own, which failed some time ago, and I have known the societies of other trades fail, and it has been a common complaint amongst us, that but for the parish, they would have stood firm. I am myself confident, that but for the parish, they would have stood firm.

"Do you think that rendering a workman's wages attachable, when in work, as repayment for any relief which he may have had from the parish, would be serviceable as a remedy for the evil you have mentioned?—Yes, I think it would be highly useful in every point of view. I have no great hopes of the old ones who have had parish relief, but I have no doubt that it would make many of the young ones subscribe, and keep themselves from the parish.

"Do you think the body of operatives with whom you are acquainted would agree with you in this view?—Of course, those who have been paupers would not agree, but all the respectable workmen would decidedly agree. I think that in instances of real misfortune, which I have known occur, it would be thought better of, if the relief was given as a loan, and not as a charity. But the workmen would generally object to any compulsory payment to guard against future liabilities.

"Do you think the process of collecting this sort of repayment would be difficult?—I think not." †

One eminent recommendation of the workhouse principle is, that it would be a self-acting test of the claim of the applicant. It is shown throughout the evidence, that on the application of this principle, the number of the claimants of relief diminishes in an almost incredible degree. The usual statements, says the report, (p. 118, folio) of the permanent overseers in towns are, that more than one-half, or two-thirds of the cases of able-bodied paupers, are cases of indolence or imposture: but it rarely appears that more than five or six in a hundred claimants sustain the test of relief given upon a correct principle. The following instance is one of a numerous class, and is selected as an apt illustration from the examination of Mr. John Coate, relieving officer of St. Leonard, Shoreditch.

"All this troop, about fifty persons, came to my door, with an officer at the head of them, demanding immediate relief on the magistrate's order. I said, 'No, I cannot think of letting the parish be robbed in this way; I shall attend the summons this night at the office.' I did attend, and stated to Mr. Benett that I should insist on the whole of those fifty cases being gone into separately before I gave any money.

"He was very warm, and said he was not going to have a vestry-room made of his office. I then handed him up the summons, and said, 'That is your signature, and I am come to answer it.' He then went into two or three of the cases. I think the first or second of these cases was that of a lad named Perkins. One of the officers told me that he knew that this Perkins had been at work that week, and had earned 8*s.* or 10*s.* This was proved. I then asked Mr. Benett whether such a lad as this ought to have had a summons, and an order for immediate relief.

"Mr. Benett said, no; but that he had no means of inquiring into the cases. The lad was certainly discharged without relief. This lad has since been transported. I had no specific information, and had no means then of obtaining any with respect to the rest: and Mr. Benett having gone through about half a dozen of these cases, I then said to him, seeing him getting very angry at the prospect of a long detention, 'I will take the rest of them into the house.'

"Myself and the beadle then went away, followed by the train of paupers, for on Saturday nights I find it necessary to take one or two beadles with me for personal security. The paupers used excessively bad language to us, and as they passed by-streets on the road to the workhouse, they slunk away, until at the workhouse, I think, we had only ten or a dozen, who chose to come and accept the bread, for the want of which they declared to the magistrate they were starving at the time they first applied for immediate relief.

¶ The next subject for consideration, is the agency by which the above principle of relief may be best carried into effect. The simplicity of the principle might suggest, that the change might be effected by a single enactment. But it is found, on the one hand, that there is scarcely one statute connected with the administration of public relief which has produced the effect designed by the legislature, on the other, that the obstacles to the due execution of any new legislative measure, are greater than they have ever been. These obstacles mainly arise from the difficulty of finding, under existing circumstances, a sufficient number of proper functionaries, and the danger to person and property from any attempts to carry into effect the intention of the statute of Elizabeth, supposing those functionaries found.

With regard to the first. It is clear from the evidence, that the success in the dispauperized parishes of those measures which the Commissioners recommend shall be generally enforced, has been solely owing to the circumstance of their being found within each of those parishes 'an individual of remarkable firmness and ability, often joined with a strong interest in good administration, great influence to overcome opposition, and leisure to establish good management.' Now among the 15,535 parishes of England and Wales, how many such individuals have been found? Certainly not a score. Good example, too, does not spread.

"The Commissioner who examined Cookham, visited Bray, and made inquiries of persons connected with that and other adjacent parishes, why they did not adopt the means of reducing their heavy rates, which (as they were well aware) had been found so efficient and salutary in Cookham. The answers were usually to this effect:—'The farmers are so disunited and unwilling to stir.' 'The members of the vestry are so jealous of each other, that they can do nothing.' 'We have no one to take the lead.' 'We have no one who will take upon himself the responsibility.' 'It never can be done, unless we have among us a man of the talent and influence of Mr. Whately.'"

Mr. Whately himself was asked—

"Do you think your example would be followed if extensively known?—I very much doubt it. I believe it is pretty extensively known, but it it has been followed only in one or two solitary cases, so far as I am aware of.

"Are you aware that any pains have been taken by the neighbouring parishes to ascertain the nature of your system?—Yes; many have made themselves fully acquainted with it by personal application to me; but either through indolence or want of firmness, or some other cause, have not availed themselves of the information they have received, nor have I any reason to hope that a great national benefit can be effected by the personal exertions of individuals, who must necessarily expose themselves to considerable obloquy

* Report, p. 154; octavo edit., p. 275.
† Report, p. 189; octavo edit., p. 335.

* Report, p. 81, *et seq.*; octavo edit., 146, *et seq.*

if not to great loss of property, and who, in many cases, have no immediate personal interest.

"If you were to withdraw your exertions, do you think that the present system would be carried on in your parish?—Many of the principal rate-payers with whom I act, are of opinion that it would not." *

"In the communication of Messrs. Cameron and Wrottesley will be found an account of the ignorance and apathy prevalent amongst the rate distributors of the adjacent parishes, with relation even to the important pecuniary results of the change of system at Cookham. Mr. Whately having been prevented by a severe illness from attending the vestry, the effects of his absence soon exhibited themselves in the management of the poor; and some of the members of the select vestry were convinced that the safety of the reformed system depended upon his restoration to health. It appears from Major Wilde's report, that when the master of the workhouse at Southwell, who had long been accustomed to manage that establishment, under the admirable superintendence of Mr. Becher, went to another parish, he soon relapsed into the common habits. In Hatfield, the management fell back during the short illness of the permanent overseer, who is a person excellently qualified; and it appears from various other instances, that the voluntary adoption and continuance of an improved system is dependent on obtaining, within each parish, an individual of great firmness, ability and disinterestedness, to originate it and carry it on; or in other words, that the good general administration of the existing system is dependent on a perpetual succession of upwards of fourteen thousand men, of firmness and ability, agreeing upon a system, and conducting it voluntarily." †

Instead of being men of this description, it appears from the return made to Parliament as well as the answers to the queries issued by the Commissioners, that some of the overseers can scarcely write their names, and few can keep accounts.

On the subject of the other main obstacle in the way of improvement, intimidation exercised on those who attempt it, we shall make an extract from the report, which not only developes the nature of the evil but points to the only remedy:—

"We see no ground for expecting that any purity in act or intention in the distribution of rates will render the distributors less obnoxious to hatred, which is always the stronger as they are the more closely connected with the rate receivers. Speaking with reference to the smaller farmers who had served the office of overseers, an experienced witness observed, that 'a refusal from a person who is nearly an equal, excites more animosity than from a person who is comparatively a stranger and has greater authority.' Can a farmer at a vestry be expected to refuse relief, and endanger his own property and person to save funds to which he is only one of many contributors, when, in proportion to his belief that the applicant is undeserving, must be his conviction of the capability of that applicant to resort to any criminal means of obtaining compliance with his demands, or of gratifying his revenge? But the immediate distributors of relief, are not the only persons obnoxious to such motives. Mr. Villiers states, that a magistrate declared to him that in his neighbourhood if a gentleman living upon his own property were strictly to perform his duty in a large proportion of the cases where paupers appealed from their overseers, he would be in danger of having his property destroyed. Such dangers, it is to be observed, are generally incurred by refusals to increase allowances, which are *now* wholly illegal; and, therefore, to expect the voluntary execution of new and strict regulations by persons placed under such circumstances, appears unreasonable. Mr. Day, the magistrate at Maresfield, to whose communication we have before referred, in the following passage forcibly expresses opinions, which we have reason to believe are entertained by a numerous class.

"'I must here guard against an impression that may be conveyed by these remarks, which might lead to a fatal disappointment. The workhouse system is at present legal, and funds for emigration may, in many instances, be raised by voluntary contributions. But were the plan, advocated by me, attempted to be put in execution at the mere instigation of an individual, or by a vote of vestry, it would probably induce an irritation that would lead to disastrous consequences. When in the parish of Mayfield it was rumoured that I intended interfering to reduce the rates, it was immediately suspected by the paupers that I was opposed to their interests. On the door of the first vestry I attended, I found affixed a notice, "that they intended washing their hands in my blood." In 1826, a threat of that kind was readily disregarded; at present, it would be consummated in a riot or fire. But if the alteration be the act of the legislature, it assumes a different aspect. It comes with the sanction of the law, and however it may be murmured at, the odium is removed from the obnoxious vestryman, or the individual magistrate. The complaining pauper looks round to the adjacent parishes and the neighbouring benches. He sees his lot the lot of all; and is told that however he may meet with sympathy, there is no power of redress. He may hope to intimidate a vestry, but he cannot dare to oppose a government.'*

"We believe, however, that general regulations made under the immediate control of the executive, would meet with comparatively ready obedience; not from fear or despair of the success of resistance, but from confidence in the disinterestedness of the source from which the regulations emanated. We are happy in having found no distrust of the government amongst the labouring classes in the pauperized districts: we rather apprehend that they entertain extravagant expectations of what can be accomplished by legislative interference. In the instructive letters from emigrants of the labouring classes to their friends in England, we see few traces of discontent with the political institutions, or the general government of their former country; few expressions of satisfaction that they now live under other institutions; but we do find in those letters, felicitations that they are no longer under local control or parochial management; 'Here,' say the labourers, in speaking of their new abodes, 'there are no overseers to tread us under foot.' Wherever in the course of this inquiry it has been deemed requisite to communicate directly with the labouring classes, the Commission appears to have been regarded with entire confidence. Our written communications from labouring men on the subject of the labour-rate are abundant: our assistant Commissioners found their inquiries answered with alacrity by all the labourers who were examined. Under the conception that the Commissioners were invested with extraordinary powers, the labourers have appealed to us for interference against local malversations. One of the Sussex labourers was asked in the course of his examination—

"'What alterations of the poor-laws are talked about by the labourers?'—'They have hopes that government will take it in hand, as they would then be contented with what was allotted to them: they would be sure that they would have what was right, and could not be driven about by the overseers.'

"'Are you sure that the labourers would be pleased to see the overseers deprived of their power?'—'Yes, that they would, for they often fail, and take the parishes in; and besides, all parish business now goes by favour. Many people do now say that they talk about reform in the government, but there wants reform in the parish.'

"'Suppose that the workmen were deprived of the allowance in aid of wages, but deprived in such numbers that the farmers would be compelled to pay wages to the same amount, how do you think such a measure would be received by the workmen?'—'That would give a great deal more content, and I am sure that they would do the farmer more work. The parish money is now chucked to us like as to a dog.' †

Here follows a variety of extracts from the evidence to the same effect.

Another difficulty in the way of any legislative enactments effecting the object in view, will be understood from the following evidence of Mr. Mott.

"The most practical witnesses concur with Mr. Mott in representing the voluntary adoption of detailed regulations hopeless, and legislation on details ineligible, if not impracticable. He is asked—

"'Do you think it practicable to bring parishes to the voluntary adoption of any uniform regulation when their importance is proved to them?'—He answers, 'I certainly do not think it practicable. I think it utterly impossible to bring the 14 or 15,000 parishes in England and Wales to

* App. (A.) Part 2.
† Report, p. 158; octavo edit, p. 282.

* Appendix (C.), p. 152.
† Report, p. 162; octavo edit., p. 289, *et seq*

one mind upon any one subject, however clear the evidence may be; much less so to act with uniformity in any one point. The Commissioners must be well aware, that great frauds are committed by paupers in the metropolis receiving relief from different boards on different board days. 'I have known instances of paupers receiving pensions from three or four different parishes. It was proposed some years ago, and it has been proposed from time to time to remedy this evil, which all the parishes are aware is very great, by one simple but effectual expedient, which it would be very easy to adopt, namely, by all the parishes paying on the same day; but they never could be got to do this. Individual conveniences prevented the remedy being applied, and the system of fraud still prevails, and will continue to prevail, so long as the present management prevails. Now, if the parishes in the metropolis cannot be got to act in concert for the suppression of an evil which affects only one part of the system, I think it will be seen that I am justified in my opinion, that any reform or co-operation in the country is quite hopeless without the establishment of a strong central management; nothing else will check the system.'

"'Might not such general regulations as those to which you have alluded be prescribed by act of parliament?'—'No, certainly not. The regulations of any system must be very numerous; and though they may be uniform, it would be necessary to vary them from time to time; and unless parliament was to do nothing but occupy itself with discussions on details of workhouse management, it would be impossible to effect any great alteration in that way. Many regulations, however ably devised, must be experimental. Unforeseen and apparently unimportant details might baffle the best plans, if there were not the means of making immediate alteration. Suppose a general regulation were prescribed by act of parliament, and it was found to want alteration; you must wait a whole year or more for [illegible] parliament to amend it, or the law must be broken. A central authority might make the alteration, or supply unforeseen omissions in a day or two. Besides a central board or authority might get information immediately on the matters of detail. If they had for instance to settle some uniform diet, they could at once avail themselves of the assistance of men of science, physicians or chymists; but you would find that parliament, if it could really attend to the matter, and would do anything efficient, must have almost as many committees as there are different details. If there was a central board established, and it were easily accessible, as it ought to be, persons in local districts would consult them or make suggestions, who would never think of applying to parliament. Who would think of applying to parliament, to determine whether four or five ounces of butter should be used as a ration in particular cases, and whether the butter should be Irish or Dutch? or, if Irish, whether Cork or Limerick; or to determine whether the old women's under-petticoats should be flannel or baize, and how wide or how long? Yet on details of this sort, beneath the dignity of grave legislators, good or bad management would depend.'*

"The Commissioners recommend therefore, the appointment of a central board to control the administration of the poor-laws, with such assistant Commissioners as may be found requisite: and that the Commissioners be empowered and directed to frame and enforce regulations for the government of workhouses, and as to the nature and amount of the relief to be given, and the labour to be exacted in them, and that such regulations shall, as far as may be practicable, be uniform throughout the country."

As the subject of pauper-labour was gone into at some length in the former article on the poor-laws in the 'Companion to the Newspaper,' it will not be necessary to recur to it here.

"III. That the Central Board be empowered to cause any number of parishes which they may think convenient to be incorporated for the purpose of workhouse management, and for providing new workhouses where necessary, to declare their workhouses to be the common workhouses of the incorporated district, and to assign to those workhouses separate classes of poor, though composed of the poor of distinct parishes, each distinct parish paying to the support of the permanent workhouse establishment, in proportion to the average amount of the expense incurred for the relief of its poor, for the three previous years, and paying separately for the food and clothing of its own paupers."

* Report, p. 166, octavo edit., p. 295.

In the same article, also, much evidence has been adduced, shewing the advantage of large district management over small. The superior economy of large parishes is still further established by the following curious and important calculations, which we extract from the Commissioners' Report.

"Of all England—

"The 100 absolutely largest parishes, containing a population of 3,196,064, give 6*s.* 7*d.* per head.

"The 100 intermediate parishes, containing a population of 19,841, give 15*s.* per head.

"The 100 least parishes, from which poor-rates returns are made, with a population of 1,708, give 1*l.* 11*s.* 11½*d.* per head.

"The 100 intermediate parishes are of the size of which there is the greatest number, and where the population is not too large, to allow the parish officers to obtain a personal knowledge of the individuals relieved.

"We have no recent returns of proportions of paupers in the parishes referred to in the preceding statement; but on referring to the parliamentary returns of the number of paupers in each parish in the years 1803 and 1813, it appears that the number of persons relieved in the large and small parishes bears some proportion to their relative amount of rates. In the 300 parishes of which the comparative amount of the poor's-rates on the population has been stated, the

	1803.	1813
Average number of persons relieved was, in the 100 largest parishes	1 in 16, or 6¼ p' ct.	1 in 13, or 7¾ p' ct.
Ditto, 100 intermediate do.	1 in 10, or 10 p' ct.	1 in 8, or 12½ p' ct.
Ditto, 100 smallest ditto	1 in 6, or 16⅔ p' ct.	1 in 4, or 25 p' ct.

	In 100 Largest Parishes.	In 100 Intermediate.	In 100 Smallest.
The Increase of Pauperism on Population from 1803 to 1813, was	1¼ p' cent.	2½ per cent.	8⅓ per cent.*

It will be necessary here to say a few words as to the character of the workhouses proposed by the Commissioners, more especially as most of the evidence hitherto made public has been on the subject of ill-regulated workhouses. The Commissioners consider that, at least, four classes are necessary:—1. the aged, and really impotent; 2. the children; 3. the able-bodied females; 4. the able-bodied males.

One of the most important consequences of a high state of civilization ought to be the realizing to the utmost the principle of the greatest happiness, and, by consequence, reducing human misery, as nearly as possible, to a *minimum*. In a high state of civilization, then, by means of such institutions as life assurances, friendly societies, and savings banks, provision may be made against most of those ills that are the scourge of humanity. But in a high state of civilization no one must be suffered to perish of want. Against such contingencies public provision must be made. But to those who are reduced to a state of destitution by their own follies and vices—who, to reverse the common phrase, are the architects of their own misfortunes—to the improvident, the idle, and the profligate, the proposed workhouses will become schools of salutary discipline. We are convinced, however, that they will act, as they ought to do, as a means of deterring all the respectable from sinking into pauperism a degradation which all will be fully enabled to avoid in a healthy state of things. Even at present, in the words of a witness belonging to the working classes already quoted, "None but the worst characters would ever think of applying for parish relief; the respectable workmen consider it disgraceful." Those who object to the restraint of workhouses as resembling that of prisons, might just as well object to the high walls, the iron spikes, and confined precincts of the King's Bench, on the plea that it was not proper treatment for gentlemen, to immerse them in such a place. This would be all very well, if the place were intended to attract as many inmates as possible. But the law meant it as a place not to attract, but to repel. And such was, and is, the intent of the law with respect to workhouses.

To those, however, who are reduced to destitution by no fault of their own—and in a high state of civilisation they must necessarily be few—to the destitute old and the orphan

* Report, p. 178, octavo edit., p. 317.

young, political society owes protection and refuge, unaccompanied by degradation. There is much in a name; and when a name has once got any stigma attached to it, it is not easy to get rid of that stigma. We should, therefore, propose, that between the places provided for the reception of the last-mentioned classes, and those for the reception of the able-bodied, who are idle and dissolute, a broad line of distinction be drawn; and that, while the latter be called Workhouses, the former be called Houses of Refuge, or Asylums.

We should wish, also, with Mr. Livingston, the eminent American statesman,* to make a distinction between the able-bodied who "are willing to labour, but who cannot find employment," and those who "are idle from inclination, not for want of employment," did we not fear that one consequence of such a distinction would be, that it would tend to destroy all real distinction between the two classes. If the state finds for all who say they are willing to work, but cannot find employment, either wages without employment, or employment in every respect *as eligible* as can be found elsewhere, they will *never find employment elsewhere.* This, in truth, has been one of the greatest blunders committed by the later menders of the English poor-laws; and, in point of fact, amounts, in the end, to making relief (to use the words of Mr. Pitt) "a matter of right and an honour, instead of a ground for opprobrium and contempt."† Whoever, therefore, should propose such a measure, though he may enjoy for a time the coveted distinction of being called the poor man's friend, will be found, in the sequel, to be the poor man's deadliest enemy. They are such friends as these who have reduced the English poor man to his present state of degradation, and, unless delivered from such friends, from that state of degradation he will never return.

With respect to the orphan children, they should be educated in their house of refuge, protected alike from the contamination of bad example, and the demoralizing influence of a sense of being looked upon as degraded outcasts. Is it politic—is it just that the youth, whose only crime is the improvidence, or perhaps the misfortunes, of his parents, should leave the place that ought to have afforded decent protection to his infancy, and useful instruction to his childhood, with morals deeply tainted, habits incurably depraved, and passions excited to vengeance, to seek, in unceasing war against society, revenge for his own degradation? Such things are a blot upon a nation's escutcheon, which a wise and benevolent statesman would rejoice to wash out. For this, if for no other cause, there is need of some government interference with the administration of the poor-laws.‡

We have dwelt at such length on these three leading recommendations, as being by far the most important; and, indeed, those on which the whole success of the Commissioners' plan will depend. The limits to which we are confined, will compel us to give the others without comment. The Commissioners recommend:—

"IV. That the Central Board be empowered and required to take measures for the general adoption of a complete, clear, and, as far as may be practicable, uniform system of accounts.

"V. That the Central Board be empowered to incorporate parishes for the purpose of appointing and paying permanent officers, and for the execution of works of public labour.

"VI. That the Central Board be directed to state the general qualifications which shall be necessary to candidates for paid offices connected with the relief of the poor, to recommend to parishes and incorporations proper persons to act as paid officers, and to remove any paid officers whom they shall think unfit for their situations.

"VII. That the Central Board be empowered to direct the parochial consumption to be supplied by tender and contract, and to provide that the competition be perfectly free.

"VIII. That the Central Board be empowered and required to act in such cases as public prosecutors.

"IX. That, under regulations to be framed by the Central Board, parishes be empowered to treat any relief afforded to the able-bodied or to their families, and any expenditure in the workhouses or otherwise incurred on their account, as a loan, and recoverable not only by the means given by the 29th section of the 59 Geo. III. c. 12, but also by attachment of their subsequent wages, in a mode resembling that pointed out in the 30th, 31st and 32d sections of that act.

"X. That the Central Board be empowered to make such regulations as they shall think fit respecting the relief to be afforded by apprenticing children, and that at a future period, when the effect of the proposed alterations shall have been seen, the Central Board be required to make a special inquiry into the operation of the laws respecting the apprenticing children at the expense of parishes, and into the operation of the regulations in that respect which the Board shall have enforced.

"XI. That the Central Board be empowered and directed to frame and enforce regulations as to the relief to be afforded to vagrants and discharged prisoners.

"XII. That the Board be required to submit a report annually, to one of your Majesty's principal secretaries of state, containing—1. An account of their proceedings. 2. Any further amendments which they may think it advisable to suggest, 3. The evidence on which the suggestions are founded. 4. Bills (if any) carrying those amendments into effect, which bills the Board shall be empowered to prepare with professional assistance.

"XIII That the Central Board be empowered to appoint and remove their assistants and all their subordinate officers.

"XIV. That settlement by hiring and service, apprenticeship, purchasing or renting a tenement, estate, paying rates, or serving an office, be abolished.

"XV. That (subject to the obvious exceptions of persons born in prisons, hospitals, and workhouses) the settlement of every legitimate child born after the passing of the intended act, follow that of the parents or surviving parent of such child, until such child shall attain the age of sixteen years, or the death of its surviving parent; and that at the age of sixteen, or on the death of its surviving parent, such child shall be considered settled in the place in which it was born.

"XVI. That whenever there shall be any question regarding the settlement by birth of a person, whether legitimate or illegitimate, and whether born before or after the passing of the intended act, the place where such person shall have been first known by the evidence of such person, by the register of his or her birth or baptism or otherwise, to have existed, shall be presumed to have been the place of his or her birth, until the contrary shall be proved.

"XVII. That the general rule shall be followed, as far as it is possible, and that every illegitimate child born after the passing of the act, shall, until it attain the age of sixteen, follow its mother's settlement.

"XVIII. Secondly, with respect to the mother.—As a further step towards the natural state of things, that the mother of an illegitimate child born after the passing of the act be required to support it, and that any relief occasioned by the wants of the child be considered relief afforded to the parent.

"XIX. That the same liability be extended to her husband.

"XX. On the other hand, the repeal of that part of the 53 Geo. III. c. 101, sec. 6, which makes an unmarried pregnant woman removable, and the 50 Geo. III. c. 51, sec. 2, which authorizes the committal of the mother of a chargeable bastard to the House of Correction.

"XXI. That the second section of the 18th Eliz. cap. 3., and all other acts which punish or charge the putative father of a bastard, shall, as to all bastards born after the passing of the intended act, be repealed.

"XXII. That the vestry of each parish be empowered to order the payment, out of the rates raised for the relief of the poor, of the expenses of the emigration of any persons having settlements within such parish, who may be willing to emigrate; provided that the expense of each emigration be raised and paid, within a period to be mentioned in the act."

The total amount of money expended for the relief of the poor for the year ending 25th March, 1832, was 7,036,968*l.*, and this amount appears to continue to be, as it has been, steadily and rapidly progressive. But, enormous as this sum may appear, we consider the merely economical evils as of trifling import when weighed against the moral evils

* Introductory Report to the 'Code of Reform and Prison Discipline,' p. 20. fol. New Orleans. 1826.

† Speech, 12th February, 1796.

‡ On the subject of the education of pauper children, there is much valuable evidence contained in the Appendix to the Commissioners' Report.

of the system. Examples have been afforded of the injustice perpetrated on those who bravely struggle to the last against those overwhelming evils. The condition of those who submit without a struggle is faithfully and forcibly portrayed in the following passage of the 'Commissioners' Report:'—

"But though the injustice perpetrated on the man who struggles, as far as he can struggle, against the oppression of the system, who refuses, as far as he can refuse, to be its accomplice, is at first sight the most revolting; the severest sufferers are those that have become callous to their own degradation, who value parish support as their privilege, and demand it as their right, and complain only that it is limited in amount, or that some sort of labour or confinement is exacted in return. No man's principles can be corrupted without injury to society in general, but the person most injured is the person whose principles have been corrupted. The constant war which the pauper has to wage with all who employ or pay him, is destructive to his honesty and his temper; as his subsistence does not depend on his exertions, he loses all that sweetens labour, its association with reward, and gets through his work, such as it is, with the reluctance of a slave. His pay, earned by impunity or fraud, or even violence, is not husbanded with the carefulness which would be given to the results of industry, but wasted in the intemperance to which his ample leisure invites him." *

This then is the condition to which bad legislation has reduced a large proportion of the poorer classes of our countrymen. We do not deny that a "bold peasantry may be their country's pride;' but we should value a moral and intellectual more than a merely "bold peasantry." And though it cannot be doubted that our peasantry have suffered degradation, we are not of the number of those who look back to any particular period of our history when that peasantry enjoyed a very high degree of elevation, because we possess no evidence that they ever enjoyed any very high moral and intellectual cultivation. Instead of possessing the elevated and refined tastes, and the cultivated understandings which could alone give them a just claim to be called "their country's pride,' their minds have been, too generally, wholly unmformed, and their pleasures coarse and sordid.

It is a consolation to every well-wisher of his country and humanity to think, that, as a great portion of this evil has been produced by bad legislation, a corresponding portion may be removed by good. We firmly believe that the most satisfactory results will be produced by the operation of the measures recommended by the poor-law commissioners; and we anticipate no ordinary gratification in watching the progress of those results as displayed in the progressive diminution of poors'-rates, but far more in the steadily and rapidly progressive increase of the people's intelligence, industry, morality, and happiness.

DISSENTERS' MARRIAGES.

ALTHOUGH the Bill for the Regulation of the Marriages of Dissenters, brought into the House of Commons by Lord John Russell on the 25th of February, has been received with so little satisfaction by those for whose relief it was intended, that it is not now likely to be persevered in, it will be convenient that we should preface the few observations we have to make upon the general question, by a brief explanation of that proposed measure.

The bill, as printed, consists of twenty-seven clauses; but its material provisions may be very shortly stated. Dissenters intending to marry would proceed, in the first instance, in the same way with members of the established church, that is to say, they would get their banns of matrimony published in the parish church in the regular form, or would procure a license from the bishop or other ordinary; but this being done, they would not, as at present, be obliged to have the ceremony performed by a clergyman of the esta blished church, and according to the office appointed in the Book of Common Prayer, but would be at liberty to be married in any other way that might be preferred by the congregation to which they belonged. The marriage, however, would still have to be solemnized by a minister, preacher, or teacher of some congregation, qualified to officiate as such according to the statutes in force at the time being, in a chapel, or other place of religious worship duly certified according to law as such, and also specially licensed for the celebration of marriages. The justices of the peace assembled at the Sessions would be required so to license any chapel or other place of worship, on the application in writing of twenty resident householders of the parish, township, or place in which the chapel might be situated.

Such is the amount of the relief to the Dissenters which the bill concedes. The other enactments have all for their objects merely the securing of the requisite regularity of procedure, the perfect publicity of marriages celebrated under its provisions, and their accurate registration. The forms and regulations laid down with this view we need not detail.

The measure has, in the first place, been objected to on account of its alleged complexity. We do not think, however, that if we admit the principles upon which it is founded, we can fairly charge it with this fault. The forms which have to be gone through by the parties intending to marry in each individual case are simple enough. Their banns having been published, they deliver within seven days after, to the officiating minister of the church in which the publication has taken place, a written declaration that they are desirous of having their marriage celebrated in a particular dissenting chapel, which they name, on this they receive, as a matter of course, a certificate, that their banns have been duly published, for which they pay half-a-crown; and carrying that to their own clergyman, they are married by him, provided that notice of the intended solemnization of the marriage shall have been given in the chapel on three preceding Sundays during divine service. These Sundays, if the parties think fit, may be the same as those on which the banns shall be published in the parish church. If they are married by license, the previous notice is not required at all. In all this there seems to be nothing either of difficult comprehension or that would be very troublesome to go through. The air of complexity about the bill arises from the multiplicity and minuteness of the forms and regulations which [illegible], as already noticed, with the view of ensuring the due publicity and registration of dissenters' marriages. Assuming the object to be right, however, it will hardly be pretended that any of these regulations are unnecessary. If it be held that publicity and registration of marriages are not proper objects of legislative concernment, then, indeed, the machinery here devised for their attainment will be looked upon as not only useless, but mischievous. It will be objected to not only on account of the trouble and expense which it entails both upon individuals and the public, but, perhaps, still more strongly as an unjustifiable interference with private liberty. This grievance, however, if it be one, is not a Dissenter's grievance, but one common to persons of all persuasions, to the members of the established church as well as to others. It is not, therefore, in a bill for the relief of the Dissenters that we are entitled to look for its removal.

But, secondly, the hostility of the Dissenters appears to have been excited against the present measure in consequence of the share which it seems still to reserve to the clergy of the established church in the superintendence of marriages generally, and, by consequence, even of those which it would allow to be celebrated by the ministers of other sects. In reality, however, the established church, under this bill, would exercise not an atom of authority over the marriages of Dissenters. The duties which its functionaries would have to perform would be purely ministerial; they would act simply as the servants of the state, and would have no discretion in any case in which their services would be called for. To parties whose banns of matrimony had been regularly published, they would be *bound* to grant a certificate to that effect, on receiving the written declaration of the parties that they wished to be married elsewhere. These declarations they would be *bound* to preserve by pasting them in books provided by themselves for that purpose. They would be *bound* to enter in each case in the Register of Banns a signed memorandum of having granted the above-mentioned certificate. Every archbishop, bishop, ordinary, or other person having authority to grant licenses of marriage, would be *bound* to grant such licenses upon the usual affidavit to any parties declaring themselves to be Dissenters, just as to members of the church. The registrar of the diocese would be *bound* to receive from the minister of every dissenting congregation the duplicates transmitted

* Report p. 47; Octavo edit. p. 87.

by the latter every three months of the entries of all the marriages solemnized by him, and to keep them in a secure place of deposit, and to show them to any person who might apply at all reasonable hours. These are all the functions which the bill reserves to the church. There is no authority granted—no right of interference whatever—no power to refuse performance of the duties imposed. There are certain small fees, indeed, appointed to be paid to the clergy for their services—half-a-crown for every certificate of the publication of banns, and five shillings in the quarter, with a penny besides on each entry, to the registrar for taking care of the book of marriages; but if these services are to be rendered at all, they must be paid for. There is no other body of agents to whom they could so conveniently be intrusted as to the clergy of the established church, were it only from their regular diffusion over all parts of the kingdom, and the circumstance that the registers of the marriages of those of the population who are not Dissenters are also in their custody. It might, or it might not, be advisable, to establish a new and distinct order of functionaries for the guardianship of these documents. This innovation could not, at any rate, be reasonably expected to be effected by a legislative act specially intended and entitled to be for the relief of the Dissenters. Desirable as such a change might be, in the mean time the old arrangement in regard to all the community, except the Dissenters, remains undisturbed; and the present bill, therefore, in dispensing the required relief to the Dissenters, naturally and almost necessarily does so by means of provisions in harmony with that existing arrangement.

But thirdly, Lord John Russell's bill has, we believe, disappointed not the Dissenters merely, but the public in general, as being a measure throughout affirmatory and conservative of the principle of the existing marriage law, at which it was hoped it would have dealt a fatal blow. It is another of the many attempts that have been made since of a passing of the act of 1753 to bolster up the cumbersome, politically [illegible] same time, ill-cemented system established by [illegible]idence, or to accommodate its requirements to the [illegible]d leave the place we presented themselves [illegible] protection to his [illegible] ives, and the [illegible] changes in the circumstances of society that have taken place since it first came into operation. By the act in question (the 26 Geo. II. chap. 33), it was, for the first time, declared necessary that all marriages should be celebrated according to certain specified religious forms; and this still continues to be the law, the last act upon the subject, the 4 Geo. IV. chap. 76, passed in 1821, being merely a modification in some subordinate particulars of the act of 1753. The subjects of the marriages of Jews—of the marriages of Quakers—of those of English subjects celebrated abroad—of those entered into in Scotland according to the law of that country—of those solemnized in churches or chapels which had not been consecrated when the act of 1753 passed—and of those of minors where the ceremony had been performed without the consent of the guardians having been obtained in writing—have all, at different times, alarmed and disturbed the public mind, and given occupation to the courts of law and to the legislature, in the settlement of disputed points and the redress of grievances arising out of the change thus made in the old law of the realm. Various attempts have also been made in parliament to effect the repeal of the modern law, and to bring back again something like the old state of things; and in 1781, a bill brought in with this view by Mr. Fox, actually passed the House of Commons, and was only lost by the opposition of the Lords. But of all the hardships inflicted by the existing marriage law, the grievances to which it subjects the Roman Catholics and the Protestant dissenters have always been accounted the chief. They remain, also, till this moment unremedied. No dissenter, Jews and Quakers excepted, can at present be married in England either by a clergyman of his own communion, or according to any other form than the service prescribed in the Book of Common Prayer. The poorer classes of the Catholics are in particular strongly attached to their own ritual, and look upon both the doctrines and ceremonies of the reformed church established in this country with abhorrence. So obstinate are their feelings upon this head, that they are every day in the habit of braving the penalties of the law, and satisfying themselves with a marriage ceremony performed by a priest of their own communion, and according to the rites of their own faith. Yet these penalties are severe in the extreme. The children who may be born to the parties are illegitimate; and either party may desert the other at pleasure, and enter into marriage with any one else. It happens by no means unfrequently, that a man, after living for some time with a woman to whom he has been thus united, abandons her and her children to disgrace and misery.

We are free to confess, that so long as the principle of this system is adhered to, we do not well see what further relief can be granted to the Dissenters than that proposed to be granted by Lord John Russell's bill. That measure would do away with whatever there is in the operation of the marriage law, which is peculiarly a grievance upon the Dissenters. Under its provisions, the members of all dissenting congregations, comprehending more than twenty householders (that is, practically, of all congregations without exception), would be at liberty to marry according to their own forms. That they are prevented from doing this, and compelled to go through another religious ceremony of which they disapprove, is the only peculiar ground of complaint, which, as Dissenters, they have at present. That minors are not allowed to marry without the consent of their guardians—that all marriages must be performed in public, between the hours of eight and twelve in the morning, and after the publication of banns for three Sundays, or license obtained on affidavit—that they must be performed in a place of religious worship—and that they must be registered;—these enactments affect the members of all communions equally; and, if they are on any account objectionable, the evil is one that presses in the same degree upon the Dissenter and upon the Churchman.

We should have rejoiced, however, if ministers had taken the present opportunity of abolishing nearly the whole of the existing marriage law. Marriage ought certainly to be considered simply as a civil contract, which any two consenting parties (qualified in respect of age and other circumstances to act for themselves) ought to be at liberty to enter into, merely by making a public declaration of the act. As in the case of all other contracts which the State engages to uphold, and which, in their consequences, affect many other individuals besides the actually covenanting parties, we agree that the law is entitled to demand here, both that the proceeding should be guarded with such preliminaries and accompaniments as may be deemed necessary to ensure its ample publicity, and that it should be registered at the expense of the parties. But beyond this, we do not see that it is either right or expedient to go. Most assuredly, a religious ceremony ought not to be imposed by the law, however proper or desirable it may be that marriages should be generally solemnized under the sanction of religion. We would leave this to the feelings of society and of individuals. From a passage in the speech delivered by Lord John Russell on submitting the present bill, an apprehension would appear to be entertained by his lordship, that if the law enjoined no religious form, marriages would be commonly entered into without any further ceremony than a mere declaration before witnesses or the civil magistrate. We believe that this would not happen in this country in one case out of a thousand. We refer to the example of Scotland. In that part of the kingdom, nothing farther is necessary in order to constitute a man and woman husband and wife, than a declaration of consent by the parties before witnesses, or even such a declaration in writing without any witnesses. But, in point of fact, a marriage there not celebrated by a clergyman, is a thing rarely or never heard of. Those that take place at Gretna are almost the only exceptions; and in the case of these, the parties are all English. Fashion has in some degree taken under its shelter the knots tied by the blacksmith who officiates here; but every where else throughout Scotland, marriages performed except by a clergyman, and with the decency of religious observances, are as unusual as in England. To what is this owing? Simply to the nearly universal feeling, which is in favour of a religious celebration of the contract, and which would look upon the neglect of that solemnity as disreputable. Liberalize the English marriage law, and you would have the same thing here. Permit people to marry according to any form they pleased, or without any form at all except what might be deemed necessary for the sake of giving due publicity to the transaction, and marriages would still be as generally accompanied by a religious service as they now are. The only difference would be, that the service would in all cases be one of which the parties approved, and in which their hearts would take part, instead

of being what it too often is at present, one in which they join only by compulsion, and which, therefore, notwithstanding all its solemn invocations, can only be deemed a solemn mockery. Such an alteration of the law would relieve all the grievances of the Dissenters as to this matter effectually and at once. The accurate registration of marriages ought then to be made the subject of another measure, which should embrace the registration of births and deaths also. For these purposes, let a new body of functionaries be created, if that should be thought a better plan than to employ the parochial clergy. But at any rate, the system should be placed altogether upon a civil and not upon an ecclesiastical foundation. A Dissenter should no more be compelled to conform to any of the observances of the established church in taking a wife, than in purchasing an estate.

THE HARDWARE TRADE.

We propose in the present paper to follow up the account of the iron manufacture, given in our last number, by a few notices respecting the present state of the hardware trade. We will endeavour to collect the more important statements upon this subject, to be found in the evidence taken by the late committee on manufactures; and shall add such further information from other sources as may be necessary to place before the reader a full view of the extent of this branch of our national industry and commerce.

It has been stated that knives were first made in this country, in the year 1563, by one Thomas Mathews, on Fleet Bridge, in London. But this notice must be understood to refer to table-knives only. It is certain that the fabrication, both of knives for other uses, and of many other instruments made of iron, was practised in England long before that date. Among the most antient trades, both in London and in other towns, we find the various descriptions of dealers and workers in iron, under the names of ironmongers, hammermen, blacksmiths, armourers, bucklers, bladers, cutlers, &c. Maitland, in his 'History of London,' tells us that of old time the cutlers in that city consisted of three sorts of workmen; namely, bladers, haftmakers, and sheathmakers; who were not incorporated as one company till the year 1403, the 4th of Henry IV. But there is a passage in Chaucer (who died in 1400) which proves that the manufacture of knives, or whittles, as he calls them, had even in his day been established in the very town which still continues to be its principal seat. It occurs in his graphic description of the miller of Trompington in the Reve's Tale, the third of the Canterbury Tales:—

"A millar was there dwelling many a day,
As any peacock he was proud and gay;
Pipen he could, and fish, and nettés beat,(1)
And turnen cups, and wrastlen well, and sheet;(2)
And by his belt he ware a long pavade,(3)
And of his sword full trenchant was the blade;
A jolly popper(4) bare he in his pouch;
There n' as no man for peril durst him touch;
A Sheffield thwittle bare he in his hose;
Round was his face, and camuse(5) was his nose;
As pilled(6) as an apé was his skull;
He was a market-beater at the full;(7)
There durstè no wight hand upon him leg,(8)
That he ne swore he should anon abeg.(9)

The great extension of the manufactures of Sheffield, however, has taken place within the last century. Before the year 1780 there were probably fabricated in the place nearly all the principal descriptions of goods which are now made, although of course in much more limited quantities. In the eighth edition, published in 1778, of the 'Tour through the Ireland of Great Britain,' originally written by Defoe, we find the following account of the manufactures then carried on:—"The principal manufactures here are knives, forks, scissors, razors, lancets, phleams, files, edge-tools for carpenters, shears, &c., metal and horn buttons; and of late years various kinds of goods have been made plated with silver, such as knives, buttons, buckles, snuff-boxes, tweezer-cases, toothpick-cases, saucepans, coffee-pots, cups, tankards, candlesticks, &c. &c. &c. There is likewise reason to believe that here were first made snuff-boxes, candlesticks, &c., of a sort of coal called kennel, or channel-coal, formerly got near this place." Saws, indeed, the manufacture of which is now so important a branch, are not mentioned in this list of articles; but the omission is probably accidental. The amount of plate manufactured, both in Sheffield and Birmingham, had before this become so considerable, that in 1772, an act of parliament was passed appointing wardens and assay-masters for both towns

(1) Mend. (4) Probably a pistol.
(2) Shoot. (5) Hat
(3) A weapon of offence, not now known. (6) Bald.
(7) That is, probably, one who used to swagger up and down the market when it was at the full.
(8) Lay. (9) Suffer for it.

The information on the subject of the present state of the manufactures and trade of Sheffield, to be found in the report of the late committee of the House of Commons, was principally obtained from two witnesses, Mr. Samuel Jackson, manufacturer of saws and steel there, and exporter of hardware generally, and Mr. John Milner, who has spent the greater part of his life as a journeyman spring-knife cutler, but is now a manufacturer on his own account. We have already had occasion to refer to many parts of the evidence of these two intelligent witnesses, in our paper on Trades' Unions, in the twelfth number of the 'Companion,' and also to some of the facts mentioned by Mr. Jackson in that on the iron manufacture in our last Number. We shall confine ourselves now to such of their statements as we have not already noticed.

The declared value of the entire British and Irish produce and manufactures, exported to all parts of the world, is above thirty-six millions sterling; and in 1831, above nine millions, or about a fourth part of this sum, was the amount exported to the United States of America alone. Mr Jackson states incidentally that one fourth of the whole goods manufactured in Sheffield are exported to the United States. Considering the unquestionably large extent of the home consumption of Sheffield goods, we should think this a high estimate; but it appears from an account in the second volume of the Tables published by the Board of Trade, that of the whole British cutlery and hardware exported, the United States take rather more than one-half. The declared value of the whole quantity exported in 1832, was 1,433,297*l.*; of which the share of the United States was 738,015*l.* Of the goods manufactured in Sheffield, indeed, there is but a very small portion exported to the continent. The chief markets are in this country and in America. Owing to the political agitation in the United States throughout the whole of the last year, there was a great falling off both in the spring and in the autumn orders from that quarter; and Sheffield severely felt the effect of this suspension. We fear the new commercial difficulties which have resulted from the interference of the president with the national bank, must still for some time prevent the demand from rising to its former average. Mr. Milner says, "We are too much dependent upon the American market; should anything unpleasant take place between America and England, we should be in a very bad state, for the experience of the last year and a half has shown the people of Sheffield, that if a convulsion took place in America, or if an alteration should take place in the commercial policy of America, Sheffield might be ruined." Fortunately, there is but little hazard of the occurrence of any one of the three calamitous events to which the apprehensions of the witness are directed. Of all insane wars that were ever undertaken, a war between two countries, one of which, to mention no other bonds of union, is a customer to the other for not less than one-fourth of the whole amount of goods which that other annually has to dispose of, would assuredly be the most insane. The worst of the political agitation which has for some time interrupted the tranquillity and prosperity of the United States, is also, it may be hoped, now over. And as for any alteration of the commercial policy of that country, the only alteration which is now likely to take place is one that will be favourable to British interests, as involving a still further relaxation of the system by which the introduction of foreign manufactures has been hitherto attempted to be checked. Mr. Jackson, who has visited the United States, found some small manufactories of fine cutlery there; but owing, he says, to the high price of labour, they could not compete with the English. In consequence of the protection afforded by the former tariff, they had made some progress in the fabrication of some of the heavier kinds of edge-tools, and also in that of mill-saws, upon which a duty of one dollar each was paid, amounting to about 50 per cent. on the value; but their success was confined to these articles.

The declared value of the entire British hardware and cutlery exported, which in 1832, as already mentioned, was 1,433,297*l.*, was in 1831, 1,620,631*l.* The difference was probably mainly produced by the falling off in the orders from America. The quantities exported in the two years were, in 1831, 16,799 tons, and in 1832, 15,294 tons. In the latter year the number of tons exported to each of the countries, taking the largest quantities, was as under:—

	Tons.
To United States of America	7,874
British North America	1,549
Asia	1,032
British West Indies	667
Mexico and South America	616
Germany	586
Foreign West Indies	560
Brazil	497
Italy	341
Africa	314

Smaller quantities were also sent to Russia, the Netherlands, France, Spain and the Canaries, the Isles of Guernsey, Jersey, Alderney, and Man, Portugal, the Azores, and Madeira, Turkey and Continental Greece, Denmark, Gibraltar, Prussia, Malta, Norway, the Ionian Islands, Sweden, and the Morea and Greek Islands.

As to the continental manufactures, Mr Jackson states, that in Prussia, Belgium, and France, a great many species of hardware trades are carried on, and several of them to a much greater extent than in Sheffield. Many are of recent origin, but others existed before there were similar manufactures in Sheffield. In repeated visits which he made to the continent, this witness found the hardware manufactures constantly improving. The branches that appeared to be making the greatest progress were the scissors, saw, edged tool, and steel manufactures; and the places in which these branches were carried on most successfully were the duchy of De Berg in Prussia, Remscheid, Solingen, and that neighbourhood, and different parts of France. "In France especially," says Mr. Jackson, "many large manufactories have sprung up of late years, in consequence of the encouragement given to them by government, and by anonymous societies with large capital, and they have been much protected in consequence of the prohibitory duties upon English manufactures." The operatives belonging to the French manufactories are described as very inferior to the operatives in England, in regard to both their comforts and their earnings. One of the greatest of the French manufactories is that at Molsheim, near Strasburg. "At this manufactory," says Mr. Jackson, "where they employ as many hands in the manufacture of saws almost as they employ in Sheffield, the wages of labour are as twelve to one; that is to say, we have to pay for a single article as much as the manufacturer at Molsheim pays for a dozen. These observations were made by myself at the time of my last journey, (in the autumn of 1830.) Being a practical man, I took more interest in ascertaining the relative situation of the operatives in the two countries. I will state, from the remarks I made, what I ascertained to be the usual terms of employment. A saw-grinder at Molsheim earns about 28 sous, or 1*s.* 2*d.* a day; he grinds and glazes six dozen billet webs, (that is a species of web of which large quantities are sent to America,) which makes the price 2½*d.* per dozen. The Sheffield price for the same work, not done in a superior manner, is 2*s.* 6*d.* per dozen." At this, which is the present rate of payment, the Sheffield workman would make from 15*s.* to 20*s.* per day. But wages were, some years ago, considerably higher: and "we have had workmen," says the witness, "that have earned 20*s.* on a Saturday morning before breakfast, when perhaps they had not worked the previous part of the week." This happened about 1810. A saw-maker at Molsheim, Mr. Jackson afterwards states, works in summer from five in the morning to seven in the evening; and in the winter from six in the morning to eight in the evening. The prices of provisions he found to be there as follows:—household bread 1*d.* per pound; white bread 1½*d.* per pound; beef 3*d.* per pound; potatoes 2*d.* per peck; beer 1*d.* per pint. "In the duchy of De Berg, in Prussia," he proceeds, "there is also a large manufactory of steel, saws, files, edged-tools, and cutlery; there are 800 saw manufacturers, 1000 file manufacturers, 3000 cutlers, 1000 sabre manufacturers, 1500 scissor manufacturers. A master saw manufacturer has generally three or four workmen who board and lodge in his house, and who receive, besides board and lodging, from 2*s.* to 2*s.* 6*d.* per week; without board and lodging, good workmen will obtain from 1*s.* 2*d.* to 1*s.* 3*d.* per day, and work from five in the morning till nine in the evening." These long hours, namely, from five in the morning till seven or nine in the evening, are stated to be general throughout the continent; and the men, besides, appeared to Mr. Jackson to work much harder during that time than they do in England. There is very little intemperance among them. The prices of provisions in the duchy of De Berg are, black bread, made of rye coarsely ground down, ½*d.* the English pound; white bread 1½*d*; and meat 3½*d.* It is here that the articles are manufactured which principally come into competition with English goods in America. They cannot on the continent make the circular saws, nor the hand saws, nor the back saws, nor long saws, as well as they can be made in England; but other kinds, including those which are chiefly in demand on the continent, and in the American market, they can make fully as well as we can. The principal continental market where the French come into competition with us is that of Belgium. The people of that country are supplied with certain kind of saws by the French manufacturers, and with other kinds by the English.

The finer descriptions of surgeons' instruments made at the manufactories of Paris, Mr. Jackson thinks inferior to those made in England, while the price is higher. "The reputation of English edged tools," he says, "of files and saws, steel and razors, is very great throughout France." English cutlery is occasionally smuggled into that country through Belgium. It is believed, however, that of late years this had not been done to any considerable extent. With the exception of a penknife or a razor, there is little or no English cutlery to be seen in private families in France. The shops of the Palais Royal exhibit what they call English goods, but there is reason to believe that most of them are manufactured in the country, and then impressed with the English marks, that they may bring a higher price. On the other hand, some of the finer articles of cutlery are occasionally brought from France to this country; for example, scissors, fitted with mother-of-pearl or ivory shanks, of which the workmanship is both cheaper and better than we can produce in England, although the blades are considered inferior.

As to the wages, and the comparative condition of the workmen in the two countries, Mr. Jackson states the following facts:—"The present price of provisions in France (in June 1833) is nearly the same as in England. A very intelligent French gentleman, who visited Sheffield last week, as the representative of a society just formed at Lyons, who are expecting to be large purchasers of foreign goods, gave me the price of provisions at Lyons and the neighbourhood at this moment; the price of bread, what is called *pain de menage*, is about 3 sous per pound; the price of meat from 10 to 12 sous. The cost of a house for a workman and his family—a house containing three rooms—would be from 5*l.* to 6*l.* a year, which is as nearly as possible the price at Sheffield. At Paris, the prices would be dearer." The wages in France vary from a franc and a half to three francs a day. In Sheffield, the operatives in the cutlery trade work eleven or twelve hours a day, and, in the different branches, were receiving in June last the following wages:—of the spring-knife cutlers, the blade forgers from 21*s.* to 31*s.* 6*d.* per week; the workboard hands (those who put the knives together) from 15*s.* to 25*s.*; the grinders from 30*s.* to 40*s.*:—of the table-knife cutlers, the forgers from 21*s.* to 35*s.*; the hafters from 18*s.* to 27*s*; the grinders from 27*s.* to 40*s.*:—of the razor makers, the strikers from 24*s.* to 26*s.*; the hafters from 18*s.* to 40*s.*, and the grinders from 18*s.* to 50*s.* These were the wages for a full week of six days; but there might then be from 200 to 300 operatives not having more than two or three days work a week: and, of the whole number of operatives, probably not more than half were in full employment. The number of hands actually employed in each of the principal staple trades of Sheffield, was as follows:—makers of table-knives and forks, 3689; of pen and pocket-knives, 2680; of razors, 754; of scissors, 600; of files, 1768; of saws, 563; of edged tools, 703; of stove-grate fenders, &c., 1530; of white metal articles, 643; and of silver-plated goods, 500; making a total of 13,430. There are, however, some other hardware manufactures carried on. The witness thinks that the workmen, at the present moment, owing to a variety of

causes, do not receive the same amount of money for their work which they did thirty years ago; but still he is of opinion that their comforts are pretty much the same, and that they never either lived or dressed better than at present. "From what I have seen," he says, "of the manufacturers of England, I believe the workmen in Sheffield are better clothed and better fed, and live in better houses than the workmen in any other part of the country, or in any other part of the world." As to the French workmen, he describes them as miserable beyond description, as compared with the English. In certain branches of the business, too, which have been only recently introduced into France, he states that an English workman will produce more in a given space of time than a French workman. A good many British artisans have gone over to be employed in the continental manufactories, but most of them have very soon returned home. "In starting a fresh manufactory," says Mr. Jackson, "it is universally the practice, particularly in the iron trade, to employ a few English workmen; but, after their own workmen have obtained the same skill and knowledge which the English workman possesses—the prices of English workmen being much higher than that of native workmen—it is of course the interest of the manufacturer either to expect the English workman to come down to the prices paid to the native workman, or to let him return to his own country. I am acquainted with Mr. Cockerill, a large manufacturer at Liege and Seraing, and when they commenced their manufactory, they employed a great number of English workmen, but I believe most of them have now returned to England. He had to pay for English workmen 7*s.* and 8*s.* a day, and his native workmen are employed at one and two francs a day."

Mr. Milner's evidence, although it does not perhaps contain any facts irreconcileable with the statements of Mr. Jackson, yet presents a more gloomy picture of the general condition of the workmen than that drawn by the latter gentleman. This witness says, that about 1817 a decline of prices began to take place, which has been going on ever since, and that from 1818 the circumstances of the workmen began to be sensibly operated upon. Employment has since been so irregular, that there never has been a sufficiency of it for more than a year or two at a time, and there has frequently been not half work for the same number of hands. The destitution and misery of many of them on these occasions, are described as being very great. Mr. Milner conceives, that upon the whole, the workmen now consume a great deal less than they did fifteen or sixteen years ago, both of such articles as tea, sugar, and coffee, and also of butcher's meat. Their dress he likewise thinks is much inferior to what it was formerly. It is evident, however, that in judging of matters of this kind, people almost always proceed in great part upon mere general impressions, rather than upon a careful induction and sufficient examination of facts. There can be no doubt that wages have fallen considerably since the termination of the war, in the cutlery, as in all other trades; but it is by no means made out that the prices of provisions, and of the other necessaries and comforts of life, have not declined in at least an equal degree. It is also beyond all question, that the market for the hardware manufactures of this country has of late years been greatly extended; and the quantity of employment upon the whole, therefore, must be much greater than it formerly was. We should think that this augmentation of the demand has fully kept pace even with the increase in the numbers of the workmen. Owing to circumstances, however, some of which at least are altogether beyond legislative control, the trade may not for the last twenty years have been so steady a one as it was for some time before; and, whether this may have been the case or not, of course, when a stagnation does take place, the number of sufferers is now greater, and the sum of misery produced more frightful, than when the entire number of the persons connected with the business was only half, or three-fourths of what it now is. A fact stated by Mr. Jackson, should go a great way to prove that Mr. Milner's comparison of present with former times, is to a great extent delusive. The poor rates of the parish of Sheffield, it seems, in 1810 were 38,000*l.*, and now they do not amount to 20,000*l.*; a reduction which, even after making allowance for the rise in the value of money, cannot be regarded as less than fifteen or sixteen per cent. If we take it, as we ought to do, in connexion with the increase of the population (which since 1811, has risen from 53,000 to 92,000), it is a real reduction of between fifty and sixty per cent. In other words, the pauperism of Sheffield is not now half as great as it was in 1810. Yet, at that time wages were higher than they have ever been since.

Of late years machinery has been introduced to some extent into the cutlery business in England, which has considerably reduced the cost of production in the case of certain articles. About ten or a dozen years ago, for instance, as Mr. Jackson states, to manufacture a three-square file, it was necessary to forge it out of a square bar, but now, by the aid of machinery, the bar of steel is rolled three square. The witness found no rolling mills for this purpose at the manufactories in the Duchy of De Berg. Of the different branches of the trade as carried on in Sheffield, the manufacture of scissors and that of plated goods appear to be in the greatest state of depression; or rather, they are the only branches that are depressed from any cause except the temporary diminution of the foreign demand. In the scissor trade, according to Mr. Milner, there were at one time between 300 and 400 forgers; and at present, there are only about 170. To make up, however, for the falling off in the manufacture of wrought steel scissors, there are now very large quantities of cast scissors manufactured in Sheffield. The latter is a very inferior article, but is so difficult to distinguish from the former by the eye, that cast scissors are often imposed upon the public for those made of wrought steel. Mr. Milner is of opinion, and he says such is almost the universal impression, that the trade of Sheffield has been very much injured by the loss of reputation arising from this substitution of a spurious for a genuine article. Meetings have been held to devise some means of remedying the evil: and it has been proposed to incorporate the manufacturers of wrought steel articles, and to allow them to stamp their goods with some common mark, which should be effectually protected; but no measures have as yet been taken to carry that plan into effect. Previous to 1814, it seems, no person could manufacture without taking out what is called an incorporated mark: but since then, in consequence, as we understand the witness, of some change in the law, any person is allowed to use the mark of the corporation of cutlers who chooses, and to place it on any description of goods he may find it convenient to manufacture. We may here mention, by-the-bye, that of what is called town-trade, or London cutlery, there is, according to Mr Jackson, very little really made in London. Notwithstanding the law to the contrary, he conceives it is not unusual even for the word London to be stamped upon many articles made at Sheffield. There may be some very fine and expensive cutlery made in the metropolis, but the greater part even of that description of articles must come from Sheffield, from the greater cheapness of labour there. The witness mentions another fact connected with this matter. "Nearly all the Sheffield manufacturers," he says, "are obliged to strike the name of their customers upon their wares, and that is one reason perhaps why no cutlery manufacturers in Sheffield can keep stocks, as they are uncertain who their customers may be; and, as articles of hardware cannot be marked well after they are hardened, they are deterred from having a quantity made on hand till they have orders, to see what impression they are to bear." There appears to be no good reason why this inconvenient custom should be continued. As for plated goods, Mr. Jackson is of opinion, that people do not now buy as many articles of that description as they used to do; but the principal cause of the falling off in this branch of business at Sheffield appears to be, that it has partly migrated to Birmingham, where wages in some departments of it are only one half what they are at Sheffield. On the other hand, the file trade has nearly left Birmingham, in consequence of Sheffield having superior advantages for the manufacture of that article. Upon the whole, Mr. Jackson admits, what, indeed, must be considered quite indisputable, that cutlery is now consumed in this country to as great an extent as it ever was; but the goods used, he says, are lower priced goods, and he seems to intend that we should understand goods of an inferior description. That more of such goods are now manufactured than formerly, we believe; but we believe, too, that the consumption of the better descriptions of goods has also increased, and that they, as well as the others, although no doubt at lower prices than formerly, are manufactured in greater quantities than ever.

That the hardware trade is upon the whole, in a tolerably prosperous state, is proved by the admissions of the wit-

nesses. The fall of prices in Sheffield goods since the peace, is asserted by Mr. Jackson, to have been greater than from thirty to forty per cent.; but he also says, "If we may judge from the apparent circumstances of the manufacturers, there does not appear to be much more distress than there was formerly." It is acknowledged also, that the town has probably increased more than any other in England, both in population, and in the number of its manufacturing establishments. When asked if the manufacturers and merchants have been doing as well of late years as during the war, this witness answers, "We have had many merchants who have obtained very considerable property, though business is done at low profits." The trade for the last eighteen or twenty years has, it is stated, been carried on nearly all on orders; and, indeed, with the exception of a few remarkable years, there appears never to have been much of what is called speculation among the Sheffield manufacturers. It is said, accordingly, to have been ascertained, that there are fewer failures among them in proportion to their number, than among the manufacturers or merchants of any other part of England. Periods of depression in the hardware trade, indeed, appear to have of late years occurred occasionally, though not almost every second or third year, as Mr. Jackson loosely states. There was a great depression in 1816, and again in 1822; but since then, although prices have been generally lower than they were previously to 1827, it is not pretended that there has been any stagnation till that occasioned by the late interruption of the usual demand from the United States. Mr. Jackson, when asked if he would recommend a friend with capital in his pocket, and competent knowledge and industry, to embark in the Sheffield trade at present, replies, that the competition is so great, that a person must have a perfect knowledge of the business in order to succeed in it; but when farther asked if, should his friend have good capital in his pocket, he would rather recommend him to keep it there; his answer is, "I should think that most of the manufacturers fancy that they can employ their capital better in trade than by keeping it in their pocket." A manufacturer, he states also, who wishes to retire from business [illegible] withdraw his capital. That is to say, the trade is in so fair a state, that more capital flows freely into it to replace whatever is taken out. Many of the branches of the hardware manufacture, however, may be carried on without much capital. There are some manufactories in Sheffield that have cost 30,000*l.*, or 40,000*l.**; but since 1817, according to Mr. Milner, a change has to a considerable extent taken place in the mode of conducting the trade, many persons having then commenced manufacturing without any capital, and their number having gone on increasing ever since, "so that now," as the witness assures us, "by far the greater portion of the cutlery business, and especially the spring-knife business, is conducted by men of this description."

Two witnesses connected with the business of brass-founding were examined by the committee; Mr. John Dixon, of Wolverhampton, and Mr. Thomas Clutton Salt, of Birmingham. Their evidence extends over nearly thirty folio pages; and we can only afford to notice a few of the more important among the facts to which it refers. Indeed, by far the greater part of it is perfectly worthless for any information that is to be found in it, being made up merely of strong expressions of belief and opinion, in support of which no well ascertained facts are adduced. Both witnesses draw the picture of the existing state of the trade in the darkest colours. Both masters and workmen, according to their representations, are suffering to an extent which scarcely any former period has witnessed. Their favourite era of comparison, or rather of contrast, with the present times, we observe, is the years 1824 and 1825. Mr. Salt states, that a capital of 10,000*l.* then easily yielded him an annual profit of 3000*l.* We submit that such returns as this could not be expected to continue. The truth accordingly appears to us clearly to be, that the depression under which the greater manufacturers are now suffering, is merely the natural consequence and penalty of the extravagant trading of that former period. It is impossible to believe, that the consumption of the articles of their manufacture has diminished, or the demand for them really fallen off within the last twenty years. No man can open his eyes and look around him without being convinced that this is not the case. We may mention merely lamps for domestic use, and gas burners and other fittings, as articles made wholly or partly of brass which must have created an almost entirely new demand within the period that has been mentioned. The witnesses admit that they cannot point out any instance of the least importance, in which another material has of late years been generally substituted for brass. It is scarcely possible, therefore, to doubt that the manufacture of articles of brass is really now much more extensive than it was twenty years ago. It may be, however, that the quantity of goods annually made since 1825, has not since reached the amount to which it was carried in that and the preceding year. The glut of the market then produced, must in this, as well as in other businesses, have left a pressure which would continue to be felt for years. Accordingly, in order to meet this state of things, the aim of the manufacturer is now, to reduce his stock as much as possible. Mr. Salt states, that he used to keep an average 6000*l.* stock, but that now he never allows it to be above 1500*l.* The efforts made with this object must, of course, have tended still farther to reduce the annual production below what it was before 1825. But the change in the mode of managing the trade, is in every way a beneficial one to the manufacturer. He is, in the first place, pursuing by far the best course for speedily relieving the market, and restoring the fair and full effect of the natural demand. And, secondly, while doing this, he is also unlocking a large amount of capital, and by that means, carrying on his manufacture at much less cost than formerly. The prosperity of 1824 and 1825, however, when the brass-founders were making an annual profit of thirty per cent. upon their invested capital, has likewise had the effect of attracting many new adventurers into the trade, and, by thus over-crowding it, opposed an additional difficulty in the way of its restoration to a healthy state. Both the witnesses speak of the numbers of persons, formerly journeymen, who of late years have set up as manufacturers, and who, having little or no capital, and employing few hands, are either able, or are compelled by their necessities, to sell their goods at a lower price than that for which they can be produced by the larger establishments. Whatever is unsound, however, in this state of things, must also soon cure itself and pass away.

The fall in the prices of brass-foundery articles in the last fifteen years is, according to Mr. Dixon—who manufactures chiefly handles and the articles for plumbers, and not the finer descriptions of goods—more than 50 per cent. The nominal prices are indeed the same as they have been for twenty years: but, according to the practice of the trade, the sales are made always subject to certain discounts: and the discount which was formerly 20 per cent. is now 50. This fall however will not, as Mr. Dixon reckons, make a difference of 50 per cent. He says, correctly enough, "If we take 20 per cent. from 20*s.*, it leaves 16*s.*; but if we take 50 per cent. it leaves us only 10*s.*; consequently we have but 10*s.* instead of 16*s.*" But it is not true that this, as he adds, makes more than 50 per cent. difference to the manufacturer. Taking the fact to be as stated, the manufacturer, where he formerly received 16*s.*, now receives 10*s.*, which implies only a fall of prices to the extent of not quite 38 per cent. The high prices referred to in this calculation are those that were obtained from 1819 to 1826.

To compensate this fall of prices, however, there has been a fall both of wages and of the price of the new materials. Of the latter, the principal is copper, which used to cost 112*l.* per ton, and may now be purchased for 83*l.* From this circumstance alone then, we have a saving in the cost of production to the extent of 26 per cent. Lead also, another of the materials, which has been as high as 24*l.*, is now only 14*l.* per ton; and spelter, which was 27*l.*, (a doubt is expressed if it was not a good deal higher,) now costs only 14*l.* or 15*l.* Mr. Salt complains of it as a disadvantage, that, whereas formerly it was the practice for the manufacturers in Birmingham to make all their purchases the first twelvemonth without paying anything, and only to clear off the debt in the course of the second twelvemonth, they are now obliged to pay down cash for all the metal they require. But the change, while it has certainly introduced a wholesomer state of trade upon the whole, is really, in its direct and immediate operation, most beneficial to the manufacturer, who, for the long credit which he formerly enjoyed, used to pay no less than 1*l.* per month on the ton; that is to say, if he purchased a ton of copper at 112*l.*, and did not pay the money for a year after, it cost him actually 124*l.*

* Jackson, 2906.

At present he gives his banker's bill for the metal, with only such a difference as may cover the discount.

The fall of wages since 1819 or 1820 is stated by Mr. Dixon to have been from 5 to 20 per cent. Wages now range from about 15*s.* to 25*s.* per week, and the average may be about 20*s.* Till 1825 it was about 27*s.* or 28*s.* This, by-the-bye, would imply a fall of nearer 30 than 20 per cent. Afterwards the witness states, that to some of his men he still gives 35*s.* per week. They would have had two guineas before 1825. All this, however, is merely a calculation of what the men generally earn, or what they may earn; for they actually work by the job or piece, and not for weekly wages. The manufactory is opened at six in the morning, and they are allowed to work during what part of the day they please, till eight at night, when it is cleared, and the doors locked. Mr. Salt however states, that though he continues to pay the men who have been a long time with him from 24*s.* to 30*s.* a week, he gives no more than from 8*s.* to 14*s.* to his new hands; and he says he is sure he could in the course of a day get 1000 men, all skilful artizans, to work for him at 6*s.* a week. Boys and women are now employed to do many parts of the work which the men used to execute. At Wolverhampton, also, it is stated, there are a vast number of females employed in the tin and japan trade, and in the screw trade. No machinery whatever has been introduced in the fabrication of such articles as those which Mr. Dixon furnishes; and that used in the department of the trade with which Mr. Salt is connected—the manufacture of lamps and ornamental brass-foundery in general—has not of late years been materially improved. It is well known, however, that owing to the introduction of steam as a moving-power, even the old machinery now performs its functions much more economically than formerly. A remarkable instance of this is mentioned by Mr. Babbage in his work on the Economy of Machinery and Manufactures. "Twenty years since a brass knob for the locks of doors was made at Birmingham; the price at that time being 13*s.* 4*d.* per dozen. The same article is now manufactured, having the same weight of metal, and an equal, or, in fact, a slightly superior finish, at 1*s.* 9½*d.* per dozen. One circumstance which has produced this economy in the manufacture is, that the lathe on which these knobs are finished is now turned by a steam-engine; so that the workman, relieved from that labour, can make them twenty times as fast as he did formerly."

PUBLIC PETITIONS.

THE following is an abstract of five reports, of the Committee for reporting on public petitions, which have been issued since our last publication. They are numbered from 3 to 7, both inclusive, and embrace the period from 17th February to 11th March. It will be recollected that, except in the last item, our abstract gives the total amount of petitions and signatures since the commencement of the session.

	No. of Petitions.	No. of Sigs.

ABSTRACTS OF PARLIAMENTARY PAPERS.

Naval Receipt and Expenditure.—The Lords Commissioners of the Admiralty have laid before the House of Commons the first annual report of the receipt and expenditure in this department, for the year ending March 31st, 1833. The receipts, including the parliamentary grant of 4,878,634*l.*, amounted to 5,219,881*l.*; and the sums expended or appropriated amounted to 4,795,656*l.*; leaving an unappropriated balance of 424,225*l.* The following are among the items of expenditure:—Wages to seamen and marines 818,208*l.*; wages to officers, ship-keepers and others on board vessels in ordinary, 72,383*l.*; admiralty, navy pay, and victualling offices, 135,676*l.*; scientific branch 21,655*l.*; his Majesty's yards at home, 72,700*l.*; abroad, 18,259*l.*; wages to artificers at home and abroad, 473,053*l.*; timber and other materials for ships, docks, &c., 485,741*l.*; new works and improvements, 44,638*l.*; half pay to officers of the navy and marines, 865,143*l.*; pensions, &c. military, 274,613*l.*; Greenwich out-pensions, 263,667*l.*; superannuations and pensions (civil), 196,939*l.*; sea victuals, 317,261*l.*; victualling yards at home and abroad, 58,156*l.*; medical establishments, 25,711*l.*; hospital provisions and stores, 20,681*l.*; provisions, &c., for the ordinary, 32,144*l.*, for the yard service afloat, 7,039*l.*, for the army and convict services, 152,812*l.*; marine service, 26,171*l.*; new works at Cremill, 8,692*l.* Parliament voted 60,000*l.* for the completion of these works, of which sum 57,292*l.* remains unexpended but appropriated.

Expedition against Algiers in 1816.—The following is the account of the proportions in which the Royal grant of 100,000*l.* was distributed among the officers and crews engaged in this expedition;—Commander-in-chief, 7,480*l.*; rear admiral, 3,740*l.*; captains and military officers of equal rank, 1,068*l.* 11*s.*; lieutenants, masters, &c. 94*l.* 5*s.*; warrant officers, surgeons, chaplains, &c., 61*l.* 12*s.*; mates, midshipmen, &c. 15*l.*; second rank of petty officers, corporals, &c. 6*l.*; seamen and marines, 4*l.* 10*s.*; landsmen, 3*l.*; boys, 1*l.* 10*s.*

Hull Port.—Abstract of an account of the number of vessels, with the amount of their tonnage, entered inwards at the port of Hull, from all parts of the world, during the year ended 5th of January, 1834; distinguishing the different nations to which they belonged.

	Ships.	Tonnage.
United Kingdom	775	142,301
Russia	17	3,910
Sweden	52	6,599
Norway	73	7,012
Denmark	220	16,592
Prussia	72	14,240
Germany	141	10,957
Holland	21	1,511
Belgium	8	653
France	4	279
Italian States	2	650
Total	1,365	204,704

Malt.—The quantity of malt made in England, in the year ending October 10th, 1833, was 4,242,279 quarters, producing a duty of 4,383,688*l.*; Scotland, 530,365 qrs., duty 523,539*l.*; Ireland, 247,954 qrs., duty 246,347*l.*; total in the United Kingdom, 5,020,599 qrs., duty 5,153,574*l.* The duty is 2*s.* 7*d.* per bushel on malt from barley, and 2*s.* per bushel on malt from bere or bigg.

Brandy, Hollands and Tobacco.—An account of the respective duties on brandy, hollands, and tobacco, in the years 1831, 1832, and 1833. Brandy, 1831, 1,388,167*l.*; 1832, 1,801,401*l.*; 1833, 1,526,546*l.*:—Geneva, 1831, 26,894*l.*; 1832, 25,091*l.*; 1833, 23,594*l.*:—Tobacco, 1831, 2,964,592*l.*; 1832, 3,080,599*l.*; 1833, 3,140,636*l.*

Court of Chancery Business, 1831—1833.—Abstract of an account of the causes, re-hearings, appeals, &c., heard and decided in the Chancery Courts, during the three years ending hilary term 1833, inclusive.

	Causes	Rehearings	Appeals	Pleas	Demurrers	Exceptions	Further Directions	Cause Petitions	Special motions which have been contested
By the Lord Chancellor	32	5	181	1	6	79	3	284	346
By the Vice Chancellor	931	11	0	42	121	136	264	3632	1830
By the Master of the Rolls	1790	23	0	0	0	57	1188	4939	0
	2753	39	181	43	127	272	1455	8855	2184

Committals in London, Westminster, and Southwark, in 1833.—Borough Compter, Southwark, 2052; Bridewell, 642; Giltspur-street Prison and House of Correction, 5344; Newgate, 2161; Tothill-fields Bridewell, 3008; total, 13,207. This return was ordered with a particular view to ascertain the number of persons committed for want of sureties on charges not being for trial: the number of such persons amounted to 1243, of whom 536 were discharged within a week; only 3 were detained above 3 months; and none 4 months.

Convict Hulk Establishment.—Abstract of an account shewing the expense of the Convict Hulk Establishment in England, the average number of convicts, with the number of days' labour performed by such convicts, and the amount of their earnings, from the 1st of July to the 31st of December, 1833, as compared with the preceding half-year. Number of convicts, 3081, being 898 less than in the preceding half-year; expenses, 27,058*l.*, being 5,200*l.* less; earnings of convicts, 17,336*l.*, being 6,572*l.* less. The number of days' labour performed varies at different stations from 154 to 177, and varied in the preceding half-year from 152 to 154; artificers earn 1*s.* 6*d.* a day, and labourers 1*s.* There is a separate account for the three convict hulks at Bermuda, in the half-year from the 1st of January to the 30th of June, 1833:—Convicts, 890; expense, 9,933*l.*; earnings, 12,832*l.*; days' labour performed, 146; both artificers and labourers earn 2*s.* a day. Transportation to the Australian Colonies, in greater numbers than hitherto, is in course of operation, with a view to the reduction of the convict establishment at home. This accounts for the diminution which the statement exhibits.

British Museum.—The Receipts of this institution during the year 1833 have amounted to 23,220*l.*, including the Parliamentary grant of 16,844*l.*; the expenses have been 19,484*l.*; leaving in hand a surplus of 3,736*l.* Among the receipts is 462*l.* for the sale of Museum publications, being 262*l.* more than the estimate. During the year 2359*l.* was expended in the purchase of books and manuscripts, including 425*l.* for the price and framing of Egyptian papyri; 1,840*l.* for antiquities and coins, with cabinets; and 1,026*l.*, for purchases in natural history. The estimated expenditure for the year 1834, will require a Parliamentary grant of 17,017*l.*, the institution being provided with funds to cover the difference between that sum and the total estimated expenditure of 22,777*l.*

The number of persons admitted to view the British Museum has been more than doubled since 1831; it was in that year 99,912; in 1832, 147,896; and in 1833, 210,495. The number of visits to the reading rooms, for the purpose of study or research, was 46,800 in 1832, and 58,800 in 1833. The number of visits, by artists and students, to the galleries of sculpture, for the purpose of study, was 4,740 in 1832, and 4,490 in 1833. The number of visits to the print-room was about 4,400 in 1832, and about 2,900 in 1833.

Record Commission.—The amount of the sums of money received by the Commissioners of Public Records from the date of the present commission, being the 12th of March, 1831, to the 1st of August, 1833, was 21,522*l.*; of which sum 20,500*l.* was derived from parliamentary grants, and the remainder from the sale of books. The disbursements of the Commission, during the same period, amounted to 21,592*l.* Since the date of the Commission, in 1831, 33 principal works or parts of works (making 38 vols. in all), have been published or are in progress under its direction. The publications are presented to the principal public libraries in this country and on the continent; and occasionally they have been given to persons engaged in historical and antiquarian pursuits. Complete sets have been supplied to Dr. Southey, and Dr. Lingard; and particular works have been given to Mr. Edward Baines, Mr. Dance, Sir Henry Ellis, Mr. George Baker, &c. The total value of the works, so given to public libraries and to individuals, exceeds the sum of 35,000*l.* A smaller number of copies is now printed, and it is not intended to send the works to all the libraries which have hitherto received them.

Short-stage Coaches, Omnibuses, &c., in London.—Abstract of a statement of the number of short-stage coaches, omnibuses, and flys standing in and passing through the city of London, and the number of journeys respectively performed by them.

Coaches, 293, journeys, 790: omnibuses, 252; journeys, 770: omnibuses passing from east to west, journeys, 246: flys, 8; journeys, 30. Total of vehicles, 533; total of journeys, 1836.

Note.—The average length of the omnibuses, from the horse's head to the end of the steps, is 21 feet 6 inches. The largest size is 24 feet.

The number of empty cabriolets going up and down between the west end of Cheapside and the Bank, on the 28th, 29th, and 30th of January, 1834, was, on the 28th, 957; on the 29th, 959; on the 30th, 1,069; total, 2,985.

Abstract of the Population Returns for Ireland in 1833.—The following are the results:—English statute acres, 17,183,763; houses inhabited, 1,249,816; building, 15,308; uninhabited, 40,654; total families, 1,385,066; families chiefly employed in agriculture, 884,339; chiefly employed in trade, manufactures, and handicraft, 249,359; families not comprised in these two classes, 251,368; males, 3,774,880; females, 3,972,521; total number of persons, 7,767,401.

Bread.—An account of the average price of the quartern loaf in the city of London, from the year 1780 to 1815:—

Year.	Wheaten.	Household.
1781	7½*l.*	5½*d.*
1782	7¾	5¾
1783	7¾	5¾
1784	7¾	5¼

HOUSE OF COMMONS.

New Members elected since last Session.

Place.	Member elected	In the room of
Ayr, &c. (dis of burghs)	Lord D Stuart	T. F. Kennedy, esq. res.
Berwick (shire)	Sir H. P. H Campbell, bt.	C. Marjoribanks, esq. dec.
Bute (shire)	Rt. Hon. Sir W Rae	C. Stuart, esq. dec.
Devizes	Sir P. C. H Durham	M. Gore, esq res.
Dungarvon	E. Jacob, esq.	Hon. G. Lamb, dec.
Dudley	T. Hawkes, esq.	Sir J. Campbell, Att.-Genl.
Huddersfield	J. Blackburne, esq.	L. Fenton, esq. dec.
Kendal	J. Barham, esq.	James Brougham, esq. do.
Leeds	E. Baines, esq.	T. B. Macauley, esq res.
Morpeth	Hon. E. G. Howard	Hon. F. Howard, dec.
Paisley	Sir D. Sandford	Sir J. Maxwell, res.
Somerset (east)	W. Miles, esq.	W. P. Brigstock, esq. dec.
Totness	Lord Seymour	J. Cornish, esq. res.
Thirsk	S. Crompton, esq.	Sir R. Frankland, do.
York (city)	Hon. T. Dundas	S. A. Bayntun, esq dec.

The boroughs of Carrickfergus and Hertford are vacant.

STATISTICS, TRADE, &c.

Produce of Taxes in France.—The following table will show the product of the indirect taxes and revenues for 1833 compared with that of the preceding year:—

Taxes and Revenues.	Produce of Taxes, &c.		Difference in 1833.	
	For 1832.	For 1833.	Increase.	Decrease.
	Francs.	Francs.	Francs.	Francs.
Register, Stamp, and Mortgage Duties	191,999,000	194,047,000	2,048,000	
Custom, Navigation, &c. Duties	105,510,000	106,236,000	726,000	—
Consumption Duties on Salt collected on the Coast	53,846,000	54,911,000	1,065,000	
Liquor, Wine, &c. Duties	62,719,000	68,246,000	5,527,000	—
Consumption Duty on Salt collected in the Interior	6,368,000	6,757,000	389,000	—
Divers Indirect Taxes (Public Vehicles, Navigation, &c.)	22,494,000	25 039,000	2,545,000	—
Product of the Sale of Tobacco and Snuff ..	67,553,000	69,628,000	2,075,000	—
Product of the Sale of Gunpowder	3,356,000	3,561,000	205,000	—
Postage and Duty of 5 per Cent. on remittances	31,103,000	32,032,000	929,000	—
Postage of Rural Service	1,437,000	1,503,000	66,000	—
Product of Mails and Packets	1,600,000	1,829,000	229,000	—
Lottery	11,109,000	10,140,000	—	969,000
	559,094,000	573,929,000	15,804,000	969,000

Increase in 1833 ..... 14,835,000f.

The above increase, divided into quarters, is as follows:—First quarter, 18,757,000f.; second, 16,335,000f; third, 12,395,000f.; last, 9,419,000f. Compared with 1831 there is an increase in 1833 of 46,906,000f.

Public Debt of France on the 1st of January, 1833.

	Francs.
Funded Debt, 5 per cent. Rentes . .	178,896,502
4½ ditto . .	1,027,696
4 ditto . .	3,125,210
3 ditto . .	34,555,274
Life Annuities	6,137,357
Pensions	56,736,874
	280,478,913

Guarantees due by the Treasury.—Capital, 229,789,701f.
Interest, 9,603,084f.
Unfunded Debt on the 1st of January, 1833. Capital, 370,504,962f.
The old public debt on the 1st of August, 1793, was estimated to amount to 127,803,000
The increase from 1793 to the year 8 of the Republic, was . . 46,913,300

	Francs
The whole amount of rentes would appear therefore to have been	174,716,000
The law of the 24th Frimaire, in the year 6, having ordered the reduction of two-thirds of the debt, and the consolidation of the remaining one-third, there should have been in Consolidated Rentes	58,716,000
But the stock having been received in payment for the sale of the national domains, and the rentes of emigrants and ecclesiastical communities having been confiscated and cancelled, the Consolidated Rentes only amounted to	40,216,000
The increase from the year 8 to 1814 amounted to	23,091,637
Total of the 5 per Cent. Consolidated Rentes, which formed the national debt on the 1st of April, 1814	63,307,637

French Civil List.—The following is a statement of the French sovereign's yearly items of expenditure, as given lately in a French paper:—

	£.
Personal Expenses	4,000
Petty Disbursements	12,000
Cabinet Expenses	2,400
Library and Subscriptions to orks . . .	10,000
Personal and Benefactions	40,000
Aides-de-Camp	14,400
Expenses of the Chamber	9,200
Closet, Chapel, and Salaries	1,600
Music, Boxes at the Theatre, and Benefits . .	12,000
Household Wages	26,000
Dresses and Liveries	8,000
Linen and Washing	4,000
Fuel and Lighting	24,800
Cellar	7,200
Stables and Stud (300 Horses)	43,000
Administration of the Palace	19,200
Kitchen and Kitchen expenses	30,000
Crown Records	1,100
Treasury, Jewels, &c.	12,800
Superannuations	34,400
Aids and pensions	60,000
Personal Effects	48,000
Sèvres Porcelain Manufactory	8,940
Gobelin Tapestries	11,520
Beauvais Woollen Manufactory	3,120
Fine Arts and Collections (grants) . . .	18,000
Ditto (purchases) . .	20,000
Mint and Medals	20,400
Forests and Domains	44,000
Buildings	122,120
Sanitory Establishment	3,200
Travelling Expenses	40,000
Banquets, and other expenses on public occasions .	16,000
Presents	6,000
Reserved Funds	8,000
Total Amount	£745,000

Bankruptcy Analysis.

From December 31, 1833, to March 21, 1834.

Auctioneer, 1. Bakers, 3. Brewers, 6. Bricklayer, 1. Builders 4. Brokers (1 Bill, 1 General, 2 Insurance, 1 Ship, 1 Stock,) 6, Cabinet Maker, 1. Cabriolet Proprietors, 2. Calico Printers, 2. Wine Merchants, 3. Total, 269.

POLITICAL RETROSPECT FOR MARCH, 1834.

GREAT BRITAIN.

In our last Retrospect we carried down the history of parliamentary proceedings to Saturday the 22d of February, on which day the two Houses adjourned to Tuesday the 25th, the intervening Monday being her Majesty's birth-day. The discussions that have since taken place have been unusually numerous as well as interesting.

On the evening of the 25th Lord John Russell submitted to the House of Commons the promised measure of the government for the relief of the Dissenters, in regard to what has long been one of the grievances of which they have most loudly and most justly complained—the manner in which they are affected by the existing marriage-law. We have explained the ministerial proposition at length in another place. Several members addressed the House after Lord John Russell had made his statement, but scarcely any of them expressed a very decided opinion as to the proposed measure, with the exception of Dr. Lushington, who highly approved of it, and denied that it was objectionable,

either for its complexity or on any other account, and Mr. Faithful, who, on the contrary, denounced it as too contemptible to deserve the acknowledgments of the Dissenters. The Dissenters in general, if we may judge from the speeches made, and the resolutions passed, at a considerable number of public meetings, appear to share the feelings expressed by Mr. Faithful, though we are not able to state exactly the plan which they would substitute for that of the government. In the mean time, however, although the bill which Lord John Russell obtained leave to bring in, after having been read a first time and printed, stands for the second reading on the 28th of April, ministers have announced that it will not be pressed unless the portion of the community for whose relief it was intended should change the view they have taken of it. No promise has been given that any other proposition on the subject will be made by the government.

In the latter part of this evening Mr. O'Dwyer moved a resolution of censure on the alleged exclusion of Roman Catholics from the jury at the late trial of Mr. Barrett, the editor of the 'Pilot' Dublin newspaper. The motion gave rise to a short debate, which was however enlivened by even a keener encounter than usual between Mr. O'Connell and Mr. Stanley. It was shown that the jury had really been selected almost entirely by Mr. Barrett's own attorney, and without either interference or opposition on the part of the government. Of 207 names 159 had been objected to on the part of the prisoner, and not one on that of the crown; and of the remaining 48 the crown solicitor had only struck off four. When it became apparent from this explanation that there was no chance of the original motion being carried, or even that it would be supported by any considerable minority, Mr. Fergus O'Connor moved, as an amendment, that a committee of inquiry into the circumstances should be appointed. This proposition, however, was also rejected, only 28 members voting for, and 132 against it. Lord Althorp this evening intimated that a bill should immediately be brought in to repeal the extraordinary clause in the act 55 Geo. III. chap. 80, by which it appeared that the commissioners of stamps in Ireland were prohibited from supplying stamps to any editor or proprietor of a newspaper who had ever been convicted of a seditious libel.

Wednesday was occupied in the House of Commons with the consideration of the two election bills, respecting the boroughs of Warwick and Liverpool. The second reading of the first, which enacts that Leamington shall be joined with Warwick in the exercise of the elective franchise, although opposed by Mr. Halcomb and other members, was carried without a division. The bill with regard to Liverpool, which proposes to disfranchise the freemen of that borough, was also carried through the same stage by a majority of 190 to 38. Both bills have since passed through the Commons, and have been read for the first time in the House of Lords—that relating to Warwick on the 13th of March, and that relating to Liverpool on the 21st. In the mean time Lord Grey has taken occasion to state that the government will not, as such, come forward to take the management of these bills; and his lordship was also understood to intimate that the votes of himself and his colleagues must be principally determined by the evidence brought before them. These declarations have been made the subject of a great deal of remark by the friends of the measures to which they refer; and they are unquestionably to be regarded as of ominous import in regard to the success of the different disfranchising bills. The thinking part of the public, however, will not, we apprehend, regret that the legislature should be driven to the adoption of some fairer and more satisfactory mode of punishing, or rather preventing, corruption in electors, than this clumsy process of wholesale disfranchisement. It is objectionable on many accounts; but there is one ground on which it has always appeared to us to be wholly indefensible. Towns, and other communities, of a certain extent, must be represented in the legislature. They have an indefeasible claim to such representation, if not on their own account, on that of the public in general. Take, for instance, the case of Liverpool. The House of Commons would be imperfect if that great town were to be disfranchised. Yet even such an absurdity as this might very possibly be the consequence of the rigid and uniform application of the principle upon which the bills to which we now refer are founded. Nay, the very thing was actually proposed when the conduct of the Liverpool electors was first brought before the legislature. The present measure goes only to take away the votes of the freemen; but, before the passing of the Reform Act, the freemen were the only voters; and parliament was at that time seriously called upon to disfranchise the place altogether. Indeed, no other proposition could have been decently made in the circumstances, according to the rule and the precedents which those who took up the case professed to go by. And there is even now before Parliament, a bill wholly disfranchising the borough of Stafford, on account of the delinquency of a certain portion of the electors. We say that the town of Stafford ought to send members to the House of Commons, and that the acts of certain individuals at present residing in that town have nothing to do with the question. Let these persons be punished if they deserve it. But what justice or what common sense is there in enacting that, in consequence of what they have done, a town containing 7000 inhabitants shall remain to all future time without any representation in the national legislature? If it contained a population of 70,000 the enormity might be greater in degree indeed, but in kind it would be the very same. A hundred, or even twenty years hence, what will it seem to be but the most monstrous absurdity, that Stafford should continue on this account to be without any representative, while there are in England and Wales, at least between seventy and eighty other constituencies not so large sending, some one member and others two? The bill for the disfranchisement of Stafford, and also another for extending the limits of the borough of Hertford, have passed through the House of Commons, and have been read a first time in the Lords.

On the 27th of February, in the House of Commons, Sir William Ingilby moved for a committee of the whole House to take into consideration the propriety of partially or totally repealing the duty on malt. The address of the honourable baronet was more facetious than convincing, and he lost his motion by a majority of 271 against 170. As soon as this division was announced Lord Althorp gave notice that he would, that day week, move for leave to bring in a bill to repeal the house tax. The bill has since been brought in, and, although the second reading of it has been deferred till after the Easter holidays, ministers have distinctly stated that they have no intention of abandoning the measure. This evening, a select committee was appointed on the motion of Mr. Sinclair, to consider the subject of church patronage in Scotland, and to inquire in how far the present system is in accordance with the principles of the church established in that country, and conducive to its usefulness and prosperity.

In a committee of ways and means, on the 28th, Lord Althorp moved a resolution, which was agreed to, continuing the sugar duties at their present amount till the 5th of July, 1835. It was admitted, however, on all hands, that a change of system in regard to this important matter cannot be much longer delayed, and that the equalization of the duties on East and West India sugar must be considered as now merely a question of trial. In the remaining part of this evening, and also on the 3d and 10th of March, the army estimates were discussed. The number of men proposed by ministers for the service of the year was 88,952, being a reduction of 8000. The reduction in the expenditure amounts to 299,000*l*. A farther reduction of 9000 men was proposed by Mr. Hume; but the amendment was negatived by a majority of 282 to 46. A subsequent attempt of the honourable gentleman to reduce the sum proposed for the support of the general staff officers from 27,120*l*. to 18,550*l*., was defeated by a majority nearly as great, the numbers being 243 to 59. Before the House adjourned on the 28th a select committee was appointed on the motion of Lord Althorp "to examine the papers respecting sinecure offices, and to report their observations thereupon to the House." The papers referred to, were moved for by an address to the crown, on the 15th of August last, and had been presented on the 26th of February. They comprehend an account of the nature, tenure, and emoluments, of all sinecure offices in the United Kingdom.

On the 4th of March, Mr. Hardy and Mr. Murray obtained leave to bring in, the former a bill to amend the law relating to bribery at elections, and the latter a bill to repeal the foreign enlistment act. The greater part of the evening, however, was taken up in the discussion of a motion by Mr. Buckingham for a select committee to consider the subject of impressment in the navy. The motion was met by Sir James

Graham with an amendment, which may be taken to indicate that impressment, except on extraordinary occasions, will never again be resorted to, whatever other measures may be adopted for securing the necessary supply of seamen. Sir James stated that he had prepared a measure which would put an end to the practice except in cases of emergency, and moved for leave to bring in a bill to consolidate and amend the laws relating to merchant seamen, and for keeping up a register of all the men engaged in that service. After a debate of some length, in which most of the speakers expressed a strong anxiety for a change of the present system, the amendment of Sir James Graham was carried by a majority of 218 to 130. After this discussion had terminated, Mr. Hutt introduced the subject of the duties on Canada and Baltic timber; but on Lord Althorp stating that it was not the intention of the government to propose any alteration of these duties during the present session, the honourable gentleman withdrew his motion.

On the two following evenings the greatest question which had yet occupied the attention of the House was submitted to it by Mr. Hume, who moved for a committee of the whole House to consider of the corn laws, and of substituting instead of the present graduated scale of duties a fixed and moderate duty on the import at all times of foreign corn into the United Kingdom. The motion was opposed by Sir James Graham, Mr. Baring, Lord Althorp, Lord Palmerston and others; but even the ministry were divided upon the question, for Mr. Hume's proposition, which was seconded by Colonel Torrens, received also the support of Mr. Poulett Thomson and Lord Howick. The speech of Colonel Torrens, though not the longest, was the most scientific, and, we think, the most convincing that was made in the course of the debate. Sir James Graham met the motion by a direct negative, and spoke at great length; as did also Mr. Poulett Thomson in answering his right honourable colleague. The address of Mr. Baring, which was in direct opposition to the opinions he had formerly maintained, was certainly not, in point of argument, one of his happiest efforts; but it hit exactly the temper of the House, and was much cheered. On the division, the numbers appeared to be for Mr. Hume's motion 155, and against it 312. For the imposing amount of this majority the landlords may be said to have been indebted to the Irish members, all of whom, with about half a dozen exceptions, either voted against the motion, or staid away. According to the lists published in the newspaper, about sixty of them, or considerably more than one-half, adopted the latter course.

The business of the House on the evening of the 11th was commenced by the discussion of a motion from Mr. O'Connell, for the appointment of a committee to consider and report on the oaths taken by members of the House. The honourable and learned member professed to ground his proposition on the alleged ambiguity of the oath taken by Catholic members under the Catholic relief bill, which bound them not to exercise any of their privileges, "to disturb or weaken the Protestant religion or government in this kingdom." In the course of an interesting debate, however, which followed, the impropriety of referring a subject of such fundamental importance to a select committee was so clearly shown, that the motion was withdrawn; and Mr. O'Connell intimated his intention to take another opportunity of submitting his views to the House in a different form.

Sir Andrew Agnew then moved for leave to bring in two bills for the better observance of the Sabbath, the one to apply to England, and the other to Scotland. The motions of the honourable baronet met with considerable opposition, but no division took place, and leave was given that the two bills should be brought in; most of the members who spoke, however, declaring their determination to oppose the measures, if they should turn out to be of the same character with that which had been submitted to the House in the preceding session. A third motion from the same quarter, for leave to bring in a bill to enable local authorities to change Saturday and Monday fairs and markets to other days was not so successful, having been negatived by a majority of 181 to 137.

A conversation of some interest took place before the House adjourned this evening on the subject of the appointment, in 1832, of a son of Lord Chancellor Plunkett to the valuable union of the deaneries of Raphoe and Down, the dissolution of which had, it appeared, been recommended a short time before in a report by the Commissioners of Ecclesiastical Inquiry, of whom Lord Plunkett was one. Severe animadversions were passed on the conduct of his lordship by various members; but on the assurance of Mr. Stanley that the matter was at present under the consideration of the Irish privy council, and that the dissolution of the union, notwithstanding Mr. Plunkett's appointment, was likely immediately to take effect, Mr. Goulburn withdrew the motion he had made for an address to the crown on the subject. It appears from explanations which have since been given that this appointment was not, as had been supposed, solicited by Lord Plunkett for his son, but that it was the spontaneous act of the government in London; and also that the Irish Chancellor, although he had been induced to sign the report of the Commissioners, had expressly guarded himself against being supposed to concur in all its recommendations. His son, too, since his acceptance of the living, had given his consent that it should be dealt with in the same manner as if he had no vested interest in its revenues.

On the 12th a select committee of the House of Commons was appointed "to inquire into the state of the law respecting sewers in and near the metropolis, and into the administration of the same by the various Boards of Commissioners of Sewers, with a view to suggest such amendments in both as shall be deemed advisable." This is a subject of the very greatest importance, and eminently demanding the attention of the legislature.

A motion for the exclusion of the bishops from the House of Lords was brought forward in the Commons on the 13th, by Mr. Ripon. The honourable member asked for leave to bring in a bill to *relieve* their lordships from the exercise of their legislative and judicial functions. The supporters of the motion had all the debate to themselves, the Chancellor of the Exchequer declining to go into the discussion, on the ground that it was not to be expected that any considerable number of the members of the House would assent to such a proposition. When the division took place, however, the numbers were found to be 58 for the motion and only 125 against it; an announcement which was received with much cheering by the minority. It certainly might have been expected that the friends of the present constitution of the church, if they declined defending their views by argument, would have taken care at least to vindicate them by a somewhat more triumphant vote.

In the latter part of this evening Mr. Hume brought before the House an act of the government which he contended was an improper interference with the freedom of industry—the accommodation which they had given to the master coopers in letting them have a number of casks from the king's dockyards when deprived of a supply by a late strike of their workmen. The ministers defended this proceeding on the ground of the great inconvenience that would have been sustained had the aid of government been refused in the circumstances; but we agree with Mr. Hume that the act was both unfair and inexpedient. It was unfair, because the conduct of the men, however unwise it may be deemed, was still not illegal, and the government therefore, standing upon the support of all classes of the community, and bound to act impartially by all, ought not to have arrayed itself on the side of one of the parties in the contest that was going on, and against the other. And it was inexpedient, because likely to be attended in every way, except in regard to the immediate purpose which it answered of relieving the temporary difficulties of the masters, with the worst effects. It not only tended to exasperate the men by impressing them with a feeling of having been unjustly treated; but it went to obscure to their minds the lesson which the eventual failure of their combination would have been sure to read to them, by deluding them into the notion that, had it not been for the interference of the government, the attempt they were making would not have failed. Mr. Hume's motion, which was for copies of the correspondence between the master coopers and the Lords of the Admiralty, was agreed to.

On the 14th, the House having resolved itself into a committee, Sir James Graham explained the reform of the Office of Exchequer for effecting which a bill was already in progress through the House. In reference to this very important measure we can only state here, that it abolishes entirely the existing system of the office, in respect both to the method in which the accounts are kept, and the officers by whom proceedings are superintended and directed. For this system, which has subsisted almost without change

since the Conquest, a completely new machinery will be substituted. The entries will be made in English instead of Latin, the Arabic will be substituted for the Roman numerals, useless forms will be discontinued, and sinecures will be extinguished. Sir James Graham stated that whereas the present establishment consisted of sixty-five individuals, and cost 41,900*l.* per annum, there would in future be only twenty-nine persons employed at a yearly cost of 11,000*l.* Of course, compensation must be made to those of the present officers who have vested interests in their places, which will prevent the immediate saving from reaching to this amount. In place of the present auditor and clerk of the pells, it is proposed to appoint a comptroller and assistant-comptroller, at much more moderate salaries; and the two tellerships will also be abolished. In the short debate which followed Sir James Graham's speech, no opposition was expressed to the general principles of the measure; but some suggestions as to minor details were made by Lord Granville Somerset, which were perhaps deserving of attention.

The same evening Major Fancourt, in a temperate speech, moved the insertion of a clause in the Mutiny Bill, abolishing the punishment of flogging in the army. The motion was resisted by Mr. Robert Grant, principally on the ground that the government was actually directing its best efforts to the reduction of flogging, and that such a resolution as that proposed would only interfere injuriously with this experiment. The resolution was negatived on a division by a majority of 227 to 94.

At the morning sitting of the House on the 17th, a conversation arose, and was continued on the following morning, respecting the principle adopted in levying the tea-duties, by the bill of the last session. An opinion was strongly expressed by several members, that the plan of discriminating duties for the different varieties of the article would be found of impossible application. But as this plan is actually pursued and found to answer in America, it is difficult to understand why it should be thought impracticable here. Notwithstanding the urgency of the representations made to them, ministers have not intimated any intention of abandoning their original scheme.

At the evening sitting on the 17th, the total repeal of the malt-tax, after the 4th of October next, was moved by Mr. Cobbett; but after a short debate the motion was rejected by a majority of 142 to 59. A discussion of considerable interest followed on a motion by Mr. Shiel for an address to his Majesty, praying that there might be laid before the House copies of any communications between his Majesty's government and that of Russia, with respect to any treaty between the latter power and Turkey, entered into since the 1st of January, 1833. The motion was resisted by ministers, and was negatived after a long debate: but the speech delivered in reply to Mr. Shiel by Lord Palmerston contained some information of which the public had not been before possessed, at least in an authentic form. His lordship stated that, in December, 1832, an envoy had come to this country from the Grand Signior, soliciting our assistance in the contest in which he was engaged with his rebellious vassal the Pacha of Egypt—that the request was refused, among other reasons, because we had at that time no naval force to spare, our ships being occupied in other quarters—and that Lord Ponsonby, although he had received his appointment to succeed Sir Stratford Canning as ambassador at Constantinople in November, 1832, had been detained at Naples, and prevented from proceeding to that city till the following May, by unfavourable weather. Of the treaty of the 8th of July last, concluded between Turkey and Russia, he acknowledged that our government did not approve; but he added, that such explanations had been given by both parties as tended, in some degree, to remove the unfavourable impressions made by the language of the treaty itself.

On the 18th the abolition of the compulsory payment of church-rates by Dissenters was moved by Mr. Divett; but, on Lord Althorp stating that the government intended immediately to introduce a measure which would probably satisfy the views of the Dissenters upon this subject, the motion was withdrawn. In the course of the same evening two committees were appointed on the motion of Sir Robert Inglis and the Solicitor-General; the one to inquire into the Glasgow Lottery, and the other to consider the present state of the law as regards libel and slander. The Solicitor-General prefaced his motion by a very able speech.

Up to this time little business had been done in the House of Lords, and no great discussion had taken place, although the conversations that incidentally arose were sometimes interesting. On the 21st, however, a debate of unusual length and animation was occasioned by a petition from certain resident members of the senate of the University of Cambridge, in favour of the abrogation of every religious test exacted from members of that university before they could be admitted to degrees, whether of bachelor, master, or doctor, in arts, law, and physic. The petition was submitted to the attention of their lordships by Earl Grey, in a long and very able address, which was replied to at considerable length by the Duke of Wellington. The other speakers were the Lord Chancellor and the Earl of Durham, both of whom strongly and forcibly urged the expediency of complying with the prayer of the petitioners. A similar petition, addressed to the House of Commons, has since been laid before that assembly by Mr. Spring Rice; and as all the principal members of the government have expressed in warm terms their concurrence with its object, there is reason to hope that a reform called for by so many powerful considerations will not be much longer impeded by the comparatively unimportant difficulties that stand in its way. The innovation, however, it is proper to remark, will necessarily lead to other changes, and is not perhaps the less desirable on that account.

On this evening the ordnance estimates were moved in the House of Commons by Colonel Maberley. The sum voted, as compared with that voted last year, exhibits a reduction of 120,000*l.*; and it is calculated that the actual expenditure will be reduced by 82,000*l.* Mr. Hume attempted to show that there was still much room for further retrenchment; but did not oppose the resolution as moved.

On the 26th a measure of very great importance was submitted to the House of Lords by the Lord Chancellor, in a bill for extending the jurisdiction of the Old Bailey Court, which at present is confined to the county of Middlesex, over so much of the counties of Surrey, Kent, and Essex, as to include the whole of the borough of Southwark, and the other populous districts on the same side of the river, and for increasing the number of sessions of the court from eight to twelve in the year. His lordship calculated that the judicature thus enlarged would extend over a population of nearly 1,700,000 persons; and the saving occasioned by the greater frequency of the gaol deliveries in the expense of detaining prisoners in custody will also be very considerable.

The two Houses adjourned on the 26th till the 14th of April, it being however arranged that the House of Lords should sit, during the holidays, in the mornings, for the hearing of Scotch Appeals.

FRANCE.

A GENERAL strike of the workmen in the great manufacturing city of Lyons, the importance and object of which had been greatly exaggerated and misrepresented by the factious, and had caused some uneasiness to government, has terminated very quietly, and even sooner than might have been expected. After a fortnight's idleness the men returned to their work, without any occasion having arisen for the interference either of the military or the civil power. Other disturbances, though not of a very serious nature, have, however, taken place in Paris. In consequence of the seizure of certain newspapers, and the restrictions laid upon the two sous publications which used to be hawked about the streets, loud disapprobation was expressed by a portion of the populace, and crowds gathered at different points of the city, discussing this and other grievances, and assuming, it is said, rather a menacing attitude. Ministers took the alarm and engaged an extra number of men, armed only with sticks, to assist the regular police in dispersing these mobs. A collision took place in the Place de la Bourse and in some of the streets leading thereto, in which the extra constables (if we may so call them) used their sticks with great effect and scattered the crowds. This circumstance was severely commented upon by the republican and all the opposition journals, who accused Louis Philippe's ministers of having hired a set of discharged galley-slaves and assassins to kill or cruelly maltreat *peaceful* Frenchmen. It was also the subject of some stormy discussions in the Chambers, where ministers were accused of having actually been the cause of sacrificing *many* lives. It was replied by them that the police had suffered more than the mob—that

no lives, however, had been lost—and that they challenged their accusers to prove their assertions. To this the attacking party rejoined, that the dead could not speak, and that their surviving friends and relatives were afraid of appearing as witnesses lest they should be arrested as seditious persons and accomplices in the riot. At last, however, an unfortunate journeyman tailor was found who had died in consequence of wounds received in the scuffle. Of this discovery the accusers took all the advantage they could, and assumed as a certainty that the poor man had been sacrificed while going quietly about his business. It appears probable that the police authorities were not very particular in their choice of peace-keepers, yet surely these men armed with sticks were preferable to troops of cavalry or to any species of soldiery. A liberal member, however, made it a matter of solemn complaint in the Chamber of Deputies, that troops had not been employed and the mob dispersed by charges of horse. (The French are certainly a most military people, but we could scarcely have expected a sentiment like this.) It was answered for ministers, that cavalry acting in the crowded streets of a capital were likely to do much more mischief, and to be of necessity much less scrupulous in distinguishing which of the citizens were riotous and which not, than the men they had appointed to the service.

Others discussions, of a nature equally violent, have taken place in the lower house on a ministerial project of law relative to revolutionary clubs and political associations. The supporters of the measure recalled to the memory of the house what had happened in their first revolution, under Robespierre, when the Jacobin club overthrew every other authority and plunged France in crime and blood. M. Keratry stated it as his honest conviction, that the 'Society of the Rights of Man,' which appears now to be the most formidable of these associations, has taken up the work where Robespierre left it off—the only difference being that, in their recent attempts to destroy public order and confound all the elements of society, they have been the beaten instead of the victorious party. General Jacqueminot, speaking on the same side, quoted passages from the speeches of the old republican, Lafayette, delivered in the years 1792 and 1794, in which it is asserted that 'political societies must either fall into universal discredit, or they will overturn everything before them.' The subject is a difficult one—we know that Frenchmen are apt to carry these matters far beyond our practice in this country: but we doubt whether persecution will cast 'universal discredit' on the clubs and societies, of which, moreover, we cannot help thinking that Louis Philippe's cabinet has betrayed rather too much fear. It must be recollected, however, that the keeper of the seals affirmed, on authority, that the 'Society of the Rights of Man' had mainly instigated and taken an active part in the troubles at Lyons and other towns; and another ministerial member (M. Fulchiron)) not only confirmed all this, but gave it as an undeniable fact, that the same society was the moving cause of the disturbances and attempts at insurrection which took place almost simultaneously with the strike at Lyons, at St. Etienne, Geneva, and Savoy. In the course of this speech, M. Fulchiron appropriately introduced the name of Washington, whom nobody could accuse of being wanting in love for rational liberty, and repeated the energetic terms in which that great and good man stigmatized political clubs.

The committee of the Chamber of Deputies on the bill for regulating the customs, or the new tariff, has introduced some important modifications in several of its principal clauses. They relate chiefly to the import duties upon coal, iron, spun-cotton, and sugars. Spun-cotton or twist is to be introduced at a still more considerably reduced rate than that we stated in the last Number of the Companion.

The new tariff, as promulgated, has been far from giving general satisfaction. It is complained, on the one hand, that it does too much, and on the other, that it does too little. In the latter class of complainants are, of course, most of the French ports and great commercial cities. Among these, Bordeaux has particularly distinguished herself, and, not contented with earnest representations and prayers for redress, the Chamber of Commerce of that city has held threatening, and, we should say, idle language to government, speaking of the feasibility of that portion of southern France detaching itself from the king's dominions, if a more liberal commercial system be not adopted. The Chambers of Commerce of Nantes, Havre, Rouen, and Boulogne have signified their concurrence in the opinions advanced in the Bordeaux address. The chamber of St. Malo also sent in its adhesion on the 4th of March, but this document is distinguished by more moderation and wisdom than the rest of them. It adopts the free trade basis laid down by the merchants of Bordeaux, *with some exceptions*, and expresses a conviction that political economy requires that the emancipation of commerce should be established, if *not suddenly*, at least *gradually* and *progressively*.

Whilst at one end of France men have been so violent as to talk of dismembering the kingdom, the popular feeling has been excited with almost equal violence in Paris by a ministerial project to revise the municipal or corporation laws, to give more political influence to the departments, and render them less dependent on the capital. In our apprehension this would be a good measure, for some of the most serious misfortunes that have befallen France have sprung out of the complete supremacy of the capital over the provinces and great provincial cities—have been owing to the circumstance that Paris has not merely represented the head and heart of the state, but its body, limbs, and extremities—that she has been as everything, and the rest of the kingdom as next to nothing in a political sense. Most of the Parisian journals, however, and all those men who look to the capital alone as the fulcrum on which to lay their revolutionary lever, are opposed to this project, which will also encounter the opposition of the bigoted adherents to the centralization system.

With the recollection of what occurred in our House of Commons on the 17th of March, when Lord Palmerston was called upon to answer questions and produce documents relating to an important part of our foreign policy, it is amusing to compare what was said in the French Chamber in the course of the discussion on the late riots, when the government party not only maintained that putting questions to ministers was inconvenient, and attended with many evil consequences, but that, according to the constitution of that assembly, the right of a member so to question was very dubious. This position was warmly attacked, but it seems probable the government will succeed in maintaining it, and thus destroy what is a useful constitutional privilege, or a pernicious abuse, just according to the tempers of those who employ it.

SPAIN.

THE problems in which the fate of this distracted country is involved seem still to be far from their solution. Instead of a blending of parties, which was to be desired as the greatest of blessings and as the only means of securing tranquillity and the establishment of a moderately liberal government to Spain, new parties have sprung up, and all appear to assume a wider or more pronounced hostility. The queen-regent's government is in the greatest distress for money, and has not yet been able to conclude a loan for which it is in treaty, of 8,000,000*l.*, a sum considered by most men as inadequate to the present emergencies. Hence decrees are issued, for the most part in vain, for levies of troops, and a sort of conscription law has been passed for raising men that the queen can neither clothe nor support. In addition to the sin of its poverty, government has committed a mistake, which has caused great irritation and disgust, in the regulations it has established for the embodying of an urban or municipal militia. Acting on a plan of numerical uniformity, and forgetting that, in many and extensive portions of Spain, there are no such populous towns, this law enacts that only places containing 3500 inhabitants shall have the right of embodying a militia corps. A Spanish paper has published a statement, showing, that, out of the whole number of towns in Spain, (leaving the revolted provinces to themselves,) only 619 would by this law be authorized to form a militia, and that the number of men that could be armed by these towns without a violation of art. 11 of the law, which allows but one man in a hundred, would be very insufficient indeed, even without taking into consideration numerous grounds of exclusion from this service established by other articles of the law. Another serious objection is, that a force thus raised would be concentrated in the large towns, leaving the small towns and villages, where such a defence is most wanted, wholly unprovided. The law includes several other capital errors, as will always be the case where legislators proceed merely on the system of numbers and uniformity without reference to other circumstances. In several places thus excluded, and which were

before well affected to the queen-regent, her obnoxious law has been publicly committed to the flames. We are happy to learn that government has withdrawn it for revision.

Favoured by these circumstances, the Carlists in the north, though they have occasionally sustained partial defeats, are said to be gaining strength. In the neighbourhood of Bilboa, they act as if Don Carlos were undisputed master of the throne. They have their organized administration, their army, their lines of customs, and their taxes, in part levied by force and in part paid with good will. Zavala, the Carlist generalissimo, has shot several of his prisoners of war in retaliation for the queen's martial decree of the 21st of January, and for the execution of several Carlist prisoners by her party.

According to the latest intelligence, the queen-regent's troops had been reinforced in the Biscayan provinces and in Navarre; but it seems they are only masters of the ground they occupy, and that the Carlists, who carefully avoid a general action, are continually harassing them, and disposing of the resources of the open country. It would be uninteresting to detail the events of this petty but sanguinary warfare. Each party is so inflamed with rage and hatred against the other, that they carry on hostilities with the merciless spirit of the middle ages. Meanwhile the pretender, Don Carlos, continues to skulk in hiding-places, only heading his partisans in arms by means of monks and other emissaries, proclamations, and promises of future reward and honour. The adherents of the queen-regent never appear to know the place of his abode, which he probably often changes, and a body of her troops has twice crossed the frontier in the course of a month and penetrated some distance into Portugal in fruitless search of him. According to some accounts he is now concealed in Spain.

At Madrid, although the riots have been suppressed, a widely spread disaffection, resulting from a variety of totally different political feelings, is said to prevail. One party is described as being anxious to remove her present majesty (Ferdinand's widow) from the regency, and to substitute the wife of the Infante Francisco Paulo, the brother of Don Carlos.

The circumstance the most to be deplored in this struggle for principle, which must decide whether Spain is to secure for herself the enjoyment of an improved and improving government, or to be thrown back on her old vicious institutions, is, that the constitutionalists and liberals are not agreed among themselves as to what is to be done or desired. On the contrary, they entertain notions the most opposite. To pass over several minor parties, and only speak of two influential classes among them, we find one bent upon an instant overthrow of all the establishments of Spain —a confiscation of church property, and the fixing of a constitution more comprehensive and popular even than those of France and England; whilst the other would proceed slowly and circumspectly, contenting itself with the gradual reform of abuses and the convocation of the Cortes after the fashion of the antient Spanish constitution. This class also, instead of irritating and alarming the monks and priests, among the latter of whom there are many inclined both to political and ecclesiastical reform, would endeavour to conciliate them and make them fall into the constitutional line of march. They would then confidently attend the course of events, and in the education of the people at large, which has hitherto been sadly neglected; in the improvement of industry and prosperity; and in the opening of roads and the establishment of means of rapid communication all over the kingdom, look for a state of things which might not only permit, but call for a more theoretically perfect constitution and government than Spain can now bear.

The present ministry, and Martinez de la Rosa as the most prominent member of the cabinet, have been made subjects of severe criticism by some of our journals. They apparently do not possess all the talent and energy desirable at such a crisis, but it ought in justice to be confessed that their position is one of extreme difficulty. Reports have been current in Madrid that this cabinet was about to be changed, and Toreno has been named as likely to be one of the new ministry.

Of the many newspapers that sprung up in the capital after Ferdinand's death, government has thought fit to interfere with some, and others have ceased through want of purchasers. Recent letters from Madrid announce that the Cortes is really to be assembled early in June. It is again confidently asserted that Spain will immediately recognize the independence of the South American states, and admit the long-disputed Cortes' bonds into the list of the lawful national debts.

PORTUGAL.

SINCE the rather important battle of Almoster, which was fought on the 18th of February, and which, after severe losses on both sides, terminated in favour of the Pedroites, and in the retreat of the forces of Don Miguel to Santarem, no great military event has taken place. In this sanguinary combat a battalion of Spaniards, well armed and accoutred, and in the service of Don Carlos, whom they style lawful king of Spain, fought on the side of the Miguelites. An expedition to the Alemtejo, which was to be commanded by the Duke of Terceira, with the object of pressing Santarem in the rear, and preventing the Miguelites from receiving provisions and other resources in that direction, has been subjected to some very prejudicial delays; and, finally, the plan and the commander have been changed. At the beginning of March, disease was still committing ravages in Santarem. A Captain Robinson, one of Don Miguel's agents from London, had, however, not only eluded the vigilance of the Pedroite navy, and landed safely in Figueira, but had reached head-quarters at Santarem with a considerable supply of money, and with ammunition and clothing. According to the last intelligence the Miguelites had received altogether 100,000*l.*, and were again well-dressed and equipped, at least to the number of 18,000 men. Several English, French, and other officers, had taken service under Don Miguel. Seventy mules laden were, however, intercepted and taken by the Pedroites on their road to Santarem; and at various times a considerable number of monks have been seized in the Alemtejo as they were carrying money and provisions to Miguel. All these friars, and other partisans of various castes and grades, have been thrown into the prisons of Lisbon, which promise to be soon as well filled as they were before the Miguelites evacuated the capital. Notwithstanding rather frequent quarrels between Don Pedro and the foreign officers in his service, and his apparent inability to pay up the arrears due to his army generally, he continues to receive frequent reinforcements of English, French, Belgian, and other adventurers, who are all said to be brave in action, though somewhat deficient in discipline on other occasions.

The most important of the Pedroite movements have been in Algarve, where the Baron de Sa, after some skirmishes, has succeeded in taking Faro, and Tavira the capital of that province, and a place of some strength, about 140 S.E. of Lisbon. De Sa's forces consist chiefly of Frenchmen, Germans, and Belgians. He expected an action with a Miguelite corps about to advance on St. Ubes. General Lemos has succeeded Povoas as commander-in-chief of Don Miguel's army. Both brothers are making efforts to strengthen and concentrate their forces in and about Santarem. A pretty constant skirmishing is kept up at that point; but, on the whole, with the exception of De Sa's successes in Algarve, it may be said that the relative positions of the belligerents have undergone little change since we last wrote.

Lord Howard de Walden has presented his credentials to Donna Maria, as new ambassador from our court. It is said in many quarters that the young queen has refused a proposed match with one of the sons of the French king, Louis Philippe, and that a scandalous story affecting her majesty's character, which has been circulated by some of the French journals, is attributable to spite for this rejection.

We mentioned in our last monthly retrospect that a building had been prepared at Lisbon for the accommodation of the Cortes. For several weeks, however, we have heard nothing more of that constitutional body, nor does a word appear to be uttered at the court of Don Pedro about the time when it is really to be convoked.

SWITZERLAND

THIS country has been placed in an embarrassing position in consequence of the late attempt made by the Polish and other refugees to revolutionize Savoy. The number of political exiles, and more especially those from Poland, that have been allowed to remain in, and wander about Switzer-

land, has for some time been a cause of ill-humour to all those countries the frontiers of which touch in any part on the territories of the Swiss confederation, but since the armed attack under General Romarino, which we mentioned in our last retrospect, and which was prepared chiefly in the territory of Geneva, this ill-humour has been greatly increased, and precautionary measures, bearing rather a hostile appearance, have been adopted by the Emperor of Austria and the King of Sardinia. Representations had been previously made to the Swiss Diet by these two powers, and also by Prussia, but the fact seems to be that the Diet cannot command obedience to its decrees and regulations; and in the meantime the Canton of Berne has formally declared that the Poles shall be free to remain in that part of Switzerland, or to go whither they choose. The Austrian troops have therefore been reinforced in Tyrol to check any incursion in that direction, and the poor, peaceful inhabitants of Savoy have been burdened by an increase of military dispatched by the King of Sardinia to defend that portion of his states. But, according to recent letters from Vienna, where the affair is taken to heart, matters are not to stop here. More energetic remonstrances, which will be sanctioned by the Germanic Diet, are to be transmitted to the Swiss confederation, in the name of *all* the German governments; and if that body fail to deliver itself "from its incommodious guests who endeavour to spread disorder both within Switzerland, and beyond its frontiers," then all diplomatic relations with the Cantons shall cease, and a military cordon shall be established to preserve Austria and other powers from the invasions of anarchy.

TURKEY.

The Sultan continues to make great efforts for the recruiting of his army. At the end of February, a considerable body of tacticoes, or the new disciplined troops, left Europe for Asia, and crossing the sea of Marmora, landed at Isnikmid, the antient Nicomedia. About thirty thousand regular troops remained at Constantinople. The greatest activity also prevails in the arsenal and dock-yards of Constantinople. Old ships of war are repairing, and several new ones ordered. The following is the strength of the Sultan's fleet at the present moment.

The "Mahmoudier," a three-decker, one of the largest ships in the world, carrying 140 guns.

The "Selimer," a three-decker, carrying 120 guns. (Both these large vessels have undergone repairs, and are now in excellent condition.)

Five two-deckers, carrying 64, or 74 guns each; all these are rather old, and one or two scarcely sea-worthy.

Seven frigates, of which only three are in good condition.

A new frigate, very lately constructed at Constantinople by a skilful American ship-builder, who died there before it was finished. This vessel carries 64 guns, and is the largest and one of the finest frigates ever built.

A beautiful sloop of war bought from the Americans, and described as being a model of perfection of its kind. It carries 28 guns.

Four other old sloops of war, a few brigs, and two English steam-boats, complete this naval force. Were it properly manned and commanded, such a fleet would not be altogether contemptible, but both crews and officers are at present about as bad as can possibly be. Before the Greek revolution, the Turkish ships were entirely managed by Greeks, who are active and clever sailors, the Mussulmans merely commanding, (the men, not the manœuvres) and working the guns when in action. Few of the Turkish officers were acquainted with the simplest rules of navigation or mathematics, or knew any thing about practical navigation, or the modes of managing a ship. An old cavalry officer, a shoemaker, a tailor, a barber, has often filled the post of capitan-pasha, or admiral-in-chief; and though in some cases this pasha had previously been a Barbary corsair, a sailor, or a boatman, and accustomed to the sea, there is scarcely an instance of one with a tincture of scientific education.

Now the Greeks, as pilots and sailors, are almost altogether lost to the Sultan. He has induced a *few* by very high wages, which he can ill afford to pay, to engage on board his ships now afloat; but these men are constantly deserting, and are, moreover, little to be depended upon in such a service. He has also engaged some Sclavonians from the Bocca di Cattaro, and that part of the Adriatic, who are excellent as working mariners, but ignorant and mutinous in the extreme. Their number is also very inconsiderable. The mass of the crews on board the fleet is, therefore, composed of young Turks—for the most part mere boys, of whom the Sultan is endeavouring to make sailors. But sailors are not made in a day, and these striplings have not the proper means of instruction. A few of them of superior condition have, indeed, been taught a little of mathematics and navigation at Constantinople by christian masters, but their instruction is incomplete, and as to experience and practice, they, of course, have had none.

The Sultan will probably avail himself of the services of the Egyptian admiral, Osman Noureddin, who recently deserted from Mehemet Ali Pasha, and was received with open arms at Constantinople. This Osman has received a proper education in Europe, and is said to be a good officer; but he can scarcely be expected to do much with such materials as the Sultan can place at his disposal.

The steam-boats are under the direction of Mr. Kelly, an intelligent Scotchman, but one by one, all the Englishmen and Scotchmen who engaged with him, have left the service in disgust, and he has been obliged to supply their places chiefly with Maltese, who have incidentally picked up a little knowledge of steam-engines, &c. But even these poor fellows have been frightened at the service by an event that took place some months ago. A Scotchman, who commanded the smaller of the two steam-boats which was lying at the time in the port, off the arsenal, was missed one night in his cabin after he had retired to bed—the few christians on board searched for him all over the ship in vain. The next morning he was found by some boatmen in the port, with his throat cut from ear to ear, and the carcase of a dog tied to his feet. Some of the Turks on board, or in the arsenal, were suspected of the murder, but the matter was never properly investigated.

People at Constantinople are lost in surmises as to the meaning of these notes of preparation, and the course the Sultan intends to pursue. As far as his fleet is concerned, if it is to act with the Czar's fleet now in the Black Sea, he may depend upon the fact, that the Russians cannot afford to lend him much nautical skill, or many seamen. In the course of the war of 1828 and 1829, it was difficult to say which of the belligerents,—the Turks or the Russians—gave most frequent proofs of bad seamanship.

There is no doubt, at this moment, that the Turkish government is wholly subservient to Russia, and it is a matter of notoriety at Constantinople, that several of the leading men in the divan, from the crafty old seraskier, down to Achmet-Pasha, who has just returned from his embassy to St. Petersburg, are bribed by Russian gold and Russian promises. (The last mentioned diplomatist, Achmet, was fifteen years ago, a common boatman on the Bosphorus.)

Opposed to this marked partiality of the court, or perhaps, we should rather say *part* of the court, (as some of the men about the Sultan are said to be violently irritated at the last Russian treaty of Hunkiar-Iskellesi,) are the feelings and prejudices of the whole body of the Mussulman people, who abhor the Russians more than ever. Among other ways, they showed this feeling in the following striking and dignified manner, when the emperor's army was encamped on the Bosphorus. The Russian generals gave a grand review of their troops, to which they invited the Grand Signior and his court. This review took place in a beautiful valley* opposite to Buyukdere; nothing was neglected on the part of the Russians to render it a brilliant and imposing spectacle;—the Sultan went, attended by the seraskier, the selictar, and some other officers and favourites; a few companies of his miserable looking tacticoes were encamped near the spot; but, save and except these, not a single Turk of high or low degree, showed his face there, although the people had been given to understand that their presence would be agreeable to government, and although the large and populous village of Buyukdere, and the village of Therapia, were only separated from the scene of display by the narrow channel of the Bosphorus.

As if he feared a descent on his coasts, and an attack on the Dardanelles, the Sultan has directed troops to be stationed all round the gulfs of Saros and Enos, and has reinforced the garrisons of the Straits of the Dardanelles. We are informed by a gentleman who has lately come from that part of Turkey, that the new fortifications raised at the Dardanelle forts, under the direction of Russian officers and

* The Hunkiar-Iskellesi, or "the Sultan's Landing-Place;" the spot where the late ill-omened treaty was signed.

engineers, are as yet very inconsiderable, and that those forts still remain, as they always have been, weak and exposed on their reverse, or, on the land side.

A camp is also forming in Asia Minor, under Redschid Mehmet Pasha, near to the town of Sivas.

Lord Palmerston is probably well informed of what is doing and contemplated, as Mr. S. Pisani, a dragoman attached to our embassy at Constantinople, has just arrived in London with dispatches from Lord Ponsonby.

GREECE.

THE 'Times' newspaper of the 17th of March contained an excellent communication from Napoli di Romania, which is the seat of the Greek government for the present. The letter was dated at the close of the last year; but we are happy in being able to add from information received from gentlemen who have but very recently returned from that country to England, and from letters we have seen of a very late date, that the views the writer takes of the present condition and prospects of Greece, are neither too sanguine, nor over coloured. For the following facts, taken chiefly from the able correspondent of the 'Times,' though a few are of our own gleaning, we can confidently vouch.

The Greek ministry, which since the arrival of the Bavarian regency has undergone several changes, seems now to be consolidated and fixed. It consists of the following five members who are all men of good education, talent, and character.

1. Prince Mavrocordato, a pure patriot though a skilful politician, who is minister of the royal household, of foreign affairs, and the marine, and also president of the council.

2. Coletti, the steady leader of the anti-Russian party, who is minister of the interior and possessed of more influence both in the cabinet and the country at large, than any other member of the government.

3. Theocaris, the son of a wealthy Greek merchant at Leipsic, by a German mother, who is minister of finance. This gentleman has been well educated at the university of Leipsic, and accustomed to business. Under the unfortunate Capo d' Istria's administration he was a valuable member of the statistical commission.

4. Schinas, who has also been educated in Germany and has travelled much in the civilized countries of Europe. He is minister of ecclesiastical affairs and public instruction, and has shown a most praiseworthy eagerness for the education of the people.

5. Schmaltz, who is minister of war. He was a Bavarian Philhellene, and distinguished himself in the revolutionary war of Greece, long before there was any prospect of a prince of his country being appointed to the Greek throne.

To have the force of law, the decrees of these ministers must have the signature of the three members of the regency. It appears there are some slight complaints, occasionally, of the slowness and precision of these Bavarian functionaries. But this probably arises merely from the national temperament of the parties. For ourselves, from what we know of the Greek character we should be inclined to think that German phlegm and steadiness would prove an advantageous check on its volatility and vehemence. The diplomatic arrangements are the following.

Tricoupi, a man of ability and considerable literary acquirements, has been sent to London, M. Soutzo to Paris, and their old friend and combatant for the cause of Greek independence, General Sir R. Church, to St. Petersburgh. Zographo, another Greek of distinguished talent, is ready to go to Constantinople whenever the Porte condescends to express its willingness to receive him.

We mentioned in our retrospect for the year 1833 (to which we claim the attention of our readers, for the sake of connecting several links of this short narrative), that the government of the Greek church had been rendered independent of the patriarch who resides at Constantinople. The primates and chiefs of the national clergy have met in synod, and have agreed to fix the number of metropolitan dioceses at ten, and no more. But consulting the life-interest of the bishops, who are now no fewer than forty, they have preserved them in their dioceses until death removes them. Generally speaking, there is a complete absence of bigotry and intolerance; nor are the people less attached to the young king because he is of the Roman and not of the Greek church. He has his chapel and his catholic priests for his own devotions. The Russians have always counted much on the sympathy of the Greek people as co-religionists, and, among the intrigues set on foot by them to obtain a supreme influence over the new state, they have not neglected to work the vein of sectarian jealousy and hatred, though it should seem they have had little success in that way. The kingdom has been divided into ten provinces, or districts, precisely corresponding with the church division into ten bishopries. These districts have been subdivided into forty-two circles. Each district and each circle has a presiding authority. In each village there is also a *maire*, who is called Demogeront, and is elected by the people, but subject to the approbation of government. Local councils are established, composed of the chiefs, or elders of the districts, towns, and villages, who are freely elected by the inhabitants without any control or interference whatsoever.

From these municipal institutions the very best results are expected as a *certainty*, and *hopes* are entertained that they may finally lead to the establishment of a free constitutional government. We should say that these are the modes, and the only modes, of rendering the Greek people fit for a constitutional regime, which, at the present moment they undeniably are *not*. Those men are guilty of something worse than idleness who would disparage and embarrass the present government of Greece, because they have not concocted a constitution, and granted a charter in form. To have acted as they suggest, would have been about as absurd as placing the Iliad of Homer in the hands of a youth, and telling him to read and understand its letter and spirit, before he has learned the characters of the Greek alphabet. But as matters have been arranged, the subjects of the new kingdom will become gradually initiated in parts of the science of self-government; they will go through an indispensable course of political instruction, and the discussions and business of provincial, or town councils, will prepare them for the debates and the larger affairs of a national parliament. Municipal institutions are at once the foundation and the bulwarks of constitutions. We know of no country that has succeeded in a representative system of government, that had not before been in possession of municipal institutions. With their natural quickness and talent, the progress of the Greeks will be rapid in these matters; but there will be plenty of time to talk of constitutions, before they can be in a condition to receive any of those which the liberality of theorists in other countries has offered them ready made.

A free press nominally exists, but in consequence of great personal abuse, calumnies on private character, and a continual outpouring of satire, to which the Greeks of to-day are as much addicted as were their ancestors of two thousand years ago, government has thought it expedient to exact a deposit of about 200*l.*, to serve as a security for payment of penalties to which they may render themselves liable, from all parties conducting or starting a newspaper. Journals devoted to philosophy and literature are, however, perfectly free.

We mentioned in the retrospect to which we have already referred, the establishment of three courts of justice; one at Napoli, the second at Missolonghi, and the third at Thebes. These were criminal courts. The formation of the courts of civil law has been delayed, in order to place them on good and lasting foundations. Codes, both of civil and criminal procedure have been prepared, and are probably published ere this.

A number of schools for primary instruction have been established throughout the kingdom, and the people have invariably shown an avidity for instruction. They have also shown much eagerness to procure proper persons for directing lyceums, or higher schools, at different places, and females to direct the education of their daughters.

The revenue of the state has been doubled since the arrival of the regency. It was estimated last year at 160,000*l.*, a small sum to be sure, but still it is an improvement on the past, while there is every prospect of rapid increase.

The only physical want is, that of hands to till the soil. The population of the kingdom, including the Cyclades, does not much exceed 700,000, and hence, large tracts of the most productive kinds of land, situated in the finest of climates, lie waste and deserted.

In the larger towns, the improvement has been rapid since the establishment of order. It is said, that persons who travelled in Greece during the horrors of revolutionary and partisan warfare, and even those who saw Napoli di Romania, Navarino, Patras, &c., only two years ago, are

struck with astonishment at the celerity with which houses, built of good solid materials, have been erected.

A considerable number of emigrants from Malta, some parts of Italy, and other countries, have settled in Greece as shopkeepers, mechanics, boatmen, or in other callings. The trade in the Cyclades is improving, and two or three of those islands are building ships with timber and other materials chiefly imported from Trieste. By a recent decree of government, the royal navy is to be increased by several vessels of different rates. Miaulis, the celebrated Greek admiral, who did so much in the revolutionary war, has been appointed to organize the fleet. The brave, honest, and disinterested Canaris, commonly called in the Levant "The Turk-burner," and who performed more valuable services with a few fire-ships than other men have done with fleets, was lately at the young king's court at Napoli, where he had adopted the Frank costume.

A new and good coinage has been introduced, and measures adopted to prevent the further dilapidation of the state property.

CHRONICLE OF EVENTS.

Oct. 17. Papers from Canton to this date have been received. An insurrection in the southern part of Cochin China had broken out, in consequence, it is stated, of a popular magistrate having been disgraced and imprisoned at Saigun, through the intrigues of some persons at Court. They rose in such numbers that the military were overpowered, and the escape of the prisoner was effected, whom they placed at their head, and sent for assistance to the Siamese, who had a large army on the Cochin Chinese frontier, so that it was feared it might be some time before order could be restored.

The same papers state that the inhabitants of Canton (city) had suffered very severely from a violent gale of wind and rain, which lasted for 12 days without intermission. It was calculated that no less than 1000 persons perished, and that 10,000 houses were swept away by the violence of the water from the hills, which met the tide, forced back by the violence of the wind, and inundated the greatest part of the city, forced down the north-east part of the wall, carrying everything before it, and, passing through the cemetery, tore up the coffins and remains, and bore them down to the river. Trade was totally suspended, and the greatest distress prevailed.

Nov 8. Singapore papers to this date state that accounts from Bencoolen, Sumatra, to the middle of August, had arrived, stating that an insurrection had broken out among the inhabitants of the hills, who had massacred the President, totally overpowered the few soldiers who endeavoured to arrest their progress, and penetrated to the very heart of the settlement, with a view, it is supposed, of causing a general insurrection throughout the country, for the purpose of overturning the Dutch Government there. The Europeans at first remained quietly in their houses, but the natives increased in such numbers that they were compelled to take refuge in the forts and islands. Matters, however, before the departure of the advices, had partly become quiet, but a general rupture was shortly apprehended.

Jan. 11. Letters of this date from La Guayra, state that the government of Venezuela, on hearing of the death of the King of Spain, had determined on despatching a special mission to Madrid, for the purpose of pressing on the Spanish government the expediency of acknowledging without further delay the independence of that republic.

23. This morning, the chateau of St. Louis, the residence of the Governor of Quebec, took fire about noon, and, notwithstanding the immediate alarm, the attendance of the troops, and fire-engines, all efforts to save the building have proved unsuccessful, and it is now a heap of ruins. From the intense cold of the day the engines became quickly clogged with ice, nor could the firemen maintain themselves sufficiently long on the roof, from the cold, to render any effectual service. The watermen conveying water from the river were literally covered with ice, as well as the firemen on whom the spray falls. All human efforts in such weather were perfectly useless. The chateau was built by the French about 150 years ago, and will cost the province from 25,000*l.* to 30,000*l.* to replace it.

28. Information of this date from Constantinople states that a war of the most savage character had commenced between the Turkish and Greek population of Albania. Unable to endure longer the vexations to which their villages were daily exposed, the latter have risen in arms simultaneously, and revenged their sufferings in the blood of their oppressors. Several engagements have already taken place, and no quarter is given on either side. Subsequent information states that these troubles had been pacified by a new Pacha, who had been sent to supersede the old oppressor, and had obliged him to refund to the people the sums he had extorted.

28. A letter from Rome states that lately, as the great sculptor Thorwaldsen was standing on the top of a very high ladder, engaged in forming the head of a colossal horse, he became so absorbed in his work that he made a step backwards in order to see better the effect of his chisel, and lost his footing; fortunately, however, he had sufficient presence of mind to seize the ear of the horse, and thus, in all probability, saved his life.—*French Paper.*

Feb. 14. The Turkish government has decided on the establishment of a post for the regular conveyance of letters throughout Turkey. It is calculated that this improvement, besides its importance to the people, will add 6,000,000 piastres to the revenue.

15. Eleven persons were destroyed at Malta by the explosion of the merchant-schooner Meteor, in consequence of the ignition of the waste powder which remained about the vessel after the discharge of 180 barrels of that article at the powder-magazine.

20. The editor of the 'Ami de la Vérité,' a legitimatist journal of Caen, was sentenced by the Court of Assizes for Calvados to six months' imprisonment and a fine of 3000 francs for a libel upon the King, and exciting hatred and contempt against the government.

26. Mr. John Richardson, the steward of John Perkins, Esq., was murdered by a pistol-shot, and robbed by two men, on his return, in a gig-cart, from Epsom to Bletchingly. Rewards amounting to 300*l.* have been offered for the discovery of the murderers, and several persons have, in the course of the month, been apprehended on suspicion.

— Sennefelder, the inventor of the art of lithography, died at Munich, in the 63d year of his age.

— The beautiful and powerful steamer the Adelaide, while on her passage from Londonderry to Liverpool, sustained considerable damage. About 2 o'clock on Thursday morning last, while off the Mull of Galloway, she was struck by a tremendous sea, which washed all the houses off deck, and swept overboard Capt. Shannon, her commander, who unfortunately happened to be in the house at the time. He was never seen afterwards. About two hours afterwards she was struck by another sea, which carried away the remains of her bulwarks, boats, davits, a bullock, half of the wheel, the greater part of the skylights, and half filled the cabins with water. One of the engines was also broken and rendered useless. With great difficulty the vessel got into Douglas, Isle of Man, at 2 p.m. on Thursday, but is so much disabled that she still remains there.

— The legislative body at Frankfort have repealed the law which limited the number of marriages between Jews at Frankfort to thirteen a year.

March 1. Information from Berlin states that numerous arrests of the students of the University have taken place. A new species of Burschenschafft has been discovered, the ramifications of which are described as being very extensive and dangerous.

— The Corporation Inquiry in the city of London closed this day. No day is named for commencing the inquiry into the state of the different companies, of which the only announced recusant is the Merchant Taylers.

4. For some time past a combination has existed amongst the workmen employed in the different gas works, for the purpose of forcing their employers to raise their wages; and a short time since they demanded that their wages should be raised to 35*s.* per week, with the allowance besides of two pots of porter each per day. It appears the wages they then and at present receive are 28*s.* per week for a stoker, a man who attends to the fires, and one guinea per week for the labourers generally, and this they receive all the year round. The respective companies refused to accede to the demand, and the workmen, in consequence, came to the resolution of making a simultaneous strike, the whole of London would, therefore, have been thrown into a state of darkness, and the most serious results might have occurred. The workmen resolved that the strike should be made at such a time that it would be impossible for the companies to engage other men; and, in fact, some days would probably have elapsed ere men, competent to perform the duty, could be procured. In the interim the Imperial Gas and Coke Company gained information of the plan in contemplation, and took measures to prevent the project being carried into effect. They, at considerable expense, obtained men from different parts of the country who were acquainted with the business, and this day the whole of the workmen, 35 in number, belonging to the Imperial Gaslight and Coke Company, who had joined the union, were discharged from the company's gas-works in Maiden-lane, Battle-bridge, and the new workmen put on in their places. The unionists seemed much astonished at this decisive mode of proceeding, and quietly left the premises. On the following day the Phœnix Company discharged 17 of their men, and subsequently the Chartered Gas Company discharged 156 of theirs. In consequence of this some difficulty was for a time felt in producing the requisite supply of gas in Westminster, but the increased experience and strenuous exertions of the new men have removed this inconvenience, and the works go on without the old hands, some of whom have in vain applied to be re-admitted.

— The *Moniteur Ottoman* announces, after private letters from Palestine, that the plague has broken out at Jerusalem, and rages in the quarters of the Jews.

4. Mehemet Ali is said to be preparing an expedition against Arabia Felix. An army of 2000 men was nearly ready to march on this service, when the last accounts left Cairo.

8. The Gazette of Frankfort on the Maine states, after a letter of the 1st from Frankfort on the Oder, that the fair in that town had gone off so badly, that the greater part of the dealers had

scarcely sold enough to cover their travelling expenses; this was owing to the adherence of Saxony to the Prussian system of commerce, as Leipsic will now have the business hitherto transacted at Frankfort on the Oder.

— The civil tribunal at Blois has delivered judgment on the appeal of the Duchess of Berri, as the guardian of the Duke of Bordeaux, against the sequestration placed on the estate of Chambord, whereby it has ordered the sequestration to be taken off, and restored full possession of the domain to the young Prince. An appeal is said to have been made against this decision.

10. The inhabitants of Newcastle resolved, at a public meeting, to call upon their representatives to resign, in consequence of their vote with the majority, on Mr. Harvey's motion for an inquiry into the pension-list.

11. The Frolic, of Portsmouth, and other fishing vessels which had left Jersey the preceding day, found this morning that they had, during the night, got within the limits of eight miles from the French coast, to which the British fishermen are restricted. Before they could withdraw beyond the limits, the French armed cutter appointed to watch the fishery and prevent encroachment, sent out an armed boat, which took the Flora, of Milton; but having been repulsed with sweeps and boat-hooks in five attempts to board the Frolic, they fired and shot the master, Burnett, through the lungs. The French boat afterwards made off, and Burnett only survived his wound an hour and a half. The coroner's inquest, held at Jersey, brought in a verdict of "wilful murder" against the man that shot Burnett.

— Late accounts from Greece state that the government is actively engaged in the revision, commenced under Capo d'Istrias in 1830, of all the ordinances of the Emperor Basilius Mazedo, which form the basis of the civil rights of the Greeks. All such of these laws as are to remain in force will be collected into one code.—*French Paper.*

— A man of the name of Polari has been tried and found guilty in Holland, for stealing the jewels of the Princess of Orange. He was sentenced to half an hour's exposure upon the pillory, with a board upon his breast describing his crime, and to be imprisoned for 12 years in a house of correction.

— M. Cabet, a member of the Chamber of Deputies, has been found guilty of libelling the King in his journal, the *Populaire*, and sentenced to two years' confinement, two years' further deprivation of civil rights, and a fine of 2000 francs. As this sentence is considered exceedingly severe, it stands a chance of being mitigated by the court of appeal.

15. This afternoon a numerous meeting of scientific and literary gentlemen and others was held at the rooms of the Horticultural Society, for the purpose of forming a Statistical Society, for the collection and classification of all facts relating to the present condition and prospects of mankind, and especially of the British empire.

The Marquis of Lansdowne (who was in the chair) felt that it was unnecessary for him to enlarge upon the actual necessity there was for a collection and classification of the various facts already elicited, and hereafter to be discovered, relating to the past and present condition of society, and to what might probably be the future state of mankind; for he believed that almost all those whom he addressed were not only aware of, but had personally experienced, the painful difficulties which lay in the way of the literary and scientific man, and of the political economist, arising from the absence of any combination of these facts for practical purposes. In other countries this want had not only been felt but provided for, and in France, particularly, there was an efficient machinery, under the direction of the government, for the attainment of the object now had in view. In this country, although the government had already done much towards the distribution of such facts—he alluded to the publications under the direction of the Privy Council and the Board of Trade—yet they must be sensible that to perform the work effectually they must look for the co-operation of able, active, and intelligent individuals; therefore it was that it was now proposed that a society should be formed, which should have for its object the collection, not of theories, but of facts, upon which alone all theories and all systems should be founded. Of the expediency of such a society no one could have a doubt; and their present object was to ascertain and determine upon the best mode of its organization.

Mr. Goulburn, M.P., in proposing the first resolution, said that during his political life he perpetually had occasion to prepare important documents for the public use, in doing which he had felt in their full force the difficulties arising from the want of an authenticated collection of statistical knowledge. The resolution which expressed the necessity for the collection and classification of statistical facts, was seconded by the Lord Advocate and carried.

Mr. Babbage proposed the next resolution, which was for the appointment of a society for the purpose described in the preceding resolution, to be called the Statistical Society of London. From the statement of this gentleman, it appeared that the idea of forming this society originated from the suggestion of M. Quetelet, the gentleman sent from Belgium to watch the proceedings at the last meeting of the British Association at Cambridge. It was first proposed to make the collection of statistical facts a branch of that association; but on consideration, it was found that the more efficacious mode would be the formation of a society like the present.

Mr. Jones, Professor of Political Economy at King's College, and one of the Committee delegated by the British Association to assist in the formation of the society, seconded the resolution. In addition to the reasons already adduced for the formation of such a society as the present, it must not be forgotten that there were many individuals who had employed years in the collection of statistical facts, but who were prevented from making them public in consequence of the want of pecuniary means. They had already received offers of the most valuable information from all parts of the British dominions, including the colonies. The principal branches of information to which the attention of the society would be directed were political statistics, in which all facts necessary for the use of political economists would be included, as well as accurate returns of the state of public justice, the number of causes tried at the different tribunals, &c.; their medical statistics, embracing all facts relating to the progress of disease, the duration of human life, and other matters closely connected with the principles of population; and lastly, moral and intellectual statistics, which would be devoted to facts illustrative of the state of literature, of crime, and of moral and religious instruction. This resolution having been agreed to, the next was moved by *Mr. Spring Rice, M.P.*, and seconded by *Mr. Abercrombie, M.P.*, appointing a provisional committee, the members of which were to be Mr. Babbage, Mr. Jones, Mr. Hallam, and Mr. Drinkwater, the Secretary. M. Quetelet was then named an honorary member, on the motion of Mr. Babbage, and the meeting separated.

18. A Committee of the House of Commons was appointed to inquire into the circumstances connected with the expedition of Capt. Ross to the Arctic seas, with a view to ascertain the fitting reward to be bestowed on him by the House.

— Mr. John Williams has been appointed to the vacant seat on the Exchequer Bench. Sir William Horne had at first accepted the appointment, but declined it after Sir John Campbell had been appointed to fill the office of Attorney-General, which he had vacated. Mr. (now Sir Charles) Pepys is the new Solicitor-General.

— A decree has passed the Mexican Congress relative to the duties on importation, which orders that in future they shall be paid in three equal portions, occupying in the whole a period of 150 days; the first portion in 70 days from beginning the discharge of the cargo, and the remaining portions at intervals of 40 days each.

— The public attention has been drawn this month to a misunderstanding between the East India Company and the tea-dealers. The latter accused the former of a breach of contract in putting up for sale 500,000lbs. of tea, beyond the quantity offered at the sale in December, when, as they state, their purchases were made on the understanding that no increase would be made at the March sale. They therefore demanded that their own uncleared stock, amounting to 2,000,000 lbs. should be taken back by the company at the selling prices. This the directors declined, but ultimately determined to withdraw from the sale 580,000 lbs. which had been refused at the previous sale. This arrangement was so unsatisfactory to the trade that, measures having been taken to prevent competition, at the beginning of the sale, an advance of one farthing only on the upset prices could be obtained; but subsequently the prices came round to nearly those of December, and the directors availed themselves of an informality to refuse the delivery of 6000 chests which had been purchased at the inferior price.

— *West Indies.* The bill for the entire abolition of slavery in the island of Antigua, which has passed the second reading of the Legislative Assembly, embraces a variety of measures apparently well calculated to meet the novel circumstances awaiting the great mass of the population. The first item of the bill provides for unqualified emancipation on the 1st of August proximo, discharged from all the provisions of the act of the British Parliament with reference to apprenticeship. A second prominent feature is the locating in their present domiciles all the slaves residing upon sugar plantations for the space of one year, and providing also for settlement in the parishes in which their present residences are situated for the same period. In case of insubordination or improper conduct two magistrates to have the power of removing them. Food and clothing as now provided by existing laws, to be supplied to the old, infirm, and young, for one year at the proprietor's expense, and reasonable wages allowed to all the able and competent labourers. The laws of the island relative to the slaves to be abrogated, and the statute law of England to take their place. One of the items of this bill contemplates the repeal of the law of the island, which gives to his Majesty 4½ per cent. of all the produce shipped from the colony, in consideration of the provision necessary for the incompetent slaves. This latter clause will prevent the bill from receiving the royal assent, but it is understood that steps are in progress to induce the legislature of Antigua to reconsider the provision by which the law has for the present been frustrated.

— The reported escape of a lion and tiger from Mr. Wombwell's menagerie, recorded in our last Number, has since been discovered to be one of those silly things called *hoaxes*.

EMANCIPATION OF THE JEWS.

An attempt is, we rejoice to see, again in progress to procure the removal of the disabilities affecting the Jews.

We Englishmen are fond of repeating that our country is pre-eminently distinguished for the liberality, the justice, and the wisdom of its laws. A good deal of this high commendation England probably deserves. But self-admiration is apt to be carried too far by nations as well as individuals. There are not a few valuable rules of legislation in the adoption of which other nations have gone before us; and among these we ought never to forget to reckon the great principle of religious freedom.

In past times the system of persecution was full well (though not every where with precisely the same zeal) by almost of the states of Europe.

Spain drove into successful rebellion her Protestant subjects in Holland, and established the Inquisition to torture the Jews and Heretics among her own inhabitants.

At one period French Protestants were massacred, at another tolerated, and again, after the year 1685, oppressed and forced into exile by the government of their country.

In Germany, Catholics and Protestants carried on long and sanguinary wars against one another.

During the earlier times of English history the Jews were constantly treated, both by the king and people as fit objects of robbery and murder, and, in the year 1290, all persons of that religion were expelled from the country. After the reformation, while England was, perhaps, on the one hand, distinguished from some other states by the somewhat less bloody character of her persecutions, it is, on the other hand, worthy of notice, that during the period when each succeeding sovereign introduced a different system of faith into her Established Church, the one principle in which all agreed was, in treating as criminals those who presumed to differ from their ruler upon points of doctrine *

Even since humanity has made too much progress to allow of men being punished for their religion by death, or even, in most cases, by fine or imprisonment, the notion has in some countries continued to prevail, that dissent from the established faith is an offence which ought in some manner to be punished. The means adopted in order to effect this object have been, to shut out the dissenter from political privileges or places of honour or profit; and we accordingly find that after opinion has ceased, tests and disabilities have frequently continued.

The people of the United States were the first who, during the last century, determined to recognise the rule that governments have no right to make the creed of their subjects a matter either of reward or punishment, and it was adopted as one great feature of the constitution of the Union, that there should be no civil distinctions of different religious classes, and that all trusts and dignities should be equally open to all.

At the time of the Revolution the same principle was introduced into the laws of the French by the Constituent Assembly in their Bill of Rights of government which that people have enjoyed through we find that this principle is still contested and that the enjoyment of equal political rights is still secured to persons of every creed with the least firmness.

The example of the French and Americans was imitated by Holland about 1811, and has since been followed in Denmark and the new kingdom of Belgium.

In the principal possessions of the English crown religious freedom has also been established. By acts of the colonial legislatures of Jamaica, Canada, Jamaica, and Barbadoes the Jews who were before previously deprived of political privileges on account of their creed, have during the last few years had restored to them all the rights of citizens; and the statute passed in 1833 by the British Parliament for the government of India contains a provision "that no native of India nor any British subject resident there, shall by reason only of his religion, place of birth, descent, colour, or any of them be disabled from holding any place, office, or employment under the East India Company"—a provision which Mr. Macaulay justly and emphatically called "a noble clause."

If we now turn from our own colonies and the dependencies of Britain to Britain itself, we shall find that it has been a long and tedious efforts to gain freedom of conscience for different classes of citizens, and that even now it has not been gained for all. It was not till 1791 that the Catholics, not till 1813 that the Unitarians, ceased to be liable to the most oppressive pains and penalties. Until 1828 capacity to hold offices was granted to Protestant Dissenters from year to year only by the annual indemnity act; political equality was not given to the Catholics until 1829, to the Quakers and Separatists until the last session of Parliament, and even during the last session we had to record, the triumphant success indeed in the Lower House, but the failure in the House of Lords, of the endeavour made to complete the good work by placing the Jewish community also on the same footing with their fellow citizens.

This, then is the present state of things, and the extraordinary anomaly which it offers at once suggests the question—What good reason can be given why the persons born and dwelling in the United Kingdom, who profess the Jewish faith, should be denied that freedom from religious disabilities which all classes except the Jews enjoy in this kingdom, and which all classes including the Jews, possess in most important parts of the empire of Britain, as well as in Holland, Belgium, Denmark, the United States, and France.

To answer this question is, one would naturally suppose, by no means an easy task; nor will this opinion be altered on reading the speeches delivered in Parliament by the opponents of the claims of the Jews.

Some of these opponents, indeed, not being able to surmount the difficulty, made a bold attempt to avoid it by asserting that the extension of political privileges to any class of men was a matter, not of right, but merely "of grace and favour," or, in other words, that although the Jews look upon it, as most persons would, as a great hard-

* Thomas Parre, who is remarkable for having lived 152 years (from 1483, about the beginning of the reign of Richard III. to 1635, in the reign of Charles I.), might at any time, until the 24th or 25th year of Henry VIII., have been burned for heresy if he was not a Catholic; in the latter part of that king's reign he would have been subject to capital punishment for denying, on the one hand, the Anglican principle of the king being the head of the Church, or, on the other, the Catholic doctrine of transubstantiation, under the government of Edward VI. he might have been legally put to death for being an anabaptist; in the reign of Mary for not being a Catholic, and in that of Elizabeth, for *being* a Catholic, or, at all events, for asserting the supremacy of the pope.

Thomas Parre must have possessed in a high degree the power of adapting his religious opinions to those of the reigning monarch, or he must have been more fortunate than many in escaping the vengeance of the law, otherwise he could never have reached the age of 152.

[WILLIAM CLOWES, Printer, Duke street, Lambeth]

ship to be disfranchised on account of their religion, the legislature may rightly persevere in keeping them in this state of disfranchisement without being able to give any reason for its perseverance.

Even those, however, who made use of this argument, or rather, of this apology for the lack of argument, seem to have had a suspicion that it would scarcely be considered satisfactory, and they therefore generally proceeded to do what, according to their principle, must have been a matter of grace and favour—they attempted to give some reason in order to prove the propriety of refusing to relieve from their disqualifications our Jewish countrymen. For this purpose the plea generally put forward has been, that the Jews are constantly expecting to be restored to Palestine, and that since their dispersion they have, therefore, been everywhere incapable of patriotism, and unfit for the performance of the duties of citizens.

If we had no experience to guide us on this point, it might be necessary to insert here the arguments, which convincingly show that no part of the tenets of the Jews affords any ground for supposing them deficient in readiness to serve their country.

But it is fortunately needless to speculate upon the effects which it is probable that religious freedom *would* produce upon the Hebrews, because we know what effects it *has* produced upon them. In many countries, as we have already mentioned, the experiment of placing the Jews on an equality with their fellow-subjects has been tried, and wherever it has been tried its success has been triumphant. They have everywhere been found just as patriotic, just as willing and able to discharge political and military functions, as men of any other faith.

In the United States a Jew was one of the aide-de-camps of General Washington. Jews have been principal members of corporations, judges, chief magistrates of cities, officers in the army and navy, and members of congress and of different state legislatures, and all these stations they have filled to the satisfaction of their countrymen.

In the island of Jamaica, where the enfranchisement of the Jews is yet recent, many persons of that religion have already been magistrates and military officers. Of these some are Englishmen, who, it deserves remark, would find themselves, on their return to their native land, under a legal incapacity to hold the same stations here which they have occupied in Jamaica.

With respect to France it will suffice to cite the testimony of Mr. Charles Dupin and Mr. Merilhou. The former said in 1827:—"The Hebrews naturalized on our territory by the benefit of our laws, have acquired all the rights of other citizens. The exercise of these rights gives them virtues; they addict themselves to study; for the pursuits of usury they substitute those of industry; and they are Frenchmen in heart as well as by blood."

The expressions used in December 1830 by Mr Merilhou, then minister for public instruction, in the Chamber of Deputies, are, if possible, still more emphatic: "But since the Constituent Assembly," he said, "has placed the Israelites on a footing with other citizens, they have partaken of our glory and misfortunes; their blood has flowed on the same fields of battle as ours; their children have been brought up in the same schools with those of their Christian brethren; they have imbibed the same principles—adopted the same habits—and have become most deserving citizens."

Let us now turn to Holland. There Mr. Meyer, a jurist of great eminence, has been chief judge in one of the courts of Amsterdam, and was also secretary to the commission for framing the Dutch Constitution; Mr. Asser was for many years secretary to the minister of justice,—a situation similar to that of an English under-secretary of state. Other Jews have been magistrates, have held commissions in the army and navy, and various offices under government, and in corporations. In that country persons of all religions perform indiscriminately military service; a great number of Jews formed part of the garrison of the citadel of Antwerp during the siege of that fortress by the French; and General Chassé, after stating to Lieutenant General Sir Robert Wilson that all his troops had behaved throughout with undaunted bravery and enthusiasm, added, that there was no difference in this respect between the Jews and the rest of the garrison.

If we had space to spare, we might bring forward many similar circumstances and testimonies, but we think that those which we have already stated give us a right to ask, whether those persons must not possess either far too little information, or far too great a determination to resist the clearest and strongest evidence, who can still maintain that the Jews are naturally deficient in patriotism, and therefore unfit for political franchises and trusts?

In truth, the facts adduced in contradiction to this hypothesis during the parliamentary discussions of last year, were so numerous and convincing, that it was at last in a great degree abandoned, and those who in the House of Lords led the opposition to the measure we are considering, relied principally on the argument, that it would show, on the part of the legislature, and produce in the minds of the people, disrespect to Christianity, if Jews were placed on a footing of equality with Christians. This mode of arguing would have been quite seasonable some hundred years ago. Jews were then frequently murdered in honour of Christianity. And even in the 17th century, Cervantes, who, though a writer of romance, is a most accurate describer of manners and opinions, makes Sancho Panza say:—"I am a good man and a good Catholic; a Christian, whose fathers were Christians before him, *and a mortal enemy of the Jews.* What more is necessary in order to be safe from slander?"

We venture, however, so far to differ from Sancho Panza and the opponents of the Jews' Relief Bill, as to think, that neither virtue nor reverence for Christianity is shown by hating the Jews, nor even by seeking, though without any feeling of hatred or dislike, to keep them subject to privations on account of their belief, and shall shortly state our reasons for that opinion.

1st. We suppose it will be granted that neither private persons nor legislators can show respect for any religion by acting in a manner entirely inconsistent with its commands.

2ndly. Christianity is the religion of peace; it teaches the value of faith, hope, and charity, but declares that "the greatest of these is charity." It enjoins us to do to others as we would that others should do to us.

3rdly. It has scarcely ever been attempted, and has certainly never been successfully attempted, to show, that to relieve our Jewish fellow-citizens from the disabilities now imposed upon them, would produce the least danger to any other class in the community.

4thly. It is with very creditable candour conceded by those who are most forward in resisting the enfranchisement of the Jews, that they are, in spite of the disadvantageous tendency of these disabilities, as deserving of respect for their *good* conduct and morality as those of other creeds more favoured by the law. "I will admit,"* says Sir Robert Inglis, "whatever advantage may be taken of my admission, that there are few classes placed in such a situation as Jews are as I think necessarily, in this country—who would be distinguished by such general good conduct."

"With due allowance for human infirmity,"† adds the Archbishop of Canterbury, "I think it may be pronounced that, in point of morality, the Jews stand well."

The testimony of the Bishop of London is even more explicit. "As to the personal character of the Jews themselves,"‡ he says, "so far as I have had an opportunity of forming an opinion, the results of my observations are highly favourable." I once had the care of a large parish in which a number of that people resided, and I found them among the most liberal, loyal, and quiet of its inhabitants."

These things, then, being viewed together, it appears to us self-evident, that to persist in keeping liable to degrading regulations, which produce no real benefit to society at large, any class of men, but particularly a class consisting chiefly, as we are told by their opponents, of moral, loyal, liberal, and quiet citizens, is neither consistent with the command to do to others as we would that they should do to us, nor with the spirit of love, nor of peace, nor of charity; that such conduct is, for these reasons, entirely at variance with the precepts both of morality and religion; and although it may have been intended as a mark of reverence, is, in fact, if rightly considered, an instance of disobedience, and therefore, of disrespect, or at least of inattention, to Christianity. And if this is true, then do those persons adopt the course at once most pious and most moral, who not only *say* that their faith teaches love and peace, but act as if they believed what they say, by striving to procure the abolition of oppressive and intolerant laws.

* Mirror of Parliament. † Ibid. ‡ Ibid.

But another reason has been given against the emancipation of the Jews. No necessity, it has been said, exists for such a measure, which means, in other words, that the Jewish body in England is not numerous or powerful, and can therefore only request, and not demand, redress. Now this argument so far differs from the rest, that it is founded on fact, and not on fiction. It is true that the British Jews are not powerful or numerous.

But although it has been too much the practice for governments to adopt no public measure, however just, till it had been loudly insisted on by the people, we do not think so ill of our country as to anticipate that the small number of the Jews will long prevent them from attaining what it appears to us they are in common fairness entitled to. Very many well-signed petitions were last year presented to parliament in favour of Jewish emancipation. A similar petition from the metropolis has again, during the last few weeks, been signed by more than 23,000 persons, among whom are almost all the most eminent merchants and bankers of the city of London. During the past month a numerous public meeting has been held at Edinburgh, where resolutions recommending this measure of justice were adopted, and where, among many other excellent speakers, the Rev. Dr. Brown, an eminent minister, expressed, as the Archbishop of Dublin and the Bishop of Chichester had previously done in parliament, a conviction that Christianity enjoined, instead of forbidding, the removal of restrictions upon conscience.

We doubt not that this sympathy in the cause of the Jews will continue; we hope, too, that even that branch of the legislature which has hitherto resisted, will learn both from argument and from public opinion, how fit it is to do them justice: and that England will be freed from the disgrace of inflicting, and her Jewish subjects from the pain of enduring, disabilities on account of religion.

HISTORY OF THE CORN-LAWS.

Of the great economical questions which are agitated in our day, that of a free trade in corn is one of the very greatest. It is also one, which, although it has been long and largely discussed in every form of disputation, is probably destined to engage yet a good deal more of the public attention both in parliament and elsewhere. The result of the late debate in the House of Commons, triumphantly as the opinions of the party opposed to the repeal of the present law were supported by the numbers on the division, will not, we may be very sure, have the effect of preventing the subject from being again and again brought before the legislature, till the advocates of a change of system shall either attain their object, or shall be made to feel the hopelessness of attaining it by many defeats. The circumstances of the present moment, and especially the moderate prices at which grain is now selling in the home market, may render it unadvisable to stir the matter again before another session; but it is likely to be at least an annual question for some time to come. In the meanwhile, the season of comparative ease and quiet—that during which the evils, or alleged evils, of the existing system do not actually press upon us—appears to be not the worst for its calm consideration, and the diffusion of a knowledge of the facts and principles upon which the judgment to be formed respecting it depends. Unfortunately, it very rarely happens that momentous public questions are finally brought to a settlement before the last moment to which such a measure can safely be deferred; and it is perhaps scarcely to be expected that we shall soon become so much wiser as in all cases to legislate for the coming crisis, instead of in the midst of its difficulties, although such a mode of proceeding would obviously in general prove by far most advantageous even for the interest that has to give way or concede when the push comes. But, at any rate, let governments go on as they may, there is no reason why the public should not avail themselves of the opportunity of making up their opinions before the necessity of acting may hardly leave time to think. We shall therefore, we conceive, be doing a useful and acceptable service, by even now laying before our readers such an exposition of this important subject as shall, within a moderate compass, embrace everything really essential to its elucidation. We shall begin with those historical details which are necessary to be known in order that we may understand what the corn-laws really are—what they are at present established, and out of what previous enactments those now in force have grown. Considerable ignorance on these heads may sometimes be observed in persons who write and declaim very fluently on both sides of the controversy.

It has been commonly assumed, that from the Conquest down to near the middle of the fifteenth century, no corn was allowed to be exported from this country; and there are some considerations certainly which would seem to make it probable that such was the case. In the first place, it is well known that the predominant practice of state policy in those days, was to endeavour, as much as possible, to retain within the kingdom all those things which were held to be indispensable to its wants, rather than, by permitting freedom of export and import, to trust to the natural operation of the commercial principle for an adequate supply. Then there were, in all likelihood, no inducements to deviate from this rule in the case of corn, arising from the state of agriculture, which for a long time was not sufficiently advanced, either to claim exemption on account of its importance, or to be able to take advantage of such exemption if it had been conceded. It must have been some ages, before grain enough was raised in England to permit any to be spared for the foreign market. We are not aware that any notices have come down to us of the first attempts made by the growers of this country to send their produce abroad. It is evident, that until that state of things arose, no law upon the subject could well exist. But when corn at length began to be sent out of the country, or soon after that practice began to grow up, it is extremely probable that the crown would interfere, by an exertion of prerogative, to put a stop to it. Mr. Macculloch has stated (see 'Supplement to the Encyclopædia Britannica,' art. Corn-Laws), that till the year 1436, the export of corn from England was forbidden, under the severest penalties. We have not been able to discover any old law imposing such penalties; nor, although we think it likely, as we have just said, that the crown had assumed the power both of preventing and of allowing the exportation of the article at its pleasure, is it quite correct to say that the trade remained fettered, even to this extent, down to 1436. The earliest statute on the subject which we have found (34 Edward III. c. 20), passed in 1360-61, declares that "the passage of corn shall be prohibited (*defendu*) in all the parts of England; so that none have license nor warrant to pass with such corn in any wise, unless it be to Calais or Gascoigne, or to other special places which it behoveth that the king cause to be furnished (*face garnir*) with the corn of England, and that at his own ordinance and license." The meaning of this we take to be, that the crown, except in the cases specified, shall be restricted from granting any license to export. It seems to be assumed, that exportation, without such license, was clearly illegal. The statute, therefore, may be considered as a restriction upon the royal prerogative; and in that view it indicates that the prevention of the exportation of corn was then regarded as a point which the commonalty had an interest in carrying against the crown. It was thought, not unnaturally, with whatever degree of short-sightedness, that the less corn allowed to be sent out of the country, there would be the more at home.

But whether it was that the actual effects of this policy were found to be different from what had been anticipated, or that in place of the consumers of corn, another interest (the producers) had obtained the ascendency in the legislature; not many years after, namely, in 1394, a new act was passed (17 Richard II. c. 7) of the following tenor:—"The king, at the request of the Commons to him made in this present parliament" (these are merely the words of form in use at the time in all statutes), "hath granted license to all his liege people of his realm of England, to ship and carry corn out of the said realm, to what parts that please them, except to his enemies, paying the subsidies and devoirs thereof due" (that is, what we should now call the customs); "notwithstanding any ordinance" (the term, as used at this time, includes acts of parliament), "proclamation, or any defence" (prohibition) "made before this time to the contrary; nevertheless he will that his council may restrain the said passage when they shall think best for the profit of the realm." And this act is confirmed in 1425, by the 4 Henry VI. c. 5.

It is somewhat curious, certainly, that the act of 1436 (15 Henry VI. c. 2) takes no notice of these two preceding statutes, the first of which, as we have seen, had forty-two years before established the free exportation of corn, subject

only to occasional suspension by royal edict when the price in the home market was conceived to be so high that it ought not to be raised by any additional quantity being sent abroad. It is probable that so vague a regulation was found nearly inoperative, and that very little corn really was exported under its sanction, the permission which it conceded being too indeterminate to encourage any extension of tillage sufficient to keep prices down to what was deemed the requisite point of depression at home. It was accordingly considered necessary in the present statute to fix a distinct limit up to which the liberty to export should extend. The words employed are as follows:—"Forasmuch as by the law it was ordained that no man might carry nor bring corn out of the realm of England without the king's license, for cause whereof farmers and other men which use manurement" (if that be the meaning of the original term, *manuovement*) "of their land may not sell their corn but of a low* price to the great damage of all the realm; our said sovereign lord the king, willing in this case to provide remedy, hath ordained, by authority aforesaid, that it shall be lawful to every person to carry and bring corn out of England, and the same to sell to whatsoever person that he will, except only to the king's enemies, as often and as long as a quarter of wheat exceed not the price of six shillings and eightpence, and one quarter of barley three shillings, in that port where that wheat or barley is so shipped, and that without sueing any license for the same; all other ordinances before this time thereof made to the contrary notwithstanding; provided always, that the king be contented with his customs and duties. And this ordinance shall endure till the next parliament."

The next parliament met in 1439. There was no parliament in 1440; but in that which met the following year, a new act (20 Henry VI. c. 6) was passed, commencing by a recital of that last quoted, which it declares to have been made "for the common profit of all the realm, and especially for the counties adjoining to the sea." It goes on:—"Our said sovereign lord the king, forasmuch as this statute is not now in his force, and that many counties adjoining to the sea may not sell the substance of their corn but by carriage and bringing by the sea, hath ordained, by the authority aforesaid, that the statute and ordinance aforesaid, now expired, as afore is said, shall begin to hold his force at the feast of the nativity of our Lady next ensuing, and shall endure from thence till the parliament next to be holden after the same feast, so that a parliament be holden within ten years next ensuing after the first beginning of this present parliament; and if so that there be no parliament holden within the same ten years, that then it shall continue and endure till the end of the same ten years." Finally, by the 23 Henry VI. c. 5, passed in 1444, the act of 1436 (no mention is made of that of 1441) is "ordained to be perpetual, and stand in his force for ever."

We have quoted the words of these statutes at length, because it is important to a clear understanding of the subject that we should know not only what was enacted, but, as far as possible, the views and reasons by which the legislature appears to have been influenced in introducing the successive changes that have been noted. Assuming that up to the close of the 14th century the exportation of corn was prohibited by law, and that till about that date very little was, in fact, exported, we find that, in the course of the next fifty years, exportation, after having been in the first instance tolerated under the king's license, became eventually within certain limits the established policy of the country. It is sufficiently evident, however, from the language of the several acts, that this important change was brought about simply by the increasing influence of the agricultural interest, and that it was not introduced with any of those more remote and comprehensive views to which we shall presently have occasion to advert. The liberty of carrying their corn to a foreign market was granted as a boon to the landlords and farmers, and certainly in the expectation that the effect would be, not to lower prices, but to keep them up to what was conceived to be a fair and remunerating rate. We shall see that in a later age, exportation was encouraged on the distinct principle of its having a tendency to secure a more abundant supply of the commodity for the home market; and hence, to keep prices more steady and moderate than they otherwise would be.

* In the common translation, "a bare price," but *bare* is evidently a misprint for *base*. The original French is *bace*.

Taking the 300 years and upwards which elapsed from the Conquest to the year 1394 as the first period in the history of the Corn Laws, we may consider the second period as taking its commencement from the last-mentioned date. It continued till the year 1463, when another important change was introduced.

Up to this time there is no reason to believe that the importation of corn from abroad had ever been prohibited or subjected to restriction. Such a prohibition, indeed, would have been altogether opposed to the spirit of our ancient policy, which, as already noticed, was anxiously directed to the object of attracting to the country and preserving within it as much food as possible. The circumstances of the time rendered it necessary that this should be made a primary object. But as the agricultural interest had already succeeded in carrying one modification of the old principle, by which they obtained the liberty of sending corn abroad, so the still-augmenting power of the same class soon after forced from the country another concession in their favour, by which they acquired a complete monopoly of the home market. The statute 3 Edward IV., cap. 2, passed in 1463, after the following preamble, "Whereas the labourers and occupiers of husbandry within this realm of England be daily grievously endamaged by bringing of corn out of other lands and parts into this realm of England, when corn of the growing of this realm is at a low price," proceeds to enact that no person, from the feast of St. John the Baptist next ensuing, shall bring into England any wheat, rye, or barley, not of English or Irish growth, unless the price of wheat shall exceed 6*s.* 8*d.* the quarter, that of rye 4*s.*, and that of barley 3*s.*, on pain of forfeiture of the grain.

Here, then, we have at length established within certain limits a system as favourable to the grower of corn as it was possible to make it—open where it was for his interest that it should be open, and close where he required that it should be close. So long as the price of wheat was below 6*s.* 8*d.* the quarter, exportation was free and importation was prohibited. The price, therefore, was sustained at that height, at the least, in so far as it was possible so to sustain it by legislative contrivances. And the benefit of the corn-grower was the avowed and sole object of the system.

This state of things seems, however, in course of time, to have been found inconvenient. In these circumstances was passed, in 1534, a new act, the 25 Henry VIII. chap. 2, the preamble of which is amusing for its mixture of *naiveté* and good sense. "Forasmuch," it begins, "as dearth, scarcity, good cheap, and plenty of cheese, butter, capons, hens, and other victuals, necessary for men's sustenance, riseth and chanceth of so many and divers occasions that it is very hard and difficil to put any certain prices to any such things, &c." It then proceeds to enact in general terms "that no person or persons, unless it be by license under the king's great seal, from henceforth shall carry, or convey, or cause to be carried and conveyed, any corn, beeves, muttons, veals, porks, or any other of the above said victuals to any the parts beyond the sea; except only for the victualling the towns of Calais, Guinnes, and the marches of the same, and except for victualling of masters, mariners, and merchants of ships passing the seas; and also except barrelled butter and meal to be carried to the parts of Ireland, as hath been accustomed." The penalty for a violation of the law was the forfeiture of the commodity. By this act, therefore, we may consider an end to have been put to the third period in the history of the Corn Laws, during which the exportation of wheat had been free so long as its price did not exceed 6*s.* 8*d.* the quarter. Exportation, except by license, was now prohibited in all circumstances.

This change of the law, along with other causes, appears to have operated with disastrous effect upon the agriculture of the kingdom. Or, to speak more accurately, the prohibition of exportation, after having been resorted to as a corrective for that depression of agriculture which had been brought about in the first instance by other causes, was found only to aggravate the evil. Much land having, no doubt, been thrown out of tillage in the course of the desolating civil contest which had raged for so many years previous to the accession of Henry VII., and the quantity having probably been rather increased than otherwise by the important innovations on the ancient policy of the state which signalized the reign of that king, the act of 1534 was passed to meet the diminution of produce thus occasioned; but the restriction thus imposed only operated as an addi-

tional discouragement to agriculture, and the extent of land under the plough became still further narrowed. In this state of things the legislature attempted to force cultivation by a very extraordinary enactment. The statute 5 and 6 Edward VI., chap. 5, passed in 1551, is entitled "An act for the maintenance and increase of tillage and corn;" and the preamble consists of a complaint that of late a great deal of tillage land had been converted to pasture. To remedy this evil, it is then ordered that for the future at least as much land shall be tilled in every parish as had been under the plough at any time since the accession of Henry VIII., under a penalty, to be exacted from the parish, of 5*s.* for every acre that should be deficient. The act, it was declared, should remain in force for ten years, and to the end of the then next session of parliament.

The system introduced in 1534, under which exportation was interdicted in all circumstances, endured only for about twenty years; and even during that period it was, most probably, in a great degree inoperative. In 1554 a new act was passed (the 1 & 2 Philip and Mary, chap. 5) restoring the liberty to export so long as the price of wheat should not exceed 6*s.* 8*d.*, that of rye 4*s.*, and that of barley 3*s.* The preamble complains, that whereas sundry good estatutes and laws had been made in this realm in the time of the queen's highness's most noble progenitors, that none should transport, carry, or convey, out of the country any corn, butter, cheese, or other victual; yet, notwithstanding, many and sundry covetous and insatiable persons, seeking their own lucres and gains, had and daily do carry and convey innumerable quantity as well of corn, cheese, butter, and other victual, as of wood, out of this realm into the parts beyond the seas: by reason whereof the said corn, victual and wood are grown into a wonderful dearth and extreme prices. The object principally in the view of those who framed this act, therefore, may be fairly considered to have been the more strict prevention of exportation when there was not a sufficient supply in the home market: but for this purpose it was deemed necessary to permit corn to be sent abroad so long as it was below a certain price at home: or, in other words, to return to the regulation which had subsisted before 1533. So that here we have an end of the fourth of the periods into which the history of the Corn Laws may be divided.

The characteristic of the fifth period is the existence of the liberty of exportation under certain limitations. At first, as we have just seen, the right ceased as soon as the price of wheat rose above 6*s.* 8*d* the quarter. A few years later, namely, in 1562, by the stat. Elizabeth, chap. 5, section 17, the limits within which the different descriptions of corn might be exported were extended so as to carry the terminating price of wheat to 10*s.* the quarter; that of rye, peas, or beans, to 8*s.*; and that of barley or malt to 6*s.* 8*d.* The better to prevent evasion of the law, it was at the same time enacted that the commodity should only be exported from such ports as her majesty might by proclamation appoint. And in 1571, by the 13 Elizabeth, chap. 13, it was declared that, for the increase of tillage and maintenance and increase of the mariners of the realm, corn might be exported, on payment of certain specified duties, at all times when no proclamation had been issued to the contrary. In these two last statutes, if not in the one by which they were preceded, we may perceive again the gradually increasing influence of the agricultural and commercial interests. All this while the law of 1463, prohibiting importation so long as the price of wheat was under 6*s.* 8*d.*, that of rye under 4*s.*, and that of barley under 3*s.* the quarter, appears to have remained unrepealed; but it must, in all probability, have proved generally inoperative from the prices seldom or never descending below these rates. The importation of corn, therefore, we may reckon to have been now practically free.

A succession of acts in the course of the next hundred years maintained the principle that had been thus introduced, of a free export within certain limits, at the same time that the limits were more and more enlarged by each act. The amount of the duty on exportation was also gradually raised. In 1623, by the 21 James I., chap. 28, exportation was permitted till the price of wheat should exceed 32*s.* and that of malt and barley 16*s.* the quarter. By the act 12 Charles II., chap. 4, passed in 1660, the export prices were advanced to 40*s.* for wheat, and 20*s.* for malt and barley; but a duty of 20*s.* was also imposed upon every quarter of wheat exported. The latter regulation, however, was repealed three years after by the 15 Charles II., chap. 7, which both reduced the duty to 5*s.* 4*d.* and allowed exportation till the price in the home market should exceed 48*s.* the quarter. In 1670, by the 22 Charles II., chap. 13, a further important change was made in the same direction, exportation being permitted as long as wheat should be under 53*s.* 4*d.* the quarter. Corn imported from foreign countries was, at the same time, loaded with imposts so heavy as effectually to exclude it, so long as the home price should be under the amount at which exportation ceased; and even when wheat rose to this price of 53*s.* 4*d.* it could only be imported from abroad on payment of a duty of 8*s* the quarter. This duty remained unabated till the price reached 80*s.*, at which point importation became free. The object, we may therefore say, directly aimed at by these arrangements was neither more nor less than to keep up the price of wheat to 53*s.* 4*d.* the quarter at the lowest. This certainly was, in real amount, a considerably higher price, though how much higher might admit of dispute, than 6*s.* 8*d.* was in 1554, when what we have called the fifth period in the history of the Corn Laws commenced, and the first attempt was made, by a reciprocating system of freedom to export, and restrictions on importation, to establish a certain point below which prices should not descend. And be it observed, that from this beginning, throughout the whole subsequent course of legislation, the benefit of the corn-grower, or at any rate of the portion of the community connected with and dependent upon agriculture, was avowedly the chief, if not the single, aim of every enactment.

But in 1689, immediately after the Revolution, the landholders succeeded in gaining still another step in advance. With the act of the 1 William and Mary, chap. 12, then passed, commences the sixth period in the history of the corn-laws. By that statute the exportation of corn was, not permitted only, as heretofore, but actually encouraged by bounties. A sum of 5*s* was made payable upon every quarter of wheat exported, so long as the home price did not exceed 48*s.*: and other bounties of smaller amount were granted upon the exportation of barley, malt, and rye. By a subsequent act (the 11 and 12 William III. chap. 20), passed in 1700, the same system was carried to yet a further length by the abolition of all the then existing duties on the export of corn. "No alteration," says the writer of the article *Corn-Laws* in the 'Supplement to the Encyclopædia Britannica,' "having been made in the prices and duties regulating the importation of foreign corn, as fixed by the act of 1670, and the duties being rigorously exacted, the act repealing the duties on exportation completed the restrictive system. Every part of this complex machine was now in operation: and while no foreigner was allowed to contend with our own home growers, the liberality of the state enabled them to contend with foreigners, even when the price of corn in Great Britain was considerably higher than its price abroad."

The granting of bounties, however, on the exportation of corn, was defended, when first proposed, on a novel pretence. It was then contended, and for a long time after commonly believed, that the extension of tillage occasioned by these bounties operated materially in keeping down prices, and that the public therefore were amply repaid in this way for the outlay. Even foreign writers were in the habit of taking this view of the subject. The following passages are quoted in the valuable publication entitled 'Tracts on the Corn-Trade and Corn-Laws,' which appeared anonymously in 1758, and again in 1766, but which is known to be the work of Mr. Charles Smith. From 'L'Ami des Hommes:'—"The English, to encourage the culture of corn in their island, have made use of a singular method, which hath succeeded, which is to gratify, at the expense of the state, the exporters of that merchandise." From Boulainvilliers, 'Les Intérêts de la France, mal Entendus:'—"In other states, private persons pay the government for the exportation of grain; England acts quite otherwise, and pays them. All common means made use of to that time to increase the fruits of the earth had been insufficient, or, at least, of little use. Before that epoch, the agriculture of England was of little account in Europe. As long as that monarchy thought only of its own subsistence, it always found itself short of the necessary; it was very often obliged to have recourse to foreigners to make up the deficiency of the growth of the nation; but when it made its agriculture an object of commerce, the cultivation of its land became one of the most abundant in Europe. Without that stroke of state—the best

concerted of all those which have yet appeared in modern politics—England had never sown but for herself: for what could she have done with the surplus of her grain? It was the bounty only which could assure her of the sale in foreign markets; and for that reason be the only source of the augmentation of her harvests. Let us combine all the means which that monarchy hath put in use, for an age past, to establish its power; and we shall find that it is to this in particular that she is indebted for her elevation."

There has, even in more recent times, been much difference of opinion as to the effect of these bounties on exportation. At present we shall only remark, that, although in ordinary circumstances such a method of encouraging tillage, must, for obvious reasons, be the very reverse of economical or advisable, yet in a peculiar state of things it might possibly be productive of beneficial results, which would not have been obtained but for the stimulus so applied. It is not a good thing, generally speaking, to trade upon borrowed capital; but a salutary impulse may be sometimes given, even by loans, to particular branches of industry. While ordinary means are best for ordinary purposes, an unusual expedient may be properly employed to surmount an unusual difficulty. But that the state of agriculture in England, when the bounty system was introduced, was such as to require that extraordinary aid, may certainly be very reasonably doubted.

This system remained in considerable vigour till after the middle of the last century; but about the year 1757, it began to be found that the exportation of corn from England to the continent could not be forced even by this artificial encouragement; and after the right to export had been repeatedly suspended for a year, in the expectation that more plentiful harvests, or the still greater extension of tillage, would again bring back the old state of things, an act was at last passed in 1773, withdrawing the bounties, and altogether prohibiting exportation as soon as the price of wheat should reach 44*s.* the quarter, and allowing importation on payment of the trifling duty of 6*d* the quarter, as soon as the price should be 48*s*. At this point, therefore, what we have called the sixth period in the history of these laws, may be regarded as having been brought to a close. The bounty system, though still nominally in force so long as the price of wheat should be under 44*s.* the quarter, never again came actually into operation.

During the seventh period, which now commenced, importation was constant and considerable, and prices in consequence continued steady and moderate. Tillage was also extended during this interval, and the extension, whether less rapid or more so than that which had taken place under the artificial stimulus that had previously been maintained, was certainly much more healthy, and much more likely to be permanent. Altogether, the state of things introduced by the act of 1773, was the most satisfactory that has existed since restrictions first began to be imposed upon the export and import of corn. But, unhappily, the period during which this act remained in operation was very short. A new act, founded upon opposite principles, was passed in 1791; and with that commenced the eighth period in the history of the English corn-laws.

By this act exportation was in the first place permitted till the price of wheat in the home market should reach 46*s.* the quarter. But of much more consequence than this slight extension of the range within which exportation might take place were the new regulations as to importation. It was enacted that so long as the price of wheat in the home market should be under 50*s.* the quarter, none should be brought from foreign countries except on payment of a duty of 24*s.* 3*d.*, an amount perfectly prohibitory. While the price was above 50*s.*, and under 54*s.*, the duty was 2*s.* 6*d.* The duty was not reduced to 6*d.* till the price reached 54*s.* the quarter. In 1804, the protection thus given to the corn grower was carried still farther by a new act. Importation, except under the prohibitory duty of 24*s.* 3*d.*, was now forbidden till the price of wheat in the home-market should be 63*s.*; the duty of 2*s.* 6*d.* was exacted from that point till the price reached 66*s.*; and it was only when it exceeded that amount that the duty was reduced to 6*d.* The limit up to which exportation might take place was also advanced by this act to 54*s.*, and bounties were still continued on exportation when the home price of wheat was under 48*s.* the quarter. These latter enactments, however, were totally inoperative.

Up to the close of the war, also, in 1814, there was nearly as little corn imported as there was exported. But when the restoration of peace removed the obstacles to free intercourse with the continent, great quantities were brought thence to this country, and prices fell rapidly. In these circumstances in the beginning of the year 1814, a new effort was made by the agricultural interest to recover their monopoly. The attempt, however, was met by so determined a resistance, that of two bills which were brought into the House of Commons having that object in view, only one, altogether repealing the bounties, and allowing exportation in all circumstances, (alterations which were of no practical importance,) was carried. But the following year the struggle to place additional restrictions upon importation was renewed with better success. After long and violent debates the celebrated act, the 55 Geo. III. chap. 26, was carried by large majorities through both houses. By this measure the importation of foreign grain was altogether prohibited till the price of wheat in the home market should be 80*s.* the quarter; that of rye, pease, and beans, 53*s.*; that of barley, bear, or bigg, 40*s*; and that of oats 26*s.* The only exception made was in favour of the produce of British possessions in North America, which was allowed to be imported when the home prices were, of wheat, 67*s.*; of rye, &c., 44*s.*; of barley, &c., 33*s.*; and of oats, 22*s.*

By this law the system of protection to the home-grower by the enhancement of prices, which had been introduced in 1791, was carried to the utmost length which it ever attained. The attempt, however, was not followed with the success which had been expected. Prices continued in general below the amount which had been assumed by the framers of the act to be necessary in order to remunerate the British agriculturist. This being the case, it would have been useless folly to proceed farther in the same course; and accordingly, in 1822, the law which had been passed seven years before, was abrogated by a new act—the 3 George IV. chap. 60—with which we may consider the ninth and last period in the history of the corn-laws to take its commencement.

During this period the extreme point of restriction established by the law of 1815 has been gradually, if somewhat slowly, receded from, although the principle of protection against foreign competition has not been abandoned. By the act of 1822, the importation prices were reduced, for wheat, to 70*s*, for rye, pease, and beans, to 16*s.*, for barley, bear, or bigg, to 35*s.*, and for oats, to 25*s.*;—those for the produce of the British possessions in North America being reduced in the same proportion. But so long as the price of wheat in the home market was between 70*s.* and 80*s.*, a duty was imposed upon the foreign article of 17*s.* for the first three months after the opening of the ports, and of 12*s.* afterwards. When the price was between 80*s.* and 85*s.*, the duty was fixed at 10*s* for the first three months, and 5*s* afterwards; and when the price was above 85*s.*, the duty was to remain steady at a shilling the quarter. Similar regulations were made for the other descriptions of grain.

The principle, however, even in this somewhat mitigated application of it, was still over-stretched. With the exception of some barley, no corn was ever brought from abroad under the provisions of this act. But in 1826, in consequence of the deficiency of the harvest of that year, a temporary act was passed permitting the importation of 500,000 quarters of wheat on payment of such duties as might be fixed by the Privy Council; and a considerable quantity of oats were also admitted by ministers on their own responsibility, for which exertion of authority they received an indemnity on the re-assembling of parliament. These measures demonstrated the unsuitableness and impracticability of the existing law, and also prepared the way for a still farther relaxation of the restrictive system. In the early part of the year 1827, accordingly, Mr. Canning moved a set of resolutions in the House of Commons, the leading principle of which was to legalize importation in all circumstances, and for the absolute prohibition which then existed to substitute a graduated scale of duties. The bill which was founded upon these resolutions, however, after having been carried through the Commons, was abandoned in consequence of a clause moved by the Duke of Wellington having been carried in the Lords, the effect of which would have been, in the very face of the main principle of the bill, to keep the ports shut so long as the price of wheat was under 66*s.* the quarter. But the next year, a measure similar to that which had been thus defeated was brought in by Mr. Charles Grant, and eventually passed into a law,

the 9 George IV. chap 60. It is by this act that the corn-trade is at present regulated. The following is a summary of its leading provisions. Importation is free on payment of a duty of one shilling on the quarter, whenever the price of wheat in the home market is 73*s.*, of barley 41*s.*, of oats 31*s.*, of rye, pease, and beans, 46*s.* When wheat is at 61*s.*, the duty upon it is 25*s.* 8*d.*, which is increased by one shilling for every shilling, or part of a shilling, that the price is below that limit. On the other hand, as the price rises from 61*s.* up to 73*s.*, the duty diminishes according to the following scale:—At 62*s.* it is 24*s.* 8*d.*; at 63*s.* it is 23*s.* 8*d.*; at 64*s.* it is 22*s.* 8*d.*; at 65*s.* it is 21*s.* 8*d.*; at 66*s.* it is 20*s.* 8*d.*; at 67*s.* it is 18*s.* 8*d.*; at 68*s.* it is 16*s.* 8*d.*: at 69*s.* it is 13*s.* 8*d.*; at 70*s.* it is 10*s.* 8*d.*; at 71*s.* it is 6*s.* 8*d.*; and at 72*s.* it is 2*s.* 8*d.* Barley at 32*s.* pays a duty of 13*s.* 10*d.*; oats at 24*s.* a duty of 10*s.* 9*d.*; rye, pease, and beans at 35*s.* a duty of 16*s.* 9*d.*; and in the case of all these grains for every shilling that the price falls, the duty increases by one shilling and sixpence, and decreases by the same sum for every shilling that the price rises. The produce of the British possessions in North America or elsewhere out of Europe may be imported on payment of a duty of 5*s.* on wheat till the price reaches 67*s.*; of 2*s.* on barley till the price is 34*s.*; of 2*s.* 6*d.* on oats till the price is 25*s.*; and of 3*s.* on rye, beans, and pease, till the price is 41*s.* When the prices have attained these limits, the duty is sixpence on the quarter, whatever the description of grain.

From this review then it appears, that the chief restriction laid upon the corn trade in this country in early times, was of a kind directly the opposite of that to which it is now subjected. It was exportation, not importation, which was restrained down to the year 1463. The restrictions upon exportation continued in actual operation till the year 1757, and were not formally repealed till 1814. Those upon importation, on the other hand, have not only continued in force ever since they were first imposed, but, notwithstanding occasional fluctuations in the degree to which they have been stretched, have been carried, upon the whole, much farther than they were at first. At the present moment, however, the system maintained, although still in a high degree protective of the interests of the home-grower, is much less artificial than it has been. There is now no absolute prohibition of importation while prices are under a certain amount, as there was previous to the act of 1828; and the bounties, which, as a further support to the agricultural interest, were formerly paid upon exportation, have also been now withdrawn.

An important part of many of the modern acts relating to the trade in corn, has been the provision made for ascertaining the prices in the home market upon which exportation and importation have been made dependent. No purpose would be served, by detailing here the various methods which have been successively tried with that view. But as one of our objects is to lay before the reader a sufficiently full account of the law as it now stands, we shall state the mode of striking the averages, as it is expressed, which has been established by the act of 1828. By that act it is ordered that weekly returns of the purchases and sales of British corn shall be made in 150 cities and towns, which are enumerated, and which comprise all the principal corn markets in England. There is in each of these towns an inspector of corn returns, and a comptroller of corn returns for the kingdom generally. The inspectors transmit their returns to the comptroller; and by that officer the averages are made up and completed on Thursday in each week, from the returns received by him during the week next preceding, ending on and including the Saturday in such preceding week. It is ordered that he shall add together the total quantities of each sort of British corn respectively appearing by such returns to have been sold, and the total prices for which the same shall thereby appear to have been sold, and shall divide the amount of such total prices by the amount of such total quantities of each sort of British corn, and the sum produced thereby shall be added to the sums in like manner produced in the immediately preceding five weeks, and the amount of the whole shall be divided by six, and the sum thereby given shall be deemed and taken to be the aggregate average price of each sort of British corn respectively. These aggregate weekly averages are published in the next succeeding Gazette, and transmitted to the collectors of the customs at all the ports. To afford the materials for these calculations, all persons purchasing corn are required to transmit to the inspectors accounts in writing of their purchases, under penalties for neglect or false and fraudulent statements.

We have endeavoured to render our sketch of the origin and progress of the corn-laws as intelligible as possible, by avoiding all reference for the present to any other legislative enactments, except those which went to regulate the export and import trade. The ancient regulations on the subjects of forestalling and regrating are all now either repealed or have become totally inoperative; and any account of them would only have still further complicated, for no purpose, an exposition of necessity sufficiently intricate, though unincumbered with any extraneous details.

In future papers, to which the present is intended as an introduction, we shall proceed to the discussion of the policy of those laws the history of which we have now traced.

TITHE COMMUTATION BILL.

THERE can be no question as to tithe being property, just as much as land is property. Tithe is merely a portion of the produce of every farm or estate, which belongs to one man, while the remainder belongs to another. It is a debt annually payable by the land, which the parties to whom it is due have just as much right to exact as any other creditor can have to demand payment of any other debt.

If this be the case, we may know what to think of the cry which some politicians are very fond of raising—the cry that tithes should be altogether abolished. It is simply a proposal that every man who happens to be the owner of a titheable estate should be allowed to put into his pocket a certain sum of money which belongs to another, or, which is the same thing, that he should be released from the obligation to discharge a certain portion of his just pecuniary engagements. With as much decency might the landlords call out for an extinction of all wine-merchants' and tailors' unpaid bills, as for an extinction of tithes, in this sense of the expression.

A difference of opinion may exist as to how that portion of the tithes which belongs to the public ought to be appropriated. This is quite a distinct point, and one which we do not now consider. What we would assert at present is merely, that the revenue called tithe, do with it what we may, is not to be given up, without an equivalent, to the owners of the soil. They have no more right to it than any other class of persons whatever.

Although, however, the character of tithe as a species of property cannot be disputed, it does not follow that the shape in which that property at present exists may not be extremely inconvenient and objectionable. If all the landed estates in the country had for many ages been purchased and held by their owners, under an obligation to allow certain other parties, once every year, to make a wild attack upon the growing crops, and to pull up and destroy as much as they could in a given time, it would be well to take measures to put an end to so pernicious a privilege. In such a case the legislature might with propriety interfere, to compel the persons having this right of annual inroad and havoc to surrender it for a fair compensation.

Now the property called tithe, in the mode in which it is at present held, is really a nuisance, if not quite so bad as this, yet bad enough to demand the application of every justifiable means for its removal. When tithes are taken in kind, as they may in any case be at the will of their owner, they become a species of exaction, suited only to the most barbarous ages, and at war with the whole spirit and habits of advanced civilization. We have here something really little short of the hostile inroad and destruction of our hypothetical case. The privilege of the tithe-owner, thus exercised, becomes an interference with the occupant of the soil, which it is impossible for the latter not to feel to be in the extremest degree oppressive and galling. The entering upon his lands, sanctioned as it may be by the law, has all the air of a robbery. No wonder that a right should come to be reviled and denied to be what it is, which thus assumes all the likeness and manner of a wrong. But even when paid in money, tithe is still an exaction liable to many grave objections. From the circumstance of the person to whom it is paid having no further connexion with the land from which he demands this yearly tribute, it is too apt to appear to the popular mind to be something given for nothing. Then the settlement of its amount is often a source

matter of difficulty, occasioning constantly renewed disputes between the two parties. When one of these parties, as is for the most part the case, is the clergyman of the parish, the disagreement thus produced is especially unseemly and lamentable, placing as it does the pastor in a position towards his flock, which, on every account, for their sake, and for his own, and for the sake of the church, is the one he ought least of all to occupy. Add to these considerations that tithes, increasing as they do in amount with the produce of the soil—with an increase of produce, which the receiver of the tithes has not contributed a farthing to create—cannot but be felt to be, in so far, an apparently unfair exaction. The tithe-owner alone reaps where he has not sowed. The landlord, if he derives a higher rent from an improved farm, does so as his reward and fair compensation for having been for a course of years before satisfied with so moderate a rent as permitted his tenant to lay out a portion of his annual returns in so improving it. But the tithe-owner lays out nothing, and yet takes his share in the benefit of every shilling that is laid out by others. He grants no respite from an increase of his annual demand till the termination of the existing lease, but presses his claim for a larger sum close upon the gathering in of every successive harvest. In this way tithe acts to prevent the application of capital to the improvement of the soil. It operates as a tax upon every such attempt, which, in many cases, the returns that can be reasonably calculated upon are not able to sustain.

For all these reasons it is extremely desirable that some arrangement should be come to by which we shall get rid of the present system of tithes. The owners of that species of property must be either compelled or induced to exchange it for some other. If the evil cannot be otherwise put an end to, the legislature, we conceive, has a right to pass even a compulsory enactment upon the subject just as it has recently done in order to put an end to another great evil, the existence of negro slavery. As the West Indian planters have been compelled to give up, for a certain sum of money, the property they had in their slaves, so the tithe owners, if need be, may in like manner be compelled to surrender for a fair compensation their property in tithes. The public sense of the necessity or the strong expediency of either measure may be considered to be its sufficient justification, so long as everything is done which it is possible to do to make up to individuals for the losses which it may inflict.

A bill for effecting a commutation of tithes was last session introduced into the House of Commons by ministers, but was afterwards dropt. The ground on which the measure chiefly failed in giving satisfaction, appears to have been, that it was not compulsory, but only permissive: that is to say, it merely proposed to afford facilities for the commutation, when the two parties (the payer and the receiver) were both willing to enter into an arrangement for that purpose, but left them the liberty to decline doing so if they chose. It would not necessarily, and probably would not for a long time in fact, have brought about the extinction of the present objectionable mode according to which the clergy are entitled to exact their dues. Since the reassembling of parliament after the Easter recess, another bill has been brought forward to effect this important object, which is founded upon a different principle. It will convert tithes, over the whole kingdom, either into their value in land, or into a fixed charge upon the rent of land.

It is proposed that the actual rent of all the titheable land in England and Wales shall be ascertained, and also the average amount of tithes paid in each parish during the last five years, by valuers appointed for each county, arable and non-arable land forming the subjects of two distinct valuations. A comparison between the amount of tithe and the amount of rent, in the case of each species of land, will then fix permanently the proportion which the former shall bear to the latter throughout the country; but at the end of every seven years the rental shall be re-valued, and the amount of the tithes for the succeeding period of that length altered according to any rise or fall that may have taken place—the proportion originally fixed between tithe and rent being, as we have just said, preserved for ever unchanged; and this adjustment having been made, the tithe-owner will have his claim, not, as at present, against the land, but against the landlord.

portable if any proprietor of land should wish to relieve his **quarter.** for all time coming from tithe, or the rate imposed **inopera** of it, he will have it in his power to do so by a single **Up** unt equal in amount to twenty five years' purchase of the annual charge. All the money thus received will be paid into the hands of commissioners appointed by the bishop of the diocese, and invested either in land or in public securities, as they shall direct. Whatever land is thus purchased with the redemption money of the tithes of any parish, must be situated either in that parish or one adjoining to it, and will be considered as glebe land under the management and control of the incumbent. He will be permitted to grant a lease of it, or any part of it, for twenty-one years, but will not be allowed to take premiums or fines on the renewal of leases.

There is also a provision in the bill for enabling landlords to free their lands from the septennial valuation, by simply converting the rate imposed in lieu of tithe into a fixed and permanent rent-charge, estimated in bushels of wheat.

Another measure which has since been brought forward, closely connected with that which we have just explained, is the bill for the abolition of church rates. This bill provides, that the imposition of church rates by vestries shall altogether cease, and that a sum of 250,000*l.* shall be annually granted for the repair of churches from the land-tax. This money will be applied strictly to the maintenance of the building, and to absolutely necessary alterations. For whatever ornamental work shall be desired by the congregation, they must provide the requisite funds by their own voluntary subscriptions.

The church rates raised by vestries at present, amount to not much less than 600,000*l.* annually. By the proposed plan, therefore, the public are relieved from considerably more than one half of the tax to which they are now subject. This will not satisfy those who would have had the rates extinguished altogether, and not even a partial substitute provided; but such a proposition is only consistent with the adoption of the principle, that there should be no church supported by the state. So long as a national ecclesiastical establishment is maintained, the buildings allotted to it must be kept in repair. In other quarters it is contended, that the revenues of the deans and chapters should be seized upon and appropriated to this object. The propriety of maintaining the sinecure situations in our cathedrals is a fair enough subject for consideration; and if this part of the establishment is found objectionable, it may be right that it should be abolished. But do not let the abolition be determined upon simply because a sum of money happens to be wanted for some other purpose, and the funds belonging to the deans and chapters are deemed the most convenient for spoliation. As to the objection taken to the imposition of this new charge upon the land-tax, on the ground that that tax is collected from the kingdom generally, while the church is maintained for England only; it is merely one of those theoretical punctilios which it is quite impossible to attend to in the actual conduct of affairs. By the present bill, the church is deprived of a large revenue, to the continued enjoyment of which it has a perfectly good legal title; for all property paying church-rates has been hitherto bought and sold under a full consideration of that liability; and the measure will scarcely be denounced by any except the boys of the lowest form in the school of politics, merely because in the opposite direction it may rub against some miserable pedantic dogma such as this.

EDUCATION OF DISSENTERS.

THE position which the two national universities have taken up, in reference to the claim preferred for a participation in academical honours by the large portion of the community who are dissenters from the established church, must be admitted, even by its defenders themselves, to be in no small degree bold and startling. They object both to open their own doors to the dissenters, and to allow them to have a separate university for themselves. They say plainly, that in so far as academical distinctions are concerned, the dissenters shall not be educated at all.

The benefits thus refused are not merely honorary and titular. Were it otherwise, those shut out from them would still have a right to demand that a sufficient reason should be given for their exclusion. There is no hardship more bitter in the endurance than degradation. But it so happens, that to these university degrees important civil privileges are attached—privileges which may even be almost said to have a money value, and which, at any rate, if their worth cannot be exactly calculated in pounds, shillings, and pence,

do most unquestionably supply the place both of money, and of exertion, and of time, in helping their possessor forward in the various paths of professional life. A degree of doctor in medicine, for instance, from Oxford or Cambridge, is the indispensable qualification to admission as a fellow of the College of Physicians. A degree of master of arts, from either of these two universities, shortens, by two years, the attendance at the inns of court of students educating for the bar. These are considerations which come home to the pockets of men, if there are any persons whose sensibilities lie there rather than elsewhere.

Let us begin with the opposition of Oxford and Cambridge to the institution of any third national university, having the power of conferring degrees, and established on such principles as to offer no bar to the admission of dissenters to all its advantages. Such a seminary already exists in the London University; but the application of that institution for a charter of incorporation, and the power of granting degrees, is met by the most strenuous resistance on the part of the two elder universities. Their opposition, however, it is understood, is rested chiefly, not upon any peculiar feature in the constitution of the new establishment, but upon the simple ground that they possess by law a monopoly of the right to grant those distinctions which the London University also desires to possess the power of dispensing. They contend, that to permit any other establishment to create masters of arts or doctors in this kingdom, would be an invasion of their monopoly.

If we rightly understand this plea, it would go to restrict the crown from founding a third university, even of the same exclusive character with Oxford and Cambridge. It would go the length of preventing for ever any extension of the means of academical education in England beyond what might be afforded by these two establishments, however strongly such extension might be demanded by the increase of population, or by any other circumstances.

This plea, be it further observed, is urged at a time when, in one of the existing universities at least, there is, from the mere inadequacy of the buildings, accommodation only for a part of those who apply for admission; and when it is in general indispensable that the name of a person desirous of becoming a student should be on the list for some years before he can be admitted.

We submit that this is a state of things which it is altogether vain to expect should be upheld, be the law at present what it may. There is a force of circumstances, against which no law can stand. If the law is now such as Oxford and Cambridge contend that it is, it must be allowed to remain so no longer. Either it or every thing else must give way. The law may be changed, but the state of society, and the circumstances of the country generally, cannot.

We are not aware, however, that any proof has been, or can be, brought forward, of the proposition on which Oxford and Cambridge thus found their claims. That they have hitherto been the only establishments in England entitled to confer degrees, is not disputed; but that they do now, or ever have, enjoyed this right as a monopoly—that is, as a right which no other establishment could or can be admitted to share with them—we have seen no evidence. Assuming that the right in question was originally bestowed by the royal prerogative—for that, if not bestowed, it is at least maintained by the authority and sanction of the crown, is, we apprehend, the orthodox doctrine in a Protestant realm such as this—what is there to show that the crown, by that former exercise of its power, deprived itself for all future time of the capacity to perform another similar act? Indeed, if we are to suppose one of the two universities to have possessed the right before the other—Oxford, we will say, before Cambridge—how came Cambridge to acquire it afterwards, except on the same principle on which it may be granted to the University of London now?

One of the forms in which Oxford and Cambridge put forward the claim we are considering, has almost the air of a joke. They have no objection, they say, to the University of London obtaining the right of bestowing honours of a different kind from those in which they deal—any new description of degrees, of its own invention. But the common degrees were not invented by Oxford and Cambridge. They are the same that are bestowed by all the universities of Christendom; and in that consists their value beyond any other before unheard of distinctions which might be substituted for them. The older universities seem to be apprehensive that their degrees will suffer in the public estimation from being confounded with those to be granted by the new seminary. Perhaps it is natural enough that they should wish to preserve the distinctive character of their own honours. But we have no fear that this object will not be effectually secured, in so far as it is just or desirable that it should, under the proposed new arrangement. A degree granted by the London University will never be confounded with one of the same nature granted by Oxford or Cambridge, except only in the case of its coming really to indicate the same amount of acquirement; and in that case there would be no reason for regret or complaint, though they should be generally regarded as equivalent. The mere identity of appellation would not obliterate the real difference, at least wherever any attention is paid to such matters. We believe that so long as there remained any sufficient reason for considering the rank of the one higher than that of the other, the doctors or other graduates of Oxford and Cambridge would no more find themselves deprived of their proper place in relation to those of the London University, than marquises, earls, and viscounts find that their higher dignities are forgotten in society because they are commonly known and addressed by the same title which is given to the members of the lowest degree in the peerage. Or, to refer to a case more in point:—who confounds masters of arts and doctors of any of the Scotch universities, with persons bearing the same titles which they have obtained at Oxford or Cambridge? The latter effectually preserve themselves from being confounded with the former by the simple expedient of adding the name of their college to their degree, whenever the occasion requires or admits of a precise announcement: a practice which their rivals carefully eschew, for nobody ever saw, either on title page or elsewhere, M. A. or D. D. of Edinburgh, Glasgow, St. Andrews, or Aberdeen.

Of course, in order that the respectability of academic degrees may be kept up, the power of dispensing them ought to be very cautiously granted to new institutions, and nothing would be more absurd than that every seminary of education which may rise in any part of the country, and take to itself the name of a college, should obtain this high prerogative. At present we should say that the University of London, and perhaps the King's College in London, are the only two establishments which have any fair claim to be so distinguished. We hesitate in regard to the propriety of granting such a right to King's College, only because the class of the community by whom it is supported might probably be themselves averse to any such additional encroachment on the monopoly of the two older universities. The claim of the London University, on the other hand, has been long and strenuously urged by those interested in the institution, and rests, besides, principally on grounds which do not exist in the case of the other new metropolitan college; namely, the circumstance that this is the only establishment at which one large portion of the public can obtain the benefit of an academical education. This and the other considerations bearing upon the question are very well stated in an Address published a few days ago from the Senate of the university to the Council, and which was originally submitted with the view that it should be communicated to the learned counsel retained in support of the application to the crown on the part of the university for a charter of incorporation *. It is here stated, among other particulars, that the university now consists of twenty seven professors, who teach at least as many distinct branches of knowledge, that a further addition to the number of chairs is contemplated; that the appointments are made by the Council, acting under the influence of public opinion, their responsibility to the body of proprietors, and after a report from the Senate on the testimonials of the candidates; that the property of the university has cost 160,000*l.*, and that, besides the peculiar facilities for public lectures afforded by its buildings, it possesses ample means of instruction and illustration in its general, medical, and law libraries, its anatomical museum, its museum of materia medica, and its other medical collections, its zoological museum, and its collection of philosophical instruments and models of machinery. The magnitude of the population of the metropolis is also urged as a strong

* London, Taylor. 8vo. pp. 15.

reason, apart from all considerations springing from the peculiar opinions of the dissenters, for the establishment in London of a university, endowed with the ordinary powers and privileges of a university. It is to be observed, however, that the University of London proposes to confer only degrees in arts, in medicine, and eventually in law. As there is not, and cannot possibly be, any education in systematic theology at this establishment, the exclusive privilege of conferring degrees in divinity will be left to Oxford and Cambridge.

But, for reasons in some respects distinct from those that have just been stated, we have no hesitation about conceding the other innovation demanded, in reference to this matter, by the dissenters from the established church. We would, as proposed by the bill which is now on its way through the House of Commons, throw open Oxford and Cambridge to this portion of the public, so as to allow them to take degrees there without subscription to the thirty-nine articles. Upon this subject there are some very sensible remarks in one of the paragraphs of the Address to which we have referred above. "It is a great grievance," the writers observe, "to the dissenters from the church of England (and under this name we may include all the members of the established church of Scotland, as well as the Scotch dissenters), that in this country they are precluded from the advantages and honours of a university education. At Oxford they are not permitted to enter. At Cambridge the lowest degree is refused to them; and this exclusion from the honours of the university has naturally deterred them from availing themselves of the means of education which it has still left open to them. It cannot be doubted that this exclusion has lowered the standard of learning and science among the English dissenters: and thus one Christian sect has enforced in some measure against those who dissent from it, the subtle species of persecution which the Emperor Julian devised against all Christians, when he forbade them to attend the schools of philosophy. It may be observed, that this penal exclusion, as in all similar cases, falls most surely upon those who are most conscientious in their views of religious truth. A person who is ignorant or indifferent, who knows not, or cares not, what he professes, may enjoy all university honours; while a student who has carefully examined the disputed questions, and who conscientiously differs in opinion from the established church, however small be the point on which he differs, is compelled to forego the benefits of a public education and the honours attached to learning and science. It is, perhaps, a still greater hardship that this sentence of exclusion falls most frequently upon young men, whose age and attainments do not enable them to form an independent opinion adverse to the established church, and whose sole disqualification is that they are unwilling without examination to renounce opinions which they have received upon trust from those whose authority they are accustomed to revere. The dissenting student is thus not merely debarred from a nominal distinction, but he is probably deprived of opportunities of establishing a reputation which would contribute greatly to his success in after life. To dissenters who are students of medicine or of law, the very entrance into their professions is seriously impeded by the exclusive character of the existing universities."

In addition to these considerations, there are others, which we think a sound view of their own best interests ought to induce the two universities to regard as of great weight. Every body must perceive, as we remarked at the commencement of our observations, that the double opposition which these venerable establishments are at this moment offering to the claims of the dissenters, cannot be successful, at least beyond a very brief season. This large portion of the community cannot be permanently, or much longer, both excluded from Oxford and Cambridge, and prevented from acquiring academic honours at a university of their own. The two older universities, in attempting to maintain their present monopoly in this uncompromising form, are wasting their strength in a contest in which they must be defeated. They are doing more. They are recklessly converting into enemies those whom they have the most favourable opportunity that could be desired of securing as friends. We wonder that they do not see that they have really no interest in repelling dissenters, but a very strong interest in attracting as many of that body as they can get to come to them. Dissenters who should study at Oxford or Cambridge, and should find themselves frankly and fully admitted to all the advantages and privileges of these great national institutions, would, we have no doubt, in general acquire the usual filial love for their *alma mater*, and feel it as strongly as if they had subscribed the thirty-nine articles ever so often. Whoever reckons this act of subscription among the ties that bind him to his university? Is there, in fact, one in a hundred of those who subscribe it, by whom it is regarded as any thing more than an unmeaning form?

The petition lately presented to parliament from a large section of the resident members of the University of Cambridge, in favour of the admission of dissenters to degrees in that institution, may be taken as a sure promise that this desirable reform will be eventually carried. It is nothing that the counter-petition, afterwards presented, had considerably the larger number of signatures. All reforms originate with a minority. It is much when a good object or a right principle has even a minority arrayed in its support. It will have a majority ere long. It has passed beyond being merely the conviction of a few scattered individuals, and has become a public cause—a bond of union to a party—a great moving power in the actual contest of men and of opinions. After this, if it really deserves victory, it will soon obtain it. As for the specific objections which have been soon raised to the proposition, we cannot see much in them. It is said that dissenters by obtaining degrees, will become members of the caput, and as such, governors of the university. This is precisely the argument that was employed against the emancipation of the catholics. As a few catholics have, in consequence of that measure, got into parliament: so, no doubt, a few dissenters would, under the proposed reform, obtain seats in the caput at Oxford and Cambridge. But the present state of things must be very much changed before these few votes, even supposing them to be uniformly given in a spirit of hostility to the established church, can have any influence. When the dissenters who take degrees at Cambridge and Oxford shall be so numerous as to out-vote the churchmen, the church will be past being either injured or benefited by any thing that academic bodies can do.

BILL FOR THE AMENDMENT OF THE POOR LAWS.

In our last Number we presented an abstract of the report recently given in by the commissioners appointed by the crown to examine the system and administration of the laws for the relief of the poor; and we inserted at length the recommendations of the commissioners for the reform of this important department of the national policy. We now give a detail of the most material provisions of the bill, which has been introduced by Lord Althorp into the House of Commons for effecting that object. It will be observed that it is for the most part founded upon the recommendations of the commissioners.

The introductory clauses direct the appointment of a board of three commissioners with nine assistants, who besides being furnished with the usual powers of commissioners, are to be invested with the power of making rules, orders, and regulations, for the management of the poor; the administration of the poor laws; the guidance of officers and vestries; the keeping auditing, and allowance of accounts; the entering into contracts; and generally to carry the act into execution. Such general rules, however, must for forty days be subject to the approval of the secretary of state for the home department, and it is afterwards competent to the privy council to prevent their being carried into effect.

With regard to workhouses, all by-laws relating to them and the relief of the poor, are to be subject to the confirmation of the commissioners, who may order workhouses to be built with the consent of the majority of the guardians, and may direct alterations and enlargements without such consent.

The commissioners are also empowered to direct parishes to be formed into unions, for the purpose of having workhouses in common, and may alter or dissolve existing unions; but in all cases of such unions it is to be so arranged, that each parish shall be chargeable with the maintenance of its own poor.

The next series of causes relate to guardians; and in all cases where the regulations of the former vestry acts have

not already been adopted, it is directed that the election shall be by the rate-payers and such owners of property as shall require to have their names entered in the rate-book as owners entitled to vote. When in unions or single parishes, the commissioners direct that the workhouses and the relief of the poor shall be governed and administered by a board of guardians; they are to fix the number and define the duties of the board. The commissioners are empowered to make and alter by-laws, which, if affecting more than one union, are to be deemed general rules; and justices of the peace are authorized to see that these and the other regulations of the commissioners are duly enforced. Lunatics, insane persons, and dangerous idiots, are not to be kept in workhouses. The commissioners are authorized to direct the removal of any paid officers of parishes or unions, whom they judge unfit or incompetent.

The measures under the head of administering relief, are very important. They are framed with the view of altering the allowance system, and depriving in most cases, out-door paupers of relief. Relief to the able-bodied is to be regulated by the commissioners, and relief granted contrary to their regulations, in any case, will be disallowed in the accounts. After the 1st of June, 1835, all allowance to able-bodied persons in employment, is to cease; and the acts authorizing justices to order out-of-door relief to the poor, are declared to be repealed: such relief not being hereafter to be given without the control of the guardians. Relief given to a wife, or child under sixteen, is to be considered as given to the husband or the father. The husband is liable to maintain the legitimate or illegitimate children born to his wife before his marriage with her, until they attain the age of sixteen, until (being females) they marry, or until the death of their mother. In all cases the relief given, may be directed by the commissioners to be considered as a loan, and as such, may be recoverable: and justices are empowered to attach wages in the hands of the employer, for the purpose of its liquidation; and if the employer refuses or neglects to make the required payment, the amount may be levied upon him by distress and sale.

The commissioners are empowered to make regulations concerning vagrants and prisoners; and the act which limits the binding of apprentices to forty miles from the parish to which they belong, is repealed.

Owners and rate-payers are authorized to raise money on security of the rates, for the purpose of enabling such poor persons as desire it to emigrate.

The rules regarding settlements direct that, after exceptions have been provided against, the child at sixteen, or on the death of the surviving parent, is to be settled in the place of its birth; but until then it is to follow the settlement of the parents. Thus future settlements will be only acquired by birth and parentage, and only in the case of a female, changed by marriage.

The bill finally makes a very important change with regard to bastardy. The acts relating to the liability and punishment of the putative father, and the punishment of the mother of illegitimate children, are repealed. All past securities and recognizances for indemnity of parishes against children likely to be born bastards, are declared to be null and void; persons in custody for not giving such indemnity, are to be discharged; and the mother of illegitimate children is declared bound to maintain them.

POPULATION AND OCCUPATIONS OF THE METROPOLIS.

THE recently published abstract of the population returns for the year 1831, exhibits some considerable improvements as compared with former publications of the same description. Not only is the classification more lucid, but the information, exhibited under the head of "Occupations," is more certain and definite, and affords a more laborious and minute analysis of social life than has hitherto been attempted in this country, and thus supplies what we, in common with many others, have long felt a desideratum. Former population acts only inquired what number of families, not *persons*, were chiefly employed in, or maintained by agriculture? how many by trade, manufacture, or handicraft? and how many families were not comprised in either of these classes? In general, the answers appear to have been made with care and distinctness in 1811 and 1821, but a more particular classification was thought to be desirable and practicable in 1831; and it was determined to ask the occupation of every male above twenty years of age; not only because he is then usually settled in his vocation, but because the number of males under twenty years of age, and the number above that age, was found to be so equal in the enumeration of 1821, that any considerable deviation from that obvious proportion was likely to induce further inquiry, and correction in every case suspected of error; for in the enumeration of 1821, the males under twenty years of age were 3,072,392; above that age 3,002,200; including all the males whose ages were then ascertained. In the enumeration of 1831, the males known to be under twenty were 3,941,495,—above that age 3,944,511, exclusive of the army and navy.

In the present abstract, the old arrangement is retained in one page which exhibits the area in English statute acres; the houses, inhabited, building, and uninhabited; the occupations as above-mentioned; and the number of males, females, persons, and families. The opposite page is occupied by the new information, which is exhibited in columns under the following heads. Males twenty years of age; agriculture, namely, occupiers employing labourers, occupiers not employing labourers; labourers employed in agriculture; employed in manufactures, or in making manufacturing machinery; employed in retail trade, or in handicraft as masters or workmen; capitalists, bankers, professional, and other educated men; labourers employed in labour not agricultural. Other males twenty years of age, except servants. Male servants twenty years of age; male servants under twenty years of age; female servants. This statement shows the nature of the information exhibited concerning each place included in the enumeration: but at the end of each county, the species of manufactures are enumerated in a note, and a list is given of the principal retail trades and handicraft employments, with a statement of the number of persons in the county engaged in them as masters or workmen: and distinguishing in the enumeration the principal towns in the county, from the county at large. This list of such occupations is of course extended with the number and extent of the towns which the county contains. London necessarily affords the most numerous subdivisions: and besides the usual enumeration at the end of the county of Middlesex, which considers the metropolis in its districts, a very acceptable appendix to the second volume shows the occupations of the population of all the parishes whose churches are situated within eight miles rectilinear distance of St. Paul's cathedral. The metropolis thus considered, and excluding only Woolwich from the places included by a circle drawn with this radius, contained in 1801 a population of 1,031,500; in 1811, of 1,220,200; in 1821 of 1,481,500; and in 1831, of 1,776,500. This statement comprehends an addition of a twenty-fifth part of the enumerated population, on account of the great number of British seamen belonging to the shipping at anchor in the Thames, of soldiers at the Tower and in Westminster, and of the transitory population always arriving and departing so irregularly as to prevent enumeration. The population of Paris, considered as embraced by a similar circle with a radius of eight English or seven geographical miles from the site of the Bastille, amounted in 1829 to 1,013,000. For the purpose of better instituting this comparison between these two great cities, Woolwich, with a population of 17,661, has been omitted in the above account, to compensate for the vacancies in the Paris circle not filled up by the department of the Seine, the population of which, including that of Paris proper, is that just given.

In adverting to the population of towns, the very valuable preface from which our statements are taken, informs us, that the number of females is always found to exceed that of males; and that this fact is easily explained by the employment as domestic servants of females drawn th[illegible] from the rural districts; females born in a town finding their occupation in it. At sea-ports this d[illegible] the more remarkable, in consequence of the num[illegible] who are excluded from the enumeration of bitants, as being seamen who navigate regist (a class of men amounting to 130,000), or mi seamen: and as the number of burials of mal equals or exceeds the burials of females, it unfair to estimate the *actual* population at double the number of existing females.

THE SUGAR DUTIES.

In the course of the debate which took place in the House of Commons on the 28th of February, when the Chancellor of the Exchequer proposed a resolution for continuing for a further period the present consumption duties imposed upon sugar, it was generally admitted that the system under which the sugar planters of the British West Indies have so long enjoyed the monopoly of the home market could not be justified upon principle, and that it ought to be and soon must be materially modified, if not altogether abandoned.

It was at the same time expressly stated by those members of the government who took part in this debate, that the question is one of time only, and that when the result of the grand experiment now in course of trial in the West India islands and colonies shall be no longer doubtful, and when it shall be made to appear that the planters in those colonies are still able to carry on the cultivation of their estates under the altered circumstances brought about by the act of last year for abolishing slavery, that then the question of a discriminating or protecting duty on sugar in favour of that class of cultivators, will be fully open for the consideration of the legislature, with a view to establish one uniform rate of duty upon all sugar, the growth or production of British possessions. It may therefore be desirable that we should endeavour at this time to give some explanation of this somewhat complicated question, and to show the effects that will probably follow the alteration which it is proposed to make.

The rates of duty at present chargeable upon sugar, when brought into consumption in the United Kingdom, are as follow :—

Raw sugar, the growth, produce, or manufacture of any British possession in America and imported thence, 1*l.* 4*s.* per cwt.

Raw sugar, the growth, produce, or manufacture of any British possession within the limits of the East India Company's charter, and imported thence, 1*l.* 12*s.* per cwt.

Raw sugar, from any other place, 3*l.* 3*s.* per cwt.

Refined sugar, 8*l.* 8*s.* per cwt.

The duties upon foreign raw sugar, and upon that which has been refined, are altogether prohibitory, being greater than the price for which similar produce which has paid the British plantation duty will sell including that duty. Not a pound of foreign grown, or of refined sugar, therefore, is ever brought into consumption in the United Kingdom. The difference between the rates chargeable on West India and East India sugar operates nearly in the same manner. Out of 4,429,864 hundred weight of sugar, upon which consumption duties were paid in 1832, only 79,595 hundred weight, or about one fifty-sixth part of the whole was of the produce of British possessions within the limits of the East India Company's charter, being not greater for the whole of our extensive Eastern empire than the quantity contributed by the little island of St. Christopher in the Antilles.

It has been said that the sugar produced in India is so inferior in quality to that brought from the West Indies as to be unsuited for consumption here except in this very limited degree. That East India sugar is in general inferior to the other, is indeed true, and the fact may be readily admitted without its forming any justification of the fiscal measure whereby its consumption is prevented. Nay, there is every reason to believe that it is principally owing to the imposition of a discriminating duty, that greater skill and a larger amount of capital have not long since been employed in the cultivation of the cane and the manufacture of its products on the plains of Hindostan. There, in its native clime, the plant attains as perfect a growth and yields as rich a product as in the most favoured of our Western colonies; but excluded as that product virtually is from the markets of the United Kingdom, where it would meet and must compete with the superior manufacture of the West, one principal incentive to improvement is wanting, and the cultivation is left in the hands of men deficient alike in science and in capital. It needs no very extraordinary prophetic powers to foretel, that from the moment when the produce of both countries shall be admitted to consumption in England at the same rate of duty, an impulse will be given to this species of industry in the East; that men of intelligence and possessed of sufficient means will be found ready to avail themselves of the fertile soil and cheap labour of Hindostan, in order to produce sugar the quality of which will vie successfully with the best which is brought from the plantations in America. It is not to be expected that this result will be all at once attained or that the culture of the cane can be immediately increased to the extent of which it will in time be susceptible; but this fact should be viewed as a powerful reason for assuaging the fears of the West India planters, and for removing their objections to an act of simple justice which has only been too long delayed, and which indeed ought never to have been rendered necessary by the raising up of an invidious distinction between the productions of different parts of the same empire. If instead of being dependencies on the British crown, the East and West Indies had been in the situation of separate and independent governments, and it had been attempted to establish discriminating duties between their respective production of the same article of commerce, would not the less favoured of the two have had a just ground of complaint against us? Time has been when a national war has ensued from a less legitimate cause of dissatisfaction. When, however, it is considered that these two regions have an equal right to claim protection and favour at the hands of the parent state, a *primâ facie* case is made out in favour of the most perfect equality, a case which it would be most difficult to assail by means of any fair argument, or to answer in argument with those better principles of commercial economy which are now, happily, so generally recognised and supported.

It has been said that this question is one of time only, an opinion which we would qualify by saying, that the present is perhaps the *only* moment in which the inexpediency of alteration could be urged upon any tenable ground. Up to the moment when this country determined, at a considerable pecuniary sacrifice, to wipe off the moral stain which attaches to the character of every nation that tolerates the existence of slavery, there was no period at which it was not competent to the legislature, with the most perfect propriety, to have put an end to the invidious distinction made between the sugar planters of India and the Antilles. The reason for continuing that distinction is passing away every hour, and we trust that by the time the bill just passed for continuing the sugar duties shall expire (on the 5th July, 1835) the success of the benevolent experiment now in course of proof in the West Indies, will again leave the legislature free to deal with this question according to its individual merits.

It is true that at no time since the advocates for equality have raised the question, have the West India planters been willing to admit the force of their reasoning. Up to the close of the war in 1814, the markets of India were subjected to a hateful monopoly in the hands of the East India Company; the capabilities of that portion of the British empire to supply this country with articles suited to our wants were but ill understood, and there existed no party in England—save that great party, the consumers, who are but little thought of in such cases—at all interested in the inquiry how far those capabilities could be rendered available to increase the sum of the general prosperity. Since the period just mentioned, when the ports of India were partially thrown open to the enterprise of private traders, the West India planters have always been able to meet the question of an equalization of duties, with the cry of distress, occasioned by the comparatively low price of their produce in the markets of Europe. As this is a plea which, for the sake of the consumers we trust the planters will still be able to urge, it may be worth while to inquire how far they are entitled to plead it successfully against the rest of their fellow subjects, and we do not think many words will be necessary in order to show why it should not thus be allowed to prevail.

During the first fifteen years of the war, which began in 1793, the West India sugar planters were enabled to sell their produce at very high rates. The consumption of sugar in the United Kingdom during the same period was actually more than doubled, the quantities retained for consumption during the years 1792 and 1808 respectively, having been 1,523,394 and 3,280,680 hundred weights. To meet this increased demand and to take advantage of the augmented price, capital was raised by mortgaging their estates and fresh quantities of land were brought under cultivation of the cane. At the same time it is notorious, that in imitation of his brother landowner in England, the West India planter increased his personal expenditure to the full measure of his means, and instead of availing himself of the continuance of high prices to provide funds for clearing off his incumbrances, took advantage of those prices in order to obtain still larger advances from the merchant to whom his

produce was consigned in Europe. When, first by the operation of the Berlin and Milan Decrees, and afterwards by the natural effect of peace, those prices were reduced to their proper level, the improvident planter could no longer pay the interest upon his mortgages and continue his profuse personal expenditure, and then began that cry of distress on the part of the West India interest, which with scarcely any intermission, has been continued ever since, and which has hitherto availed them for the continuance of their monopoly of the markets of this country. It will be rather too hard, however, to entail a perpetual tax upon the people of England, and to circumscribe the industry of our manufacturer on the one hand, and of the Indian agriculturist on the other, because our West India planters misapplied their former extraordinary gains, using that as income which they should have viewed only in the light of capital. That this view of their case is a just one is capable of the completest demonstration. Those few of their class who acted a more prudent part have never ceased to draw a revenue from their estates, and while they have been forced to accept a lower price for their produce have been able to meet this evil by the diminished price of the various articles required for the supply of their plantations.

The grower of sugar in the West Indies has a just right of complaint against the mother country, or rather, would have that right but for the monopoly of which we complain, on the ground of the restrictions which are placed upon him in providing the necessary stores for his plantation. The sugar grower of India is not fettered in this way, but receives his supplies without restriction from any country where they are found to be the cheapest. One of the principal evils of all systems of restrictions, consists in the seeming necessity which it produces for multiplying attempts at protection to a degree, which in the end involves, and becomes injurious to every interest and class in a country. It is only just that our West India colonists should have the same choice of markets whence to procure supplies as is enjoyed by their rivals, and every restriction of that nature must be removed whenever they shall be deprived of their present monopoly.

Impolitic as the preference is which is given to the sugar of the West Indies over that of our Eastern possessions, it would be wholly inoperative to the benefit of the class for whose advantage it was designed, but for another part of the system under the operation of which a bounty is paid upon the re-exportation of sugar which has been refined in England. Hitherto, greatly as the consumption of sugar has increased in this country, the power of production in the West Indies has increased with it, so as always to be in advance of our home wants. Under this circumstance, and so long as it may be necessary to seek a market elsewhere for a single pound of West Indian sugar, the price of that pound must govern the price of the whole quantity imported, since it is quite impossible to imagine two prices to exist coevally in the same market for the same article. Unless, therefore, some means were employed for keeping up artificially the price of British plantation sugar relatively to that produced elsewhere, it would be a matter of comparative indifference to the Indian cultivator whether the discriminating duty were continued or not, since the markets which would govern the price everywhere would be equally open for his produce. The means whereby the price of the favoured article is artificially kept up, are, however, provided by our system of drawbacks, which are so calculated as to give an actual bounty upon the exportation of sugar refined in England. This bounty has been estimated according to a series of experiments carefully conducted by a scientific gentleman employed by Government, at about four shillings per hundred weight, and to this amount the price of every hundred weight of sugar imported for consumption is benefited, at the expense of the great body of consumers, and for the sole advantage of the West India planters. In confirmation of this assertion, we may refer to the speech of the Vice-President of the Board of Trade, under whose instructions the experiments alluded to were made. The loss thus entailed upon the country in the year 1832, the latest period to which the parliamentary accounts are hitherto completed, may be stated as follows:

cwts.	£.
3,655,534 retained for consumption, at 4*s.* per cwt.	731,106
455,846 refined, equivalent to . .	
774,939 raw sugar, exported . .	154,987
Together .	886,093

Of late years, it has happened to this country in many instances to witness a disposition in neighbouring kingdoms to imitate our commercial errors, and in some of these cases the imitation has not occurred until those errors have become sufficiently manifest to ourselves. As one instance, we may bring forward the system which has been adopted by France of giving protection to the produce of her own colonies, as against that procurable from foreign countries. It is true, that France has not adopted this plan in all its absurdity, inasmuch, as she admits the like descriptions of produce from all her colonies at equal rates of duty; but on the other hand, she has carried the amount of protection afforded by discriminating duties, and rendered efficient by a system of drawbacks, to an extent far greater than has been shown to exist with us. By these means the price of sugar is artificially raised to the French consumer, to the extent of twelve shillings per hundred weight. The operation of this system in the year 1832 was such, that of eighty-two millions of kilogrammes of sugar, upon which duties were paid, upwards of sixteen millions of kilogrammes were refined and re-exported, being just one-fifth of the whole; while of the thirty-nine millions of francs received in duties, rather more than nineteen millions were paid back in drawback, being as nearly as possible, one half of the entire sum received! This system has also had another bad effect in France, it has forced the production of beet-root sugar to such a degree, that, according to the statement of Mr. Gautier, made to the Chamber of Peers, the quantity of that kind of sugar made in France in 1832, amounted to twelve millions of kilogrammes, a quantity equal to one half the total importations of sugar annually made to Great Britain from all parts of the world. We have seen a statement drawn up by a gentleman who possesses the best sources of information on the subject, which proves, that by these means the annual loss to which the French people are subjected in order to "protect" one or two insignificant colonies, exceeds by fifty per cent. the whole amount of capital employed in the colonial trade of France.

It must always be a difficult matter for the government to apportion correctly any scale of payment where individual skill and ingenuity are arrayed in opposition to the revenue, and engaged in obtaining the greatest possible amount of money from the exchequer. This must always be the case as respects a drawback paid on the exportation of any article which shall have undergone a process whereby its form is altered from that which it bore when the duty was paid, in respect of which the drawback is claimed. The various experiments set on foot by the government, in order to ascertain the exact amount of drawback which should be paid, in order to give back on exportation precisely the amount of duty paid upon sugar, exhibit very different results according to the quality of sugar acted upon, and the modes employed in the refining process. This fact furnishes a strong argument for the establishing of a system under which it shall not be necessary to grant any drawback on re exportation. Such a course can only be followed by allowing the refining of sugar and all analogous processes, to be performed in buildings, placed in the custody of revenue officers, in which case, the raw material being delivered for manufacture without payment of the consumption duty, the refined or manufactured article would not be entitled to drawback on re-exportation. Under a fair and wholesome state of things, such a plan must be beneficial to commerce, inasmuch as it would at once set free all that amount of capital which is now employed in paying duties upon the raw material, and which is, as it were, left unprofitably to the government during the time employed in the processes of manufacture. An approach was made towards this desirable state of things, by the passing of an Act of Parliament during the last session, under which the Commissioners of his Majesty's Customs are empowered to approve of premises as "Bonded sugar houses, for the refining of sugar for exportation only," and to deliver to the proprietors of such houses, any quantity of foreign sugar, the produce of any British possession, for the purpose of being there refined, under the locks of the Crown for exportation only, and subject to such conditions and regulations as those Commissioners may consider necessary for the protection of the revenue. This Act was passed at the instigation of the sugar refiners, who alleged that they were liable to be injured in the prosecution of their business, through the periodical scarcity of British plantation sugar in the market. The system of refining in bond is ren-

dered to a certain degree unprofitable, however, through the necessity which is imposed of exporting all the produce of the raw sugar employed, their being little or no market on the continent for the treacle, which forms from one-fifth to one-fourth the amount of that product. Treacle is consumed largely by the poor of this country, but its consumption on the continent is extremely limited. In Sweden, in some Prussian provinces on the Baltic, and in Bohemia, it is partially used, but with these exceptions, the only vent for the refuse of sugar refineries is among the distillers of ardent spirits, with whom its value must, of course, be measured with reference to the price of grain. Treacle, produced in the bonded refineries of England, must consequently be sold at about one half of the price which it would yield if permitted to be brought into consumption here; and this sacrifice upon an article, the bulk of which is great in proportion to its value, forms a considerable drawback to the success of sugar refining on the bonding system in England.

If that system were introduced generally for the refining of all sugar, as it seems reasonable to suppose will before long be the case, it will be necessary to provide some plan under which the refiners may bring every portion of their produce into consumption at home, and it does not appear difficult to apportion the duties upon each description of product so as to secure substantial justice at once, to the grower, the refiner, and the consumer.

Since the partial opening of the trade between this country and India, it has always been among the greatest difficulties with which our merchants have had to contend, to find profitable investments in return for goods of British manufacture; and, it has been especially desirable to find some additional article suited for consumption in England, which might serve as "dead weight" in freighting ships on their return voyage. If, by equalising the consumption duties upon East and West India sugar, an impulse were given to the cultivation in India, those ends would be materially answered, and an additional impulse would, at the same time, be given to a branch of foreign commerce which is already of the highest importance, and which bids fair to be, in the course of years, at once the most extensive and the most profitable in which this country will be engaged.

ABSTRACTS OF PARLIAMENTARY PAPERS.

Private Bills.—Our March number contained an abstract of the private bills before the House of Commons this session. The list since issued only contains four additional Bills, one relating to municipal regulations, one to tithes, one to authorise change of name, and one to the improvement of a harbour. The following is an account of the progress made in private bills up to March 26th:—

Petitions presented	196
Bills read first time	181
Bills read second time	72
Bills read third time	19
Royal assent	12
Withdrawn	1

Bank of England Notes in Circulation.—An Account of the Amount of Bank of England Notes in Circulation, distinguishing those under 5*l.*, and Bank Post Bills, at the close of the business on the last Saturday in every Month, from 17th August, 1833, to 15th March, 1834.

1833.		Bank-notes of £5 and upwards.	Bank Post Bills.	Bank-notes under £5	Total.
August	31	17,774,050	1,566,010	289,650	19,629,710
September	28	16,533,660	1,576,940	289,410	18,400,010
October	26	16,952,530	1,588,110	289,110	18,829,750
November	30	15,904,300	1,415,670	288,800	17,608,770
December	28	16,094,670	1,349,910	288,050	18,732,630
1834.					
January	25	17,789,610	1,606,260	287,840	17,683,710
February	22	17,294,420	1,567,480	287,630	19,149,530
March	15	16,519,920	1,493,160	287,430	19,300,510

Bank of England.—An Account of the Liabilities and Assets of the Bank of England, on the average of the three months ending the 4th of March, 1834:—Liabilities—circulation, 18,700,000*l.*; deposits, 14,418,000*l.*; Total, 33,118,000. Assets—securities, 25,547,000*l.*; bullion, 9,829,000*l.*, Total, 35,376,000*l.*

An Account of the Average Circulation of Branch Bank of England Notes and Twenty-one-day Bills, during the Year 1833; distinguishing the Amount from each Branch Bank, and the aggregate Sum.

The Gloucester Branch Bank		51,030
The Manchester	ditto	1,542,150
The Swansea	ditto	49,150
The Birmingham	ditto	407,400
The Liverpool	ditto	560,750
The Bristol	ditto	124,350
The Leeds	ditto	269,530
The Exeter	ditto	37,000
The Newcastle	ditto	51,130
The Hull	ditto	72,860
The Norwich	ditto	34,170
		£3,199,520

Private Bank Notes circulated.—The aggregate Amount of Notes circulated in England and Wales by Private and Joint-Stock Banks, between the 28th of August, and the 28th of December, 1833, was—

Private Banks	£8,836,803
Joint-Stock Banks	1,315,301
	£10,152,104

State of Crime in the Metropolis in 1833.—The whole number of charges brought before the metropolitan magistrates by the new police during the last year, amounts to 69,959; showing a decrease, compared with the previous year, of 7,584 offences. A very large proportion of the charges are, however, of a very minor character. Out of the whole number, it appears that no less than 27,000 have been dismissed by the magistrates as unsupported by proper evidence. The largest items in the catalogue of the offences are—

Drunken charges brought before the magistrates	11,393
Ditto, discharged by the superintendents	18,487
Disorderly characters	5,721
Prostitutes	3,427
Assaults	5,721
Larcenies	7,858
Suspicious characters	3,201
Vagrants	6,757

Out of the large number of 29,800 drunkards, no less than 12,000 appear to have been female.

Gaol of Newgate in 1833.—Statement of the Number of Persons in custody on the 1st January, 1833, and committed to His Majesty's Gaol of Newgate during that Year, and showing how they have been disposed of.

	Males.	Females.	Total.
In custody on the 1st of January, 1833	179	134	313
Committed to 31st of December inclusive, under 17 years of age	222	36	
Above that age	1,478	425	2,161
			2,474

Of whom there have been executed	2	
Died	3	
Removed to the hulks at Gosport	400	
Ditto to Portsmouth	75	
Ditto to Sheerness	50	
Ditto to Chatham	300	
Ditto to Woolwich	320	
Ditto to Penitentiary, Milbank	24	
Ditto to Refuge for the Destitute and House of Occupation	7	
Ditto by *habeas* for trial at the assizes	14	
Ditto to the House of Correction for London	109	
Ditto to Middlesex	241	
Discharged, having received His Majesty's pardon	9	
Ditto, having been acquitted at the sessions, Old Bailey	383	
Ditto, bills of indictment not having been found	117	
Ditto, not having been prosecuted	6	
Ditto, having been imprisoned pursuant to sentences	67	
Ditto whipped	14	
Ditto fined 1*s.*	35	
Ditto upon bail and for other causes	39	
Removed to Clerkenwell, Southwark, and Tower sessions, for trial	8	
		2,223
Remaining in custody on the 1st of January, 1834—Males, 183; females, 68		251
		2,474

959 of whom have been in Newgate before.
Committals decreased this year 1,036.

A Statement of the number of Persons committed to His Majesty's Gaol of Newgate and convicted in the year 1833, specifying their offences and sentences:—

Murder	2
Burglary	9
Housebreaking	72

Shooting at	1
Highway robbery	15
Stealing a letter from the Post-Office	2
Cutting and maiming	4
Returning from transportation	2
Horse-stealing	3
Cattle-stealing	1
Sheep-stealing	5
Forgery	26
Coining	5
Stealing in a dwelling-house above the value of 5*l.*	32
Manslaughter	3
Bigamy	7
Concealing the birth of an infant	1
Receiving stolen goods	22
Larcenies	1,017
Misdemeanors	25
	1,254

OF WHOM THERE WERE SENTENCED.

To death *	107
Transportation for life	103
Ditto 14 years	149
Ditto 7 years	426
Imprisonment in Newgate and the House of Correction, viz.:—	
For 2 years	7
18 months	6
1 year	34
9 months	13
8 months	2
6 months	79
4 months	6
3 months	118
2 months	8
6 weeks	32
1 month and under	98
Fined 1s. and discharged	40
Discharged by the Court	6
Those whose judgments remain respited	2
	1,254

STATISTICS, TRADE, &c.

Court-Martial committals.—The number of persons committed under sentence of court-martials to the several gaols in England, in the year 1833, amounted to 920.

Chimney-Sweepers' Apprentices.—The number of boys bound to chimney-sweepers, during the last nine years, at the several police offices within the bills of mortality, amounted to 115 so far as the returns show, but the Mansion House, Guildhall, and Southwark offices, possess no materials for affording such returns.

Turkish Army.—At the commencement of the hostilities with Egypt, the Turkish army formed a total of about 300,000 men. It was composed like the Russian army, of regulars, disciplined in the European manner; and of irregulars, levied after the old system.

The regular army is at present composed of 50,000 men namely;—

Infantry.	
Four regiments of the guards	10,000
Twenty regiments of the line	24,000
Battalions distributed in the provinces	12,000
	46,000
Cavalry.	
Three regiments of the guards	1,500
Two regiments of the line	1,000
	2,500
Artillery of the guards	300
Artillery of the line	1,200
	1,500
Total	50,000
Irregular Army.	
Infantry and artillery	120,000
Cavalry	50,000
	170,000
Grand total of the Turkish army	220,000

The greater part of the regular troops, and particularly the guards, are in service at Constantinople and the principal strong places of the empire. The irregular troops are dispersed upon the frontiers, and sometimes are intrusted with the defence of places of small importance in the interior. Two French officers have the chief charge of exercising the regular troops, horse and foot, at Constantinople, and of instructing them in the management of arms, horse exercises, and the evolutions of the line.—*Mémorial Encyclopédique.*

* Two of whom have been executed, viz.:—for murder, one: house-breaking, one. Total, two.

Egyptian Army and Revenue.—The Egyptian army is maintained with so much difficulty, that impressment is the only means employed of recruiting its numbers. Nevertheless this army at present rivals the best European troops in organization and discipline. Ibrahim Pasha has much improved his system, by inducing European officers of merit to enter his service. The forces of the Egyptian army, upon the ordinary footing, consists of 111,000 men, namely,—

Infantry, regular.	
One regiment of guards	2,400
Fourteen regiments of the line	45,600
	48,000
Cavalry.	
Regular, (eight regiments)	6,000
Irregular	24,000
	30,000
Artillery.	
Regular	2,400
Irregular	2,000
	4,400
Sappers and miners	1,200
Military pupils	2,400
Total	86,000

If we add to these two last numbers the amount of the extraordinary levies made during the last war with the Porte, namely— 60,000

We have for the total of the army on the footing of war 171,000

In the 60,000 men of the extraordinary levies made in the last campaign against the Turks, were comprised people from Upper and Lower Egypt, Syria, &c.—*Mémorial Encyclopedique.*

Exports from St. Petersburg in the year 1833.—The following are the most prominent articles:—Copper, 212,720 poods; iron, 828,955; hemp, 1,980,668; flax, 246,911; cordage, 230,474; potass, 475,996; linseed oil, 201,244; tallow, 1,083,657; candles, 36,358, wax, 9233; soap, 8077; isinglass, 5625: leather, 129,602; wool, 58,512; hogs' bristles, 64,020, horsehair, 23,924; feathers, 29,708; spices and drugs, 18,741; mats, 132,003; cloths, 208,470; table linen, 984,100; packing cloths, 1,619,385 archines; linseed, 58,369 tchetverts; and deals, 2,181,562.

Exports from the Cape of Good Hope.—According to an official document published at the Cape, it appears that the value of colonial produce exported to Great Britain during the months of October, November, and December, 1833, amounted to 24,916*l.*; to St. Helena, 2,953*l.*; to the Mauritius, 8,443*l.*; to the East Indies, 663*l.*; to South America, 2,208*l*; to New South Wales, 5,137*l*; to Hamburgh, 240*l.*; to Java, 1,457*l.*; and to the Island of Ascension, 200*l.*;—making altogether a total value of 46,217*l.* of goods exported during the quarter. Besides the goods of colonial produce so disposed of, it appears that articles not of colonial produce were exported during the same period to Great Britain to the amount of 915*l.*, to St. Helena 406*l.*, to the East Indies 175*l.*, to the Mauritius 1,822*l.*, to South America 188*l.* to New South Wales 1,969*l.*, and to Java 237*l.*,—making altogether 5,712*l.*, and showing the export of goods generally to have amounted during the quarter to 52,129*l.*

Silver Mines of Konigsberg.—The 'Frankfort Gazette' states, after accounts from Stockholm, that the silver mines of Konigsberg have of late acquired considerable importance. The produce in the year 1830 was only 800,200 marks, whereas that of 1833 exceeded 45,000 marks, of pure silver. The average amount of each year's produce, after defraying all expenses, is about 309,423 specie-dollars; 3,000 or 4,000 men were formerly employed in these works, now 300 or 400 are sufficient.

Bankruptcy Analysis from March 21, *to April* 22.—Baker, 1. Bill-broker, 1. Booksellers, 3. Brewer, 1. Brick-maker, 1. Builder, 1. Butcher, 1. Chemist and Druggist, 1. Clothier, 1. Coach Maker, 1. Coach Proprietor, 1. Coal Merchants, 4. Commission Agent, 1. Confectioner, 1. Corn Merchant, 1. Cutler, 1. Dealer, 1. Drapers, 2. Embroiderer, 1. Fellmongers, 3. Fishmonger, 1. Foreign Warehouseman, 1. Glover, 1. Grocers, 5. Haberdasher, 1. Hatter, 1. Iron Manufacturer, 1. Ironmongers, 3. Jewellers, 2. Laceman, 1. Linen Draper, 1. Maltsters, 2. Mealman, 1. Merchants, 2. Millers, 3. Oil Merchant, 1. Scrivener, 1. Shoemakers, 2. Shopkeeper, 1. Silver Plater, 1. Silversmith, 1. Surgeon, 1. Tailor, 1. Timber Merchants, 3. Tobacconist, 1. Upholsterer, 1. Victuallers, 6. Watchmaker, 1. Wine Merchants, 3. Wool Stapler, 1.—Total, 81. Total, from the commencement of the year, 350.

PUBLIC PETITIONS.

In consequence of the vacation, only three Reports have been issued since our last. They are numbered from Eight to Ten, and extend from the 12th to the 21st of March.

	No. of Petitions.	No. of Sigs.
Parliamentary.		
For the repeal of the Union	103	72,748
Against the Hertford Disfranchisement Bill	1	326
Against Liverpool Freemen Bill	6	9,066
Ecclesiastical.		
For Abolition of Tithes in Ireland	126	92,404
For Commutation of Tithes	32	13,356
Against Lay Patronage in Scotland	94	65,525
For relief of Protestant Dissenters	473	100,577
In favour of the Established Church	74	11,362
For reform in ———	2	470
Against the Union of Church and State	4	13,041
For the better observance of the Lord's Day	106	25,223
Against the Bishops' sitting in the House of Lords	3	1071
Taxes.		
Against the malt tax	93	17,701
For repeal of the Corn-Laws	14	104,198
Against alteration in the Corn-Laws	64	16,444
Against the house and window taxes	11	1,062
For alteration in the Poor-Laws	4	521
For repeal of the Beer Act	6	377
Miscellaneous.		
Hand-loom weavers, for measures of relief	9	13,705
Agriculturists ——— ———	39	10,655
For alteration in Corporations	5	10,899
Concerning the Dublin and Kingston Ship-canal	2	7,994
Against the employment of Chimney Sweepers	9	1,933
Against Imprisonment for Debt	3	318
In behalf of Mr. Cohen	5	865
Other miscellaneous Petitions reported since our last publication	75	4,391

POLITICAL RETROSPECT FOR APRIL, 1834.

GREAT BRITAIN.

The first half of the month of April passed in this country without having been marked by any political events. Parliament re-assembled, after the recess, on Tuesday the 14th. The business in the House of Lords consisted merely in the presentation of a few petitions. In the Commons, after the house had resolved itself into a committee of supply, the miscellaneous estimates for the year were brought forward by Mr. Spring Rice. The amount voted under this head had in 1831 been 3,346,000*l.*; which was reduced in 1832 to 2,750,000*l.*, and in 1833 to 2,258,000*l.* The present vote exhibited a reduction of 234,000*l.* upon this last sum; the entire amount now being only 2,024,000*l.* or 1,322,000*l.* under the sum voted in 1831.

The first proposition upon which any discussion arose, was that for a grant of 11,550*l.* to purchase two pictures by Correggio, for the National Gallery. With scarcely an exception, however, all the speakers expressed themselves strongly in favour of the grant. Mr. Warburton remarked, that if any pictures were purchased for the National Gallery, they should be such as, like the two pictures in this instance, had obtained a high and well-known character throughout Europe. It was afterwards stated by Mr. Rice, that since the first purchase of pictures by the public in this country, there had been given to the state, by private individuals, pictures to the value of 67,000*l.* Sir Robert Peel said that an excellent bargain had been made for the public in the purchase of these two pictures, which were two of the finest works of art in the world. He did not believe that there were twenty pictures in existence finer than those two. Some remarks were also made on the intended appropriation of a part of the new National Gallery to the use of the Royal Academy. It was stated by ministers, that the Academy would not be understood to acquire any right of possession in the rooms that might be allotted to them; but that, should they be afterwards removed in consequence of all the space being required for the pictures belonging to the public, it would probably be considered equitable and expedient that they should be provided with apartments elsewhere.

An interesting conversation also arose on the motion for a grant of 20,000*l.* to enable his Majesty to issue money for the erection of school-houses, in aid of private subscriptions, for the education of the poorer classes. Mr. Hawes stated that the effect of a similar grant voted last session had been to produce subscriptions from private individuals to no less an amount than 60,000*l.* According to Mr. Rice the public grant of 20,000*l.* had occasioned a total expenditure of 48,111*l.*, by which permanent means of instruction had been provided for 30,366 children. The right honourable gentleman further remarked, that the suggestion which had been thrown out for the establishment of normal schools, that is, of schools for the professional education of teachers, was one that, in his opinion, well deserved to be adopted; and that he hoped his noble friend, the Chancellor of the Exchequer, would authorize him, before the close of the present session, to make some proposition to the House on the subject.

On the 15th, Mr. Roebuck brought forward his motion for the appointment of a select committee to inquire into the political condition of the Canadas. The honourable member introduced his proposition in an elaborate speech, in which he endeavoured to show that the province of Lower Canada was in such a state of exasperation and disturbance as approached nearly to open revolt. He did not, however, bring forward any facts to make it appear that this state of things extended to the other province; and Mr. Stanley, in his reply, also contended, that even in reference to the portion of the colony to which the statements that had been addressed to the House were in some degree applicable, they were greatly exaggerated. Mr. Roebuck finally withdrew his motion, and a Committee was appointed "to inquire and report to the House how far the grievances complained of, in the year 1828, on the part of certain inhabitants of Lower Canada, have been redressed."

In the latter part of the evening, Lord Althorp laid before the House the ministerial scheme for the commutation of tithes. We have detailed the leading provisions of this proposed measure in another place. The resolution moved by Lord Althorp was carried after a short debate; and the bill founded upon it has since been brought in.

On the 16th, in the House of Lords, the Lord Chancellor, in moving for certain returns on the subject of education, entered at considerable length into the existing state of popular education in this country, and into the defence of his own conduct in having abandoned the principle which he had formerly advocated, of a system of general education to be established and maintained by the state. He contended, on a comparison of returns which he had obtained from different parts of the kingdom in 1818, with others obtained in 1833-4, that such a progress was actually making in the multiplication of schools by the voluntary exertions of the public, that it was both unnecessary and would be inexpedient for the legislature to interfere in the matter. He intimated, however, that he should have no objection to the institution, by the state, of normal schools, such as existed in France and Prussia; but with this exception, he expressed himself of opinion, that an occasional small grant, like those voted in the last and the present session, in aid of private subscriptions, was all the aid or encouragement to the education of the people that the government could properly or safely offer. We think that, admitting the increase in the number of schools to be as great as is assumed, his lordship infers too much from that fact, when he takes it as a satisfactory proof that popular education is proceeding, in all respects, as well as could be desired. At the most, it only goes to show that probably more children are taught now, than were taught fifteen years ago, to read, write, and cipher. It is no evidence of any extension of the higher and only valuable education bestowed upon all classes in Prussia and France. His lordship acknowledged, indeed, that his returns threw no light upon the description of education received at the schools which appeared to be so fast increasing in number. "It was to be recollected," he remarked, "that all was not gold which glittered; so all was not education which looked like it. There might be schools well planted, many children might appear to darken the doors in a morning as they entered, and their busy hum might be heard

within the walls throughout the day, and they might flock around as they departed at the eventide; yet, for want of attention being paid to the means of education, no great benefit might result." The subject, however, is undoubtedly surrounded with considerable difficulties.

In the course of this evening, Lord John Russell stated in the House of Commons, in answer to an inquiry by Colonel Evans, that it was the fixed intention of the government to persevere in pressing the local courts' bill, and the bill abolishing imprisonment for debt, through parliament during the present session.

On the 17th Lord Althorp explained to the House the plans of the government on the important subject of the reform of the poor-laws, and obtained leave to bring in a bill to carry his propositions into effect. We refer the reader to a preceding page for an analysis of this bill. It has since been read a first time and printed; but has not yet undergone any formal discussion. An interesting debate then took place on a motion by Colonel Williams, for an address requesting his Majesty to signify his pleasure to the universities of Oxford and Cambridge that they should no longer demand from persons taking degrees (except in divinity) any declaration of conformity to the Church of England. This motion, however, was afterwards withdrawn, on Mr. G. W. Wood moving for leave to bring in a bill to effect the same object. Mr. Wood's proposition was strongly opposed by different members; but on the division the numbers were 185 for, and only 44 against it. The bill accordingly has since been brought in.

On the 18th a message having been received from his Majesty communicating the intention entertained of taking measures for regulating and limiting the numbers of the members of the several orders of the Bath, it was moved in committee by Mr. Stanley that compensation should be made out of the consolidated fund to certain officers of the order who would be deprived of their fees under the new arrangements. This proposition gave rise to a short debate, but it was eventually assented to. Afterwards in a committee of supply a grant of 8,978*l.* was moved for Maynooth College, and warmly opposed by several members; but it was carried on a division by a majority of 137 to 11.

On Monday the 21st, the presentation by the Duke of Gloucester of a petition signed by 258 members of the senate of the University of Cambridge against the admission of Dissenters to degrees, gave rise to a long and animated debate. A similar petition was presented at the early sitting of the House of Commons by Mr. Goulburn. In the evening Lord Althorp brought forward the ministerial plan for the extinction of church-rates, which we have explained elsewhere. In the debate which ensued, the members representing the opinions of the Dissenters expressed in general only a very qualified approbation of the measure. This evening, also, the Hertford borough bill was read a third time and passed.

During the remainder of this week, at the close of which we now write, the House of Commons has been occupied in the discussion of a motion made by Mr. O Connell on Tuesday, for a select committee to inquire into the means by which the Union with Ireland was effected, the effects it has produced, and the consequences of continuing it. The debate, although it has been four times adjourned, is not yet concluded.

FRANCE.

The association suppression bill passed the Chamber of Deputies, at the end of March, by a majority of 246 to 154.

The Chamber of Deputies, by a vote of 176 to 168, annulled a treaty concluded in 1831 by the Duke de Broglie and General Sebastiani, and refused to grant the sum which the ministry were pledged to pay to the United States as an indemnity for the injuries inflicted during the last war, by the French upon American ships and commerce. The sum agreed to, as full compensation did not exceed one million sterling.

After having strenuously but vainly laboured to procure from the Chamber the ratification of his arrangement, De Broglie (as minister of foreign affairs) resigned. His example was followed by Sebastiani, who was a member of the cabinet without having any portfolio, or especial duties.

After these resignations the ministry was re-modelled.

Among the recent prosecutions of the press, the editor of the 'Gazette de France,' a Carlist paper, has been tried for a libel on Louis Philippe—for styling the young Duke of Bordeaux Henry V.—and for calling in question the legality of paying taxes to the existing government. Moved by the evident weakness and imbecility of this party, the jury have given an acquittal.

M. Lionne, the editor of the 'Tribune,' the most stirring and violent of a party which is acknowledged by all France to be much more formidable than the 'Carlist,' has been visited with more severity. For a libel on the subject of political associations, and for espousing and encouraging the cause of the Mutuellistes and revolted workmen of Lyons, he has been condemned to five years' imprisonment, and to a fine of about 1000*l.* The office where the tribune was printed has also been sealed, and government has withdrawn the printer's patent, without which he cannot prosecute his calling.

Certain discussions in the Chambers on the affairs of Algiers, have fully proved that the occupation of that place and its dependencies is a losing concern—that it costs enormous sums to the French nation who derive no benefit from it; while the native population, whether Moors, Arabs, or Kabyles, are in all respects in an infinitely worse situation, than they were in under the old Dey.

In our last monthly retrospect we announced with pleasure that the workmen had returned to their occupations, and that riots had ceased at Lyons. A few days later, however, that unfortunate city became the scene of horrors and desolation almost equal to those it sustained under the French Republic and Collot d'Herbois in 1793. It has been once more the arena of a frightful civil war—barricades have been raised—blood has flowed in torrents in the streets—the courts of justice have been closed, and all business and industry interrupted for more than a week in this, the second city of France.

On the 5th of April, when some of the workmen were to be tried for former riots, or for their connexion with the illegal society called the Mutuellistes, which aimed not merely at imposing laws on their (the workmen's) employers but at prescribing a new form of government for France, the deplorable disturbances commenced. At an early hour an immense throng beset the court of justice, which was also soon crowded by angry men, who interrupted the proceedings by their clamours, while the shouts and threats of the mob without, meant for intimidation, rendered the voices of lawyers, prisoners, and witnesses, almost inaudible. Thus circumstanced the president of the court proposed that the hall, at least should be cleared, and the trial carried on with closed doors. Such a measure was opposed by the procureur du Roi, and by the groans and hisses of the mass of the audience. The discussions which ensued ended by postponing the trial until the 9th of April.

When the court broke up, the crowd without made a violent attack on the witnesses who had deposed against the Mutuellist prisoners.

Lawyers in their gowns, (French lawyers do not wear wigs) rushed into the midst of the mob to protect these witnesses, and even the Procureur du Roi collared one of the rioters. No call was made on the military, and the judicial and civil authorities were evidently anxious to prevent any violent collision. But during this unseemly turmoil, a brigadier of gensdarmes was heard to say, that if he had but forty men like himself, he would presently reduce the *canaille* to order. He had scarcely uttered the words when a host of workmen set upon him, tore off his order from his breast, his aiguilettes from his shoulders, seized his sabre, and with insulting expressions threw it into the river. The officer was saved from being torn to pieces himself by some respectable citizens, who took him into one of their houses and defended him there. The ill-timed bravado of this man was, undoubtedly, a great provocation to the people, while the treatment he received was, of a nature to exasperate *all* soldiers, and the French, who have such high notions of military dignity, most especially. This little incident, added to one or two others, contributed greatly to inflame the fury of both parties, who, in the end, fought most mercilessly against each other.

As the crowd would not disperse, the proper authorities at length gave orders that some infantry of the line should advance to the large square, where the Court of Justice is situated. A company marched up with fixed bayonets, but the workmen saluted the common soldiers as brothers, and remained quiet. A second company then advanced in

the same manner, yet still no collision took place. On the contrary, parts of the multitude quietly withdrew, and others placed refreshments for the troops before the doors of the wine-houses. Seeing all quiet, the officers ordered them to remove their fixed bayonets, and then the soldiers partook of what was offered to them.

At this spectacle, some of the more timid citizens of Lyons expressed their fears that the troops were gained over by the associations, and would not act against the workmen. The officers in command seem never to have entertained any apprehensions of the sort. Before evening, every thing was tranquil in Lyons.

On the following day, however (the 6th of April), there was a great deal of excitement, occasioned by the funeral of a chairman of a Mutuellist club. The members of the Society of the Rights of Man, and other associations, attended in great numbers. Intemperate speeches were made over the grave by workmen, and money was collected for men wounded or taken prisoners during the preceding disturbances. The mourners retired, singing Republican songs, which they continued to do during the greater part of the night. An officer and a platoon were reviled and taunted with being the tools of traitors and of tyrants.

Two days of comparative calm then succeeded, but on the morning of the 9th, the day fixed for the continuation of the interrupted trial, at about eleven o'clock, an immense mass of armed men arrived and presently filled the large *place* or square of St. Jean, which had been almost empty a few minutes before. An orator arose out of this mass, and read a paper declaring Louis Philippe to be no longer king, and proclaiming a republic for France, the head of which was to be, naturally, the city of Lyons.

Both the military and the civil authorities present seem agreed in stating that the first musket was fired by the insurgents, but this is denied by the opposition newspapers. To us the question does not appear important. From the decided military manner in which the deluded workmen came to the scene of action, and from other circumstances, it was evident that theirs was not a mere demonstration—that the soldiers must either fight against part of their fellow-citizens, or leave the whole of the south of France a prey to another revolution. We deplore the carnage that ensued, but we cannot see how bloodshed could have been avoided.

A few words with respect to the localities may aid our readers in understanding the nature of the contest, and *how* it could be so long maintained by the workmen. Lyons, which, with its suburbs of Croix Rousse, La Guillotière, La Favoniere, &c., contains a population of 190,000 souls, is situated at the junction of the rivers Rhône and Saone. The Saone, a broad, deep, and rapid stream, traverses it in its length, and the Rhone washes other parts of the city. Bridges across these rivers afford communication between different parts of the city and the suburbs, and hence these bridges were obstinately contested by the troops and the workmen. On both sides of the river there are *places*, or free, open squares, upon the greater part of which several streets open from different points. Through these streets the insurgents could make their approaches on the *places* where the troops were deployed, and through them they could retire when beaten. A sad experience taught the soldiers not to follow them through those streets, which are, for the greater part, long, narrow, and crooked, with strong stone houses of five or six stories, and with numerous windows, on either side. This is particularly the case in the old part of the town, which is the manufacturing district, where the workmen made their longest stand.

If General Aymar, to whom this difficult command fell, had engaged his troops in these streets at first, he would have been defeated as surely as Marmont was beaten in Paris in 1830. Added to these features, which render Lyons a critical ground for such operations as the troops had to perform, several of the suburbs are on eminences rising from the banks of the rivers, and are not only very defensible positions, but gird in and command a great portion of the town. Now the workmen were in possession of La Guillotière and most of these places from the commencement of the affair, the number of the troops employed being by no means adequate to keep them all, and to defend the interior of the city.

On the first day (April 9th) the conflict began in one of the large squares. The workmen were beaten off at the first attack, and the prefect, or chief magistrate, seeing that they were raising barricades on all sides, ordered the troops to advance upon those in some of the more *open* streets. The soldiery succeeded in destroying those they marched upon, notwithstanding a murderous fire. A condensed and serious action took place in the square of the prefecture. The workmen intrenched themselves in an unfinished but strong building, whence they were dislodged only by artillery. Even after they had fled from this point, two other buildings of still greater strength remained to be reduced by cannon-ball and shells before the troops were masters of this part of the town. At one large house, which was filled from the ground floor to the attic with workmen, who fired with all the precision of riflemen, many were killed, and a considerable number made prisoners. The prisoners almost to a man came out of the house besmeared with blood and blackened with gunpowder.

At the same time, hard fighting was going on at several of the bridges, in the Place des Terreaux, and at the school of Croix Rousse. For five hours the cannon and musketry scarcely ceased for a minute. On most points the insurgents were obliged to retire, and they passed the night as if it had been one of repose after their usual labours in the factories, without making any new effort.

On the second day they not only maintained their ground within the city, but increased their number and their barricades.

On the third day they drove the troops from some of the suburbs they had occupied, destroyed two telegraphs, and nearly succeeded in cutting off General Aymar's communications. This was the critical moment. Paris was in consternation from the non-arrival of telegraphic intelligence; and it appears certain that the general was for a short time in doubt whether he should not withdraw his troops from Lyons.

On the fourth day, however, affairs wore a very different aspect. By a succession of rapid and well-concentrated movements, the troops, after long and desperate fighting, remained completely victorious except in the heart of the old town, whither the insurgents retired, and shut themselves up in the strong lofty houses.

Though beaten and disheartened—though the victory was decided—these desperate men kept up the insurrection until the 15th of April, when it was finally suppressed, and the city was restored to a sad tranquillity.

Many years must pass before Lyons can recover from the losses and injuries she has sustained. The workmen attacked and destroyed the property in the houses of all the merchants and manufacturers who were unpopular with them. The best of the public edifices, the Hôtel de Ville or Town Hall, the fine old cathedral, and several other churches, before the very altars of which the struggles of despair were prolonged, have been almost entirely ruined. The elegant modern dwelling-houses and hotels on the Place de Bellecour have been rent and riddled with cannon-balls and shot, and nearly every part of the town and suburbs bears equally melancholy evidence of what has happened.

The loss between killed and wounded sustained by the troops is stated at 2000, and it is calculated that from 6000 to 8000 of the insurgents have been killed or wounded.

The cannonading had not ceased at Lyons when another attempt was made to render Paris also the scene of civil warfare. The arguments of the republican journalists, the loudly expressed sympathy of a certain portion of the inhabitants of the capital for the cause of the workmen at Lyons, the uncertainty as to how and when that struggle might terminate, and the well-known desperation of a faction, had all rendered it incumbent on the government to strengthen the garrison of Paris. We cannot see why Louis Philippe was to be blamed for doing this at such a crisis, or even for reviewing, as he did, on the morning of the 13th of April, the troops that had been concentrated—for this review was intended to prevent an insurrection by an exhibition of the overpowering force the king had at command, and ready to act. Some of our newspaper writers, however, lay the entire blame of what happened upon this review, and upon the king and government.

On Sunday the 13th of April, the *émeute* began at two o'clock in the afternoon, on some of the quays on the Seine, and in the Place du Chatelet, whence it soon spread to the populous streets of St. Martin and St. Denis. The immediate cause of the explosion is said to have been the arrest in the streets of two or three riotous individuals. By six in the evening, a crowd of workmen from the quarters of the

Marais and the Fauxbourgs had prepared themselves for violence. They began their operations by taking up the pavement of the streets, seizing omnibuses, coaches, and cabriolets, to convert into barricades, and by attempting to gain possession of the windows of the houses from which to fire on the troops; but they had not in their favour, as they *had* in 1830, the general good wishes or indifference of the inhabitants of Paris, which alone can render such tactics available against well-organized troops in proper numbers.

Before nine o'clock, 20,000 regular troops and 20,000 national guards were under arms. During the night, numbers of the national guards came in from the Banlieux of Paris, which have been distinguished these several years by a good spirit, and love of peace and order. There was some fighting on both sides of the Seine, and the affair lingered on throughout the night; but as day broke, and disclosed the force of the troops and artillery brought against them, the insurgents abandoned all their barricades, and confusedly retreated to obscure houses in narrow streets and alleys, where they were soon blockaded on all sides, and compelled to surrender. We regret to say that several acts of cruel vengeance were committed on the insurgents, not so much, it should appear, by the regular troops as by the national guards, who had suffered severely, and had heard of several of their fellow-citizens and companions in arms being massacred in cold blood by the mob. It is said they confounded, in their rage, the innocent with the guilty; and this is very probable, and indeed a natural consequence of such a system of warfare.

Though the horrors were insignificant compared with those of Lyons, during the night of Sunday, and Monday morning, Paris presented some dreadful scenes. When the Dukes of Orleans and Chartres rode to the scene of action at an early hour in the morning, they were hailed by the troops and the national guards, but some of the insurgents deliberately fired at them from a window. The king, after reviewing a large body of troops in the Place de Carousel, rode to the disturbed quarters about noon, but before he arrived the insurgents were disposed of. By Monday evening, nearly 40,000 regular troops of all kinds, besides national guards, whose steadiness and fidelity admitted of no doubt, were at Paris and the suburbs.

In concluding its account of the success of the government, one of the Paris papers ('Le Temps') says, "May God grant that this triumph of order may not cost us too much of our liberty!" We join in this prayer with all our hearts; but it ought to be impressed on the minds of the French people, that liberty and order must be alike exposed unless they can prevent these perennial attempts of a party, representing no very large portion of the public, to change the government by force.

Besides the numerous prisoners taken with arms in their hands, many have been arrested in Paris since the conflict. These men are not to be tried by the usual courts and by juries, but by a special commission appointed by the Chamber of Peers.

As a further woful consequence of the events we have hastily sketched, Marshal Soult, the war minister, insists on the necessity of raising the army to 360,000 foot and 65,000 horse; and, in addition to the heavy sums already granted for that part of the service, he demands fourteen and a half millions of francs for the year 1834, and twenty-two and a half millions for 1835.

The task of making new laws for the repression and punishment of future insurrections has been allotted to M. Persil, who is likely to err on the side of severity rather than on that of moderation.

SPAIN.

ALTHOUGH a body of Carlists surprised and entered the city of Vittoria, where they massacred 196 prisoners, their party seems rather to have lost than gained ground. They could not maintain themselves in Vittoria, and that *coup-de-main* produced no military results.

Impelled, it is supposed, by poverty, the queen-regent has begun church-reforming. This, in Spain, is a critical subject to touch, yet, as far as government has hitherto proceeded, their measures appear wise and moderate. The queen-regent's decree states,

1. That the provision for all prebendaries, canonries, and other ecclesiastical bodies not immediately connected with the cure of souls, shall be suspended.

2. That the revenues of those that become vacant are to be exclusively applied, in the terms of the papal bulls on the subject, to the extinction of the national debt.

3. That government reserves to itself the faculty of disposing of individual benefices for the purpose of rewarding such eminent services as may be rendered either to church, or state, or education.

The cabinet still finds difficulties in raising such a loan as is indispensable to the wants of the country. In spite of the Carlist insurgents in the provinces, Madrid remains perfectly quiet, the good citizens seeming almost indifferent to the petty partisan warfare. M. Sarmento, the envoy from Donna Maria, has been well received at court, and the amicable relations between the young Queen of Portugal and the Regent of Spain seem now to be much strengthened and more declared. By recent intelligence fresh troops were to march to the Portuguese frontiers, and a corps of 2000 men was to make another irruption in search of Don Carlos. M. Perez de Castro, a distinguished Spaniard, has been nominated minister to the court of Donna Maria.

The long expected royal statute for the convocation of the Cortes was at last published on the 13th of April. It is a singular omission, that, among all its details, it does not fix the date when this body, or rather these bodies, shall meet. It is expected, however, that an express decree will determine this at an early period. The statute seems to give satisfaction to all moderate Spaniards.

The general Cortes are to be composed of two Estamentos or Estates, viz. the Proceres, or Peers, and the Procuradores, or Deputies of the Kingdom.

The Estate of Peers is to consist of the archbishops and bishops of Spain, the grandees of Spain, the *titulos* of Castile, of an undetermined number of men illustrious by the employment they have held as ministers, ambassadors, generals, judges, &c., and by their previous services to their country; of landed proprietors and great merchants and manufacturers, who have an annual income of 70,000 reals, and who have been previously deputies of the kingdom; of public teachers and professors, and cultivators of science and literature, who have acquired celebrity, and possess an annual income of 70,000 reals, whether derivable from private property or a salary paid by the state.

All must have completed twenty-five years before they can take their seats.

Among the grounds of exclusion is the existence of any mortgage on the estates of the grandees!

The Estate of Deputies is to be composed of persons freely chosen according to the law of elections.

Every deputy must be a native of the kingdom, or the son of Spanish parents; he must be thirty years old, have an annual income of 12,000 reals, and must be born in the province for which he is named, or must have resided in it at least two years previously to his election; he must also possess within the province, either in town or country, property which shall produce half the income necessary to a deputy. Here, again, no proprietor whose estates are encumbered with mortgage is eligible.

By chapter 5, article 24, it is established that the right of convoking, proroguing, and dissolving the Cortes, shall belong exclusively to the sovereign.

By article 31 of the same chapter, it is decreed, that the Cortes shall not have the right of deliberating on any subject which shall not be expressly submitted to their examination in virtue of a royal decree. But a supplementary article provides that this is not to prejudice the right which always *was* exercised by the national Cortes of *offering petitions to the sovereign.*

The sessions of both houses are to be public, except in certain cases to be defined by their own regulations.

PORTUGAL.

No great or decisive movements have been made by the Pedroites, who have, however, gained some minor advantages, for the best of which they are indebted to Admiral Napier.

That distinguished officer, among other places on the northern coast of Portugal, has taken Caminha, Viana, and Valença do Minho; and it is probable that before this he has made himself master of Figueira, a sea-port through which the Miguelites have frequently received supplies.

Castello Branco, a strong town and the capital of a province, Monte-Alegre in Tras os Montes, and some other

towns, have spontaneously declared themselves for the constitution and the young queen.

In the south the queen's troops under Bernard da Sa sustained a check. A division of the constitutional army advanced from St. Ube's, and took the important town of Alcacer da Sa, without meeting with any resistance.

Two thousand men from Oporto planted the queen's colours on Braga, but they only gained possession of an empty town. Nearly all the inhabitants had run away, carrying their property with them.

We hear no more talk of the Portuguese Cortes. Will the example of the queen-regent of Spain hasten its convocation? But the Cortes of Portugal can scarcely be complete until the Miguelites are dispossessed of all the towns and districts they still hold or control.

It is asserted that considerable numbers of Spanish Carlists have entered Portugal in aid of Dons Miguel and Carlos.

BELGIUM.

We regret to state that Brussels has been again disgraced by riot, plunder, and barbarous destruction.

When the Dutch government was overthrown by the revolution of 1830, among other things retained by the Belgians were several fine English horses, the property of the Prince of Orange. It was lately resolved to dispose of these horses by a public sale, and this was thought a proper opportunity by some of the Flemish nobility to show their respect to the son of their late king, or their own liberality, in restoring what they might have considered as indelicately appropriated by their countrymen. Accordingly they entered into a subscription for the purpose, bought up the horses, and sent them to the Dutch court at the Hague.

Although party spirit may have had much to do in this liberality, still we think, that so far there was nothing to blame on the side of these nobles; but it certainly was, at the least, imprudent for them to publish, as they did a few days after, and when the Belgians were much excited by the military promenades of the Dutch on their frontiers, an advertisement calling upon the friends of the House of Nassau to join in a subscription in order to make up part of the amount of their outlay. This conduct, however, cannot excuse what followed.

The populace of Brussels having obtained, by means of the advertisement, a clue to the individuals who had taken part in these proceedings, rose tumultuously on the 5th of April, and broke into the houses of the Prince de Ligne, the Duke d'Ursel, and fourteen other gentlemen designated as being of the Orange party. The destruction of furniture, pictures, and other valuable property, was continued during the next day, though 3,000 infantry, and 1,500 of the king's body guards, were in the city all the time.

The conduct, the negligence, or the connivance (for it has been called both) of Leopold and his government has been severely criticised, and turned to party purposes; but the king was placed in embarrassing circumstances, for which allowances ought to be made, and policy as well as humanity might have prevented him from employing the military against the people.

When the king went out at the head of his troops to show that no such extreme violence was contemplated, he advanced only accompanied by a few officers, and spoke with the rioters. They received him with the loudest acclamations, and soon after, and without bloodshed, the city was restored to tranquillity.

The government has recently expelled from the country, on twenty-four hours' notice, several foreign residents at Brussels, who had in different manners rendered themselves obnoxious.

CHRONICLE OF EVENTS.

Nov. 16. By the Canton papers which come down to this date, it appears that the distress occasioned by the violent overflowing of the waters, and incessant rains, was not confined to Canton alone, but was felt generally throughout the country. The city of Chin-chow had been almost entirely destroyed, 18,000 houses having been swept away by the water from the mountains bursting through a ravine upon the town. Numerous persons were drowned on the occasion. A forced subscription had been ordered by the government to alleviate the distress of the lower orders, and to repair the different embankments. The several companies were called upon for sums in proportion to their capitals; the Hong merchants were rated at 80,000 dollars; the silk and cotton merchants, as well as the salt-merchants, at 40,000; the government collecting altogether a sum of about 1,600,000 dollars. The local authorities had solicited the government to open the granaries for public use, as a famine was much apprehended, but no answer had been returned up to the date of the advices.

Dec. 18. Letters and papers from Bombay to this date state that the insurrectionary movement still continued in Gwalior; and, if the accounts are to be relied on, had assumed a threatening aspect, for it is stated that no less than 30,000 insurgents were under arms, with forty pieces of ordnance. Nine regiments of regular troops had been sent against them, under the command of Colonel Baptist, who had succeeded in restoring partial tranquillity; but, as the number of the riotous and discontented was so superior, much apprehension was entertained for a continuance of it. The Rajahs of Uncara and Bhoondee are said to have been preparing considerable forces to arrange, by force of arms, some misunderstanding which existed between them. Lucknow had again been visited by the cholera, where, during one week, no less than 1,200 persons fell victims to it.

Jan. 16. Sir Benjamin D'Urban, the newly-appointed governor of the Cape of Good Hope, arrived there this day, and was received with all the honours due to his rank. On being sworn in, the king's commission was read, which stated that in future all governors of the Cape were to be assisted by a legislative and executive assembly; the former to consist of not less than ten nor more than twelve persons, exclusive of the governor, of whom five should at all times be persons holding appointments within the settlement. The five official persons were to be the officer of the forces next in command to the governor, the colonial secretary, the treasurer, auditor, and attorney-general; the others, to be named by the governor, were to be landed proprietors or merchants who had been at least two years in the colony. The executive council was to be composed of the official persons above-mentioned, without any other addition. This intelligence had given general satisfaction throughout the settlement, as it was looked upon as an earnest of a free and liberal legislative assembly being established in the colony.

26. By accounts from the Cape of Good Hope to this date, we learn that a meeting of the principal colonists had been held for the purpose of drawing up a petition to his Majesty, praying that a settlement might be made at Port Natal, on the eastern coast of Africa, the vicinity of which is stated to be peculiarly favourable for agricultural undertakings, while its proximity to the sea, and its position as regarded the neighbouring tribes, afforded the means of carrying on to a considerable extent an internal and external trade. The petition was unanimously agreed to.

Feb. 3. The correspondent of the 'Times' at Alexandria, in a letter of this date, says, that Mehemet Ali has at last created a military power capable of withstanding the attacks of the Sultan. In the arsenal, as well as among the troops, the utmost activity continues, as if a new conflict was not far distant. It is said that to a demand for his disarming, Mehemet Ali has declared his willingness to begin, provided he receives a guarantee from France or Great Britain that he is not to be attacked either by the Sultan or the Autocrat. Ibrahim Pacha was expected to arrive in Egypt immediately. The Syrians are described as dissatisfied with his rule, and the example of Aleppo is quoted, where, when he ordered a levy, the people offered money to be exempted—he took the money, and then ordered the levy. This act is said to have produced exasperation and revolt, which ended with executions of the ringleaders. Mehemet Ali's troops have been successful in the Hedjaz. There is a report in circulation respecting the loss of a vessel in the Red Sea, having on board a number of officers, among whom were several Europeans, designed for an expedition carried on against some part of Arabia. The city of Bagdad is now blockaded by the neighbouring Arab tribes, and reduced to the greatest straits from want of provisions. There are numbers of refugees at Alexandria eager for employment, from Poland, Naples, and Piedmont, and also some French Carlists. Mehemet Ali published a notice some time since, that he could not employ the Polish refugees. This was attributed to a wish to conciliate Russia, and General Dembinski, whose acceptance of employment from the viceroy is stated to have arisen from a wish to serve his countrymen, has resigned, and is now about to return to France, accompanied by some Poles lately arrived. Mehemet Ali having paid 5000 purses to the Sultan, under the name of a present, the latter demands 30,000 additional, as arrears of taxes due to the Porte. There are 7000 ready, which may be sent if tranquillity be preserved in the East between the Great Powers. Mehemet Ali professes to be content with his present position as "a tributary," not "a subject" to the Porte; but his immense preparations would seem to indicate that he waits but a favourable opportunity of declaring his independence, and leaving the Turks to their fate separately, while he establishes an Arab-Egyptian dynasty.

15. The opposition party in the parliament of Lower Canada has assumed a very bold attitude in reference to the government. A call of the House was made on this day, when seventy resolutions were proposed, strongly condemnatory of the proceedings of Lord Aylmer the governor, and of the despatches of Mr. Stanley. The extracts from these despatches, which had been laid before the House, are characterized as insulting and inconsiderate to such a degree that no legally constituted body, although its functions were infinitely inferior to those of legislation, could or ought to tolerate them. Subsequently nine articles of impeachment against Lord Aylmer were added to the above seventy, and a vote to moderate their warmth was negatived by 52 to 19. When the last accounts left Quebec, twenty-three of the resolutions had been adopted in a committee of the whole House.

— Resolutions against the removal of the deposits from the United States Bank have passed the Senate at Washington, with only one dissentient voice: but the President still remains inflexible, and is supported by the House of Representatives.

March 4. The steam-boat 'William Penn,' plying between New York and Baltimore, when nearly opposite the Point House, was discovered to be on fire. Every exertion was made to stop the progress of the flames, which spread with great rapidity from the fire-room, and soon communicated to the fuel. The boat was then run on shore, and the passengers, amounting to 140 or 150, jumped overboard. The scene presented was one of inexpressible dismay, and three lives were lost; a lady, a clergyman, and an officer, who all jumped overboard abaft the wheel-house, where the water was deep, were drowned. The passengers all suffered severely from the nature of the landing, it being very soft mud.

5. A boat belonging to Findochty, in the parish of Rathven, was lost on the coast of Caithness. Five widows and thirteen helpless children are thereby left in very destitute and pitiable circumstances.

11. Five villages in the district of Neuschlos, near Gratz, were destroyed by fire. It broke out in the village of Oberpremstetten, and a terrible hurricane prevailing at the time, the flames spread to four neighbouring villages. The most strenuous exertions failed in arresting the fury of the conflagration. Only a few houses escaped, which lay out of the direction of the wind: 128 houses, with their stables and barns, are reduced to a heap of ruins No lives, however, were lost.

16. The remains of the fisherman Burnet, who was shot by the crew of the French cutter, l'Ecureuil, as mentioned in our last, were interred at Gorey, in Jersey. Upwards of 200 persons attended the funeral. The captains and proprietors of oyster-vessels have entered into a liberal subscription for the widow and family. It appears that government is taking cognizance of this affair.

17. The town of Pembroke was in a state of excitement bordering on riot, in consequence of the death of a young man named William Truscott, while he was the object of pursuit of a party of the preventive service belonging to the revenue cutter 'Skylark.' It is said, in the verdict of the coroner's jury, that the deceased ran into Pembroke river in presence of the preventive party, and was there suffocated; and that one of the party, whose name is unknown, fired a pistol at the deceased the instant he ran into the water. The popular irritation rose to a great height, and some mischief was done by brick-bats and other missiles. Lieutenant Connor, commander of the 'Skylark,' received a severe wound on the cheek.

20 German papers state that the Sultan has given permission to the inhabitants of the Isle of Samos to govern themselves on payment of a tribute of 500,000 piastres; but as the revenues of the island are much reduced, the Sultan will forego the tribute for the first three years

Sir John Jeffcott, the principal in the fatal duel at Exeter, surrendered to take his trial immediately after the opening of the commission of the Exeter assizes. Sir John entered the dock accompanied by his brother and another gentleman. The clerk of arraigns having read the indictment charging him with the wilful murder of Dr. Hennis, Sir John pleaded "not guilty." There was no evidence offered on the part of the prosecution, and the jury, under the direction of the judge, found him "not guilty."

22. The Lord Chief Justice was raised to the peerage by the title of Baron Denman of Dove-Dale, in the County of Derby.

23. Ten prisoners were indicted at the Midland Circuit, Derby, for the murder of certain miners of the Red Soil Mine, Ashford, by setting fire to a quantity of straw, and by pouring upon it oil of coal, sulphur, and other combustibles, which, by their noxious fumes, suffocated several of the miners. This circumstance arose out of a dispute as to the property in certain cross veins of the "Red Soil" and "Magpie" mines, which are contiguous to each other. The jury acquitted all the prisoners, apparently on the ground that the mischief was not intentionally done.

26. Mr. John N. Reeve was tried at Norwich on the well-known charge of stealing some sovereigns from the body of Mrs. Pyne, one of the ladies drowned on board the 'Earl of Wemys' smack, off Brancaster. The grand jury ignored the bill against Mr. Reeve for stealing money from Miss Roche's reticule, and the evidence against him on the other charge was so slight, that he was not called upon for his defence; and the jury acquitted him in the fullest possible manner, declaring that he left the court without a stain on his character.

28. On Good Friday, in consequence of the wind blowing very strong from the westward, and the tides being then about their extreme height, the water rose several feet above its usual level, and the lands below Ulverston were inundated to a considerable extent. Many wheat fields were entirely covered with salt water; several walls and hedges were thrown down, and the road leading along shore towards the canal foot was in many places completely broken up, and in others covered with gravel and large stones. The damage sustained is therefore very great. Considerable damage has been done at Roosbeck and Rampside, by the sea washing away portions of land in some places, and in others almost covering whole fields with stones and gravel. The sea was tremendous along the west side of Walney, especially a little above the south end. The surf broke against the land in liquid mountains, and the spray, being carried high into the atmosphere, flew several miles before it fell. There is great reason to fear that the sea will make a passage across the island at no remote period. It is generally believed that this is the highest tide which has occurred since April 1821.

29. Several arrests have taken place at Berlin, and, it is said, a conspiracy worthy of the fanaticism of the anarchical party was about to break out. Uniforms of gendarmerie and of the keepers of the Palace-garden, were found at the rendezvous of these silly conspirators. Several foreigners who had resided here for a year past have been ordered to quit the city immediately, and the kingdom as soon as possible. It is said that the garrisons of the Rhenish provinces are to be reinforced.

31. On Easter Monday a most disgraceful riot took place in Ahascragh, at the fair. Hundreds of Lord Ffrench's tenantry were literally in a state of warfare with the people of the town. Skulls were laid bare, and bones broken; some are despaired of. Sticks, spades, forks, and every species of weapon that could be had were in requisition. There were but four police in the town, owing to the assizes. They succeeded in arresting three of the ringleaders, and the day after six men were lodged in the Bridewell of Ballinasloe.

The sentence by default pronounced against General Romarino, and the other Sardinian subjects who took part in the attempt of February last, has just been published. They have been found guilty of leze-majesty, and are ordered to be delivered over to the chief executioner, to be by him conducted on a court or market-day, with halters round their necks, by the open squares, and other accustomed places of Chambery, to the place of execution, to be there hung upon a gallows erected for the purpose, till they are dead. They are further sentenced to pay a fine of 50,000 livres, and declared to have incurred the penalties affixed to highway robbers of the first class, amongst whom their names are to be enrolled.

Several skeletons have been lately dug up in the parish of Stowe, Bucks; one of colossal size, and one having an antique gold ring round the bone of one finger.

According to the Hanoverian papers, the celebrated German jurist, Feuerbach, who died lately at Frankfort, during a journey undertaken for the benefit of his health, is now generally believed to have been poisoned. He was a kind patron of the unfortunate Caspar Hauser, and most zealous in his endeavours to discover the murderers of that mysterious youth.

April 1. A discovery was made that twelve convicts confined in Newgate had made very effectual preparations to break out on the north side of the prison. They had loosened the brick-work, and cut round one of the stones so completely, that they could see into the street immediately beneath the cell. This was supposed to have been effected in about two hours and a half, when the timely discovery was made by Mr. Cope, the governor.

3. The sawyers who struck on the 1st of July last at Greenock have at length discovered the error of their ways, and offered to return to their work unconditionally. Their places, however, have been gradually supplied, and, like many others, they find their repentance to be too late.

— About two months since the workpeople in the employment of Mr. John Haley, of Bramley, turned out, and have remained out ever since. On Thursday, however, four girls who had been amongst the turn-outs resumed work. This was not in accordance with the wishes of their fellows, and consequently an assemblage, to the number of about 1000 persons, took place in front of the mill that evening, when several of the windows were broken, and other riotous proceedings occurred. A similar congregation took place last night, but several constables from Leeds being on the spot, the turn-outs contented themselves with hissing, hooting, &c.

4. At the Government Annuity Office, no less than 400,000*l.* was paid in the purchase of annuities, this being the last day for receiving lives above sixty-five as nominees. The clerks were employed nearly the whole of the night in preparing the accounts.

— Recent accounts from Napoli di Romania announce the death of the Greek captain, Colocotroni, in the prison in which he had been confined several months, for having taken part with other chiefs in a conspiracy against the government.

— The 'Augsburg Gazette' of this date contains extracts of letters from Frankfort, dated the 31st ult.; and from Vienna the 29th ult., stating that the Ministers of the Congress now pursue

their deliberations daily, their attention at this moment being devoted to the press, the liberty of which will only be restricted so far as is necessary to prevent its degeneration into licentiousness. In order to lighten the labours of the Congress, the bookseller Gremium, of Frankfort, has sent in of his own accord a memorandum relative to the publications of Germany, and to the best mode of regulating the press in future. It appears that the Congress awakens a general satisfaction throughout Germany, now that the numerous misrepresentations as to its views, spread in all directions, are no longer attended to.

5. Admiral Sir Richard Goodwin Keats, G.C.B., governor of Greenwich Hospital, died in his 77th year. He is succeeded at Greenwich by Sir Thomas Hardy.

— Upwards of 2000 persons have left the St. Katharine's and London docks within the last three weeks for Upper and Lower Canada, Van Dieman's Land, New South Wales, and New York, and there are not less than twenty large ships now fitting out in the above docks for the purpose of conveying passengers to the colonies. Yesterday the George Clinton, American ship, and the Adventure, a British vessel, left the St. Katharine's and London docks with upwards of 300 emigrants on board, who intend settling in the United States. Among them are mechanics of every description, principally belonging to the metropolis, agricultural labourers, excavators, and others. The George Clinton and the Adventure also carry out a great number of cabin passengers.

11. The 'Gazette' announced the appointment of Mr. Robert Graham to the vacant office of one of the Lords of the Treasury.

15. Serious disturbances took place at Oldham, in Lancashire, in consequence of the intrusion of the police the preceding evening into the trades' union, where they seized two of the members and some books. The factories ceased working this morning, and the men assembled and rescued the prisoners as they were being conveyed to the magistrates, and maltreated the police. On passing a factory in which men were employed at a lower price than the scale of the unionists, some muskets were, either in defiance or alarm, discharged from the windows, and one man was killed; on which the enraged mob assaulted the premises and demolished the windows, forced an entrance and destroyed a quantity of machinery, as well as the furniture in the house of the manager. Two troops of lancers and four companies of infantry arrived in the course of the forenoon; but after the above outrages the people manifested no disposition to further violence, although twelve of the ringleaders were captured and committed for trial. The unionists, however, have resolved not to return to their work until their grievances are redressed, and then only on the principle of the Regeneration Society, that is, eight hours work for twelve hours of pay.

— A branch of the Bank of England is about to be opened at Plymouth. This will be the fourteenth establishment in connection with the bank.

21. At the Dorchester assizes, six agricultural labourers were convicted, on the 17th of March, of a felony, in being members of an illegal society, and administering illegal oaths. It appeared that the system of many of the trades' unions had been adopted by these peasants. Their object was to compel their employers to give them a certain rate of wages, and to submit to certain rules of their dictation. It seemed, also, that they were in connexion with other societies of the same description. The oaths were administered with a good deal of mummery, the persons taking them being blindfolded, and then shown the picture of a skeleton, death's head, &c. The prisoners were sentenced to seven years' transportation. This sentence, and the consequent violent language and threatening attitude of the trades' unions, has formed the most exciting topic of the month. It was contended that the men were ignorant of the existence of the law under which they had been convicted; and that having, by this conviction, made the law known, it would be an act of becoming grace to pardon the convicts. Large meetings have been held in London, Birmingham, and other parts of the country, to petition the Crown in their favour. But it having been notified, from the proper official quarter, that "his Majesty had not been pleased to signify any commands" on the London petition, and the convicts having in the meantime departed for their destination, other meetings have been held to get up new petitions, and to pass resolutions, deploring, in very strong language, the determination of the Government. The subject was noticed in Parliament on April 18, when Lord Howick denied that the convicts were ignorant men, since two of them were Methodist preachers; and the documents found upon them showed that Government had been enabled to deal with the ringleaders of a body, that, if not checked in its career, would have proceeded to a frightful extent; and he contended that Government had acted with true mercy in visiting with severe punishment the Dorchester prisoners, which was calculated to have the effect of preventing similar conduct being pursued by other individuals.

On the 21st, the trades' unions met, by previous arrangement, in Copenhagen Fields, and marched thence, in numbers which have been variously estimated from 15,000 to 100,000—but probably from 30,000 to 40,000—to Whitehall, to deliver to the Secretary of State for the Home Department, a petition to the King in behalf of the Dorchester convicts, signed by 266,000 persons. The deputation was received by Mr. Phillips, the under secretary, and informed that Lord Melbourne had seen a copy of the petition, and did not object to it; and he would, if it were presented in a proper manner, receive it and lay it before the King, which, under such circumstances of attempted intimidation, he declined to do. The deputation then withdrew with the petition, and the people, on being informed of this result, dispersed. Serious disturbances had been apprehended from such a vast assemblage, and the troops and police were at hand, though they did not appear in view; but the whole affair happily passed off in the most quiet and orderly manner. The petition has been since presented and received.

— A memorial has been agreed to by the merchants, planters, and others of the island of Jamaica, against the continuance of the legislature as at present constituted. The petitioners wish, that until the freedom of the negroes is established on a permanent basis, the "Assembly should be suspended, and its legislative functions vested in a responsible council appointed by the king, on principles similar (so far as the different circumstances admit) to those regulations established in Demerara, and other colonies recently conquered." They allege as reasons for this, that as the Imperial Parliament has legislated for the internal affairs of the colony, a seat in the Assembly is no longer held in esteem by men capable of legislating for the benefit of the colony; that the Assembly will therefore be probably filled by unfit persons; that to provide for emergencies, a more energetic and powerful government will be proper; and that the suspension of their legislative functions will tend to allay party spirit.

— Accounts from Bermuda state, that the House of Assembly had passed a resolution, declaring that slavery, without any modification of apprenticeship, should be abolished on the 1st of August next in that colony.

Commencement of the Grand Junction Railway.—This great national work is now commenced. The viaduct for carrying the railway across the valley of the Weaver, in Cheshire, which was contracted for a few weeks ago, by Mr. M'Intosh, of London, is now in progress. The foundation-stone, as it were, of one of the greatest enterprizes which modern times have seen is now laid, and the combined efforts of individuals will now be directed towards the completion of a scheme, the object of which is to connect London with the commercial and manufacturing part of the kingdom. It is expected that in three years this portion of the great line of communication between Lancashire and London will be completed, and as the works at the other end of the line will probably proceed with equal rapidity, we may hope in about that time to see the trade of the south and centre of England pouring along its new channels, and to be able to reach London from Liverpool in from ten to twelve hours. Since the passing of the act, the attention of the directors has been turned towards the discovery of the most eligible route to be taken, and it has been ascertained, that in the neighbourhood of Stafford and Birmingham a cheaper and better line can be found, affording facilities of access to several important towns, which the original route did not give. Several deep cuttings and high embankments will be avoided; and although, by the application to Parliament in the present session, considerable time will have been lost in proceeding with the works at the Birmingham end, there is nevertheless such a reduction in the amount of work to be done there, as that no ultimate delay will be occasioned in the completion of the whole. By far the greatest work on the whole line—and we should probably not err were we to state in the kingdom—is the viaduct over the river Weaver, which will consist of twenty arches, of sixty feet span, and will be nearly three times as long, and one-sixth higher than the stupendous work of the same kind at Newton, on the Manchester and Liverpool Railway. The extremities abut against the solid ground, which rises up with considerable steepness on each side of the valley. There will be no artificial embankments at the ends of the viaduct, and the railway will be carried, by a series of arches, from the high ground on one side to that on the other. Each arch will be sixty feet wide, and sixty feet high from the ground. The following statement of the dimensions of the principal bridges in England will, on comparison, give a better idea of the magnitude of this work:—

Waterloo Bridge	of	9	arches,	is 1260	feet in length.
Vauxhall do.	of	9	do.	is 820	do.
Southwark do.	of	3	do.	is 700	do.
New London do.	of	5	do.	is 800	do.
Chirk Aqueduct	of	10	do.	is 450	do.
Pontcysyllte do.	of	12	do.	is 870	do.
Sankey Viaduct, on the Liverpool and Manchester Railway	of	9	do.	is 550	do.
Weaver Viaduct	of	29	do.	is 1380	do.

The viaduct is to be built of stone, which will be supplied in great abundance in the immediate vicinity, and it is probably owing to this abundance, and to the extreme cheapness with which it can be procured, that this immense edifice has been contracted for on such reasonable terms to the company; the whole sum for building it, we are informed, will not exceed 55,000*l.*—*Liverpool Times.*

COMMERCE OF FRANCE AND ENGLAND.

The first Report of the Commissioners appointed to consider the Commercial Relations between this country and France has just been printed; and the document deserves to be considered as one of the most important ever laid before the public. The connexion of France and England has hitherto, in regard to commercial intercourse, as in most other respects, been little more than a connexion of opposition. The object of the policy of both governments has been to weaken, and, if it might be done, to cut asunder the bonds of attachment by which the two countries have been united by nature. Rivals in the struggle for power and ascendancy, the two states have acted as if each had no higher interest than at any cost to keep itself independent of the other. This consideration has been for the most part argument sufficient to shut the eyes of both to all the benefits promised by any arrangement for the free interchange of their respective articles of produce—of those many things adapted for the use and convenience of man which the one has and the other wants. Hence, instead of such interchange, and the friendly relations by which they would have been thereby bound together, all the force of exorbitant duties and prohibitory enactments directed to the exclusion of the goods of the one from the markets of the other, and a feverish state of mutual jealousy and hatred, ever and anon breaking out into fierce and protracted contests of arms, to the fearful waste of the capital and the blood, and the injury of all the truest interests of both.

Was this a natural state of things, or, in more distinct terms, were there any peculiarities inherent in the position and circumstances of the two countries which made it necessary or desirable that they should regard and treat each other as they did? Looking to the past, he would be rather a bold than a profound reasoner who should say decidedly that the hostile rivalry of France and England, with all the undoubted mischiefs and miseries that have flowed from it, has not been upon the whole productive of more good than evil to both nations. All struggle and exertion is as such salutary and elevating, and even war itself, with all its hated accompaniments, must notwithstanding be accounted of use in so far as it calls forth great efforts and brings powerful energies into exercise. It may be that France and England never would have risen to be the great and civilized countries they now are, but for that very hostility which kept them for so many ages constantly contending together. No excitement less rude might have sufficed to enable them gradually to cast the slough of their old barbarism—to awaken from the inactivity and indolence, the aversion to change, and superstitious submission to ancient institutions and observances, which belong to a certain stage in the progress of society—to shake themselves free from those various influences, indisposing them to change and improvement, which might otherwise have grown over them like a crust, and kept them for ever lagging in the march of civilization. We say that we do not know whether the wars in which they have so often tried their strength with each other, may or may not have performed the service of such a useful or necessary stimulus. But passing from this consideration to what is vastly more material, there can at any rate be little hesitation in pronouncing that the season in which the action of this destructive element might have been serviceable is over now. There is no fear that either the one country or the other will now fall asleep, though the trumpet of battle should never again sound in the ear of either. The onward movement of each is now made sure under the force of other and far better impulses. The chief of these are Literature and Commerce; both, unlike war, the ends and fruits as well as the means of civilization. In a state of literary advancement such as that now attained by Europe, contests of mere physical energy would seem to be as much out of place as the burning of torches after the sun was high in the heavens. What was needed to disperse the darkness would be profanation in the daylight. But commerce, the other great civilizer, is opposed to war even more than literature is. Peace is to commerce light, and warmth, and all things; the very air she breathes, and which if she have not she dies. In so far as she is concerned, there is but one alternative; if we will have war, we cannot have commerce.

The wars in which France and England have been so frequently engaged during the last six or seven centuries, although they have now ceased, never, we hope, to be renewed, have generated and left behind them, as it were, a poison in the atmosphere, under the action of which there is reason to fear that the commercial intercourse between the two countries will long continue to droop. It might be supposed that now, when not only the combatants have sheathed their swords, but the quarrel has to all appearance been fought out, and all things seem to promise that the friendship which has been established between the two nations will be permanent, there would be nothing remaining to oppose itself to the freest resort of the one for sale and for purchase to the markets of the other. The following passage from the commencement of the Report before us points out with great clearness how it has happened that a state of things in great part created by the war still continues to maintain itself notwithstanding the return of peace:—

"The commercial legislation of France has been founded, for the most part, on the desire to make that country independent of every other, and to force within itself the production of the principal articles of consumption, in spite of natural difficulties, and without any reference to their cost. That legislation received its greatest encouragement under the Imperial *régime*, when France was excluded from many of the markets of the world, and when, in order to possess without interruption those objects of luxury which long usage had made necessaries, it appeared absolutely needful they should be created by her own industry, or grown on her own soil. And though the cost of so producing was ruinous to the consumer, and, in the long run, scarcely less so to the producer, yet the government and the people lulled each other with the fallacy 'that the cost mattered not, as the money was spent in the nation, and the wealth of France was not expended on foreigners.' The fact, however, cannot be denied, that many of the efforts made by France to produce the commodities she had been accustomed to import, were forced upon her by the isolation into which she was thrown by the naval superiority of Great Britain. But these efforts, however well suited to the peculiar exigences of the time, and however creditable to the ingenuity of those who exerted them, necessarily flung the capital of France into false and unfavourable positions. When the return of the Bourbons opened to France the commerce of the world, so many interests had been created, and so much labour and wealth were engaged in the production of articles which might have been more economically imported, that it was found

 [William Clowes, Printer, Duke Street, Lambeth.]

difficult suddenly to change that legislation which gave to the French producers the benefit of a monopoly, without which they would have fallen; and their fall would inevitably have brought with it much suffering and distress."

The appointment of the two commissioners, Mr. George Villiers and Mr. John Bowring, to whom we are indebted for the present Report, grew out of a suggestion of Baron Louis, the French minister of finance, addressed in 1831 to Mr. Bowring, who was then employed by the British government in the investigation of the method employed in France in keeping the public accounts. The commission was appointed in the latter part of the same year; and two commissioners having been nominated on the part of the French government—the Baron Freville, counsellor of state, (since made a peer of France), and the Count Tanneguy Duchatel, counsellor of state (since a member of the Chamber of Deputies)—it was determined, on considerations of convenience, that the sittings, in the first instance at least, should be held in Paris. The first report of the English commissioners, here printed, is dated the 26th of November, 1832. It is addressed to the Board of Trade, and together with the appendix and a supplement, dated 1st of January 1834, forms a folio volume of 212 pages.

We cannot here attempt to review even in the most rapid manner the entire contents of this document, or to present any thing like a synopsis of all the information contained in it, the greater part of which is exhibited in a very condensed form. But we will select a few of the points adverted to by the commissioners, to which it may appear most desirable that the public attention should be directed.

Let us first, however, state the object which is to be considered as having been really contemplated by the appointment of the commission. In a letter addressed to the commissioners a short time before the commencement of their labours, Mr. Poulett Thomson, the Vice-President of the Board of Trade, thus explains the views of both governments: "It was proposed to establish the present commission, to be composed of individuals of each nation, not with the character of representatives of the commercial interests of their respective countries, to contend for peculiar points, or negociate for separate advantages, but with one common and uniform object in view; namely, to ascertain as clearly and exactly as possible, from the documents and information which either government can command, what is the present state of the trade of the two countries; to examine how it is affected by the tariffs; how far their provisions are rendered inoperative by the smuggler; and how, with regard to the existing interests, and the obstacles which they must naturally create to the introduction of a better system, a change in favour of a freer communication can be effected." And the commissioners themselves observe: "We were well aware that the interests which had been created in France by her commercial system, and the prejudices which these interests had engendered, presented a formidable barrier against any rapid or extensive change. To alter the whole legislation of a country on matters which involve great pecuniary considerations, was no task to be lightly undertaken or easily accomplished. All that we could hope for the present was, that some modifications might be introduced into the French tariff, and some principles recognized, whose future developement, when experience had shown their value, might be reasonably anticipated. We could not but feel, and the fact has been again and again presented to us, that England had been long engaged in the career of restriction and prohibition, and that she had, in truth, furnished example and encouragement to other nations to adopt a system, which, happily for her own interest, she has since had the wisdom to abandon, or considerably to modify, yet that she still retained numerous laws which protected and interfered with free commercial communication. But though hopeless of any extensive or immediate change, we considered that the opportunity was most valuable for gathering together authentic and official facts, and of tracing from sources whose authority could not be disputed, the progress of manufacturing and commercial decline or prosperity; nor has our conviction of the usefulness of our investigations been in any way diminished as we have proceeded in a task which has been materially forwarded by the friendly zeal of our colleagues, and the most unreserved communications on the part of the French authorities." They afterwards remark, in reference to the project of a new commercial treaty with France: "Treaties of commerce are generally agreements for mutual preferences; and, in so far, are encroachments upon sound commercial principles. They are intended to benefit the contracting parties by common intercourse, to the exclusion (and consequently to the detriment) of other nations. They ordinarily propose exclusive advantages, which, if they open some channels of commercial profit, necessarily close others, and prevent the negociating nations from availing themselves of the improvements, or accommodating themselves to the changes, which the fluctuations of agriculture, manufactures, or trade demand. The Methuen Treaty, for example, bound Great Britain to take the produce of a particular country at diminished duties, whatever superior advantages any other country might chance to offer; while Portugal was, at the same time, compelled to receive the manufactures of England, whether or not she might have supplied herself more profitably elsewhere. A treaty therefore with France, proffering reciprocal advantages, that is to say, giving to France peculiar privileges in the English markets, or obtaining peculiar privileges for England in the markets of France, did not appear to offer any prospect of permanent utility; but if it were possible that each country should, for itself, and with a special view to its own interests, remove those impediments to intercourse which had grown out of hostile feelings or erroneous calculations, and by comparing the facts which each government was enabled to furnish for the elucidation of the inquiry, each should find that it could safely and judiciously prepare for more extended transactions; if, in a word, it could be shown that each possessed sources of wealth which might be made productive to the other, while they lost nothing of their productiveness to the nation that possessed them, we believed, that in selecting such topics for our examination, and such objects for their result, we were best discharging the duty which had devolved upon us."

In reviewing the past history of the commerce of France and England, the commissioners divide it into three periods; the first of which comes down to the revolution, or the year 1791. The ancient policy of France, like that of our own country, was founded upon the principle of encouraging importation, and discouraging, or prohibiting exports, a principle which, although not the result of far reaching vie at least had the merit of looking to the interests not of a few producers but of the great body of consumers. It was in 1664, in the reign of Louis XIV., and during the administration of Colbert, that a sort of imitation of the English Navigation Act was promulgated, by which a tax of fifty sous per ton was imposed upon all foreign ships entering the French ports, with the view, as it was expressed, of inducing builders and merchants to construct French vessels. The exclusive policy thus introduced was extended, under the direction of the same minister, in 1667; and in 1687, it was established in its full rigour. From this date, the interest of the consumer, that is of the nation, was systematically and avowedly treated as of inferior importance to that of the producer. High prices were encouraged as a national blessing. For this purpose not only were foreign commodities excluded, when if admitted, they might have been sold cheaper than the same description of goods produced in France, but bounties were paid upon the exportation of articles of French manufacture which could not be disposed of abroad at a remunerating price. And this curious forcing process, was called, both in France and in England, encouraging the national industry. It was, in fact, encouraging certain branches of industry which were incapable of yielding any profit, at the expense of all those other branches which really contributed to the national wealth.

In this state matters continued till 1786, in the close of which year was concluded the treaty, commonly called the Eden treaty, after Mr. William Eden (afterwards Lord Auckland), the negociator. The preamble of this compact (which is not given by the commissioners), is worth quoting for the sake of the principles which it recognises, and the evidence thereby afforded of the advanced state which public opinion had attained upon such subjects in the two countries, at a time when many persons believe that the minds of men had scarcely awakened to any enlightened political views. It is one among many proofs which might be adduced, that almost every nation in Europe was moving forward in a rapid course of improvement before the breaking out of the French revolution, a course of improvement which that terrible convulsion arrested every where at the moment

substituting in its place a dreary quarter of a century of war and desolation, and after all, scarcely in any case leaving the spirit of political reform of so healthy and really vigorous a tone as before. The Eden treaty commences by declaring that "His Britannic Majesty and his most Christian Majesty, being equally animated with the desire not only of consolidating the good harmony which actually subsists between them, but also of extending the happy effects thereof to their respective subjects, have thought that the most efficacious means for attaining these objects, would be to adopt a system of commerce on the basis of reciprocity and mutual convenience; which, by discontinuing the prohibitions and prohibitory duties which have existed for almost a century between the two nations, might procure the most solid advantages, on both sides, to national productions and industry, and put an end to contraband trade, no less injurious to the public revenue than to that lawful commerce which is alone entitled to protection." The treaty then proceeds amongst other things to enact, that "the subjects and inhabitants of the respective dominions of the two sovereigns shall have liberty freely and securely, without license or passport, general or special, by land or by sea, or any other way, to enter into the kingdoms, dominions, provinces, countries, islands, cities, villages, towns, walled or unwalled, fortified or unfortified, ports, or territories whatsoever, of either sovereign situated in Europe;" that they shall have leave to come with their ships and merchandise into each other's ports, on payment only of the duties prescribed by the treaty, which, upon the wines of France imported into Great Britain are to be the same as those charged upon the wines of Portugal;—upon hardware, cutlery, cabinet ware, turnery, and all works, both heavy and light, of iron, steel, copper, and brass, imported into either country from the other, not higher than ten per cent. *ad valorem*,—upon manufactured cottons and woollens not higher than twelve per cent. *ad valorem*; and the same upon porcelain, earthenware, and pottery, plate glass, and glass ware in general. These stipulations, be it observed, are much more liberal than those which all the exertions of the friends of commercial freedom have yet succeeded in establishing under the state of things which has succeeded to the period of the Eden treaty.

This treaty, however, continued in operation only till 1791, when its provisions were supplanted by a new tariff reimposing the former prohibitory duties; and the system then restored may be said to have been adhered to down to the present day, at least on the part of France, in all its leading principles. The commissioners enter into a variety of details, tending to show the flourishing state which the commerce between the two countries attained during the short period of the operation of the Eden treaty, as compared with its condition at any period, either before or since; but into these we cannot follow them. We will extract, however, some of the general conclusions at which they arrive. On the whole, they state, the quantity of manufactures exported from England continued to be much larger than the quantity imported by her from France: but yet the demand for French articles in this country was decidedly on the increase. The foreign trade which France commanded under the low prices produced by English competition during the existence of the treaty of 1786, has since, of course, been altogether, or nearly altogether, lost. Foreign trade cannot exist, except in association with low prices. Another effect that has followed is the increase of smuggling. "In 1789," the commissioners observe, "the whole of the intercourse (between France and England) was sanctioned by law, while, from the period in which the Eden treaty ceased to be in operation, an indirect and contraband trade, of continually increasing magnitude, particularly of imports from France, has grown out of the fiscal regulations of the two countries; a trade which is, according to the best information we can obtain, very much larger in amount than that which passes through the custom-houses."

It appears from tables published by M. Moreau, in which he compares the general commercial relations of France in 1787-9 with those of 1819-21, that the decrease of importations upon the whole, in the latter three years, was not less than 360,000,000 francs, and that of importations from England alone not less than 49,000,000 francs. In 1787-9, the total importations into France amounted to 1,644,391,500 francs; and the importations from England to 169,234,700 francs. The amount of the general importations again was in the first period 1,344,581,600 francs, and in the second only 1,140,428,600; exhibiting a decrease of 204,153,000 francs. The exports to England had only increased from 100,382,800 to 102,298,200 francs, or not quite 2 per cent. The commissioners add,—

"The comparison between the importations of 1789-91 and 1819-21, show some interesting fluctuations. At both periods England ranks third in importance for the amount of her exports to France; but the Netherlands, which was the seventh country in importance at the former period, had become the first in the latter; one of the causes of the change being, no doubt, that they had become the indirect channels for the supply of colonial and other produce, once imported direct from England. Spain, the second country in importance before the revolution, had become the fifth; and the United States, which were the tenth, had advanced to be the sixth.

"In comparing the rank of countries, as to the exports from France, England, which in 1789-91 was the fifth in rank, had taken the first rank in 1819-21. The German States, which had the eighth place in the earlier period, occupied the second; while the Hanse Towns, which filled the second, were lowered to the seventeenth. Austria was the sixth before the revolution, and the eighteenth in 1819-21; and the French colonies, which were the most important, had sunk to the fifth rank.

"Not less remarkable have been the fluctuations of the different articles of commerce.

"In the first period, the twenty principal articles imported were coffee, sugar, cotton, cotton goods, wheat, oil, wools, linens, indigo, cattle, wood, tobacco, iron and steel, copper, potashes, silk goods, spirits, coals, hemp, olive oil.

"In the second period, the twenty principal articles imported were cotton, sugar, oil, wools, coffee, indigo, wheat, olive oil, linens, wood, copper, coals, cattle, iron and steel, hides, potashes, cheese, hemp, tobacco, rice.

"The articles of interchange between France and England have undergone the fluctuations, which will be best shown by comparing the relative importance of the articles of French importation and French exportation:—

"French importation, 1787-9,—cotton and woollen goods, coals, wheat, salt meat, muslins, copper, flour, silk goods, drapery, hardware, lead, provisions, earthenware, butter, tallow, tobacco, haberdashery, mercery, tin, rice, pepper, linens, carriages, alum, tin plates, iron and steel, indigo, oil, hides, and sugar. In 1819-21,—cotton, indigo, iron, lead, tobacco, pepper, sugar, tin, carriages, coals, saltpetre, potashes, whale fins, copper, tin plates, hemp, instruments, wheat, jewellery, wood, cinnamon, coffee, hides, cocoa, wool, tortoiseshell, oil, ostrich feathers, black lead, and rice.

"French exportation, 1787-9,—brandy, cotton twist, wine, linens, lace, colonials, tobacco, wheat, furniture, silk goods, seeds and grain, gum, cotton goods, wools, fruits, indigo, liquors, woollen goods, books, salt, skins, soap, porcelain, copper, verdigris, cattle, paper, madders, provisions, and vegetables. In 1819-21,—brandy, wine, linens, seeds, eggs, silk goods, fruits, wool, madders, cattle, hats, books, butter, millinery, pictures, porcelain, glass ware, hides, oils, skins, furniture, mercery, clocks and watches, leather and woollen manufactures, perfumery, flour, soap, cork-wood, and lace."

The following account, in which the imports and exports of France in 1828 are contrasted with those of England, gives a very distinct view of the state of the commerce of the two countries—

"Importations.—France: silk, cotton, sugar, wheat, linens, indigo, oil, olive oil, coffee, wools, wood, tobacco, precious stones, hair, hides, silk goods, linen thread, fruits, coals, and straw hats. England: cotton, sugar, tea, coffee, silk, wheat, flax, tallow, timber, wools, wines, indigo, whale oil, rum, madders, hides, India goods, skins, tobacco, and butter.

"Exportations.—France: silk goods, wine, silk, cotton goods, linens, brandy, woollens, coffee, cotton, sugar, madders, hides, flour, refined sugar, mercery, clothing, prepared hides, volatile oils, [illegible] and fruits. England: cotton goods, woollens, cotton twist, linens, coffee, iron and steel, cotton, refined sugar, India piece goods, copper ware, hardware, raw sugar, indigo, rum, coals, wrought tin, wine, salt, tobacco, soap, and candles."

Although this table, however, exhibits the different articles entering into the foreign trade of each country, ranged according to their relative importance, it is not to be assumed that those occupying the same places in the French and English columns are imported or exported by the two countries in the same absolute quantities. The importations of

the first five articles in the English column, as the commissioners remark, exceed all the importations of France taken together, and the amount of the first article of English export is greater than that of the whole export trade of France.

The foreign commerce of France has made much less progress within the last half century than either her agriculture or her manufactures. The value of her imports and exports together amounted, in 1787, to 25,000,000*l.* sterling; in 1830, it amounted to no more than 25,500,000*l.*, notwithstanding an increase in the population of the country from twenty-four to thirty-three millions. The entire foreign commerce of England amounted, in 1787, only to 18,000,000*l.* sterling; and in 1830, to nearly 70,000,000*l.*, or nearly four times as much, the increase of population having been from nine to sixteen millions.

One of the documents contained in the appendix to the report is a return from the English custom-house, showing the general exportation of several of the most important articles of British commerce, and the quantity of each remitted to France in each year, from 1814 to 1831. Upon this return the commissioners observe, "The most remarkable facts are, the increased consumption of British wool in France, notwithstanding the import duties of thirty-three per cent. In 1824, only about 4000 lbs. were exported to France, while, in the last four years, the average has been nearly 1,000,000 lbs. Of copper, for the last ten years, there has been a gradual increase of export, namely, from about 200 to 20,000 cwt. Of cast iron, there has been a small increase; but of iron bars a great decline, attributable to the operation of that discriminating duty, which levies fr. 27. c. 50. per 50 kilogrammes on the coal-produced iron of England, while the hammered and wood-wrought iron of Sweden pays only fr. 16. c. 50. Of coals, the exportation to France has nearly doubled during the last six years, though subject to a duty in the proportion of fr. 110 to fr. 33, as compared to that paid by the coals of Belgium entering by the land frontier. The annual exportation from England to France now averages more than 40,000 tons, which is about one-tenth of our whole exportation; while, from Belgium, the importation, in 1831, was 440,000 tons." In another table is given a statement of the whole amount of coals exported from England in 1831 and 1832, with the amount of duties received thereon, by which it appears that the quantity sent to France is only about one-fifteenth of the whole. "Of woollens," continues the report, "there is a constant tendency to increased shipments to France, and more particularly so of manufactured goods, of which, before the opening of the English market to French silks, scarcely a piece was exported to France; while now, the demand is gradually increasing from year to year, as, in fact, is the general exportation of this article." It appears, also, that in the year 1830 the importations of all articles from England amounted to not less than an eighth part of the whole importations into France; and that, of the whole amount of exportations from France in the same year, not less than a fifth part consisted of commodities sent to England. These results, taking place notwithstanding the exclusive system in force, show strikingly how well adapted the two countries are by nature for commercial intercourse, and the exchange to a large amount of their produce with each other. As the commissioners remark, "it can, in fact, be hardly doubted, that, of all countries in the world, France and England are the best situated for the interchange of their peculiar productions, and the most likely, under wise legislation, to assist each other in the developement of those aptitudes which grow out of their natural position. Their vicinity, their high civilization, their extent, their variety of soil, climate, and productions, seem to offer an almost unbounded field of mutual interchange."

At present, however, the small share which France possesses of the immense export trade of England places in a strong light the oppressive operation of those anti-commercial regulations to which she has subjected herself. In 1830, while our exports to all Europe amounted to 34,275,387*l.*, those to France amounted only to 659,087*l.*, or about a fifty-second part of the whole. Among the European countries to which shipments of British goods were made, France ranked only the ninth in importance. In 1831, she ranked as the eighth, and received a thirty-eighth part of the exports from England to the whole of Europe.

In illustration of the effects produced on the industry and capital of France by her prohibitory system, the commissioners instance a few facts connected with the agriculture, the manufactures, and the navigation of that country. In the article of iron, it is calculated that the annual sacrifice made by the agriculturists to the protected iron-masters is not less than from 1,500,000*l.* to 2,000,000*l.* sterling. Yet the policy maintained at this enormous expense has been so far from protecting the iron-manufacture, that the largest of the iron companies have become bankrupt. Numerous returns are quoted with the view of exhibiting the declension that has taken place in the shipping of France under the prohibitory system. These however we must omit, and content ourselves with giving the following brief general statement extracted from a Report on the National Fisheries presented to the Chamber of Deputies:—"In 1788 France had trading to St. Domingo alone 527 ships, tonnage 167,665, manned by 9,855 mariners,—whilst in 1830 she had engaged in the trade to all her colonies only 407 ships, 101,283 tons of shipping, and 6,029 men." It appears, also, that while the whole import trade of France in 1787 employed 455,269 tons of French, and 433,599 tons of foreign shipping, making 888,868 tons in all, in 1830 it only employed 340,171 tons of French, and 669,283 tons of foreign shipping, or 1,009,454 tons of shipping in all. The amount of tonnage employed in the export trade appears (by comparing statements in pp. 20 and 30 of the report,) to have actually diminished; having in 1787 been 161,582 tons of French, and 532,687 tons of foreign shipping, or 694,269 tons in all; while in 1830, it was only 258,621 tons of French, and 370,518 tons of foreign shipping, or 629,139 tons in all. We may here notice, what is indeed admitted by the commissioners themselves, that the different accounts quoted in the report, derived as they are from various sources, are frequently found not to correspond exactly.

The effect of the French prohibitory system upon the national revenues is sufficiently shown by the statement of the fact, that the net returns from the custom-house do not exceed 3,000,000*l.* sterling, being only 1,000,000*l.* more than England receives on her importations from France alone. The gross receipts of the English customs average nearly five times those of the French.

A very interesting part of the report is that devoted to the subject of the contraband trade between the two countries. A list is first given, furnished by the French custom-house, of the prohibitions established by the tariff now in operation in France, divided into classes according to the general grounds which are conceived in each case to justify the prohibition. The classes thus formed are five in number; namely, prohibitions established, 1. for the public safety; 2. to protect monopolies (including tobacco, salt, and playing-cards); 3. to prevent abuses and confusion of articles; 4. unimportant, and existing only by a too general application of the laws; 5. for protecting French manufactures. Another document still more curious follows, being a complete list, furnished by the French government, of the prohibitions on imports and exports, with the date of the laws of prohibition, and with the detailed reasons which led to the introduction, or which are employed for the justification, of those laws. But we cannot afford to quote any part either of this singular paper, or of the able remarks of the commissioners on the inconsistencies of the system of which it is an exposition. The general principle upon which the prohibitions are defended is, that the cheapness of a foreign article is a sufficient ground for prohibiting its importation, and the cheapness of a home article for prohibiting its exportation. If these principles, as the commissioners remark, were carried out to their legitimate consequences, all commercial relations between France and other countries would cease;—no exchange of commodities at all could take place.

The actual state of the contraband trade created by this system, is next considered. Maritime smuggling, it is stated, has probably diminished of late years, the rate levied on commodities introduced by sea being higher than that paid along the land frontier. One of the principal branches of the maritime smuggling now carried on is the smuggling of tobacco from Guernsey to Cherbourg and the neighbourhood. Sugar and coffee are also frequently introduced all along the part of the coast adjacent to England, and along the whole Pyrenean frontier.

But the greatest quantities of contraband English goods are brought across the northern land frontier. They are for the most part packed in bales weighing from 70 to 80 lbs.; and it is usual to get those packages stamped at the frontier towns with the names of French manufacturers before they

are forwarded to the interior. There are many depôts of these English goods at Cambray, St. Quentin, Ypres, Tournay, Mons, Chuney, and other towns in the neighbouring departments. Of the sugar, coffee, and other bulky colonial articles consumed along the frontier, a large portion is thus introduced by the contraband traders; but tobacco, it is stated, is the only article of colonial produce which is conveyed in considerable quantities into the interior.

"It is estimated," says the report, "that of the premiums on smuggling one half goes to the carrier and the other to the smuggler. The smuggling companies have usually a chief, who undertakes the pecuniary arrangement of these transactions, and is the party with whom the insurance is effected; it is he who arranges with the carrier for the conveyance of the goods, paying ordinarily from twenty to thirty francs per package. The carrier is not provided for by the smuggler, but merely delivers his charge at an appointed place. The manager generally receives for himself five francs per package. The introduction of the goods through the lines usually employs three days; and the average expenditure per man is twelve francs per journey. When the goods have passed the lines, they commonly leave the hands of the smuggling parties, whose business is what is called the *filtration* through the frontier." The value of each package of manufactured goods thus introduced, is stated to be usually about 50*l.* sterling.

But the principal means employed for the introduction of contraband goods is the agency of dogs. The statements of the commissioners upon this subject, taken from a report made on the 30th of July, by the director of the French Custom House to the minister of finance, are exceedingly curious. It is stated to have been in 1825, when smuggling by horses was suppressed, that smuggling by dogs commenced. The first attempts were made in the neighbourhood of Valenciennes, and the practice has since extended to Dunkirk and Charleville, to Thionville and Strasburg, and lastly to Besançon, where it was introduced in 1828. The dogs thus employed, carry each a weight, sometimes of ten, sometimes even of twelve kilogrammes, equal to about 25 and 30 lbs. Troy. But supposing the average quantity to be only two and a-half kilogrammes, and calculating the whole number of dogs on the supposition that in certain districts one in ten, in others one in twenty was killed, it is estimated that in 1823 there were introduced in this way into France 100,000 kilogrammes of goods, 187,315 kilogrammes in 1825, and 2,100,000 kilogrammes in 1826. The kilogramme is exactly equal to 2 lbs. 8 oz. 3 dwts. 2 grs. Troy. In the opinion, however, of many of the Custom House officers, not more than one dog in seventy five was destroyed, even in the most favourable circumstances.

The description of goods thus smuggled into the country, consists usually of tobacco and other colonial produce; sometimes of cotton twist and manufactures. In the neighbourhood of Dunkirk, dogs have been taken with burthens worth 600, 800, and even 1200 francs. It is added, that publications hostile to the government, have frequently been introduced in this way.

"The dogs," proceeds the report, "which are trained to these dishonest habits, are conducted in packs to the foreign frontier; they are kept without food for many hours; they are then beaten and laden, and at the beginning of the night started on their travels. They reach the abodes of their masters, which are generally selected at two or three leagues from the frontiers, as speedily as they can, where they are sure to be well treated and provided with a quantity of food. It is said they do much mischief by the destruction of agricultural property, inasmuch as they usually take the most direct course across the country. They are dogs of a large size for the most part." These animals, ill used as they are, and rendered fierce by hunger, fatigue, and their constant pursuit by the Custom House officers, are very subject to madness. A Custom House officer died from a bite of one of them in 1829. They are trained to regard these functionaries as their natural enemies, and to attack them accordingly.

Among the attempts made to suppress this mode of smuggling, rewards of three francs (half-a-crown) a head have been given for every frauding dog (*chien fraudeur*) destroyed; but although 120,834 francs (about 4833*l.*) has been paid on this account between 1820 and 1830, implying the destruction within that period of 40,278 dogs, their number instead of being diminished has continued rapidly to increase. It was proposed, as another expedient, to lay a heavy tax on the exportation of dogs from France. The dogs carried to the frontier for the purposes of illegal traffic are always, it is said, conducted in strings of from eight to ten, and sometimes from twenty to thirty. They have to be forcibly conducted, anticipating as they do ill usage and fatigue in the employment for which they are destined. It would probably, therefore, be difficult to transport them clandestinely, if the authorities would exert themselves; but it is one of the consequences of the unnatural system which has given birth to this illegal commerce, that neither the public in general nor even the paid servants of the government, can be brought to act with much zeal or activity in support of the law.

The large quantities of contraband tobacco, which find their way into France, are sufficiently accounted for by the fact that the price of the article in that country is 300 or 400 per cent. above the English and the Dutch bonded prices, while its quality is also greatly inferior. It is asserted that although seizures are of daily occurrence, the profit on the fraudulent trade, after all risks are deducted, is not less than 75 per cent. to the smugglers who carry it on on their own account. Of English manufactures, cotton twist is among those that are most extensively introduced by the smuggler. "It makes its way," says the Report, "both by land and sea in spite of all interdictions, to a continually increasing amount. The qualities principally in demand are the higher numbers, which the French mills cannot produce, or produce only at an extravagant price. An official return states that the French No. 180, which can be bought in England at fr. 18 per kilogramme, sells in France at from fr. 39 to fr. 40.; the same quality of French manufacture to which no risk of seizure attaches, will, it is said, produce fr. 42, the two or three francs of difference being paid for the additional security. The numbers principally introduced, are from 170 to 200, and are employed chiefly for the fabrication of bobbinets (tulles). But there is also a large demand for English cotton chains at Tarare: and they are so necessary for the existence of that manufacture, that, by the connivance of the Custom House authorities, no seizures take place after the article is lodged in the warehouse of the manufacturer. He has thus to support an additional cost of from 30 to 40 per cent., the whole of which (by the connivance of the government) goes to the contraband traders. The amount of illicit introduction, is calculated at above twelve millions of francs. There is also a large introduction of English tulle, (bobbinet) estimated at more than fr. 15,000,000, which sells at from 7 to 8 per cent. above the price of French of the same nominal quality. Of cotton goods, quiltings, camblets, and muslins are the principal articles. Of late, there has been a considerable contraband trade in dyed English woollen yarn; and as much as 70 per cent. has been paid for its delivery to the French manufacturer. Fine cutlery is largely smuggled."

It appears, that wherever the duty exceeds 30 per cent. on the value of the foreign manufacture, the power of the custom-house to prevent its introduction ceases. It is conjectured from this, that the average rate of smuggling is probably about twenty-five per cent. on real value; that is to say, that goods smuggled from abroad sell in France for about twenty-five per cent. above the price they would bring if their importation was free.

It is difficult to obtain data from which to form any satisfactory conclusion as to the total amount of the contraband trade. The commissioners state that their investigations have led them to estimate the amount of British goods smuggled into France across the Belgian frontier alone, at more than 2,000,000*l.* sterling a year.

The smuggling from France into England consists chiefly of silks, tea, brandy, and some other spirits. The contraband trade is stated to be greatly diminishing at most of the ports from which it has been carried on. The following are the most important items collected from different accounts given in the report. From January to November 1831, smuggled from Dunkirk, 68,117 litres Geneva (a litre is somewhat less than nine-tenths of an imperial quart), 240 litres ratafia, 530 kilogrammes tea, 36,693 litres brandy of 22 degrees, 71,381 litres brandy of 33 degrees. Preserving the same denominations, the shipments from Gravelines during the same period were, of Geneva, 29,842; of tea, 3250; of brandy of 22 degrees, 11,399; and of brandy of 33 degrees, 48,607;—from Boulogne, of Geneva, 27,806; of brandy, 177,095; of tea, 2,141; of silk goods, 24,309 kilogrammes (value fr. 2,439,900); of silk lace, to

the value of fr. 10,500; of jewellery, to the value of fr. 22,000;—from Calais, of silk goods, to the value of fr. 2,261,400; of trinkets to the value of fr. 22,000; of brandy, 79,700 litres; of tea, 32,598 kilogrammes; of Geneva, 14,416 litres. In 1831 there were smuggled into England from Cherbourg, 240,000 litres of brandy, and 1000 chests of tea.

As in the case of smuggling into France, there is a regular charge at which each different description of goods is introduced by the contraband trader into the British ports. One difference, however, is remarkable. While the premium for delivery in Paris, or in any other town at a considerable distance from the frontier, is enhanced in proportion to that distance, the charge for delivering smuggled goods in London is no greater (with the exception, of course, of the expense of carriage) than for delivery at Dover. The present premiums from Dunkirk are stated to be, on gold trinkets, 6 to 10 per cent.; silver ditto, 10 to 12; silk blond, 10 to 11; coral, 14 to 15; silk goods, 24 to 25; ribands, 22 to 24; gauze ribands, 24 to 25; tea, 50; and spirits, 80. The commissioners calculate that the total amount of English duties evaded by the clandestine import of French articles through the ports of Dunkirk, Calais, Boulogne, Fécamp, and Cherbourg, exceeds 800,000*l.* per annum. And from this amount tobacco is excluded, whole cargoes of which have been sometimes introduced from the French bonding warehouses into Ireland. From data which are submitted in the report, it is calculated that while of the French silks imported into England from 1826 to 1830, the average yearly value of the portion on which duty was paid, was about 400,000*l.*, that of the portion fraudulently introduced was about 200,000*l.* As the yearly average of seizures was under 10,000*l.*, it follows that the risk to the smuggler from the custom-house did not exceed five per cent. The loss of revenue, from the fraudulent importation of French brandy, is estimated at considerably above half a million. The brandies thus introduced appear to be for the most part of the strength of 33 degrees, instead of 22, which is the proof.

The remainder of the report is occupied chiefly with a review of the colonial system, and of the fisheries of France, and with some notices of the statistics of Paris. We cannot, however, at present follow the commissioners over this ground; nor can we enter upon the additional information contained in Mr. Bowring's supplement to the report. We cannot, however, better conclude our abstract than by the following gratifying statement from the commencement of the last mentioned paper. "Since that report was prepared," says Mr. Bowring, "a great and gratifying change has taken place in the state of public opinion in France. At no period have commercial questions occupied so much of the attention of the community in that country, and certainly never has the progress of those convictions, which must ultimately lead to the emancipation of commerce from the fetters which have so long and so perniciously bound it, been so salutary and striking. In the course of the last year most of the chambers of commerce and many commercial commissions have been called on to express their views on the subject of the commercial policy which has so long depressed the enterprise and impeded the prosperity of a country so rich as France in all the elements of wealth and industry; and it may be said that their opinions have been almost unanimous in denouncing the prohibitory system as pernicious in its consequences, and demanding the gradual liberation of the country from its thraldom. When our commission first began its labours our prospects of success were neither bright nor extensive. Arrayed against every suggestion of improvement were strongly fenced interests—monopolies in high places, and public indifference. We have had the gratification of seeing the topic of free trade become popular, of witnessing not only increasing knowledge of sound principles but increasing zeal in their advocacy; and think it may safely be anticipated that the measures of government will henceforth be directed in that channel of liberalism and well-advised national interest, which will form a most advantageous contrast to the policy of the last forty years."

THE CONQUEST AND OCCUPATION OF ALGIERS BY THE FRENCH.

THE Regencies on the African coast of the Mediterranean, or, as they are more commonly called, the Barbary States, were for many ages one of the greatest curses to Christian Europe, and a fatal check on the progress of commerce and civilization.

Nominally acknowledging the *suzeraineté* of the Turkish emperors, they for the most times despised the authority of the reigning sultan, nor were they much more submissive to their deys chosen by themselves to rule over them. As long as the tyranny of these deys ran in the directions prescribed by the more numerous or more powerful party among the pirates and marauders, they were respected and rewarded with a large share of the plunder, prisoners, and booty made from the Christians; but whenever the deys opposed the inclinations of the prevailing party, they were deposed, tortured, and barbarously executed—just as if they had been mere Christians.

It was therefore unavailing for the European powers to recur to the nominal sovereign, and make treaties with the sultan at Constantinople, with the view of preserving their subjects from slavery and spoliation. The Barbaresques laughed at such treaties. It was equally vain to enter into any arrangement with the head authorities on the spots, for these authorities were continually changed by sanguinary revolts, and the Deys of Algiers, Tunis, and Tripoli almost immediately ceased to be deys whenever they interfered with the pillaging propensities of their subjects.

There was, then, no way of making a treaty binding, and in fact no proper party to treat with. The only course to be adopted was that of arms. The Algerines and the rest of the Barbary States set the laws of nations at defiance; and the Turkish Sultan, who could not keep them in order, or make them observe the treaties he entered into, or was willing to enter into, with the Christian powers, had no just right to complain if those powers themselves undertook the task of coercing the inhuman corsairs, whose excesses in all the worst vices were abhorrent to humanity. This principle was acknowledged, at least in Europe, for several centuries, during which attacks were made by different nations on various of the Barbary States. Indeed England, as well as Spain and Portugal, seeing the inefficiency of casual expeditions and bombardments, more than once aimed at making permanent establishments on the African shores of the Mediterranean.

As far back as 1535, the Emperor Charles V., with a fine Spanish army, landed and attacked the fort of Goletta. He thence marched upon Tunis, where no fewer than 12,000 Christians, reduced to a state of abject slavery, and chained and treated like dogs, were confined at the time. After releasing the Christians, and obtaining some successes, which cost him very dear, the emperor was glad to return to Europe, leaving only a small garrison in Goletta, and renouncing for the time his African conquests as a too dangerous vision.

In 1541 Charles, however, resolved to crown his reputation by the conquest of Algiers. After some advantages, and a stay in the country long enough to allow him time to build some works that yet remain, a tremendous storm dispersed his fleet, and the army retreated and re-embarked in confusion. Shortly after this the brave Admiral Blake taught the Algerines and the other pirates on the Barbary coasts to respect the flag of England.

In 1662 we became possessed of Tangiers, which is situated on the Barbary side of the Straits of Gibraltar. The Portuguese had occupied it ever since 1471, and that court presented it to Charles II. as a marriage-portion with the Princess Catherine when Charles espoused her. Some well-meaning people at the time fancied we might thence put down piracy and the trade in Christian slaves; and that, by extending our power along the coasts and in the interior, we might gradually civilize a great part of Africa. But, in the event, the occupation of Tangiers was of no use to us, and rendered no such benefits to the natives; and after keeping possession of it for twenty-two years, we blew up a fine mole and some fortifications we had built or improved, and abandoned the place. Oran, in the neighbourhood of Algiers, and now included in the French conquest, was held by the Spaniards as early as the time of Ferdinand the Catholic, (or at the latter part of the 15th century,) but they never could make any beneficial impression. They lost it, and retook it, and finally, in 1792, the town having been partly destroyed by an earthquake, they abandoned it altogether. During the time the Spaniards occupied Oran they built some handsome forts, barracks, aqueducts, &c., portions of which existed and were serviceable when the French took the place.

In 1683 Duquesne, the admiral of Louis XIV., bombarded Algiers. In 1775 a Spanish army of upwards of 25,000 men, commanded by General O'Reilly, landed in the neighbourhood with the intention of laying siege to, and taking Algiers, but this force was soon obliged to re-embark in haste, and with great loss.

The memorable bombardment of Algiers by Lord Exmouth in 1816, is too recent an event to require any description. It effected all that a temporary measure could effect—it struck terror in the hearts of the marauders for a while—it procured the release of some thousands of Christian slaves, but it was far from putting a final, general stop to Barbary piracy. Since that time both Tunis and Tripoli, by their excesses, have called Italian fleets before them, and in the bombardment of Tripoli the Genoese navy very honourably distinguished itself a few years ago.

While the abominable system of piracy carried on by these barbarians was in full vigour, the people that suffered the most were the subjects of the small maritime states in Italy, and the inhabitants of the coasts of Sardinia and of the Less or Mediterranean Islands. Not only were their trading and fishing vessels continually seized, and all on board conducted into slavery, but they were often surprised by the corsairs on shore, in their defenceless little towns and villages, and men, women, and children, after experiencing the most revolting treatment, carried to Barbary and sold as slaves.

We have ourselves witnessed the consternation of these poor Italians caused by the appearance of an Algerine or Tunisine cruizer, both on shore and at sea, and that not many years ago.

The might and the almost omnipresence of the British navy of late years, had so far imposed terror on the barbarians, that they seldom ventured to attack an English merchant vessel, or even to detain an Englishman if they found him aboard a captured vessel of any other flag. If we look back on the past, however, we shall find many a British subject detained by them in slavery—many a brave sailor that lingered out his life in the midst of their insults, oppression, and unutterable abominations.

One of these men, who was fortunate enough to escape after fifteen years' captivity, and after having been forced by an intolerant master to turn mussulman, was Joseph Pitts, a native of Exeter. He was taken by the Algerines in the year 1678, when he was a stripling. On his return to England he published an account of his adventures, and of the Algerines, Moors, &c. among whom he had lived so long. His little work, which bears every evidence of authenticity, may still be consulted with advantage, for few or no changes in the condition and habits of the people of Barbary have taken place since his days. He describes the Moors, the Arabs, and the fierce Kabyles, or people in the interior, precisely as they now are. He shows that the garrisons and the armed forces on the coast, mainly composed of the outcasts of Constantinople, Smyrna, and other parts of Turkey, tyrannized at once over the peaceful natives, and over their own deys; that this class, frequently reinforced and directed in their manœuvres at sea by Christian renegades, carried on the trade of cruizing and piracy on their own account, only giving to the existing government a small share of the profits. And even thus did matters continue until the other day.

After showing, as we have attempted to do in a few words, the paramount causes that rendered the extinction of the Barbary States, and particularly that of Algiers, desirable to a considerable part of the civilized world, we need say very little as to the particular or national motives that led France to take up arms. These motives, however, were not devoid of significance, and had they been much less important or provoking than they really were, the French might have counted on the ready sympathy of all the weaker states on the Christian side of the Mediterranean, and indeed of the other powers of secondary consideration, whose ships trading in that sea were continually exposed to the corsairs. All these powers would look with gratitude to that nation which should break up those nests of pirates, and would consider it the benefactor of mankind. This conviction was deeply impressed on the mind of Charles X. and his cabinet, by whom the project of invading Algiers was formed.

We come now to the immediate motives. In 1815 M. Duval was sent as Consul-General of France to re-establish those political and commercial relations with the Barbary States that had been interrupted by the course of the revolutionary and Bonapartean wars, when the French flag was swept from the seas. The choice of the French government was unfortunate, for M. Duval, born and bred in the Levant, and indoctrinated in all the double dealings of that mischievous class, the dragomans of Constantinople, had no notion of straightforward proceedings, and of the true dignity of the nation he was sent to represent. One of his first acts was to re-establish France in certain rights of trade, coral-fishery, &c., which she had previously enjoyed on the sea-coast of the regency between Seibous and Cape Bon. For the enjoyment of these privileges the French African Company had at first paid to Algiers the unimportant sum of 17,000 francs, but, in the course of the 18th century, after gradual increases, this sum was trebled. M. Duval, instead of insisting on former treaties, consented to pay the dey twelve times the amount of 17,000 francs. By the old treaties France had free permission to erect forts and entrenchments, and place garrisons in them for the protection of her coast establishments. But Hussein, the Dey of Algiers, in treating with Duval, and restoring the little territory the French had formerly possessed, expressly stipulated that no fortifications, and no French military force of any kind should be admitted. After verbally assenting to all this, Duval, by bribes and intrigues, prevailed on the Algerine ministers and the local authorities to overlook the erection of some military works at Bona and Calle. These works were completed and garrisoned by the French before the dey was aware of the project. When the facts came to the knowledge of Hussein, he was transported with rage at the French consul's duplicity, but he took no hostile steps, and left the new forts wholly unmolested.

In 1793, the young republic of France suffered severely from a scarcity of corn. To obtain supplies the government applied to the Dey of Algiers, who broke an established law and permitted the two Jewish houses—those of Busnach and Bacry—to export grain from the regency to alleviate the distress felt in France. It appeared afterwards that the dey himself was the real corn speculator, and that the Jews were merely his agents. But this discovery ought not to have affected the business in any way. Between the years 1793 and 1797, cargoes of grain amounting in value to between 600,000*l.* and 800,000*l.* were sent from Algiers to the southern coast of France. In the contracts the Jews Busnach and Bacry made with the French republican government, they had not expressly stipulated that the payment for their corn should be made in specie, but at the time they concluded the bargain, specie was the regular currency in France, while in the East they never had a notion of any other currency than hard cash. Moreover, the first cargoes of corn landed at Marseilles were paid for in cash. The unscrupulous seizure of national and private property at home, vast as it was, could not long suffice the French experimentalists; and assignats, or paper that sunk in value every day, were made the legal currency of the republic. These assignats were tendered to Busnach and Bacry in payment of subsequent consignments of corn. The Jews, however, had seen the rapid depreciation of this currency, and accepted the paper only on condition that the French government should make up the difference, whatever it might turn out to be, between the nominal and real value of the assignats. The contracting parties, owing to the fluctuation in the value of the paper, were soon embarrassed, and disagreed with each other as to the fixing of a just indemnity.

The Jews were not very moderate in their demands; in addition to the indemnity for making up paper to the value of cash, they soon added heavy interest and charges for commission, &c. The Republicans, on their side, not only resisted such demands, but insisted on a diminution of prices, as some of the Algerine corn delivered was, they stated, damaged and unwholesome. According to their showing, the debt legally owing to Busnach and Bacry did not exceed 280,000*l.* With pretensions so widely different no arrangement could be made, and the continual wars of the French that succeeded made them disregard the subject altogether, although the Algerine government, both under the Directory and Napoleon, repeatedly urged its claims. It was not until ten years after the restoration of the Bourbons, or in 1826, that the ministry of M. de Villèle took these claims under consideration, and set apart funds to discharge the long-standing debt.

But here again, fresh difficulties arose. It was made out

on the side of France that Busnach and Bacry, the Algerine Jews, had debts in France which amounted to about 100,000*l.*, and the government insisted on the justice of keeping back this amount out of the sums due them from the dey. The dey protesting he had nothing to do with the private speculations or debts of the two Jews, indignantly rejected this proposal, and not only demanded his money in full, but that 80,000*l.* which he openly said *the French consul had received for rendering certain good offices to Bacry in the prosecution of his claims in France*, should also be restored to him without challenge or deduction.

The dey did not receive the immediate and precise answer which he required. This exasperated the semi-barbarian, who, saying he was both cheated and laughed at, publicly abused the consul in the most unmeasured manner. Hussein was in this state of irritation when, on the 27th of April 1827, M. Duval waited on him to pay the compliments customary on the Bairam, or great festival of the Mahometans. As soon as the consul appeared, he furiously demanded whether he had a letter for him from Paris. The consul answered he had not; and then the dey, losing all respect and self command, after threatening, reviling, and calling him by all the opprobrious names in which the Turkish idiom is so rich, struck the consul on the face with a straw fan.

This gross insult broke off all official relations between the two governments. On the 11th of June, 1827, a French squadron commanded by Captain Collet, appeared off Algiers. Duval the consul, and all the French residents, embarked without any attempt being made by the dey either to hinder them or to make up the quarrel. Before Captain Collet sailed he sent in a haughty and threatening demand for reparation. Hussein laughed at this, and the squadron departed.

The French ships were scarcely out of the bay of Algiers when the fierce old Hussein gave orders for seizing and making slaves of all such subjects of France as could yet be found in his dominions, and for plundering and destroying the French forts at Calle, Bona, and one or two establishments at other ports. These measures could only tend to precipitate the retaliation which the dey had done so much by his previous conduct to provoke. The first warlike demonstrations of the French were, however, paltry and unimposing. They established a blockade of Algiers, which excited nothing more than the derision of the dey, and which, with unaccountable folly, with an immense expenditure of money, and with a considerable loss of human life, resulting almost entirely from sickness, they persisted in for three years. In 1829, when the utter uselessness of such measures ought to have been proved over and over again, the French minister of war collected a body of troops in the South of France, and maritime preparations on a large scale were completed at Toulon In the month of August of the same year, M. de la Bretonnière, a distinguished officer of the navy, was despatched to Algiers to offer peace to the dey, on what were generally considered moderate terms. The alternative was a war of invasion. But the fiery Hussein was as obstinate as ever. He flew into a paroxysm of rage when the French diplomatist made use of the word "reparation"—he said *he* was the injured party, and that he would never make peace unless France agreed to indemnify him for the losses caused to him by the blockade. The audience for peace broke up in mutual anger and in fresh exasperation on both sides.

When M. de la Brettonnière embarked on board of his ship of the line, at the mast head of which the sacred flag of truce was still flying, the advanced batteries of Algiers turned their guns upon her, and continued to cannonade her as long as she was within reach. This last dishonourable, abominable outrage, is said to have been ordered by an express signal from the Cassauba, or palace of the dey.

Extreme measures now became inevitable; but it must be allowed that the odium of commencing hostilities, and of giving a fierce turn to the contest, every way rests with Hussein.

The ill-fated ministry of M. de Polignac, which was so soon to provoke a revolution at home, had just entered office when intelligence reached France of the insult offered to M. de la Bretonnière and the national flag. This ministry boldly, and we think properly, resolved to delay no longer, and at once completed that armament which was to drive the dey from Africa.

The only Christian government that remonstrated as to the extent of the expedition, and the fate that was reserved for Algiers if the French conquered it, was the British, then presided over by the Duke of Wellington. Prince Polignac replied to the duke that France, when insulted, required the assistance of no one to redress her wrongs; and that she was not obliged to consult any other power, as to what she ought to do with the conquest she was determined to make. The Duke of Wellington put up with this haughty reply; and he and his friends, who are constantly embarrassing and questioning the present administration about matters that really had their origin under the management of his own cabinet, would do well to remember this. In this particular case, for example, the duke permitted the armament of France to depart, without pressing for any guarantee or assurance that Algiers would not be held as a fair conquest, and permanently colonized by the French. The duke knows very well what the decided feeling of Charles X. was on this subject; and if, at a later period, Louis Philippe held out something like an assurance that he would not keep possession of Algiers, this was owing to circumstances over which the duke had no control, and in which he could claim no merit.

An admirably appointed French army, amounting between infantry, cavalry, artillery, engineers, sappers and miners, &c., &c., to an effective force of 37,877 men, and placed under the supreme command of the Count de Bourmont, sailed from Toulon on the 25th of May 1830. The naval force of this expedition was, in proportion, even still more imposing. There were eleven sail of the line, twenty-four frigates, seven sloops of war, twenty-six gun brigs, eight bomb-ketches, seven steam-boats, and numerous small armed vessels. Between sailors and marines, the men in the ships of war alone amounted to 27,000 men. The transports of almost every class and nation amounted to 400 sail.

A number of flat boats, drawing only a few inches water, and with one end made to extend and lower like a sort of drawbridge, were provided for facilitating the landing of the troops.

On the 12th of June this fleet got sight of the African coast; on the 13th it sailed past Algiers, and soon came in front of Torre Chicha which defended the peninsula of Sidi-Ferruch, the point where Bourmont had determined to land. To have disembarked in front of Algiers, or indeed at any point much nearer to the city than the one chosen, would have been impracticable, or at least most hazardous.

To the astonishment of the French, not a gun was fired from the strong Torre Chica. The Algerines had most absurdly abandoned that post, and had taken up a position, indifferently defended by redoubts, at the distance of about 1200 yards from the coast, where they could neither prevent the landing of the French, nor cover the city of Algiers when they had landed. With troops so imbecilely commanded, and who at the first onset did not amount to 20,000 men, little was to be feared; and if the French suffered severely before they gained possession of the capital, it was almost entirely owing to their own impetuosity on the one side, and the bad generalship of Bourmont on the other.

At day-break on the 14th of June, the French began to land and form, which they were allowed to do without a musket-shot being fired at them. Before evening the Algerines were swept from the peninsula of Sidi Ferruch, and, under the orders of General Valazé, a strong line of entrenchment was begun across the gorge of the peninsula, which was to serve as a general depôt for the invading army during the siege of Algiers.

On the 15th the French outposts suffered severely from the musketry of the Arabs and Kabayles, whom the Baron Juchereau de Saint-Denys (who was present, and who has written an admirable account of this campaign,) pronounces to be the best sharpshooters in the world. On the 16th a hurricane came on, which for some time threatened the expedition with the fate that befel the fleet of Charles V.

On the 19th Bourmont, who, in an unaccountable manner, instead of availing himself of his first successes and astounding impression, and pushing forward for the city, had remained almost on the spot where he landed, was attacked by an Algerine force, which had been allowed to gather from all points, and which is said to have amounted to between 40,000 and 50,000 men. The best of these troops were 4000 janisaries, 5000 Koul-Oglous, 10,000 Moors (from the cities of Algiers, Constantina and Oran) and 12,000 Kabayles, or mountaineers, from the interior.

After a furiously contested battle, in which the French lost 700 men, between killed and wounded, the Algerines were completely beaten and disheartened. But even then the *prudent* Bourmont did not push on for the capital. He lingered where he was—gave the Algerines time to recover from their consternation, to strengthen their positions, &c., and thus made other combats and a lamentable loss of life inevitable, ere he could set himself down before the walls of Algiers.

At last, on the 29th of June, or a fortnight after his disembarkation, Bourmont broke ground before the Fort of the Emperor (built by Charles V.) which commanded the Cassauba, or palace of the dey, the town, and nearly all the outer forts. The works of the besiegers were not uninterruptedly prosecuted; the besieged made frequent sorties, which, with their cannon and bombs, caused the French a daily loss of from 80 to 100 men. While Bourmont was making his entrenchments the admiral of the fleet kept up a cannonade on the sea-front of Algiers, which (tremendously strong *then*, as we experienced to our cost) had been much strengthened since Lord Exmouth's attack. This cannonade, however, could have been intended only to distract the attention of the Algerines, for M. Juchereau lets us into the secret that the admiral kept so much sea-room "that very few of his balls reached the enemy's batteries on account of the *distance and motion* of the ships."

But the Algerines soon experienced that the inland fortifications of their city were far more vulnerable than its sea-front, where alone they had hitherto been exposed to attack.

On the 4th of July, as day dawned, all the French batteries, on a given signal, opened their fire at once. By half-past nine in the morning the Fort of the Emperor, the key to Algiers, was knocked to pieces and silenced; and shortly after, by order of the dey, it was evacuated by the few men that survived in it, and blown into the air by setting fire to the powder magazines.

The French then began to form advanced batteries against the Cassauba and parts of the city. But the fierce old dey's heart now failed him, and about two hours after noon he sent his private secretary with a flag of truce. After some *pour parlers* which of course all ended in the conditions agreeable to the conquerors, (for the French were now, in fact, the conquerors of Algiers,) the following preliminaries were agreed to.

1. That the French should take possession of the city of Algiers, the Cassauba, all the forts, and all *public* property of every kind, at nine o'clock on the following morning, the 5th of July.

2. That the Mahometan religion, and the customs and usages of the inhabitants should be respected, *and that no person belonging to the French army should enter the mosques.*

3. That the dey and all the Turks should quit Algiers in as short a time as possible, but be at full liberty to choose their place of retreat, having, at the same time, the entire conservation of their private property guaranteed to them.

On the following morning, at the appointed hour, the French began to take possession, and before evening everything was quietly theirs. Thus fell Algiers, after more than three centuries of barbarity, piracy, and brigandism.

It is due to the conquering army to state, that at this proud moment their discipline, their abstinence from insult, revenge, and plunder, were admirable; and sorry are we to be shortly obliged to give a very different account of the conduct of the French in Algiers.

The booty made in gold and silver specie, in wool and other merchandise, in brass cannon, &c., which were set down in the list of public property, was estimated at 55,684,527 francs, or about 2,237,381*l.* of our money. To this are to be added 800 iron cannons, an immense quantity of shot, shell, powder, &c., and the value of the real property of the state, comprising half of the houses in Algiers. It is calculated that after deducting the expenses of the whole expedition from the gross amount, France must have made a clear profit of three millions sterling in actual property.

It will be remembered, that very soon after his downfal, the dey packed up his private property and sailed for Europe, where he learned that Charles X., who had ordered his dethronement, was himself dethroned by the revolution of July. But before the wily, experienced Hussein—who, by keeping himself almost constantly shut up in the strong palace, or rather citadel, of the Cassauba, had contrived to reign longer, and on the whole more prosperously, than any of his predecessors—before the old dey left Algiers, he gave the French some most valuable advice, as to the proper mode of maintaining themselves in their new conquest.

He recommended them to clear the country as soon as possible of the Turkish janisaries, who had ever been fierce and unruly,—to conciliate the Moors and wandering Arabs,—and particularly to avoid hostilities with the Kabayles, or mountaineers, who are descended from the ancient Numidians—a warlike race that has never been conquered by Carthaginians, Romans, Arabs, or Ottomans. By neglecting this advice Bourmont almost immediately endangered the safety of the new colony, lost many brave soldiers, and was soon unable to move beyond the forts of Algiers.

For the additional observations and facts we shall add on this very interesting subject, we shall be mainly indebted to a recent article in the 'Foreign Quarterly Review'—a work that has been particularly distinguished by its comments on foreign policy.

The writer of the article on Algiers, who has himself a clear insight into the statistics and the character of the different races that inhabit the regency, goes on the authority of General Clauzel, Baron Pichon, General Brossard, Captain Rozet, and other Frenchmen of high reputation, who have seen what they describe, and what they have printed and published, with their names to their several productions.

After saying, "we are not among those who envy our neighbours their possession of Algiers; on the contrary, it was our wish that they might make a good use of its acquisition; though we must say that hitherto our hopes and wishes have been alike disappointed;" the writer in the 'Foreign Quarterly' continues,

"By the capitulation of the 4th July, 1830, the French became possessed of the city of Algiers and the forts depending on it. *No mention was made of the provinces, or of the native tribes.* (These, as we shall presently see, were not the dey's to give!) The dey capitulated merely as commander of a military garrison, not as sovereign of an extensive kingdom. The natives had been told by the French in their proclamations, *that they had come to deliver them from the Turkish yoke, and restore them to their independence.* The Turks were in fact aliens to the country; their power was that of pirates by sea, and usurpers and marauders by land, and the French might just as well pretend to inherit the one as the other of these attributes. The French became possessed by conquest of Algiers, Oran, Bona, and one or two more points upon or near the coast. The Moors and other mixed races who inhabit these became subjects of France. The interior of the country remained, both *de jure* and *de facto*, in possession of the natives. These natives are of two races—the Arabs and the Kabayles. The Arabs are the descendants of the great eastern conquerors of the times of the caliphs: their tribes are scattered all over northern Africa; they are mostly shepherds, live under tents, and tend their flocks in the plains. The Kabayles, so called by the Moors, are the real aborigines, the descendants of the old Numidians; they are the cultivators of the soil, live in villages called *dashkrahs*, and constitute the great majority of the interior population of the regency of Algiers. They are evidently of the same race as the *Berbers* of Morocco. * * * * Several of the Arab tribes near Algiers paid tribute to the Turks, in order that their cattle might graze safely on the plains; but the Kabayles seldom or never entered into such agreements; they lived independently in the numerous parallel ridges and valleys of the Atlas, which cover the greater part of the surface of the country, and their own sheiks and marabouts administered justice; the Turks only extorted any thing from them by sending detachments to surprise the villages, or kidnap their young men, and making their parents pay a ransom. Such was the *sovereignty* of the Turks over nine-tenths of the territory of the regency. When the French landed, the Arabs abandoned the cause of the Algerines or the Turks, as soon as they could do it with safety, and by their defection, and the intelligence they brought to the French camp, materially facilitated the success of the invaders. They had promised the French general to maintain neutrality, on condition of being protected against the vengeance of the Turks."

For the proper understanding of the question we beg the reader's close attention to all the points included in the extract we have just given.

"After the capitulation," says General Brossard, "and

on the very day the French entered Algiers, all the authorities dependent on the dey were abolished, without any others being substituted. Thus all at once the Arab tribes found themselves independent."

In spite of this self-evident fact, when, a short time after, the Arab tribes peacefully assembled at Bleda, a town about twenty-five miles from Algiers, to consult as to what future relations they should maintain with the French conquerors, Bourmont, instead of employing negociation, or distributing a small portion of the treasures of the Cassauba to win over the sheiks, marched against the assembly with a column of 2000 men. The Arabs learning this approach were alarmed and irritated; the more peaceful or timid tribes departed, but the rest (being joined on this occasion by numbers of Kabayles) kept their ground, and determined to attack the French. And, in fact, the very day after his arrival at Bleda (24th July, 1830,) these hardy shepherds and tillers of the soil fell upon Bourmont, and not only drove him with loss from that town, but followed him up during his hurried retreat to Algiers, pressing on his rear and flanks nearly the whole of the way.

Bourmont then, literally shut up in Algiers and the narrow strips of country commanded by its guns, would have treated with the sheiks; "but they," says General Brossard, "replied that since their victory of Bleda, there was not a herdsman in all Africa who would condescend to treat with the French."

Bourmont fell with the Parisian revolution of July; but it was not until the 2nd of September that his successor to the governor-generalship of Algiers, appointed by Louis Philippe, arrived. This successor was Count Clauzel, one of Napoleon's generals, a man distinguished by military genius, and much respected for his political consistency, and honourable, gentlemanly character. Shortly after his arrival Marshal Gerard, then minister at war, informed the Count that the French government, *already determined to keep possession of Algiers*, was now confirmed in its intention of forming an important colony in its territory. The first step to be taken towards this great end, was to grant lands to colonists on the Matidja plain, and then gradually to drive all the refractory native tribes back upon mount Atlas. But neither the marshal who commanded, nor the general who obeyed his instructions, ever gave themselves the trouble to inquire who were the owners of those lands in the Metidja plain. M. Pichon, who a year after took this trouble upon himself, "discovered that they belonged chiefly to Moorish proprietors, inhabitants of Algiers, the quiet subjects of France, whose property was solemnly guaranteed to them by the capitulation, and who were accustomed to let their lands to Arab or Kabayle cultivators or graziers, either on condition of receiving part of the produce, &c., or for a fixed rent. The regency, or the government of the dey, had no lands except a few farms attached to certain offices of the state."

This was indeed a capital mistake—a playing with right, property, and the letter and spirit of conventions! "The word 'colony,'" says the writer in the review, 'has been sadly misunderstood by the French in this instance. A colony, in our modern sense, presupposes a vast extent of uncultivated and unappropriated ground, as in North America or Australia. There the land is waste and void, for the few Indians, or black savages, are neither cultivators nor shepherds, but hunters and fishermen. But the case is very different in Barbary. The Arabs are herdsmen, shepherds, and graziers; many of them are also farmers and have fixed residences. The Kabayles, who form the great majority of the indigenous population, are all farmers, and very industrious ones too, and the land in the back ground of Algiers is divided among them. * * * Those who live near the towns on the coast are the most tenacious of their possessions, which are the most profitable on account of their vicinity to the markets. The idea of 'driving back' (*refoulant*) the native population into the interior is a most barbarous one."

M. Pichon shows that this idea is sufficiently impracticable.

"Persons," says he, (and we perceive with astonishment that such persons are numerous among the French at Algiers) "who talk seriously of imitating Cortes and Pizarro —of *exterminating the natives*, do not mark the difference between our position and that of the Spanish conquerors, who had to deal with people *that had no fire-arms*,—the Arabs and Kabyles *have all got muskets*, and this arm goes a great way to equalize the combatants, especially in a lengthened and desultory warfare, and in a country where great strategetic operations, movements of large masses, and of batteries are impossible. We experienced this at St. Domingo, and we are now experiencing it in Africa."

Count Clauzel soon found himself engaged in active hostilities with the Arabs and Kabyles, and the Dey of Titteri. His troops took and plundered Bleda, and got as far as Medeah, the residence of the Dey of Titteri, about forty-five miles from Algiers; but they could not sustain themselves there, and all these successes, if such they could be called, cost them very dear.

Count Clauzel returning to France in disgust, General Berthezène, an excellent officer, and apparently a well-meaning man, remained at Algiers. The army was by this time so reduced in number, that the new commander saw the necessity of contracting his line of posts. He marched from Algiers in June, 1831, with 6000 men, to bring in some of the most advanced posts. The French troops burnt the huts and crops of the Kabayles; but on their return towards Algiers, they were sorely harassed by the natives, who gathering in force, and elated by Berthezène's retreat, scoured the partially-allotted Metidja plain, burnt the crops at the French experimental farm, seven miles from Algiers, and kept the garrison on the alert for several weeks.

General Berthezène then very wisely appointed a native Arab, a man of ancient family and hereditary reputation for sanctity, who lived a few miles from the city of Algiers, to be Agà or governor of the Arabs, and to act as a medium of communication between the French and the tribes. Through the good offices of this Agà a suspension of hostilities was agreed to, with the understanding that the general should send no more armed parties into the plain beyond the line of the French outposts.

"General Berthezène," says General Brossard, "had he retained the command, would have established friendly relations with the Arabs; he would have effected this by means of his personal influence, for his conduct towards the natives had always been founded upon humanity, equity, and good faith; the Arabs put great trust in his word, and if some of them deceived him, no one was afraid of being deceived by him. Several chiefs of tribes were sincerely attached to him. 'God will give thee the victory,' said an old sheik, 'for thou art just and good.'"

But the just and good Berthezène was much too scrupulous and moderate a man to suit the *mouvement* and exterminating party at Algiers, who, by their chicanery and misrepresentations, soon obtained his recall. It is probable, however, that his own despatches had something to do with this; for, in writing to the minister at war, he did not hesitate to combat the favourite system of colonisation, and on his own personal observation and experience he told some home truths which could not have been very palatable to the vanity of the civilizing government.

In August, 1831, he wrote that the Moors of the country "ruined," "interfered with in their manners and habits;" "reduced to poverty, treated with contempt, and ruled by foreigners," were in many respects *in a far worse condition than they had ever known under the old Dey*. "It is natural," continued the general, "that they should neither like us, nor relish *the kind of civilization we wish to force upon them*. There is yet something to be done with regard to these people. *The Romans always left to the conquered people the care of their own municipal institutions!*"

The French, who are much addicted to quoting the example of the Romans, would do well to remember this last most important fact.

In October, 1831, the French government, then presided over by M. Perier, resolved to take the administration of Algiers into its own hands, and to separate the civil from the military jurisdictions. Baron Pichon, an experienced man of business, and one enjoying an unspotted reputation, was sent out as civil intendant. But if this choice was good, what shall we say to the next? Shortly after the notorious Savary (Duke of Rovigo) was appointed to supersede Berthezène as commander-in-chief at Algiers!

On arriving at his post, M. Pichon found, as he had foreseen, that it was not a bed of roses. He saw great and increasing oppression and misery on every side, and he was soon made to feel how difficult it was for a man of the pen to interfere with a man of the sword—and that man Savary, —or to draw a proper line between the civil and military attributes of office. Not only had private property of Turks, Moors, and Arabs been seized and squandered in de-

fence of the convention, but the funds and the establishments of religion and charity—the public and in many respects meritorious institutions of the country—had been remorselessly attacked, and dilapidated, if not annihilated.

Nay, even the supply of water—an object of such paramount importance in an African climate and to a Mahometan people—was perilled by French carelessness and blind avarice. To keep the aqueducts, fountains, &c., in good repair, many charitable individuals had left handsome legacies. Now all these funds were sequestrated by the French. General Clauzel, indeed, ordered that the government of Algiers should take upon itself the work to which these funds were appropriated; but this was not done. Consequently the aqueducts were neglected, and the gardens round Algiers which, under the Dey, were well supplied with water, became dry and parched. The detachments of troops, moreover, marching and countermarching through the country, found it more easy to break into these aqueducts with pick-axes, and so get at the water, than to suffer thirst till they reached the next well or fountain. In and about Oran this neglect of conduits and reservoirs, and destruction of aqueducts, were carried so far, that in March, 1832, M. Escalonne, acting civil intendent of the place, represented to M. Pichon that unless prompt measures were taken, the French in Oran, blockaded by the Arabs, might find themselves in total want of water!

In detailing with feelings of shame and indignation this general *gaspillage*, M. Pichon says;—

"It is easy to imagine the impression such measures may have made on the inhabitants of the rest of the country, who are not under our power—*a country too 550 miles in length, and from 150 to 200 in breadth!* I have had indubitable knowledge of many fraudulent acts and malversations that had taken place in the midst of the disorders into which both private and public property has been thrown by the system. This is the unavoidable consequence of the violation of the laws of property; we have ourselves seen in France worse than this, during our revolutionary sequestrations and confiscations. Can the chaos resulting from all this at Algiers be cleared up by the *logic of the sabre?* We shall see!"

Our readers will remember it was stipulated in the convention with the Dey, that none of the French soldiery should enter the mosques, and that the religion and usages of the inhabitants should be respected. By a report made by M. Pichon, it appears that as far back as May 1832, out of *thirteen* large mosques with minarets, the French had already seized *seven*.—One of these seven was knocked down to make room for a new square—the others were turned into barracks. The Commission for military lodgings asked for three more: M. Pichon reduced the demand to one. A few months after another mosque was converted into a Catholic church. There remained therefore to the Mussulmans only four of the good mosques, and two of these four the French engineers wanted to demolish because they stood too near to the line of defence on the sea-side. In Oran, where there were plenty of other buildings fitted for that purpose, the civilizing army seized every one of the mosques. "The consequence will be," says M. Escalonne, the intendant, "that the Imams and other servants of the mosque will leave Oran, and the tale they have to tell to their brethren in the interior will not be in our favour."

All Mahometan people hold their tombs and their burying grounds, which are frequently solemnly-beautiful places, in extreme veneration. But these, to erect fortifications, or to make a road wider or more direct, the French have upturned, or cut through without hesitation. "If you go on at this rate, we shall neither know where to live nor where to die," —was the sad remark of a Moor to M. Pichon. Captain Rozet, who seems to have visited the country merely as a traveller, and who is not a very censorious observer, says on this head,—"Algiers, like other Moorish towns, was surrounded by cemeteries and tombs. These were a sort of sanctuary, the violation of which would once have cost the life of the desecrator, but calamity and fear stifle all generous sentiments. From the first period of our conquest, *we* have violated their tombs; I have seen our soldiers open them to ascertain if they concealed any treasures. The bones of the dead were thrown on the dunghill; I have seen corpses yet entire, and enveloped in white sheets, lying by the road-side. The natives, with downcast eyes, gazed at this sad scene without daring to utter a word: some of them came with religious veneration to gather the scattered bones, and carried them away. But after a time, when bivouacs were formed in the midst of the cemetries and——" But we cannot complete this horrid picture. Knowing, as we well do, how solemn and deeply rooted are the feelings of the Musselmans in these respects, we can assure the French that it will take many years of kind treatment, and of an improved government, (of which scarcely a symptom has been seen as yet,) to obliterate this fatal remembrance and the hatred which will accompany it. Savary, by constitution and habit, was naturally disposed to fall in with the views of the exterminators, or of the party desirous of possessing themselves, at any cost, of the lands and property of the natives. "Drive back to the mountains"—"destroy" —"Stop the broken aqueducts with the heads of the first Bedoweens you meet," were the cries of these men, who had a newspaper, the "*Semaphore*" of Marseilles, to represent and advocate their views. We have before us several detestable examples of injustice, cruelty, and almost unparalleled tyranny—but we can find room for only one, which is advanced and supported by official documents by M. Pichon, *and which has never been contradicted.* The whole proceedings are worthy of Savary. The winter had been passed in perfect peace, the Arabs having scrupulously observed the treaty concluded by their Agà and General Berthezène. In April 1832, some pretended messengers from the remote tribe of the Biskaris, came to Algiers and were received with some parade by Savary, who, in dismissing them, made them the usual presents of cloaks and a little money. These messengers were regarded by the most respectable Moors of Algiers, and by the Agà of the Arabs himself, as impostors. The same day on which they left Algiers, on their return homewards, in passing through the grounds on the Metidja plain occupied by the Ouffia tribe, who had long been living on the most friendly terms with the French soldiers and officers, these Biskaris were plundered of their cloaks and other effects. This is an incident of common occurrence all over Barbary, and even in the most peaceful times. The Biskaris, however, escaped unhurt, and returned to Algiers to lodge a complaint. On the night of the same day, Savary sent out of the city and on the road to the Ouffia encampment, a battalion of the foreign legion, and a squadron of some sort of native cavalry in the French service. Before the dawn of the next day they surrounded the Ouffias who were buried in sleep, and without summons or any kind of notice, the soldiers rushed into the tents and stabbed or shot the inmates to the number of eighty! Only seventeen or eighteen men (among whom was the Sheik of the tribe,) were made prisoners. A number of women were driven to one of the French outposts, and after being detained there three days, were allowed to go back to bury their murdered husbands, fathers, and sons! The cattle, scattered over their fields, and many of which did not belong to the Ouffias, but were merely intrusted to them as herdsmen, were carried off and publicly sold. The money produced by the sale was distributed among the troops that had achieved the slaughter. M. Pichon says he saw some of the officers "who felt a painful regret at receiving their share," but his reviewer properly adds, that "the only wonder is they accepted it at all!" From 1500 to 2000 sheep, between 600 and 700 bullocks, and from 25 to 30 camels formed this booty, taken from the Ouffias for *being supposed* to have stolen a few fustian cloaks and a few piastres. But it appears from a variety of evidence that the Ouffias were either not guilty at all, or were not guilty as a body or tribe. M. Pichon, who had the best means of obtaining information from the natives, says, that the robbers belonged to the tribe of the Kreshnas, and were marauding on the lands of their neighbours the Ouffias. General Brossard asserts, "that the robbery was committed by a joint party of the Kreshnas, the Beni Moussas, and the Ouffias, without the chiefs of those tribes having taken any part in it: it is even asserted that they were ignorant of the attempt. Marauding parties of this sort, composed of men of various tribes, are not of rare occurrence."

We have not space to tell many deeds of duplicity, degrading meanness, and utter disregard for human life, that accompanied and followed the butchery and plunder of the Ouffias; and many other subsequent tales,—such as of military executions of Sheiks, beheading of merchants and seizure of their property without form of trial, of men thrown into secret prisons, and being found with their heads cut off —we must leave wholly untold.

Savary and the party with whom he acted sowed the seeds

of a "reign of terror," and they were soon made to taste some of its fruits themselves. The landed property outside of the towns, became almost valueless:—from want of confidence and cultivation on the part of the natives, the French were deprived of all the many luxuries of life the country was so well able to furnish them. If, except in battalions, they ventured beyond the outposts, they were cut in pieces by the infuriated Arabs and Kabyles. In the course of 1832 and 1833 they suffered great losses. Irritated by fresh severities, and by Savary's setting at nought General Berthezène's treaty with them, the Arabs resumed the offensive along the whole of the French line. Nay, they even forced that line, and after doing great mischief to the baking, farming, and other establishments, set themselves down on the plain of Staweli almost within cannon-shot of the city of Algiers. At the same time Oran was continually beset by the Arabs, though whole tribes, and several Sheiks and Maribouts, had been sacrificed by the French "to inspire a salutary terror." Both at Oran and Mustagannim the French could get no provisions except such as were sent to them by sea. The little *cabotage*, or coasting trade, that had always been carried on in Moorish barks, was annihilated, and the general aspect of things seemed to justify the assertion of a French gentleman writing from Oran, who said, "We carry nothing but desolation and misery to all the points at which we land." This our readers must remember was the fourth year of the military occupation and of the existence of "L'Afrique Française." "Meantime," adds the writer in the 'Foreign Quarterly Review,' "France is annually spending about twenty millions of francs, besides losing some thousand men, to retain a possession, the whole revenue of which, including the sequestrations, does not exceed a million and a half! This is a system evidently ruinous to all parties. The French ought to give up every idea of extending their conquests along the coast or in the interior, or of extensive colonisation, at least for years to come. Moderate garrisons ought to be kept in the towns on the coost, commerce encouraged, and friendly relations entered into with the Arabs of the plains, as between neighbour and neighbour. The Arabs are a fine, intelligent race, much more manageable and humane than the Kabyles, and they have a keen sense of justice and of the sacredness of oaths." In these notions, General Brossard, whose active services have made him well acquainted with the country, perfectly agrees. Of two plans proposed, 1st, To form an impassable line of fortifications round the territory which it is wished to occupy; 2nd, To drive back (*refouler*) by force of arms, the native tribes beyond the mountains;—he says, the one is impracticable except on a very small scale, and the other absolutely impossible. The General then recommends the third plan, which must prove the safest, the least expensive, and the most consonant with justice and humanity— *i. e.*, to obtain the peaceful submission of the nearer tribes, and to make of them a barrier against the attacks of the wilder and more remote tribes.

We most cordially say with the Reviewer, "May the French Government adopt this plan ere it be too late!"

STAMP DUTY ON NEWSPAPERS.

[The following paper, which was prepared several months ago for the information of some official personages who took a strong interest in the question of the repeal of the stamp duties on newspapers, has been obligingly confided to us for publication. It will be seen, by reference to the speech of Mr. Hill, member for Hull, on the debate on Mr. Lytton Bulwer's motion, that some of the statements and estimates given in this paper were employed by that gentleman. These facts throw a strong light on the general question; and we have no doubt that they have been collected with great care, and scrupulous accuracy.]

If the stamp were abolished, newspapers would probably be reduced a little in size, and the price might be 2*d.* instead of 7*d.*

There can be no doubt that such a diminution in the price of newspapers would enormously increase the sale, and there are facts which enable us to estimate that increase probably with some degree of accuracy.

Twopence is about the average price of newspapers in the islands of Jersey and Guernsey. The population of those islands (sixty thousand) is about as large as that which, in Great Britain, is required to maintain a single weekly paper; whereas, in Jersey and Guernsey, fifteen papers are published every week.

The sale of the three non-political papers of greatest circulation in this country, *viz.* the Penny and Saturday Magazines, and Chambers' Journal, is about ten times as great as that of the three weekly newspapers of greatest circulation, notwithstanding that, to most people, news and politics are far more enticing than any other matter.

A few years ago it was shown by a very able writer in the 'Scotsman,' that the number of newspapers in the United States of America was, in proportion to the population, five times as great as in the British isles; and the same writer was of opinion that, but for the dispersion of the inhabitants, the United States would, in all probability, have a proportion of newspapers eight or ten times as great as in the British isles—an estimate, the accuracy of which is confirmed by the fact that, in the State of New York, with a population of 2,000,000, that is of one-twelfth of the population of the British isles, the number of papers is at least two-thirds of the entire number published in England, Scotland, Ireland, and Wales.

The very great difference in the consumption of cheap and of dear newspapers will not appear surprising if we consider the mode in which cheapness operates. Suppose the price of newspapers in this country to be reduced from 7*d.* to 2*d.* Many, who had previously read a weekly paper, would now see a daily one. Those who had purchased a single daily paper would now buy several. Papers would be bought by individuals instead of parties, &c. &c. In short, it may safely be assumed that the previous newspaper-purchasing class would continue to spend at least as much money on newspapers as before, and this alone would advance the sale to three-and-a-half times its former amount.

But another and a much larger class would now, for the first time, become purchasers of newspapers. Of the comparative magnitude of this class a tolerably accurate notion may be obtained, by an examination of the returns of assessments to the window-tax. It may be assumed that a man's expenditure in rent is a tolerably fair index of his expenditure in other things, newspapers, for instance, and that the proportion between the rent of a house and its number of windows is tolerably uniform.* If such be the case, and we assume a certain number of windows, say twenty-eight, to mark the lower limit of the class which can afford to buy sevenpenny papers, two-sevenths of that number, or eight windows, will mark that of the twopenny paper class (the classes of society increase as we descend, in a pretty uniform ratio: it is manifest, therefore, that, in these numbers, *comparative* accuracy only is required. Smaller numbers of windows would, undoubtedly, have given a nearer approximation to *absolute* accuracy; but houses with less than eight windows are not assessed).

Now, by a parliamentary return for the year 1831, it appeared that the number of houses in England and Wales, containing not less than twenty-eight windows each, was 26,499; while the number containing less than twenty-eight, but not less than eight windows each, was 347,287.

From these facts we may infer that the class, now for the first time purchasing newspapers, would be thirteen times as large as the previous class, and that it would buy thirteen times as many cheap papers as the previous class did dear ones. But we have already shown that the old class alone would purchase three-and-a-half times as many papers as before: the whole increase is, therefore, more than sixteenfold.

Taking all circumstances into consideration, we may, we think, safely assume that the abolition of the stamp would increase the *number* of papers in this country tenfold; but as the new papers would probably be somewhat smaller than the old, let us assume that the increase in *quantity* of paper will be eightfold.

The revenue at present derived from newspapers arises under the following heads:—

1. Stamps.
2. Duty on paper.
3. Duty on rags imported.
4. Duty on advertisements.

Under the proposed arrangements the revenue derived

* The assessments for the house duty would be a better guide for our purpose, but for the exemption of farm-houses.

from stamps would, of course, altogether cease; the duty on paper and rags, assuming our data to be correct, would be increased eightfold; but the duty on rags is so trifling, that it may be omitted in the account; the duty on advertisements would be greatly increased, and this forms the most important item of the account.

The present high price of advertisements is owing, not not so much to the duty on advertisements as to the stamp on newspapers, which greatly restricts the advertising power. If, as we have assumed, that power were increased eight-fold, there can be no doubt the price of advertisements would fall very much indeed.

In the United States, the charge for advertisements varies very much, but the average appears to be about 1½*d.* per line. In Jersey and Guernsey it is about 1*d.* per line. Suppose the price in our own country to be reduced to 1½*d.* per line *plus* the advertisement duty; the charge for an average advertisement of 12 lines would then be 3*s.* or less than one-third of the present price. What effect would this reduction have on the number of advertisements?

Before the reduction of the advertisement duty, the price of an advertisement in this country was about eight times as great as in the United States, while at the same time the *number* of advertisements, in proportion to the population, was more than twenty times as great in the United States as in the British Isles. It appears, therefore, that a diminution in the price causes the number of advertisements to increase in a much higher ratio; and this result is in accordance with experience generally, as to the increase of demand as compared with the diminution of price. Any one accustomed to read our own papers must have observed a considerable increase in the number of advertisements since the reduction of the duty, though, for reasons already stated, the price of advertisements has fallen but little. The alteration is however too recent for its full effect to have been manifested; there cannot yet have been sufficient time for the whole change to have taken place in the habits of the people.

With an eight-fold advertising power it is manifest that the number of advertisements might increase eight-fold without crowding the papers more than at present, and such an increase is not greater than may be expected to arise from the estimated reduction to one-third of the present price, if we look at the state of things in America.

Indeed, when we consider that the English are much more of a trading people than the Americans, we might very safely assume even a higher rate of increase.

In order to allow the unstamped papers to pass through the Post-office, it is proposed that franks should be sold (say by the venders of stamps) at a penny each. It will be necessary to make the postage payable by the person sending the paper; for otherwise a great many papers, especially the very low-priced ones, would be refused by persons to whom they were addressed. It is obvious that a direct payment to the Post-office, by the transmitter of the paper, would be highly inconvenient, if not impossible. Mr. Knight's plan of a stamped frank obviates the difficulty; and it would facilitate the transmission of all printed sheets under a certain weight. By a Parliamentary Return, it appears, that in the year 1830, out of thirty millions of papers stamped for the whole kingdom, thirteen millions passed through the London Post-office. If to this we add seven millions as the probable number of newspapers sent through the other post-offices of the kingdom, we make the total number distributed by the post to be twenty millions, or two-thirds of the whole number printed.

After a careful consideration of the subject, we think it very doubtful whether this number would be much, if at all, increased by the proposed arrangement. Let us consider it exactly the same: the cost to the country of transmitting the papers by the post would therefore be the same under each arrangement, and may consequently be omitted in the comparison, whilst the receipts from this source must be carried to the credit of the proposed plan alone.

The account is as follows:—

PRESENT REVENUE.

Derived from a given number of stamped Newspapers—say 100—

Stamps, 100 at 4*d.* each	£1	13	4
Discount, 20 per cent.	0	6	8
	£1	6	8
Duty on paper—100 of the average size weigh about 8lb., which at 3*d.* per lb. is	0	2	0
Duty on advertisements.—* Say one-fifth of the stamps	0	5	4
Total revenue derived from 100 papers under the present arrangements	£1	14	0

FUTURE REVENUE.

Derived from an equivalent number, or rather weight of unstamped newspapers, viz. 800.

Duty on paper— 8 times as much as above	0	16	0
Duty on advertisements— 8 times as much as above	2	2	8
Postage—66 papers (two-thirds of 100) at 1*d.* each	0	5	6
Total revenue derived from an equivalent number of papers under the proposed arrangements	£3	4	2

From this calculation, it appears that the removal of the stamp would nearly double the revenue derived from newspapers.

Supposing, as before, the increase in the number of papers to be accompanied by a like increase in the number of advertisements, let it be determined what increase of papers will be required to leave the revenue in its present state.

Total revenue now derived from 100 newspapers					£1	14	0
Receipts for postage, as in the previous account					0	5	6
Duty on 100 papers (see previous account)	£0	2	0				
Duty on advertisements (see previous account)	0	5	4				
	0	7	4	× 4 =	1	9	4
Total					£1	14	10

It appears, therefore, that an increase in the number of papers, in the ratio of four to one (supposing the number of advertisements to increase in the same ratio), would slightly benefit the revenue, even though the stamps were abolished. Such an increase in the sale of papers may be looked upon as absolutely certain; for it only requires that the public should purchase four papers at 2*d.* each, where it now buys one at 7*d.*

It may perhaps be thought, that the increase in the number of advertisements will not keep pace with the increase in the number of newspapers. Let us therefore assume, that the papers increase six-fold, while the advertisements increase three-fold only.

Total revenue derived from 100 newspapers	£1	14	0
Receipts for postage, as in the previous account	0	5	6
Paper-duty, 48 lbs. at 3*d.*	0	12	0
Advertisement-duty, 5*s.* 4*d.* × 3 =	0	16	0
Total	£1	13	6

Thus it appears that such an increase as that assumed above would leave the revenue practically in the same state as at present.

That the probabilities are decidedly in favour of a much greater increase scarcely admits of a doubt; and if so, it follows, that the change proposed is more likely to benefit the revenue than to injure it. This much, at least, may be considered as quite certain, that the abolition of the stamp cannot possibly produce any serious loss.

It may perhaps appear, that the fact of the Irish papers having only a twopenny stamp has been overlooked. Such is not the case: but the revenue derived from the Irish papers is so small a fraction of the whole (not so

* In the year 1832 the duty on advertisements (155,400*l.*) was about three-tenths of the stamp duty (574,430*l.*) The increase of advertisements in consequence of the reduction of the duty from 3*s.* 6*d.* to 1*s.* 6*d.* in 1833, cannot, for reasons already stated, be estimated with accuracy, but we think it may safely be assumed to be eventually about in the ratio of 3 to 2: this increase of number, combined with the diminished rate of charge, determines the future advertisement duty under existing arrangements to be about two-tenths, or one-fifth of the stamp duty.

much as a tenth part), that it was thought better not to complicate the account by an item of such trifling importance.

The smallness of the number of papers in Ireland would, if we did not consider the poverty of that unfortunate country, militate against the views here held out; but if the consumption of newspapers be compared with the consumption of any luxury which bears the same price both in England and in Ireland, it will be found that Ireland offers no exception to the principles which it is the object of this paper to establish.

Indeed, a mere glance at the lists of English and Irish papers will show that, in the large towns, where alone in Ireland a moderately wealthy population is to be met with, the greater cheapness of the Irish papers produces a decided effect; for while in Great Britain, Edinburgh, Glasgow, Liverpool, Canterbury, Greenock, and Kelso, are the only towns, besides London, which support a paper published more frequently than once a week (London alone maintaining a daily paper), there are in Ireland six daily papers published in Dublin, and papers more frequently than once per week in Belfast, Carlow, Clonmel, Cork, Drogheda, Ennis, Galway, Kilkenny, Limerick, Newry, Sligo, Tralee, Waterford, and Wexford.

In the foregoing review of the advantages to the revenue which may be expected to follow the entire abolition of the stamp duty upon newspapers, no notice has been taken of the indirect benefits which would certainly accrue from the proposed measure. When, however, it is considered that every increase in the power of advertising must be accompanied with increased facilities for buying and selling, and that consequently the revenue derived from the sale of articles of import, or of excise—from the duties on stage-coach travelling and posting—from the auction-duty, &c. &c., would be greatly increased; and again, when the effect on the revenue of an increase in the trading business of the country is traced through its various ramifications, it becomes difficult to estimate the amount of injury caused by the barrier which the stamp-duty on newspapers presents, or the extent of the benefit which would follow its removal.

CHURCH REFORM BILLS.

IT appears from a paper printed last session by order of the House of Commons, that of the incumbents of 10,560 benefices, being the entire number in England and Wales, only 4649, or considerably under one half, were resident in their parishes in the year 1831. The state of things is, no doubt, the same still. There are very nearly 6000 benefices, the holders of which do not reside on their livings.

Of the exact number of 5911 benefices which were thus situated in 1831, there were 3374, or considerably more than one half, which did not possess even a resident curate. In other words, very nearly every third parish in England may be stated to be without any resident clergyman whatever.

It will hardly be denied on any hand that this is a condition of things imperatively demanding reform. Let this utterly or partially deserted state in which so many cures are left be accounted for, or apologized for, how it may, the case is one to which a remedy must be applied at any cost. The evil goes to destroy the very life of the institution within which it has sprung up and attained its enormous magnitude; and if there be no other way of dealing with it, it must be extirpated, even though something else that is really valuable should go with it. The grand principle upon which the church stands, and is sustained in being, is irreconcilably at war with so imperfect a distribution over the country of the benefits which it professes to dispense. An Established Church, a church supported by the state, appears to be mainly called for by the consideration that by such a provision only, in the present state of society, could religious instruction be diffused throughout every part of the kingdom, and the light of moral and christian truth be set up and kept permanently visible in its poorest and remotest corners. The ground is removed from under the church, therefore, and it is left without a foundation to rest upon, in proportion as this great end remains unfulfilled. There are other purposes, we allow, and high purposes too, not necessary to be indicated here, which belong to the idea of a national Church; but this only is essential to its very existence. In regard to some of these other purposes we think, for instance, that the Church of Scotland is far less judiciously contrived than that established in this part of the island. But in the first requisite of an Established Church, that it really supplies religious instruction equally and fairly to all parts of the country—to the poor parishes as well as to the rich—to the thinly inhabited as well as to the populous—to those remote from the great highways of resort and traffic as well as to those more favourably placed—in this respect it holds out an example which may well put its sister institution to the blush. Of about a thousand parishes, into which Scotland is divided, there is not one which has not its resident clergyman, who, with very few exceptions, is the incumbent of the benefice. Even where an assistant, or curate, as he would be called in England, is employed, it is extremely rare for the incumbent not to be also resident in the parish. Indeed the law of the Scotch Church does not, we believe, permit the latter to absent himself, even in those cases in which he is permitted to have an assistant. A state of health requiring removal to another climate, or some other claim equally urgent, makes the only case in which a dispensation is granted from what is held to be the clergyman's first duty, residence among his flock. An assistant very seldom does more than relieve his principal from the labour of preaching and conducting divine service on the sunday; almost universally the baptizing of children, the ceremony of marriage, and certain other higher offices, continue to be performed only by the latter. His constant presence in the parish, therefore, even although in somewhat infirm health, is indispensable.

Be it observed, that as matters are managed in this part of the kingdom, it is in general the poorest parishes that are left without a resident clergyman—that is to say, it is precisely those for the sake of which an established Church is most required that are allowed to remain without any share in its advantages.

These livings are usually held as annexations to others of more value, the incumbent residing on the latter. It is the toleration of pluralities, therefore, or the holding of more benefices than one by the same individual, which creates non-residence. Prohibit the former and you put down the latter evil. At least, you cannot get rid of the latter until you have abolished the former.

This is the view upon which the Lord Chancellor has proceeded in two bills which, with the consent of his colleagues, he has laid before the House of Lords. One of these bills destroys certain provisions of the existing law by which a right to a dispensation from residence is created in certain cases—in the case, for instance, of a clergyman who has been appointed chaplain to a nobleman or one of the officers of state. The other lays down the fundamental and comprehensive rule that acceptance of one benefice shall in every case immediately void all previous preferment, except only where two benefices to which the same individual may be presented shall not together exceed, annually, the value of 300*l.*, and shall at the same time be only five miles apart. It is permitted also that a benefice, not exceeding 100*l.* in annual value, may be held along with a cathedral preferment; and that where an archdeaconry is below the annual value of 20*l.*, it may be held along with any benefice within the limits of the archdeaconry. The sums specified are to be the actual value of the living in each case, as ascertained by the church commissioners.

Besides these regulations, however, there are others bearing directly upon the matter of residence. It is proposed to declare that hereafter, with the exception of the bishops, while attending parliament or engaged in episcopal visitations, no spiritual person shall be absent from his preferment more than thirty days at one time, or more than sixty days at several times in one year, under a penalty of three times the value of such preferment during the time that he shall have been so unlawfully absent. If such penalty be twice recovered, the preferment is to be void. Absence from a preferment is defined as absence from the house of residence appropriated to the preferment; and it is proposed to enact, that where there is no fit house one shall be appropriated for that purpose. To ensure the observance of these rules, it is provided that all bishops and lower spiritual persons whatever shall, under penalty, annually make a return respecting their residence to the archbishop, which shall be consolidated and transmitted to the King in council, to whom the archbishops must make the like return of their own residence.

All existing pluralities will, of course, remain untouched,

and clergymen at present exempted from residence will continue to enjoy their exemption while actually employed on the duties causing such exemption.

It is objected to any attempt to enforce residence that, if successful, it must render the services of curates nearly unnecessary, and therefore put an end to that description of employment by which persons embracing the Church as their profession are provided for in the earliest stage of their progress. But the natural resource for the younger members of the clergy would seem to be those numerous livings of small value which have been hitherto held, for the most part, along with others yielding a larger income, but which will now be released from the occupation of pluralists, and left free to be distributed among incumbents who will be content with such preferment till they obtain better. Most of the livings thus disengaged will be at least as good as most curacies are at present. No fear, at any rate, can be reasonably entertained of a deficiency in the supply of persons from whom vacancies in the Church may be filled up; and that is the only evil which could be considered a public inconvenience.

On the whole we look upon these bills as most important, and consider their whole tendency to be at once to strengthen the foundations and to augment the usefulness of the Church. To use the Lord Chancellor's own expression, this reform lays the axe to the root of existing abuses, and effects their eradication, in as far, at least, as that can be done by any legislation upon the two great grievances which the measure attacks. We trust, as sincere friends both to the Church and the House of Lords, that at least the leading principles of the bills will not meet with opposition from either.

ABSTRACTS OF PARLIAMENTARY PAPERS.

Excise Duties.—An Account of the quantities of the several articles charged with Duties of Excise, in the Year ending 5th of January, 1834; and a comparison of the Amount with the average of the three preceding Years:—

		Average of the three preceding years.	1833.

Sundries	£	78,236

Writs.—The number of writs issued from the different law courts from the 1st day of Michaelmas Term, 1832, to the 1st day of the same term, in 1833, were, in round numbers—

In the King's Bench	39,000
In the Common Pleas	7,000
In the Exchequer	42,000

Government Prosecutions for Libel.—The government prosecutions for libel since the accession of his present Majesty have been six. In these cases the defendants were;—William Cobbett; William Alcock Haley; Richard Carlile; John Ager, Patrick Grant, and John Bell; and Henry Hetherington, and Thomas Stevens.

Persons committed for selling Unstamped Publications.—The number committed in the metropolis from February 27th, 1833, to April, 14th 1834, was forty-nine, of whom none are now actually in prison. In the rest of Great Britain six persons have been committed, of whom three are still in prison.

Game Laws.—The number of commitments under the game-

laws in England and Wales, from 1st November, 1832, to 1st November, 1833, was 3,209. The greatest number confined during the period in any one place, was 160 in the Devizes House of Correction.

Corporal Punishments in the Army.—The following has been the number of such punishments in the years from 1830 to 1833:

655 in 1830; 646 in 1831; 485 in 1832; and 370 in 1833.

Executions for Robbery.—In the year 1833, 246 persons received sentence of death for robbery in England and Wales; of whom seven were executed.

STATISTICS, TRADE, &c.

Spanish Finances.—A correspondent of the Times' furnishes the annexed view of the present financial position of Spain.

ACTUAL STATE OF THE FOREIGN DEBT OF SPAIN.

1804.—Dutch Loan	30,000,000 guilders, or about		£ 2,500,000
1806.—Ditto . .	10,000,000 ditto	ditto .	800,000
	Cortes.		
1820.—French Loan	200,000,000 reals	ditto	2,000,000
1821.—National do.	500,000,000 ditto	ditto	5,000,000
French do.	140,000,000 ditto	ditto	1,400,000
1821 and 1822.—French and English Loans		.	12,900,000
1823.—English Loan . . .			1,400,000
			26,000,000
1823.—Royal Loan in Paris	89,000,000 francs	.	
Redeemed . .	24,000,000 ditto		
	65,000,000 do., or about		2,600,000
1826.—Rentes Perpetuelles	136,782,000 do.		
Redeemed . .	1,782,000 do.		
	135,000,000 do. . .		5,400,000
1828.—British Indemnities	3,000,000 dollars	.	600,000
French ditto .	80,000,000 francs	.	3,200,000
			37,800,000
1822.—Addition to Dutch Loans of 2,500,000*l.* converted into Cortes' Bonds .		.	1,500,000
1833.—Supposed issue of Rentes Perpetuelles since 1828			5,000,000
1834.—Arrears of Interest on 14,000,000*l.* unacknowledged Cortes' Bonds since Nov., 1823, about			7,000,000
Grand Total about .			£ 51,300,000

About 7,000,000*l.* of Cortes' Bonds have been converted into 3 per cent. stock here and on the Continent, by the decree of 1831, which, with the 5,000,000*l.* of National Bonds, reduces the amount of Cortes' Bonds in actual circulation to somewhere between 14,000,000*l.* and 15,000,000*l.* sterling.

Domestic Debt.

AMOUNT OF CLAIMS PRESENTED TO THE CORTES IN 1822.

	£
Debt on which interest is allowed . .	70,860,000
Ditto on which interest was not allowed . . .	75,870,000
Total .	146,730,000

including about 15,000,000 of Vales Reales in circulation, whereof one-third are entitled to interest payable in specie, and the remainder in paper.

STATEMENT OF THE GROSS REVENUE OF SPAIN IN 1828.

	£
Land-tax . .	1,470,000
Duties on consumption .	910,000
Import and export duties .	600,000
Tobacco . .	610,000
Salt	400,000
Licences, stamps, &c. .	130,000
Tax on the revenues of the clergy	605,000
Sundries . . .	503,000
	5,228,000

STATEMENT OF THE EXPENDITURE OF SPAIN IN 1828.

	£
Army . .	2,650,000
Navy . . .	400,000
Finances and collecting revenues	1,450,000
Justice . .	140,000
Ministers of State . .	110,000
Royal Household . .	500,000
	5,250,000

For the last six or seven years Spain has only been able to arrange the interest due on her domestic debt by the issue of fresh obligations, whilst the interest paid on the bonds acknowledged in Paris, Amsterdam, &c., has been raised by the sale of fresh Rentes Perpetuelles.

The Minister of Finance, in his late statement published at Madrid, estimates the amount of interest required by the Government as follows:—

		Capital.
£ 1,400,000	For the acknowledged domestic debt, at 4 per Cent., is . .	£ 35,000,000
600,000	For the Vales Reales in circulation, at 4 per Cent, is . .	15,000,000
1,400,000	For the bonds acknowledged in Paris, &c., at 5 per Cent., is .	28,000,000
£ 3,400,000	Annual interest on acknowledged debt of	£ 78,000,000

He further states that the revenues of 1833 only amounted to about 4,000,000*l.* sterling, whereas the expenditure, including the amount due for interest on the debt, exceeded 9,000,000*l.*

The Population of the United States.—No precedent exists of so rapid an increase of population as what has taken place in the United States during the last 60 years. Beginning from the year 1770, when it was estimated at 1,500,000, we find it successively rising to 3,929,226 in 1794; to 5,319,782 in 1800; to 7,329,903 in 1810; and to 9,654,415 in 1820. Nor had it slackened during the subsequent 10 years, for it appears that in 1830 the number of inhabitants had risen to 12,856,154, consisting of the undermentioned classes:—

	Males.	Females.
Free whites . .	5,358,755	5,167,299
Slaves . .	1,014,345	996,284
Free persons of colour	153,495	165,972
	6,526,529	6,329,555

The number of individuals of the age of 100 years and upwards was proportionably far greater in the case of the free coloured and slave population than in that of the whites; inasmuch as in the instance of the former, on a population of 2,330,096 souls, they amounted to 986 males and 1329 females, or, in all, 2015 individuals; whilst in that of the latter (the whites), on a population of 10,526,058, they did not exceed 508 in all, or 274 males and 234 females—a singular contrast in the proportion—it being 1 individual in 20,720 in the case of the whites, 1 in 1450 in that of the blacks, and 1 in 510 in that of the free people of colour.

Military Justice in France.—In 1832 the French army, including the municipal guard, &c., at Paris, consisted of 388,402 men. Of this number 6,858 had been subjected to trial; and if we add to these 75 natives of Africa who had been tried by court-martial, we have a total of 6,933 men who had been brought before the military tribunals in the year 1832. Of the 6,858 soldiers, 14 were transferred to the ordinary tribunals, 2,217 were acquitted, and 4,627 had been condemned. Of the latter 93 were condemned to death; 391 to hard labour; 13 to seclusion; 308 to the *boulet*;* 1,149 to the public works, and 2,556 to imprisonment. Thus the military tribunals have acquitted nearly a-third of the number arraigned. The punishment of death has not been applied in the proportion of one in 4000; 521 of the convicts have been subjected to corporeal and ignominious punishment; the rest have been punished correctionally; for the *boulet* and the public works are considered among correctional punishments by the military law; the first for desertion accompanied by circumstances which increase the offence, and the other for simple desertion, or for selling the horse, arms, dress, or equipments furnished by the state. According to the terms of the law of the 13th Brumaire, year 5th, which extends the jurisdiction of courts-martial to the natives of conquered countries, such courts have been established in Africa, at Algiers, at Oran, and at Bon, which exercise a criminal jurisdiction not only over the troops stationed in these provinces, but also over the inhabitants. The portion of the population of these countries which is subject to the military law is estimated nearly thus: At Algiers, about 21,000; at Oran, 3000; at Bon, 500; total 24,500. During the year 1832, as already intimated, the courts-martial tried 75 natives of the African possessions; of whom 13 were condemned to death, 4 to hard labour, 2 to seclusion, 3 to the public works, 6 to imprisonment; the rest were acquitted; making the proportion of acquittals little less than three-fifths. It results from the preceding statements that in the course of the year 1832, 6,933 persons were arraigned before courts-martial; of whom 106 were condemned to death, 395 to hard labour, 132 to seclusion, 308 to the *boulet*, 1,152 to the public works, 2,562 to imprisonment: consequently, 4,655 have been condemned, 14 have been transferred to other tribunals, and 2,264 have been acquitted.

* In this punishment, we believe, the motions of the party are encumbered by a heavy cannon-ball attached to the leg.

PUBLIC PETITIONS.

Eight Reports have been issued since our last. They extend from the 21st of March to the 6th of May, and the last is numbered the Eighteenth.

HOUSE OF COMMONS.

New Members elected since the commencement of April.

Place.	Member elected.	In the room of
Derbyshire	Hon. G. Cavendish	Lord Cavendish, peer
Monaghan	Mr. Westenra	Hon. C. D. Blayney, peer
Perthshire	Sir G. Murray	Earl Ormelie, peer
Wells	N. W. Colborne, esq.	N. Lamont, esq. dec.

The county of Fermanagh, the city of Edinburgh, and the boroughs of Leith, Hertford, and Carrickfergus, are vacant.

POLITICAL RETROSPECT FOR MAY, 1834.

GREAT BRITAIN.

Our last retrospect brought us to the commencement of the great debate in the House of Commons, on the motion made by Mr. O'Connell, on Tuesday, the 22d of April, for the appointment of a select committee to inquire into the subject of the repeal of the union with Ireland. The debate lasted for six nights, and was concluded on Tuesday, the 29th, by a division, when the numbers appeared to be 38 for Mr. O'Connell's motion, and 523 for an amendment proposed by Mr. Spring Rice, the purport of which was, that the House should address the Crown, pledging themselves, while they would continue to apply their best attention to the removal of all just causes of complaint, and the promotion of all well-considered measures of improvement in Ireland, to maintain unimpaired and undisturbed the legislative union between the two countries. Other amendments, moved by Mr. Hume and Mr. Mullins, were negatived without a division. On the following day the House of Lords, on the motion of Lord Grey, unanimously concurred in the address of the Commons.

The principal speakers in this protracted discussion were, on the side of repeal, Mr. O'Connell, and Mr. Sheil, and on the opposite side Mr. Spring Rice, Sir Robert Peel, and Mr. Emerson Tennent. There were only two points which the advocates of the motion can be said to have established, or even to have attempted to establish. They showed that very objectionable means had been employed in bringing about the union; and many persons will also, probably, be disposed to go along with them in another of their positions, namely, that the Irish Parliament which assented to the treaty of union, exceeded in so doing any powers which it could reasonably be supposed to have received from the nation. Neither of these considerations, however, had really any bearing upon the question. They might both of them have made good topics for a debating society, but to urge them as worth attention in the determination of a course of action was the merest puerility and waste of time. The parts of the question which were really relevant the repeal speakers never touched. It was made evident for instance, by both Mr. Tennent and Sir Robert Peel, and that not simply by argument, but by stubborn facts, that during the few years preceding the union, absurdly described as the period of Irish independence, the Irish parliament neither was, nor possibly could have been, in any sense whatever, an independent body. This demonstration, for, as Sir Robert Peel emphatically remarked, it could be called nothing else, the supporters of Mr. O'Connell's motion,—the declaimers in favour of a return to the so called system of independent government, or at least of the establishment of some other resembling it which they would not farther describe, never ventured to assail;—they did not once approach that ground in the whole course of the long and weary controversy. They did not once try to show how it was possible or conceivable that, England and Ireland continuing subject to the same crown, the parliament of the latter could be really independent of that of the former. Mr. Canning pithily expressed his scorn for this childish project of Mr. O'Connell and his partisans, by placing it on a level with a proposition for restoring the heptarchy. It would, indeed, be a step in the same road back towards barbarism. But it would be even something beyond this in absurdity. Dissolve the union between England and Ireland! Dissolve the union between the right hand and the left, and let each, instead of being directed by one will, have an independent mind of its own.

On the 30th, Sir Andrew Agnew's Bill, for what the honourable member called the better observance of the Sabbath, was, after a debate, thrown out, on the motion that it should be read a second time, by a majority of 161 to 125. Nobody went the length of defending all its provisions, or, indeed much beyond its principle.

On the 1st of May, Sir Robert Heron moved for leave

to bring in a bill to prevent the necessity of members vacating their seats on accepting office. The motion, however, met with little encouragement either from the ministers, or from the House generally, and it was eventually withdrawn, as was also an amendment proposed by Mr. E. L. Bulwer, to give seats *ex officio* to the members of the cabinet and the officers of state.

The second reading of a bill for effecting the compulsory and permanent commutation of tithes in Ireland was moved by Mr. Littleton on the following evening. The motion was opposed by several Irish members and others, and an amendment was proposed by Mr. S. Carew for adjourning the debate till the following Friday, which was negatived by a majority of 241 to 74. The debate, however, was eventually adjourned to Tuesday the 6th, on which evening the second reading was carried by a majority of 248 to 52. This decision was preceded by a warm debate.

On the 5th Mr. D. W. Harvey brought forward his motion for a revision of the pension list, with a view to the extinction of such pensions as did not appear to have been granted on public grounds. Mr. Strutt moved an amendment for the appointment of a select committee, simply to ascertain the nature and extent of any abuses which might have occurred in the granting of pensions, but without pointing to any disturbance of the present holders. The ministry, however, considered themselves bound to oppose both motions; and that of Mr. Harvey was negatived by a majority of 390 to 148, that of Mr. Strutt by 311 to 230. Mr. Harvey's motion, for one thing, evidently was defective in not carrying out to the legitimate extent of its application the principle upon which it was founded; for if it would be right, in the case of pensions conceived to be improperly granted, to deprive their holders of all future benefit from the grant, it would be equally just to call upon them to refund what they had already received.

On the 7th, the second reading of a bill for granting a charter to the new banking copartnership, called the London and Westminster Bank, was carried against the opposition of ministers by a majority of 143 to 35. It is quite clear that upon this question ministers had no other course than the one they took. The bill is not an express violation of the late charter granted to the Bank, but it is a direct invasion of privileges secured to the Bank by a former act of parliament, which act ought certainly, therefore, to have been repealed before the present bill was brought forward. The proper and fair time indeed to have repealed the act in question would have been before the granting of the late charter. In taking their present ground ministers are only maintaining the same interpretation of that act, of which they last session availed themselves in both houses of parliament to resist certain claims which the Bank advanced, grounded on a different interpretation. The third reading of the new bill was carried in the House of Commons on the 27th, by a majority of 137 to 76; but ministers have since intimated their intention of continuing their opposition to the measure in the Lords.

On the 7th, also, Mr. W. Brougham's bill for establishing a general registry of deeds was thrown out, on the motion that it should be read a second time, by a majority of 161 to 45. This decision was followed by the rejection of Mr. Cayley's bill for a district register by 125 to 68.

A motion, made on the 8th by Mr. Pryme, for the repeal of the law preventing unbeneficed clergymen from sitting in the House of Commons, was withdrawn after a short discussion.

On the following evening Lord Althorp explained to the House his plan for the reduction of the Four per Cent. Annuities, by which he expected to effect a saving to the public of above 53,000*l.* per annum. He proposed to give to the holders of Four per Cents. for every 100*l.* the same amount in the 3½ per Cents., not to be redeemable till the year 1840. The amount of the fund called the Four per Cent. Annuities does not exceed 10,700,000*l.*

The remainder of this evening was occupied by the discussion of Lord Althorp's motion for the second reading of the Poor-Laws Amendment Bill. The motion after a warm debate was carried by a majority of 319 to 20. This important measure has since been considered in committee on several evenings; and all the most important clauses of the bill have now been carried, by majorities in general as overwhelming as that in favour of the second reading. A few alterations in the bill as originally proposed have been submitted by ministers and adopted by the House; but none that touches the great principles of the measure. We shall take an early opportunity of returning to this subject.

On the 13th, the appointment of a select committee on the admission of students to the bar by the Inns of Court, was moved by Mr. O'Connell. The debate which followed turned principally on the case of Mr. D. W. Harvey, which has been so often brought before the public, and eventually a committee was appointed to inquire into all the circumstances attending the rejection of the claim of that gentleman to be called to the bar.

In the latter part of the evening Mr. Brougham obtained leave to bring in a bill for the establishment of a general registry of births, marriages, and deaths. We shall explain the provisions of this important measure in our next Number.

On the 15th, another Sabbath observance bill, which had been introduced into the House of Lords by Lord Wynford, very nearly met with the same fate as its predecessor in the Commons. The motion that it should be read a second time was only supported by 16 of their lordships, and opposed by 13. The measure, in its original form at least, has no chance of passing.

This evening, in the House of Commons, Mr. Tennyson moved for leave to bring in a bill to shorten the duration of parliaments. After the question had been debated at considerable length, the motion was rejected by a majority of 235 to 185. The minority included not only the advocates of triennial parliaments, the scheme of the author of the motion, but also those of annual, biennial, quadrennial, and quinquennial. The term of six years, we believe, was not patronised by any honourable member.

On the 16th, the Lord Chancellor laid before the House of Lords two bills for the reform of abuses in the Church, which were read for the first time. We have noticed these valuable measures in a preceding page.

The second reading of a bill, brought in by Sir Edward Knatchbull, for the amendment of the beer act, was carried this evening in the House of Commons by a majority of 157 to 27. The principal object of this bill is to make it necessary that an individual desirous of opening a beer-shop should produce a certificate recommending him as a proper person from six 10*l.* rate-payers of the parish.

On rising, both Houses adjourned over the Whitsuntide Holidays, the Lords to Thursday, the 22nd, and the Commons to Wednesday, the 21st.

On the evening on which the House of Commons reassembled, the second reading of a bill introduced by Mr. Lyall, the main provision of which went to transfer the monthly sixpences contributed by the seamen of merchant ships, and now paid into the naval chest of Greenwich Hospital, to the general fund of the Merchant Seamen's Institution, was carried, against the resistance of the ministers, by a majority of 94 to 57. The justice of this alteration of the law cannot be questioned. Mr. Robert Grant then moved the order of the day for the second reading of his bill for the removal of the disabilities of the Jews; for which on a division there appeared a majority of 123 to 32. This evening also, a third Sabbath observance bill, brought forward by Mr. H. Fleetwood, was thrown out, the numbers being only 45 in its favour, and 77 against it. But later in the night, a fourth bill, professing the same object, which had been introduced by Mr. Poulter, was read a second time, and carried by a majority of 52 to 12.

On the 22nd, an interesting debate took place on the motion of Mr. E. L. Bulwer, pledging the House to the expediency of repealing the stamp-duty on newspapers at the earliest possible period. The proposition was opposed by the Chancellor of the Exchequer, principally, if not exclusively, on the ground of the inability of the revenue to bear the reduction which he apprehended would follow the repeal of the duty. Upon this point, we refer the reader to an article printed in a preceding page, in which are collected many striking facts illustrative of the extension that would, in all probability, be given to the demand for newspapers, and to the practice of advertising, by a change in the present law. We believe that such change cannot be far distant, notwithstanding the majority of 90 to 58, by which Mr. Bulwer's motion was rejected.

A bill for the abolition of arrest upon mesne process—an important concession to reason and humanity—was this evening ordered to be brought in on the motion of Mr. Pollock, although not without opposition from several honourable members.

Mr. Tooke then moved, that the select committee on the

business of the House should be instructed to consider the expediency of establishing authentic reports of the debates. None of the supporters of this project were able to explain what they meant by authentic reports; but the motion was only negatived by a majority of 117 to 99.

On Monday the 26th, a division took place in the House of Commons on the motion for going into a committee on the Jewish Civil Disabilities Bill. The opponents of the motion, however, were only 7 to 63.

Much of the time of the House of Lords has been taken up during this month in the examination of witnesses respecting the acts of bribery alleged to have been committed at the late Warwick election, it having, on the motion of Lord Wynford, been determined by their Lordships on the 26th of April, not to proceed to the second reading of the bill for enlarging the boundaries of that borough, until the petitioners against the measure should have been heard by their counsel. Considerable trouble has been occasioned by some of the witnesses proving refractory and refusing to obey the summons of the House.

On the 27th, a discussion of great interest was expected in the House of Commons on the motion of Mr. Ward, which had been for some time announced, for a reduction of the Irish Church. It was generally understood, that upon certain points involved in this question, and likely to be brought forward in the course of the debate, a considerable difference of opinion prevailed among the members of the cabinet. Mr. Ward made his motion in the following words: "That the Protestant Episcopal Establishment in Ireland exceeds the spiritual wants of the Protestant population; and that it being the right of the State to regulate the distribution of church property in such manner as Parliament may determine, it is the opinion of this House that the temporal possessions of the Church of Ireland, as now established by law, ought to be reduced." After an able speech from the mover, the motion was seconded by Mr. Grote. When the latter honourable member, however, had sat down, Lord Althorp rose and stated, that in consequence of certain communications which he had received since the debate commenced, he felt it necessary to move that the House should adjourn till Monday the 3rd of June. The adjournment took place accordingly. In the mean time it is understood that the Earl of Ripon, the Duke of Richmond, Mr. Stanley, and Sir James Graham, are no longer members of the government. What changes may take place in consequence of these resignations remains only matter of conjecture at the time when our publication goes to press.

FRANCE.

Both Chambers have been principally occupied in the preparation of laws to prevent the recurrence of riot, revolt, and civil warfare, and to punish those who have been, or may hereafter be, engaged in making barricades, &c. The opposition in the Chamber of Deputies to the bill to this effect, was numerically small, but exceedingly violent. The clause that excited the greatest outcry was that relating to the domiciliary visits of the police and gendarmes in quest of swords, fire-arms, ammunition, and other articles capable of being converted into implements of war.

It was urged by M. Pages and other republican members that the law would act as a trap—that it did not properly define what arms, &c., people might keep for the amusement of the chase, and for the protection of their property, and what were unlawful.

There is no doubt that much of the bill is opposed to all our notions of individual liberty and the sacredness of private houses; but in how far the desperate madness of a party that has now so often renewed a hopeless struggle, and caused the French nation such enormous sacrifices, may render some such measure indispensable to prevent a state of continual revolution and anarchy, is another question.

In reply to one of the opposition who complained of the severity of the law, a ministerial member said, "While we have been rendering the penal code more and more mild, the people have been gradually becoming more and more ferocious!" We cannot admit the principle implied here, nor can it, we think, be affirmed, with any regard to truth, that even the most disorderly part of the populace are so ferocious now as they showed themselves to be in the first revolution.

Every clause of the bill was, however, passed, and Louis Philippe and his government have expressed their firm determination to carry it into vigorous execution. Many members of the Lower Chamber, and among them M. de la Martine, the distinguished poet, who are avowedly averse to the cause of Louis Philippe, energetically supported ministers in their measures, pleading that they were absolutely necessary for the safety of the country, and that though they, as individuals, had little affection for the government that arose out of the revolution of July, 1830, they preferred any established government to a fresh revolution. This sentiment we know to be common to the immense majority of the French, including men of every shade and caste of political opinion, except the faction we have already alluded to.

In the Upper House the bill encountered no opposition, but the peers are an assenting, complacent body, not likely, from their constitution and relative circumstances, ever long to run counter to a large majority of the Chamber of Deputies.

A proposal to pay 1,200,000 francs, to the corporation of Lyons, to enable them in part to repair the great damages inflicted on the city during the last insurrection, was angrily and somewhat scornfully rejected by the deputies. Several members argued that the citizens of Lyons were not entitled to any such succour at the hands of government, as during the struggle they did not join or render proper assistance to the king's troops. Since the suppression of that tragical revolt, Lyons has twice run the risk of being anew the scene of riot and bloodshed, for some of the workmen have fired on detached sentinels and weak outposts.

In the capital, and indeed in the kingdom generally, Louis Philippe appears to have full confidence in that armed citizen force; but in certain districts, where revolutionary notions obtain, the national guards have been disbanded, and regular troops marched in.

Some violent provincial papers of republican politics have also been suppressed, and their editors and printers thrown into gaol. Very numerous arrests of suspected persons have taken place at Paris, Lyons, and in several of the departments.

Soult, the minister of war, in demanding for the years 1834 and 1835 the enormous standing army of 425,000 men, (horse and foot,) sustained a partial defeat, it being determined in committee that the demand for 1834 should be granted, but that for 1835 it should be limited to the first six months of the year. May we hope that in twelve months' time it may be possible to govern the French people with a less imposing force?

Some interesting debates on the affairs of Algiers occupied the Chamber of Deputies for three days. In the course of the discussion, what we have shown in a separate article, or that the occupation of Algiers as a colony was a very losing concern for France, was made very apparent. But Soult, aided by a little national vain-glory, on which a French statesman may always safely count, triumphed over a rather energetic opposition, and carried his point that the conquest should be kept at any cost. Soult reiterated the assertions that Louis Philippe and his ministers had all along been determined to retain possession of Algiers—that they, in fact, had never had but one opinion on the subject. Their financial estimate for that promising colony was, however, very much cut down in the Chamber of Deputies.

The report of the deputies' committee on the project of law respecting the customs' tariff, has appeared officially in the 'Moniteur.' It recommends wider modifications than M. Thiers had been disposed to. Among these are a reduction of *one third* in the duty on foreign coal, a considerable reduction in the existing rate of duty on foreign iron, a reduction of 10 per cent. in the present duty on foreign raw wool (now from 20 to 30 per cent.), and a trifling reduction in the duty on foreign cattle. The other modifications are of minor importance.

Admiral Roussin, who, on the re-modelling of the ministry after the resignations of the Duke de Broglie and General Sebastiani, was named minister for the colonies and the marine, has written from Constantinople, declining the honour of that promotion, and begging to be left where he now is, as special envoy to Turkey. Admiral Jacob has therefore been appointed in his stead.

The Chamber of Deputies adjourned, *sine die*, on the 20th of May; and it was dissolved on the 24th. The colleges are appointed to meet for the new elections on the 20th of June, and the Chambers to reassemble on the 21st of August.

On the morning of the 20th of May, the celebrated republican, General Lafayette, died at Paris, after a short illness, which was his first, as well as his last, in the seventy-seventh year of his age.

To the private virtues—to the public honour, sincerity, and consistency of Lafayette too much praise cannot be given—but praise must almost end there. He was not a great man—he was not even a clever or sagacious man. He was a man of *one idea*—he took this up (almost accidentally) in his youth—he passed all his life in a dream, and died in his mistake. He figured in both hemispheres, and in sundry revolutions, none of which he could shape or direct. He was always either duped or outmastered by the power and influence of others.

He will occupy a place in history, because he was mixed up in great events, but his name will never obtain the glory attached to that of one who has produced a great and enduring impression on political affairs and society.

His character has been hit off, by two men of eminent talent, who knew him well at the busiest time of his life, or during the first French revolution. "He wishes to be a Sir Charles Grandison Cromwell—*il a bien sauté pour reculer*—(meaning, that he had not answered in France to the reputation he had acquired during the war of independence in America)—he only desires a newspaper fame!" said the bitter epigrammatic Mirabeau.

"He has every great and good quality; but, unfortunately, there is a something wanting in every one of them!" said M. de Narbonne.

Mirabeau, who was too severe, acknowledged, however, that Lafayette had great *sang-froid*, or coolness and self-possession, and that whatever talent he possessed, he had it always ready.

SPAIN.

IT is now confidently asserted that the Cortes will assemble on the 25th of June. The government has not accepted any of the tenders for a loan, and delays making any arrangements with the creditors of the country until the Cortes shall meet and give them their proper consideration.

The new church commission has been at work. They have put forth a plan of ecclesiastical territorial division, so proportioned as to harmonize with the new civil territorial divisions of the country. They have also decided that the convents of mendicant friars shall be gradually diminished, and that the admission of fresh novices into those orders shall be suspended for the present.

These establishments of begging monks are certainly too numerous; but they are far from being so bad as they have been described by hasty, ill-informed travellers. At all events, we can conceive few things either so cruel or so impolitic as to suppress them all at a blow, and throw their inmates loose on the world. It is worthy of remark, that the French when they held military occupation of Italy, which they governed very much on the *coup-de-main* system, and with a deadly hatred of monks, rarely or never put down the convents of the mendicant orders. The Benedictines, the Cistercians, the Dominicans, &c., they disposed of in a summary way; but they were content to leave the Franciscans, the Capuchins, and such classes, much as they found them. There were two pretty obvious reasons for this. In the first place, the Benedictines and higher orders of monks had extensive estates—most valuable property, (which the French confiscated!) while the Franciscans and Capuchins had no property whatever beyond their churches and their convents, and the "sack of St. Francis" filled by the voluntary donations (generally in kind) of the peasantry and poorer citizens. They, therefore, offered no temptation to the French fiscal—and then the French knew that the plebeian orders, composed out of the common people, possessed the sympathies and could direct the political feelings of the popular masses to the most violent extremes. The same commission has also settled that the ecclesiastical seminaries are exclusively to be directed by such of the clergy as have "proved themselves to be worthy of the trust, and of unequivocal attachment to the imprescriptible rights of Donna Isabella II."

Civil war, however, has not yet ceased in Spain, though the military operations have been neither decisive nor important. In the northern provinces the Carlists claim some advantages; it appears, indeed, certain that the Queen's forces under the command of Quesada have been twice checked, with some loss, by the partisans led on by Zumalacarreguy, but the Carlists have not succeeded in making themselves masters of any of the fortresses or important towns.

A quadripartite treaty between England, France, Spain, and Portugal, which was admitted by Lord Palmerston in our House of Commons to be in preparation, is said to have been officially executed. France, it should appear, is bound in this treaty to interfere by force of arms to effect the tranquil and firm enthronement of the two young queens, and to restore general peace in the Peninsula.

The whole of the proceedings of the congress assembled at Vienna have been conducted with so much closeness, that it is unsafe to indulge in any conjectures on this head; and we only mention as a rumour, which seems generally credited, that in consequence of the announcement of the quadripartite alliance, the congress is to prolong its sittings for another month.

From other quarters it is asserted that the northern courts, and Austria more especially, will see with pleasure any kind of settlement in the long-troubled affairs of Spain and Portugal, so long as the monarchical principle is not interfered with, or the ultra-liberal parties permitted to predominate.

PORTUGAL.

ADMIRAL Napier has taken the valuable sea-port of Figueira. The Miguelites have evacuated Almeida, a small town in the province of Beyra, near to the Spanish frontier of Leon, but important from its position and some fortifications. General Rodil, at the head of an auxiliary force, sent in aid of the young Queen by the Spanish government, after encountering some difficulties on his march, chiefly from the peasantry, who in many parts of Portugal still incline to Don Miguel, and who generally entertain their old national antipathy to the Spaniards, has contrived to effect a junction with the Duke of Terceira, and the united forces of these two commanders have occupied Coimbra. The Miguelite garrison of that city retired without firing a musket.

In the north of Portugal, though the good disposition of the country people is somewhat doubtful, the inhabitants of the towns now pretty generally recognise Donna Maria and the Constitutional Charter—though what that charter *will be* seems uncertain.

According to the latest advices, Don Miguel still remained at Santarem. The notions entertained of his position and prospects are of course influenced by political and other feelings. He is represented by one party to be still in possession of a strong, well appointed, and well supplied army, and of the affections of the mass of the Portuguese people—to have in his rear a productive, well cultivated country—and, in short, the necessary means for prolonging the struggle. But another party says, with equal positiveness, that his resources are almost annihilated, that his cause is now desperate, and that he may be expected daily to break up from Santarem without fighting a battle in that part of the kingdom. According to this showing, he and Don Carlos contemplate retiring immediately on Elvas, where they will probably enter into an arrangement to act in combination.

In our last monthly retrospect we mentioned that in the southern provinces Bernard da Sa had sustained a check. He, however, soon recovered himself, and when (on the 5th of May) a Miguelite force of between three and four thousand men attempted to dislodge him from his positions, he completely repulsed them, after they had suffered great loss. Donna Maria's or Don Pedro's ministers seem to have started some difficulties as to their ratification of the quadripartite treaty. The ratification is, however, daily expected. The same men, with certain of the ex-emperor's favourites, and even Don Pedro himself, have had fresh quarrels with British and other officers in the young Queen's service, and in command of the foreign mercenaries, who, undeniably, have done more for Donna Maria's cause than the native Portuguese soldiery. General Bacon has been removed from the command of the cavalry, and is now seeking a fair trial by court-martial. The details of these constant squabbles are too paltry to merit notice, but they certainly tend to exhibit Don Pedro in an unfavourable light.

The minister Carvalho has put forth a decree annulling

former commercial treaties with Great Britain, and equalizing the duties on all imports into Portugal, let them come from what country or under what flag they may. The passing of this decree, without previously advising (as is usual in such cases) the British Government, was an obvious lack of courtesy on the part of Don Pedro, and was so considered by Lord Palmerston. The effects of the decree, however, will scarcely be so important as some persons in this country contemplate.

A difference in favour of British imports, amounting in *some instances* to 15 per cent. less in the duties on them, from various causes was no such immense advantage to the British merchant. We are of opinion, that the greatest commercial power ought not to attempt to avail itself of such mean and invidious distinctions between nation and nation; and certainly, if we do avail ourselves of these distinctions, they will in no manner add either to the trade or the honour of our country.

When the present ministry, in 1831, equalized our duties on Foreign wines, admitting the wines of France and other countries at the same rate as those from our old ally Portugal, we conceive they destroyed the grounds on which any serious complaint could now be raised against the recent equalization system of the Portuguese.

A Methuen, or any other treaty, when infringed by one contracting party, can hardly remain binding on the other.

In Spain we enjoy no distinctive advantages over other nations; but that circumstance does not prevent us from competing with, and in most great articles of import, even underselling them in the Spanish market.

UNITED STATES.

The long quarrel arising out of the Bank question and General Jackson's withdrawal of the Government deposits from that establishment, has been carried on with increasing violence, and is not yet terminated.

The Senate determined by twenty-eight votes to eighteen that the reasons assigned by General Jackson for the removal of the deposits from the Bank were unsatisfactory; and that he had exercised an authority not conferred by the constitution and laws, but in derogation of both. The question was made the subject of a stormy discussion in the House of Representatives, where one member, a Mr. Allan, had so much to say, that he could not finish his speech in two whole days! In that assembly, however, a vote was carried approving of the conduct of the President.

A violent debate, with the result of which we are not yet acquainted, has since taken place in the Senate as to the point, whether that body should receive or reject the protest which General Jackson had sent in consequence of their vote of censure, and of (what he terms) their unconstitutional interference with the authority of the executive.

It should seem that the opposition or Bank party is very strong and violent.

In the midst of this excitement and mutual irritation some elections at New York, which were merely municipal, gave occasion to a riot and some bloodshed. The Irish inhabitants of the St. Giles of New York, who were Jackson-men, are accused of having begun the affray in which several hundreds of both parties were soon engaged.

A body of the Bank party forced the arsenal, and procured arms and ammunition—the Jackson-men followed them, and provided themselves for war in the same manner. Troops were called out—the Mayor arrived and addressed the multitude, who then quietly restored their arms to the arsenal and dispersed—not, however, before thirty persons had been badly wounded.

The Jackson candidates for civic honours succeeded in the election, but, according to American papers, it seems uncertain which party will have the majority in the Common Council.

The Bank partisans of New York have invited their friends of Philadelphia to make common cause with them.

The crisis in the money market is still felt, and there have been other important failures.

SYRIA.

In spite of partial insurrections, and some discontent on the part of Pashas and others, who preferred, for obvious reasons, the weaker government of the Sultan Mahmoud, to the stronger government of the Egyptian conqueror, it appears pretty certain that the condition of Syria has been improved since Mehemet Ali has taken possession of the country.

Commerce, the forerunner of all good—the only sure harbinger of national prosperity and civilization, has made great progress in the short space of two years. British merchants with their usual alacrity, have been among the first to avail themselves of this new opening of trade, and his Majesty's government, properly impressed with the increasing importance of Syria, and the advantages to be derived from firmly established and well-maintained commercial relations with that part of the East, has appointed a Consul-general (Mr. Farren) who has now been residing for some months at Damascus.

This ancient and once magnificent and trading city has been for many ages rather remarkably distinguished by its adherence to Oriental exclusiveness, and its dislike of European commerce and the enlightenment and other influences proceeding of which that is the source. These prejudices, however, seem to retreat before the energy and power of the Pasha of Egypt, who cordially entered into the spirit of Lord Palmerston's despatches in favour of British establishments in Syria, and wrote to his adopted son Ibrahim Pasha, who is commanding in that country, warmly recommending our newly-nominated Consul-general and all British subjects who may attempt to revive the long decayed commerce of Damascus, Bagdad, &c.

In consequence of all this, Mr. Farren was received at Damascus with the utmost kindness and distinction, his public entrance into the city being almost a triumph. In other countries we might disregard such a pageantry; but in the East, so honourable and splendid a reception will have the solidly advantageous effect of raising our Consul in public estimation, and of dissipating some prejudices. Ibrahim Pasha evinced the most friendly sentiments towards the Consul-general personally.

The arrival of Mr. Farren was also exceedingly well-timed. It was at the season when the Mahometan pilgrims were assembling at Damascus from all parts of the interior for their journey to Mecca. Now these men will speak of what they have seen, and spread the accounts of British enterprise and influence through all the adjacent regions. A moral power, not to be despised, will thus be created in support of trade and civilization, and this power may finally triumph over bigotry and sloth.

The nearest sea-port on the Syrian coast is Beyrout. Before the appointment of the consul-general, not a single British vessel, not a single British cargo, had arrived at that port direct from home. There did not exist a commercial house in any part of Syria, nor were the capabilities, the resources, the productions, or the trade-wants of that great country at all familiar to Englishmen. Since Mr. Farren's appointment, British vessels from 120 to 250 tons each have arrived at Beyrout direct from England, carrying cargoes of British and colonial manufactures, and at one time (in February last) there were three of our ships on their passage to that port. Of these three ships, two were from London, and one was from Liverpool.

Within a short time three British ships at Beyrout were freighted home direct, and there was abundance of produce at hand to be shipped by the first occasions that might offer. One of the three return ships, we are informed, brought a full cargo of madder roots, silk, wool, and skins. These articles will continue to form important and increasing items of Syrian export, but there is an abundance of most excellent tobacco, cotton, and other things to add to them. The productive power of the country is, indeed, already coming fully into play.

Four British houses at Damascus and three at Aleppo, all in direct trade with England, are now established, while others are in contemplation. A branch of one of the existing houses has already been settled at Bagdad, and sanguine hopes are entertained that similar British commercial establishments will soon be seen spreading all over the surrounding countries. Local consuls, or vice-consuls, are fixed at different points, and communicate regularly with the consul-general at Damascus. As in Turkey and in Egypt, the native courts of law have no authority whatever over the affairs and litigations of British subjects with each other. These matters are left to the local consuls, whose decisions may be submitted to the consul-general as to a court of appeal, whilst the consul-general's sentences may

be re-examined, confirmed or revoked, by appealing to a higher tribunal in England.

A glance at a map of the East will make our readers feel the advantageous geographical position of Damascus, the capital of Syria, and now the centre of a truly interesting scheme of British operation. The population of this capital and its immediate neighbourhood would of itself be sufficient to form a considerable mart for trade; but we must look at Damascus in its relation with the surrounding and vast regions of Asia—we must consider it as the centre of numerous and far-extending radii, which may all be made high roads for commercial enterprise.

The French and other governments are increasing their consular establishments in Syria, which is now become the scene of active interests, both political and commercial. The civil authority is lodged in the hands of Sheriff Bey, as Mehemet's governor-general of Syria.

CHRONICLE OF OCCURRENCES.

Jan. 24. A private letter of this date from Port Louis states that the island of Mauritius had suffered severely from the effects of a hurricane on the 20th, which, though only of a few hours' duration, was more disastrous in its consequences than any that have occurred since 1812. The largest bridges were swept away, and some lives were lost. Unlike preceding hurricanes, it did not complete the circuit of the compass; it ranged from south-east to north, and by proceeding no further spared the shipping. A few ships, however, suffered; but only one was lost.

Ap. 20. The coroner's inquest on the body of the man killed by a shot from the factory during the Oldham riot, has delivered a verdict of manslaughter. The evidence on which this verdict was founded, is only known through the subsequent statements of the witnesses to the reporters; as the inquest was held with closed doors, a circumstance on which the newspapers have animadverted.

28. The strike of the journeymen tailors of the metropolis has been made to engage much of the public attention during this month. The journeymen struck for higher wages at this time when their services were most in demand. The masters being encouraged by the leading newspapers, and generally by their own customers, who forbore at this juncture to press their orders, organized an opposition to the demands of the workmen, most of the respectable masters in London agreeing not to employ any men belonging to trades' unions; and many of them employing women to execute their work. This strike is said to have thrown 13,000 men out of employment; and as it does not appear to have produced the expected results, as the funds of the union are exhausted, and as arrangements in progress appear to threaten that their services may be superseded, there is understood to be a disposition among the men to return to their work. It is hardly to be expected, however, that they will all be able to regain their former employments. The tailors in several other towns have struck in imitation of the metropolitan tailors; but some of them appear to have already returned to their employments. At a meeting of the master tailors in London on the 27th, it was decided by a very large majority, that only those journeymen should be re-employed who would sign a declaration that they had ceased to be connected with any Trades' Unions.

30. The town of Brandeis, fifteen miles from Prague, is chosen to be the future residence of the Duchess of Berri, and the spacious castle there belonging to the crown is putting in order for her reception. It is said, that Charles X. opposed her residing at Prague, because he did not wish to have her husband so near.

May 12. One of the most remarkable domestic occurrences of the month, has been the abduction of Mr. William Gee, a solicitor of Bishop Stortford, and the forcible means used to obtain from him certain title-deeds and a check for 800*l.* Mr. Gee was professionally employed by a person who stated herself to be a widow, of the name of Canning, to invest the sum of 2000*l.* for her benefit. He invested 1200*l.* of this sum, and placed the remaining 800*l.* in the hands of his bankers. Mr. Gee having been by specious pretences seduced to a house in York Street, Commercial Road, was there seized by three men, and forced through the back kitchen walled with strong boards, and plastered with mud and soil. He was there fastened by chains and cords to a board which served for a seat, and to two pieces of wood so that he could scarcely move. The men then extorted from him an order for the title-deeds of the invested property of Mrs. Canning, and a check for the 800*l.* This was stated to be the price of his release, and was yielded by him in the fear of being murdered. One of the men, who was blind and seemed the leader of the party, then went away with the order and the check, leaving the other men in charge of their prisoner. When Mr. Gee was left by himself, he contrived by extreme exertion to force up the chain across his breast; and then, turning his hand, he was able to untie the cords which bound his legs, and ultimately to get out. He clambered over several garden-walls, and at last escaped into the street, and immediately took measures to prevent the check being paid. Information having been given of these facts at the Lambeth-street Police-office, the three men were apprehended the next day. The blind man, Edwards, calling himself Heath, is a teacher of music, and had hired the house in York Street but a few days previously, and had the den constructed according to his directions, for the special purpose to which it was applied. He did not deny this part in the transaction, but justified it as a means of obtaining for Mrs. Canning that justice which had been quietly sought in vain. The transaction has been since elucidated by the fact, that Mrs. Canning had been married, under a false name, to Edwards, and that she had only a life interest in the property in question, which she was to retain while she remained a widow, and no longer. The other two men, Lecasser and Weedon, appear to have acted as directed by Edwards. They have all been committed to take their trial on the charge, "That they, by menaces and by force, did demand of Mr. W. Gee the sum of 1100*l.* or 1200*l.*, with intent to steal the same." This leaves Mr. Gee the option of still preferring bills of indictment against the prisoners for the higher offence of felony, or of assault with intent to commit a felony.

16. In consequence of a resolution come to by the master manufacturers and cloth weavers, not to give employment to any men but such as would sign a declaration abandoning the Trades' Unions and promising not to join that or any similar association while they continued in their employment, about 3000 workmen in all the branches of the woollen manufacture left their employment. The determination of the men was not to sign the declaration proposed to them; and as the masters refused to receive them on any other terms, twenty-four mills have been brought nearly to a stand.

16. The infant son of King Leopold died this night at the palace of Laecken. He was not quite ten months old. Whit-Sunday, usually a great holiday in Brussels, was universally observed as a day of mourning for this calamity. It is supposed that the king, according to the power with which he is invested, will nominate one of his nephews as his presumptive successor in the throne.

18. The Tabernacle, Moorfields, was a scene of great disturbance on Sunday morning, in consequence of an attempt of the trustees to exclude Mr. Campbell, the favourite minister of the congregation, from the pulpit, and to put another gentleman in his place. There was a great deal of hissing, yelling, and shouts of "Campbell!" which lasted three quarters of an hour before the service was allowed to proceed. On the following Sunday Mr. Campbell was allowed to resume his place in the pulpit, and preached to a congregation that filled every part of the building.

Procession of Trades' Unions.—On the subject of the late procession a Correspondent sends us the following statement:—"I took a station in Maiden Lane, nearly opposite the Gas-works, in an elevated situation, above the heads of the passers-by, and singularly eligible for the purpose I had in view—the absolute counting, from beginning to end, of the persons actually walking in procession. The two horsemen, leading the van of the multitude, passed me at a quarter past 10, by my watch, and the last man of the whole passed me at 23 minutes past 12, by the same watch, being at the time about eight or nine minutes too fast. I carefully counted the whole of them, noting down, as I proceeded, each 500 in my memorandum-book; and, upon adding up the numbers, I made 23,620 persons in the actual line, exclusive of those who walked by the side to keep the road, and who, I suppose, might amount to perhaps 200 or 250 more. The men walked in rows of five abreast, excepting that at the head of the procession and about the petition some were eight abreast; at the head of the different lodges generally came two first, then four, and then five again; of the bricklayers' labourers a great many were six abreast.

"As they did not carry any insignia of their trades, I could not note accurately the precise number of *every* trade, but from personal knowledge of individuals of the different trades undermentioned and their situation in the line, I state the following as the numbers of those trades:—

Tailors	5060
Carpenters	3195
Bricklayers and Plasterers	1845
Plumbers and Glaziers	930
Bricklayers' Labourers	2538

A builder's foreman in the city has told me that he also counted them from beginning to end, at a later period than myself, and he made 'nearly 25,000.' He also told me that the secretary of the Sawyers' Society had counted them for the information of that body, and that he made them 25,000."

POPULAR EDUCATION IN THE ARTS.

In one of the late Reports (the fifteenth) from the Committee of the House of Commons on Public Petitions, there is printed a petition from the vicar, curate, churchwardens, and other inhabitants and rate-payers of the parish of Foleshill, in the county of the city of Coventry, the principal object of which is to urge the necessity of an alteration in the administration of the poor-laws. At present, however, we notice the petition, the good sense and right feeling of which are highly creditable to its authors, for the sake of a suggestion contained in it on another subject of great national importance. After stating that the parish of Foleshill contains, by the last census, a population of 6969 persons, at least four fifths of whom were formerly employed in, or totally dependent upon, the riband trade, and that the consequence of the admission, since 1826, of ribands of French manufacture has been to throw idle 2099 looms out of 2391, the entire number in the parish, to the immense augmentation of the poor-rate, the petition proceeds:—"That your petitioners have never entertained any doubt that the legislature were actuated by the most wise and patriotic intentions of promoting the general benefit and prosperity of the country, when they repealed the law which, for more than half a century, has totally prohibited the importation of French riband; but it is admitted, in the evidence to which your petitioners have before craved the attention of your honourable house, by those who have had every advantage of acquiring information which the highest authority could afford, that the operative riband manufacturers of this country are at present perfectly unequal to compete with the long cultivated taste and ingenuity of their French competitors. That your petitioners are of opinion, that the superiority which the French riband weavers have attained is attributable to the constant instruction and encouragement afforded by the government of their country, to all classes of persons engaged in the trade, for the cultivation of their taste, and the developement of their inventive genius; and that, before the English weavers were exposed to such an unfair and unequal competition, a much longer period than three years ought to have been allowed, and every facility should have been afforded to them of acquiring similar advantages, so as to render unnecessary the introduction of French ribands as a source of instruction and improvement, &c."

The first point of view from which we look with gratification upon such expressions of popular opinion as the above, is that in which they present us with an indication of the improved intelligence of our industrious classes. They have begun to see the value of the superior skill and taste which they do not yet possess; and, although we shall not say that this alone would be enough to ensure them, even if they should be left to themselves, the acquisition of what they so well appreciate and so strongly desire, we may certainly, at least, take it as an earnest that when the requisite means have been provided, and the proper facilities put in their power, they will avail themselves of their new opportunities with an alacrity that will leave none of the benefit unreaped.

The object here, as we have said, is one of great national importance; and this being the case, we hold that it is one deserving of national encouragement. In ordinary cases, it may be safest and best for governments to refrain from interfering with their aid where the people can act for themselves, and to allow what we may call the natural forces of society to work out the desired end in their own way and their own time. But this doctrine is, we think, carried too far when it is announced as applicable universally. There are circumstances, and the present we regard as being of that description, in which, unless the state as such shall come forward with its assistance, a great benefit may be either lost altogether, or at all events the moment in which it is of most importance that it should be secured may be allowed to pass away, and perhaps some irretrievable advantages along with it. It is quite evident that the poor riband weavers of Coventry, without employment, and subsisting upon parish alms, will and can do nothing to procure for themselves the instruction of which they are notwithstanding so well aware that they stand in need. Their employers, the master manufacturers, are scarcely more likely to bestir themselves in the matter than the workmen, in whose difficulties and privations they are themselves sharers to a large amount. Suppose the return for any exertions they might make, or any expenditure they might incur, in instituting schools of the fine arts for the instruction of their men, to be ever so sure, it is still only prospective, and even considerably remote in prospect. They could not expect the period of remuneration to commence till after the lapse of some years. But rather than wait so long, rather than set their faces to so arduous and so costly a struggle, they will probably endeavour to find an investment for their capital in some other branch that will yield them an immediate profit. The great wealth of our traders and manufacturers of all kinds in this country does indeed enable them to venture upon enterprises, the protracted character of which would deter the capitalists of most other countries. But, on the other hand, in no country whatever is the value of quick returns, the importance of a frequent circumvolution of the capital employed in any business, better understood, or rated higher, than it is in this. Whenever the period of return is more than usually long, the magnitude of the rate of profit must make up for the delay. This is the course of ordinary business, of that business in which the great mass of the capital of the country is engaged. It is only in regard to the comparatively small surplus, which flows by a variety of devious channels into what is properly called speculation, that the rule can be said not to hold so strictly. But it would be wild in the extreme to trust such a matter as that we are at present considering to a principle almost as irregular in its operation, and as little to be counted upon, as the chances of a lottery.

The case, finally, is one in which there is but little probability that the public generally, or any sufficiently large portion of the public, will come forward with the requisite readiness and zeal to effect the proposed object, if the government shall stand back. There has been little or no indication as yet of any disposition to do so; and indeed, there is wanting here that which most commonly excites the efforts of private individuals, the prospect of immediate relief to some present and urgent distress. The look-forward is too far for the popular vision, which is for the most part confined to the concerns of the passing hour, and to a scene of action near at hand, and where everything can be clearly discerned.

We conclude, therefore, that unless the government shall lend its aid in providing that instruction which the riband-weavers of Coventry pray for, the object is not very

[WILLIAM CLOWES, Printer, Duke Street, Lambeth.]

likely to be accomplished at all. But there is another reason, founded not in considerations of expediency, but in the justice of the case, why the state should not refuse to do something here. There can be no doubt that the present condition of the riband manufacture of this country, its inferiority as compared with that of France, and with that of every other branch of mechanical industry prosecuted among ourselves, is the doing of the legislature. The protection accorded to their silk trade up to within the last few years from foreign competition, has only tended to keep it in a state of depression. From the end of the 17th century till the year 1826, no importation of silk goods into Great Britain was permitted from any other country in the world. Sometimes the law was strictly prohibitory; at other times, duties so heavy were imposed upon the foreign article as to exclude it quite as effectually. The monopoly thus enjoyed by the manufacturers "effectually put a stop," as a late writer has remarked, "to all improvement;" so that the manufacture continued stationary in England, while on the continent it was rapidly advancing.... Notwithstanding the unparalleled advances we had made in other departments of manufacturing industry, it was affirmed in 1826 by the member for Coventry (Mr. Ellice), in his place in the House of Commons, 'that there were in that city 9700 looms, 7500 of which were in the hands of operative weavers, who applied their manual labour, as well as their machinery to the manufacture of ribands. These looms were, for the most part, of the *worst possible construction*; and it would scarcely be believed that the improved loom in France would, in a given time, produce five times as much riband as the common loom in England, with the same manual labour! He could also state that there existed an improved manufacture in Germany, by which one man could make *forty-eight times as much velvet as could be made in an equal time by an English machine.*'... Perhaps these statements may be somewhat exaggerated; but there can be no doubt that they are substantially well founded. Surely, however, no one believes that the inferiority of the machinery used by the English manufacturers is to be ascribed to any thing except that the protection they enjoyed had made them indifferent to improvements. No one believes that the French or Germans are superior to the English in the construction of machines; on the contrary, their inferiority is admitted by themselves, and by everybody else. That that spirit of invention, which has effected such astonishing results in the cotton manufacture, should have been wholly unknown in that of silk, is entirely to be ascribed to the fact of the former never having been the object of legislative protection. The cotton manufacturers were not bribed into the adoption of a routine system; they could not rest satisfied with mediocrity; but being compelled to put forth all their powers—to avail themselves of every resource of science and of art, they have, in a few years, raised the British cotton manufacture from a subordinate and trifling, to the very first place among the manufactures, not of this country only, but of the world!"*

The state owes the silk manufacture whatever compensation it can make for the injury it has thus inflicted. In so far as regards the machinery employed in the manufacture, the best, and indeed, the only thing that the legislature can do in order to repair the mischief wrought by the prohibitory system, is what it has done—to leave English mechanical skill and ingenuity to contend without favour against those of other nations. There can be no doubt of the result of such a contest. Already the machinery employed in the silk manufacture in this country, is equal, in most respects, and in some, superior to the most improved in use on the continent. "We do not exaggerate, we only state the plain matter of fact," says the authority already quoted, "when we affirm that the silk manufacture has made a more rapid progress during the last eight years, or since the abolition of the prohibitive system in 1826, than it did during the preceding century. So unprecedented has been its advance that 'the once existing disparity in quality between goods of French and English make, has, with some very unimportant exceptions, not merely disappeared, but actually ranged itself on the side of the British artisan.' Some of our readers will probably be not a little surprised to learn, that the real or declared value of the silk goods of British manufacture exported to France in 1832, amounted to 75,187*l.* Most of the machines and processes known on the continent have been introduced amongst us, and many of them have been materially improved. Nor, after what has taken place, can the least doubt remain in the mind of any one, that had the same freedom been given to the silk manufacture fifty years ago that was given to it in 1826, it would now have ranked among the most important and valuable businesses in the kingdom, and would have had nothing whatever to fear from the admission of foreign silks free of duty."*

The more abundant capital, more energetic spirit of enterprise, and greater advancement in the science and practice of mechanics, possessed by the people of this country, have enabled us to make the rapid progress that has just been described even in a line of pursuit in which, owing to the want of the usual stimulants, we had scarcely ever, until lately, made any forward movement at all. It required only a new application of the same powers and principles which we had long been in the habit of applying in numerous other branches of industry. But in certain departments of the silk manufacture, and especially in the weaving of ribands, it happens that a knowledge of the art of design is as essential to the production of the finer descriptions of articles as mechanical skill. Now, in that knowledge the artisans of this country, of all classes, are for the most part wholly uninstructed, and wholly without the means of obtaining instruction. It is a species of knowledge which among us has all along been cultivated only by those who follow the profession of painting. It has no more been thought of as the accomplishment of the common mechanic than Latin or Greek has. He has had no opportunity of acquiring either any skill in this art, or even any taste for it. Had the silk manufacture been left to bear up by its native strength against foreign competition, it is not likely that we should have suffered ourselves to be beaten here by our continental rivals any more than in other manufactures. But the protection, as it is falsely called, with which the trade has been fenced round and covered over,—protection against the very influences which would have most invigorated it,—has had the effect of keeping it dwarfed and feeble, where so many other things, springing from the same soil, are beyond example luxuriant and gigantic.

In most of the continental countries the people of all ranks have hitherto enjoyed vastly greater advantages for the cultivation of a correct taste in the fine arts than have been open to us in England. In Italy, in Spain, in France, in the Netherlands, and in many parts of Germany, the churches are often adorned with pictures by the greatest masters, and are open every day of the week to all who choose to enter. A sense of the power of high art in this way grows up in the heart with the birth of thought and feeling, and lives there in intimate and permanent association with whatever else makes up the being of the individual. With us there is nothing of this kind; to the great body not only of the labouring classes, but of the public generally, the world of art is "an universal blank;" their minds and eyes are as little acquainted with it as if they were without the faculty of deriving pleasure from such a source.

Something, no doubt, and in course of time we would hope much, will be done to create and diffuse throughout the community what we cannot hesitate to call a higher civilization, by the scheme which the legislature has at length adopted of establishing a national gallery, to be free to the whole public almost as the public streets. Be it observed, that this is really the only thing that ever has been done in this country for the effective diffusion of a taste in art. The annual exhibition at Somerset House, for instance, to say nothing of its consisting merely of modern works, is in no sort a public gallery. The shilling demanded for admission, indeed, is but a small sum; but it is also a small matter which it purchases—the liberty to enter once into the rooms. You may, indeed, go, if you please, in the morning, and remain, if you can, till night; but there are few persons whose convenience it would suit to make so lengthened a visitation. An hour, or a couple of hours, is all that can be easily spared at one time by most people who have any thing to do with their time; and in that space how many of the ten or twelve hundred works, with which the walls of the rooms at the Royal Academy are covered, can be, we do not say studied or examined, but even looked at? Yet no good is to be gained by merely looking at a great picture for a few moments. What is wanted is a repository of treasures of this description, which

* Macculloch's Dictionary of Commerce. Second Edition, p. 1031.

* Id. p. 1032.

shall be open at all times to all comers; and such the National Gallery will be. Thither any one may resort who has an hour or half an hour to spare; and he may repeat his visit as often as he pleases. In this way he will not only see the pictures, but will make acquaintance with them; he will not only carry away from a single inspection a confused impression of the forms and colours mingled on the canvass, but he will get the work by heart, and thus make it, as it were, his own property, and have it always with him, wherever he goes. The productions of the pencil defy that mechanical transcription which is applicable to those of the pen; and it is in this way only that they can be really multiplied. It is this consideration which forms the grand argument for the formation of collections, such as that we are now considering, at the public expense. It is impossible, without such collections, that the mass of the people should ever acquire any knowledge of art.

But for that sort of education in art which, as is pointed out with so much intelligence by the Coventry riband weavers, the welfare and even the existence of some important branches of manufactures require, more is necessary than the institution of public galleries. We hope and trust that the legislature will follow up what it has already done by the establishment of schools in certain districts where our weavers of ribands and fancy stuffs, and perhaps other descriptions of mechanics, might be instructed in the arts of design. This is what is most wanted, it is almost all that is wanted, to enable us to defy the rivalry of the continental manufacturer, even in those departments of the silk trade in which his superiority is most decided. We believe that the expense of such schools would be inconsiderable, and that, after they had been fairly established at the cost of a few thousand pounds, they would maintain themselves. The only difficulty would be to bring the manufactures in question up to the point at which a skill in design should be a necessary accomplishment of the artisans; they would scarcely drop down again from this elevation after they had fairly gained it.

The fullest information, we believe, which has yet appeared in this country on the subject of the schools of design alluded to in the Coventry petition as existing in France, is to be found in the evidence given by Mr. Bowring before the Select Committee of the House of Commons, which sat upon the silk trade the session before last. It may be useful as well as interesting to present here the most important portions of his statement. "Up to the period," says the witness, "in which the pattern is produced, I think the French have greatly the advantage over us; they have not a great superiority when the pattern is produced; but the fact that struck me most in France was the way in which taste was formed, and I was exceedingly surprised at finding among the weavers themselves, and among their children, and amongst everybody connected with the production of patterns, an attention devoted to everything which was in any way connected with beauty, either in arrangement or in colour. I have again and again seen the weavers walking about gathering flowers, arranging them in their most attractive shapes. I found them constantly suggesting to their masters improvements in their designs; and I learnt that in almost every case where the manufacturer had great success, there was some individual in the fabric who was the creator of beautiful things. There is at this moment scarcely any house of considerable reputation at Lyons which has not a partner who owes his position to his great success in the study of the arts; this has been treated as an object of so great importance, that they have, in the city of Lyons, a school of arts, to which the town itself gives 20,000 francs a year, and which takes possession of every lad who shows great aptitude for drawing or for any other subject of study which is likely to be brought to bear on manufactures; all the painters, and all the sculptors, and all the botanists at Lyons become manufacturers, and scarcely ever go out of the manufacturing circle. The town gives instruction in every thing which presents itself in the shape of art. I went to the school of St. Peter, which is one of the most remarkable schools of art, and I found there 180 students, and that to every one of these students the town was giving five years gratuitous instruction in art; a great number of them were engaged in the study of anatomy; they had a surgical professor there, who was teaching them not only the harmony of the human form, but all the wonderful organization of the human machine, as connected with the machinery of manufactures. I found a botanical professor who had thirty or forty boys under him studying flowers, and many flowers exceedingly beautiful. I found others attending to architecture; and, in fact, that all the departments of art, which could in any way be caught hold of for the production of beautiful things, had become objects of attention. And I found also a professor, the object of whose teaching was to show those young men how the machine could avail itself of their productions; that is to say, how by machinery they could produce, on a piece of silk cloth, that which they had drawn on a piece of paper. Those schools are not only the object of local attention, but they come immediately under the protection of government; and I see by the general budget, that the government (that is, the Minister of Commerce) allows 3,100 francs a year, independently of the endowment the town gives to this school. Although the Minister of Commerce makes a special grant for any purpose which is likely to advance those studies, the town is willing to consent to make supernumerary grants. The school supplies the student with every thing but the materials, and their works belong to the students themselves. Of late, (which, by the way, is another evidence of the effect of competition,) the school has become an object of very considerable attention; and the French, finding they are thrown more on their production of beautiful patterns, are giving to the schools of art a vast deal of their care and anxiety; the professor of painting of this school is a man of high distinction, very well known in the world of art. . . . . The French manufacturer considers that his pattern is the principal element on which he is to depend for his success. The mere art of manufacturing may be easily effected; but here is a taste-producing school which contains from 150 to 180 students; it has gone as high as 200. The manufacturer goes there, and he sees a boy who has passed through all the courses of study, who has, in fact, the appropriate knowledge, that boy's mind having been getting instruction in every shape, and applying it all to one particular end, namely of manufacture, which he looks to as the means of future success. The manufacturer can pick out of these 200 boys the boy whose taste is most distinguished; that boy is admitted into his house, probably at a small salary. One manufacturer told me he had three such: to the lowest in rank he gave 1000 francs, equal to 40*l*. The number of pieces produced, the object of a particular pattern, may be very small at first, but if his success is remarkable, in two years he may get 2000 francs; after three or four years, if his success is great indeed, and the patterns he produces meet with great acceptance, he can obtain 3000 francs: from the moment that his reputation is worth 3000 francs his fame is established, and he has the offer of a partnership; and that is the history of a great many of the most prosperous manufacturers of Lyons.

"There is but one principal school, which is the school of St. Peter. I have heard again and again, from manufacturers even of considerable reputation, that they are not in the habit of trusting wholly to themselves for the result of a pattern; it is to them a matter of great anxiety to hear the opinions of young men who are thus instructed; and as an evidence of the attention paid to the matter, I visited, not long ago, the house of a weaver, a man getting 30 or 40 sous a day; he turned over some hundreds of patterns, and said, I will give you my opinion of these. I was much struck with the correctness of his taste, and I found they were able to prophesy pretty correctly what the success of a pattern would be.

"The greatest attention is paid to the production of a pattern, as the recompense of the successful manufacture of a new pattern, or a new order of patterns, is full of encouragement. The subject of patterns is a frequent topic of conversation: for instance, the power of introducing patterns from a kaleidescope, was, on one occasion, the object of my inquiry. I found that all the intelligent manufacturers agreed that the kaleidescope produces nothing but incongruities. . . . . In reference to the botanic part, or the study of flowers as patterns, there will not be seen the inconsistencies in the French patterns which are so often found in the English patterns; they draw more correctly and observingly.

"I beg to state, that the universal conviction in France is, that they are wholly dependent on the superior beauty of their productions for their foreign sale; and that is the great object of anxiety there, that every thing should be done to keep up that spirit; daily knowledge is gathered

from all quarters, and the universal desire among the manufacturers there is to do something which in the regions of taste, shall be better than that which has been done by their neighbours; for they feel they are much behindhand in many other matters; that they do not possess the same advantages for the production of their goods after the taste is created: their looms, for instance, are frequently in a deteriorated and backward state, and nothing but the superiority they have on these matters of taste, enable them to carry on a successful trade.

"The observations of the operatives are invaluable to the master; I have heard manufacturers again and again say, that the masters who stood upon their own sagacity, and had not availed themselves of the hints of their dependents, had failed."

Mr. Bowring adds, that very high sums are sometimes paid to designers. "The highest sum I have ever heard of," he says, "is 6000 francs a year; but it is a better remuneration to give a talented young man a partnership than a salary of 4000 francs a year, his assistance being so important for the production of a novel thing." In the school of art there are, he thinks, five or six professors. "I will describe," he continues, "the course of things which is followed: There is the Anatomical School, which gets supplied with subjects with great facility, having the power of drawing on the hospitals, as the other surgical schools have. Then the school of the living human being; I found a very beautiful child, of three or four years old, with thirty or forty students sitting round it: they were employed in copying its locks, or engaged in the study of its features. I found in a third range the architectural students; they were engaged in copying different styles; and the great object of the master is to prevent confusion between different styles, and they find architecture of considerable importance for providing patterns of a stiff and formal character: thus their ornaments are correct and appropriate. Next comes the manufacture in velvet, of which there are of students is, I take *forty-eight times as much velvet as* [illegible] *can be made in an equal time by an English machine.*' ... Perhaps [illegible] these statements [illegible] but there [illegible] n be [illegible] greater: they were engaged in copying the most beautiful flowers. A botanical garden is attached to the school. There are thirty or forty students, some of whom were engaged in arranging the flowers, to show them in their most attractive shape. Then I think came what may be called a general professor, whose object was painting landscapes, and exhibiting art in its wider bearings. And, last of all, a professor whose object was the application of machinery to art, which takes possession of all that which the boy has invented or produced, and teaches him how it is to be transferred to the silk manufacture. I found in that school a large collection of patterns, which had been deposited by the Prud'hommes. After a certain number of years, those patterns come into the possession of that school, and are employed as helps for the production of new patterns."

The instruction at this school is purely gratuitous; and the pupils are admitted by the order of the municipality, or corporation, by which the principal expense of the establishment is defrayed. "There is also," proceeds the witness, "a department of Natural History; I am desired to obtain for them specimens of sculpture, for they thought they should probably find them of use. The mayor requested I would send from hence, at the expense of the town, a copy of the Elgin Marbles, for the service of the School of Art. There is a letter from the mayor also, in which he tells me that they are intending to give this school much more developement; that they feel the pressure of necessity upon them; and that they have ordered a report to be made of the Bresca school at Milan, to see whether anything existing there can be advantageously introduced at Lyons. I mention this as an evidence of the anxiety and attention with which they look at these things. The manner in which the grant is made is precisely this: I hold in my hand the budget of the town of Lyons for 1831; in the year 1830 they granted 22,000 francs from the town, but this year only 20,000. The mayor proposes the amount; it is then referred to the municipal council, to approve of it; it is then referred to the prefect, and comes under the immediate cognizance of the king: so that the sanction of all the principal authorities is obtained, the town reserving to itself the right of making any supernumerary grant, if it should be necessary. Of late a very large legacy has been left by a French general of the name of Martin, who has directed that a considerable portion of it should be applied to the establishment of an institution whose objects are, in many respects, similar to those of the school of St. Peter. The amount altogether was not less, I believe, than two millions of francs, and the decision as to its application is as late as April 1831." The operations of this school, he adds, are also intended with reference to the improvement of the silk manufactory; "but they do not exact that a boy there shall devote himself exclusively to the manufacture at Lyons. He gets gratuitous instruction as soon as he gives evidence of aptitude for those particular instructions; and it happens that in a town like Lyons, inasmuch as he gets an almost certain existence by applying his talents to the production of patterns, there are very few men who go into the higher walks of art, where there would be great uncertainty. Those men, devoting themselves to those studies for the purpose of improvement, calculate that when once they leave the school they can get a thousand francs, which is the first recompense of their labour. I was surprised to find that this school had not produced a greater number of artists and painters; but the simple fact is, the manufacture swallows them up, and it is on manufacture that their hopes are founded. I have said again and again, how is it you are not at Rome, or at Paris, and applying your genius to something better? The answer was, invariably, 'We have a certainty here.' And thus it is that the manufacturer of Lyons avails himself of the talent which the neighbourhood produces."

At St. Etienne, Mr. Bowring afterwards states, where there is a great manufacture of ribands, there is also much attention paid to the subject of drawing, although there is nothing there that can be decidedly called a school of design. There are in the place many students not collected in schools, and a considerable number of draftsmen. "At this moment," he says, "there are fifty-eight artists at St. Etienne, employed in the production of riband patterns."

OXFORD.

GREAT as the necessity still is for placing the education of the poor upon a broad and solid foundation, it appears to us that there is even a more pressing necessity for making some great efforts for the improvement of the education of the *rich*. The little that has been done in schools for the humbler classes has still had the effect of exhibiting the immense superiority of rational modes of instruction, and mild correctives in youthful wilfulness, [illegible] years' babbling of [illegible] the Netherlands, and [illegible] of [illegible] over a [illegible] without sense, and a ten years' subjection to brutal and indecent punishment. A fearful and revolting manifestation of the state of intellect amongst some of the more unhappy of the young men, who to the wisdom and virtue induced by the fagging and flogging of Eton, superadd the experience of a year or two in the profligacy and bigotry of Oxford, has been presented in the late memorable display of the habits and modes of thinking of the under-graduates at the installation of the Duke of Wellington. This ceremonial demands no notice from us except in the point of view in which we put it, as an indication of the miserable state of knowledge and feeling amongst the students of one of our great universities.

The following passages, descriptive of the exhibition we have mentioned, are selected from the "St. James's Chronicle," the organ of the party who dwell with rapture upon the manifestations of "the spirit of the age" exhibited by the big boys of Oxford. We beg our readers to peruse the extracts with the understanding that the record of these transactions is made in the warmest spirit of admiration.

"*Tuesday.*—After the masters of arts and strangers had wedged themselves into a compact mass, the undergraduates and bachelors of arts were admitted into the upper galleries, and then came

> "Tumult and Confusion, all embroiled,
> And Clamour, with a thousand various mouths."

"After they had filled the gallery and settled themselves in their seats, an unanimous cry arose among them for three cheers for the Duke of Wellington. They were given with such hearty vociferation, that I was almost afraid that the miracle of Amphion would be renewed, and that they would move the stones out of the roof of the theatre upon the heads of the clamourers. Then there was a short pause, and again another cheer for the Chancellor of the University;

The name of Dyer, one of the proctors, was then mentioned, on which was heard

> "On all sides, from innumerable tongues,
> A dismal universal hiss, the sound
> Of universal scorn." *

Various other names, not only of private, but of public men, were at intervals shouted out by undergraduates in the gallery, and served as signals for them to express their like or dislike to the individuals who bore them. The name of Earl Grey was received with an unanimous demonstration of strong disapprobation. Some few cheered the Lord Chancellor, but their cheers, "like angels' visits," were few and long between. The majority of voices was evidently hostile to his lordship. An undergraduate exclaiming "The bishops," the cheering was universal, deafening, and almost appalling. Lord Wynford entered the theatre about this time, and was received with applause; so, too, was Lord Lyndhurst. The next arrival of importance was that of the Duke of Cumberland, who was in the full dress of Colonel of the 15th Hussars. Not a dissentient voice was raised against him—on the contrary, he and his suite were received with loud cheers. A cheer was proposed and given for the Chancellor of the University of Dublin."

The "honoured correspondent" of the 'St. James's Chronicle, thus describes the same scene:—

"C. Ch., June 10, 1831.

"In the transactions of this day conservativism was absolutely embodied—I may say, impersonated. Never did I see—never, I believe, did any one see, such an exhibition of eager, bursting, uncontrollable enthusiasm, as that of which the Duke of Wellington, in the first place, the Dukes of Newcastle, Cumberland, Lord Winchelsea, Lord Fitzroy Somerset, and the noble Chancellor's friends, were the objects. A miraculous unanimity of sentiment, universally prevailed. The walls actually trembled at the shouts that greeted the Duke of Newcastle and Lord Winchilsea; and when a cheer was proposed for the bishops, you might have supposed yourself in a park of artillery, or the tenant of a three-decker, delivering both her broadsides at the instant. Twice was Lord Grey's name pronounced—twice the groans and hisses became perfectly frantic—without one mitigating note of applause, or even compassion, so deep and sincere was the contempt of all, both young and old. Lord Brougham's name fared no better, except that two or three feeble voices were raised to claim forbearance to a man of science and letters. Yet the assembly at Oxford is no mob; it consists of educated men, many of them, under God, the hope of the next generation. Let him who seeks to know what is the 'spirit of the age,' the spirit of the present and the coming age too, look here."

Let us see how "the assembly at Oxford," which is "*no mob*," but "*consists of educated men*," deported itself on the following day:—

Wednesday.—"In the galleries the under-graduates were as closely packed, and as determined to express their opinion on 'men and things in general' as on the previous day. Their first cheer was for 'The Ladies,' and this was repeated at very frequent intervals throughout the day, always accompanied with a certain gay, hilarious, gallant, and hearty expression of their happy faces very distinctly marked from all the other various feelings by which they were animated from time to time. Having given 'The Queen,' 'The Princess Victoria,' 'The Duchess of Kent,' and other announcements of course, they proceeded to the authorities of the university, and treated the different names much in the same manner as on the previous day. The ministers, as well collectively as in detail, were also groaned, hissed, and laughed at most unmercifully. His Royal Highness the Duke of Cumberland entered very early, and was warmly received. His presence seemed only to re-animate the zeal of the young men to still more noisy exertions. The favourite noblemen, especially, were now given out in rapid succession, with occasionally a sarcastic proposition to provoke a groan. In some cases the latter was accompanied with a witty addition, such as 'Earl Grey, and his family in office,' which drew down a hearty laugh of long duration. 'Daniel O'Connell and his tail' was treated to the same doubtful honours; and 'The House of Commons and Reform.' There were also sentiments given out and cheered vehemently, such as 'The Rights of the Universities'—'The Principles of William Pitt'—'Protestant Ascendency'—'The Memory of the Protestant Reformers'—'The King's Address to the Bishops'—'The Memory of George III., and of George IV.'—'The Duke of Wellington's Administration,' &c. 'The Gower-street Company' was received with a burst of laughter and cries of 'Stinkomalee.' 'The Admission of Dissenters' was also given out and received with determined and inveterate marks of reprobation it would be impossible to describe."

Those who are "under God, the hope of the next generation" had still another day to establish the assertion that they were "no mob." The Thursday morning was devoted to the service of the church. The reporter, with great *naïveté*, says, "It was about eleven o'clock when the Chancellor, accompanied by the Vice-Chancellor, the noblemen and gentlemen recently made Doctors, and the heads of houses in their robes of state, entered the cathedral; and, *though he was not received with the noisy cheers with which the welkin has rung for him elsewhere*, I heard more than one person congratulate his neighbour upon the powerful champion which the church had now enlisted in her service and defence."

Political dialogues in a place of worship are, of course, in the best taste: but let that pass. Come we to the crowning manifestation of the great truth exhibited in "the glorious, gratifying, and truly useful ceremonial at Oxford;" that "there will flow from this university a river of life and strength, contentment and joy, to every corner of the land!"

Friday.—"The Duke of Cumberland, as on the preceding days, arrived before the Chancellor, and was received with loud plaudits. Meanwhile as soon as the undergraduates took their places in the gallery assigned to them, they commenced to cheer or groan according to custom, and just as the feeling of the moment suggested some subject for applause or disapprobation. In the former spirit the following exclamations were raised:—'The Queen!' 'The King's Conscience!' 'The Bench of Bishops!' 'The privileges and politics of the University!' 'The editor of the *Standard!*' 'Trinity College, Dublin!' In the latter these shouts were uttered. 'A groan for Gaffer Grey!' 'Down with the Ministers!' 'A groan for Lord Palmerston and his protocols!' 'A groan for Lord Brougham!' A new idea then struck one of the undergraduates, and a cry of 'A laugh for the Dissenters' so tickled the fancy of the young men, that a very gentle cachination, which at first followed the cry, soon became so infectious that it swelled into a general roar, which did not subside for more than two minutes. 'O'Connell and his tail' were next proposed, and the groans were loud and discordant. 'Repeal' followed, and produced no impression, but 'Repale' was succeeded by a hearty laugh. The cue once given, others were not slow to take it up, and 'the rint,' in connexion with O'Connell's name, was most particularly well groaned for. I thought of others who had better reason to groan. 'Lord Grey's disinterested relations in office' was no sooner shouted out than a general burst of laughter, followed by mingled hisses and groans, proclaimed that the opinion of the Oxonians was not in their favour. 'Mr. Sheil' was declared not to be worth a groan, as were two or three other persons in public life. Shortly afterwards a general move in the area indicated that some person of consequence was coming, and a cry of 'Hats off,' preceded the entrance of the Duke of Cumberland, attended by his aide-de-camp. He was long and loudly cheered, and it was not till he had taken his seat that the undergraduates resumed theirs. 'Three cheers for the ladies' were given with great enthusiasm, so much so that the gownsmen seemed to forget that there was such a thing as arithmetic, and 'one cheer more' was split into fractions, making altogether a most puzzling whole. 'The graces in the gallery' were next loudly cheered, particularly by their neighbours. The same sentiment, but varied in form, 'The undergraduate ladies,' was received with mingled mirth and cheering."

The authorities on the subject of this 'glorious, gratifying, and truly useful ceremonial,' say that "the assembly at Oxford is no mob, but consists of well-educated persons." We entertain another opinion. It seems to us that the uproar when "twice was Lord Grey's name pronounced, and twice the groans and hisses became *perfectly frantic*"—the vociferations of "Stinkomalee" (a nick-name for the

* The reporter is infected with the *genius loci*, and cannot give a common quotation from Milton without a blunder.

London University, invented by a paper distinguished for its orthodoxy and obscenity)—the "Down with the Ministers"—the groans "for the House of Commons"—the "Laugh for the Dissenters" which swelled 'into a general roar'—are as much ebullitions of an intolerant, ignorant, and, we add without shrinking, *blackguard* "mob," as the huzzas and hisses of the lowest mob that was ever collected in 'Spafields;' and, we say it with real grief, we think such an exhibition of imbecile fury is likely, with most thinking, and reasonable, and just men, to injure the Church of England, precisely in the same way as the support of another blackguard mob, in the year 1792, did an injury to that Church, by associating its venerable name with the most ferocious attack upon the lives and properties of dissenters, that the bigotry of the worst laws had ever produced. The frantic groans of the theatre at Oxford, and the infuriating yells of the mad men who burnt Dr. Priestley's house at Birmingham, proceeded from one and the same cause—ignorance. Education has destroyed this furious spirit amongst those who are called the lower orders;—education—the education which teaches public and private duties, respect for the rights of others, courtesy to all men—has not yet touched the great body of Oxford students—the gentlemen *par excellence*, the 'educated men' who are "under God, the hope of the next generation."

Alas! for the next generation, if it had no other hope. Its best hope is, that the spirit of sound instruction will gradually spread through the land, and that its light may at last penetrate even the chinks and crannies of the monastic walls of Oxford. It is impossible that it can long continue that the felon boys of Newgate and the patrician boys of Eton should be the only flogged boys in the land;—it is impossible that it can ever again occur that several thousands of young men, so brought up under the guidance of brute force, should for three days, under the guidance of their own unreasoning passions, yell out insults to large classes of their fellow subjects—to the Ministers of the Crown—to the popular branch of the legislature, in the presence of a prince of the blood, an archbishop, and nine bishops, hereditary senators of all parties, and hundreds of that gentle sex who ought not to see the "human face divine" distorted by such fierce passions of hatred as appear to have animated these unfortunate boys. Unfortunate we call them, because even high birth and great expectations are no preservatives against the evils which must result from rejecting in early life that principle of self-respect which almost instinctively suggests the feelings and habits of gentlemen;—unfortunate we call them, because if to the vocation of the Christian ministry is to be carried that ferocious spirit of bigotry which these young men manifested (and the great part have acted thus because they look upon the Church as their *freehold inheritance*), they will find their ship embarked on a perilous sea, and learn, to their discomfiture, that the "spirit of the age" will exact something more from the parish priest or the collegiate dignitary, than the capacity for obtaining preferment and the aptitude for faring sumptuously every day. We make these remarks in the spirit of affection for the Church. We know that it contains, and that too amongst its hierarchy, many of the most upright and able men in the land, who would scorn to utter one word of contempt against conscientious dissent—who show to all men, that the first duty of a Christian minister is to exhibit Christian charity, in the highest and most enlarged sense of the term. Such men were not stimulating the howlings at Oxford. May their example so infuse itself into the general body of the ministry of the Church of England, that they will see the necessity of building the future security of that church upon their own virtues and acquirements. Her great support is the immortal reputation of the many glorious men that have been her champions, and the champions of civil and religious freedom. Her rotten foundations are those institutions which cherish habits of thought, that have no sympathy with the great bulk of the people, and foster prejudices and party-feelings which are disgusting enough in laymen, but most disgusting in those who profess to be dedicated to the service of the religion of peace.

STATE OF THE SILK-TRADE.

DURING the last month the subject of alleged distress in certain branches of the silk manufacture has been brought before both Houses of Parliament; in the Upper House by Lord Strangford, and in the Commons by Mr. H. Bulwer, one of the members for Coventry. The motion made in the Lords was for a committee of inquiry into the allegations of a petition presented by certain silk-weavers, setting forth their distress, and praying for measures of relief, while the debate was raised in the Commons upon a motion for leave to introduce a bill for *prohibiting* the importation of foreign manufactured ribbons. The questions in both cases have been negatived, in the Lords without a division, and in the Commons by so large a majority, that it does not appear likely any similar proposition will be soon again brought forward in that house. Under these circumstances, we might be well content to leave the matter without comment of ours, but that we think the occasion a good one to show how utterly groundless are the arguments of those persons who are accustomed to declaim against the more liberal system of trade which has of late years become part of our national policy, and which, it would not be difficult to show, has in every case in which it has been allowed a trial, triumphantly borne out the predictions of its advocates.

We remember, at the time when Mr. Huskisson first proposed to throw down some of the barriers which had been raised with the view of protecting the silk manufacture of this country, and without which barriers it was declared impossible that this branch of industry could be continued among us, that Mr. Baring, who at that time sat as the member for Taunton, an important seat of the manufacture, declared in Parliament that the silk trade was "a doomed trade"—that when once the competition of foreign manufacturers was admitted, our capitalists and artisans would find it altogether impossible to stand against the competition; that ruin the most signal and complete must overtake them.

Ten years have elapsed since this prediction was so confidently uttered, a sufficiently long period certainly, wherein to judge of its correctness; and now, how stands the fact? By submitting it to the test of a few arithmetical figures, which are not capable, like figures of speech, of being turned and twisted to answer different purposes at different times, it will be seen that the prediction has not only signally failed of its accomplishment, but that the growth and proportional increase of the manufacture has been great beyond all expectation or precedent.

The quantities of raw and thrown silk imported for use into the United Kingdom in each of the ten years preceding the alteration of the system were as follows:—

1814	.	2,119,974 lbs.
1815	.	1,475,389 ,
1816	.	1,088,334 ,
1817	.	1,686,659 „
1818	.	1,922,987 „
1819	.	1,848,553 „
1820	.	2,027,635 „
1821	.	2,329,808 „
1822	.	2,441,563 „
1823	.	2,468,121 „
		19,409,023, or yearly aver. 1,940,902 lbs.

The quantities used in the ten years that have followed the change have been—

1824	.	4,011,048 lbs.
1825	.	3,604,058 „
1826	.	2,253,513 „
1827	.	4,213,153 „
1828	.	4,547,812 ,
1829	.	2,892,201 „
1830	.	4,693,517 „
1831	.	4,312,330 „
1832	.	4,373,247 „
1833	.	4,684,499 „
		39,585,378, or yearly aver. 3,958,537 lbs.

Showing an increase of more than 100 per cent., if we take the average of the years, and proving that the growth of the manufacture has been both steady and progressive in the face of that foreign competition before which it was declared incapable of standing for a day. If, at the period when that prediction was uttered, any one had foretold the degree of prosperity which has been here proved, he might have been considered extravagant even by the most sanguine friends to the liberal system; but if, in addition, he

had predicted that which is now a fact of daily occurrence, that silk manufactured goods, the produce of the looms of Manchester and Macclesfield, are actually exported to France to be used in that country, he would have been considered entitled to a habitation in Bethlehem hospital.

It is true, and for the silk manufacturers themselves it is a fortunate truth, that in return we import largely the produce of the looms of France. Without this stimulus to the ingenuity of our artisans, they might to this time have continued satisfied with the inferior fabrics which alone they produced up to the period when the foreigner was allowed to bring his skill and taste openly into competition with them. But what, after all, is the amount of silk goods which the alteration of the law has caused to enter our ports from Europe? Our readers will, we think, be somewhat surprised to learn, that, compared with the quantity of raw silk woven by us at home, it has amounted, upon a liberal computation, to less than four per cent.—that is, for every four yards of French manufactured silks, of all descriptions, brought for use to this country, one hundred yards are used of domestic fabric.

In every article of plain manufacture, and of what are called heavy goods, we have nothing to apprehend from the free competition of our neighbours. It is only in light and fancy articles that their productions are preferred; and for this preference there are quite sufficient reasons to be given. In the first place, the proportion of labour bestowed upon such goods is proportionally greater, with reference to their value, than where a larger quantity of material is used Labour is unquestionably cheaper in France than with us, owing to the smaller cost of provisions, and the fewer comforts to which the French artisans are accustomed. Simond, the intelligent Swiss traveller, has described the poverty of the silk-weavers of Lyons as being far more abject than anything to which our own artisans are accustomed. He tells us that their abodes are wretched in the extreme; one room, generally not larger than twenty feet square, not unfrequently serving every purpose both as a dwelling and workshop, for three entire families, containing, consequently, their looms, their beds, and all the few articles they possess for domestic purposes. But the French manufacturer is entitled to a preference for his fancy goods as a reward for the superior taste and ingenuity displayed by him in the invention of patterns, and the combination of colours.

We have, in another article in the present Number, given an account of the great school of art at Lyons, at which numerous pupils are constantly receiving gratuitous instruction in the different departments of drawing, with a view to the employment of their attainments in the manufacture of silks. We have nothing of this description in England, and until we have, and until time shall have been allowed for the production of its good effects in rearing up a new class of artisans, it will be hopeless to expect to rival our neighbours in that branch of the manufacture. There is, assuredly, no want of public spirit on the part of our leading manufacturers, and we do not despair of shortly seeing an honourable rivalry to the schools of Lyons instituted by them in more than one of the seats of our silk manufactures. Some attention to this subject has already been given by the cotton-printers of Lancashire; and everybody must have observed the superiority of the patterns produced by them now, over the comparatively rude conceptions which they were formerly accustomed to put forth. But whatever is done in this way has hitherto been confined to the instruction of youths within the walls of individual factories—a far different thing from the establishment of schools under public sanction, and having the advantage of professors who have acquired a public reputation.

Notwithstanding the incontrovertible facts we have brought forward as to the prodigious and continuing growth of our silk manufacture, it may still be very naturally imagined that complaints would not be made by any considerable class of persons without some foundation. That distress is felt by the petitioning weavers of Coventry we will not deny. They may be, they doubtless are, without that full employment, and those remunerating wages, which every right feeling man would wish them to enjoy; but we are convinced, by all the inquiry we can make, and by an examination of the evidence adduced before the committee on the state of the silk trade, which made its report in 1832, and that on the state of manufactures, commerce, and shipping, which sat in 1833, that this unfortunate state of things is in a great degree owing to the want of judgment shown by the workmen in resisting the introduction of improved machinery, by which course their trade has been carried to other places, and among other workmen, who have not suffered their unwise prejudices to impede that march of improvement, in furthering which, our artisans are, of all classes in the community, the most deeply interested. It was with feelings of no little pleasure that we lately read an advertisement put forth by the operative silk-weavers of the town of Nuneaton, in which they candidly acknowledge having committed this error, and express their anxious wish for the introduction, by the master manufacturers, of those improved machines, the use of which, in ignorance of their true interests, they had before resisted.

POOR LAWS AMENDMENT BILL.

An abstract of the provisions of this great measure, as originally brought forward, was given in the 'Companion to the Newspaper' for May. The bill has now come out of committee in the House of Commons, where it has been discussed clause by clause; and we shall state the several modifications it has received in the course of this ordeal.

In the clause regulating the appointment and powers of the commissioners, the duration of the commission has been limited to five years; a proviso has been inserted, that no member of parliament shall be a commissioner or assistant commissioner; the distance from which witnesses may be summoned has been confined to ten miles; and the power to commit for contempt has been struck out. Contempt is now made punishable by fine only, and on conviction before two magistrates. The clause which enabled the commissioners to act as justices of peace has also been omitted.

The commissioners were originally empowered to order any sum not exceeding one-tenth of the annual rates of any parish to be expended in enlarging workhouses. It is now provided, that the sum ordered to be so expended shall not, in the case of any parish, exceed 50*l.* in the year. Of course, vestries may of themselves allow any larger sum they please.

As to another very important point, a discretionary power has been given to the commissioners with which they were not entrusted in the first draught of the bill. Instead of the original peremptory enactment, that the allowance system should cease universally on the 1st of June next, the commissioners are now authorized to sanction its continuance in such places, for such times, and on such conditions, as they may think expedient. The object contemplated is still the abolition of out-of-door allowance, and that as speedily as it can be safely and conveniently accomplished; but it has been thought better to make provision in this manner for any cases in which strong reasons may exist for suspending for a short time the introduction of the new system.

Certain alterations have also been made in regard to the powers of rate-payers and vestries. Both occupiers and owners were originally to have additional votes up to the number of six, in proportion to the value of the property for which they were assessed; that advantage is now given to owners only. Owners are, besides, permitted to vote by proxy. It was at first proposed that parishes should be restricted from adopting either Gilbert's Act, or Sturges Bourne's Act, or Hobhouse's Act, without consent of the commissioners;—such consent is now made necessary only for the adoption of Gilbert's Act.

The clause which restricted overseers from giving relief in any case, except under the direction and control, or in pursuance of the order, of the parish guardians or select vestry, has been qualified by the introduction of words permitting and requiring the overseers, in cases of urgent necessity, to afford such temporary relief in food or medicine as the case may require, and that whether the applicant for assistance belong to the parish or not. The age of twelve, instead of sixteen, as at first proposed, is now appointed as that at which paupers may receive relief in their own names.

An important clause has been introduced to the effect, that in the case of all property the rent of which is under 10*l.*, the owner of the property, and not the occupier, shall be assessed.

As the bill was originally drawn out, the different modes of acquiring a settlement by hiring, service, apprenticeship, renting or purchasing a tenement or estate, serving an

office, or paying rates, were abolished; and a settlement was left to be acquired only by birth, parentage, or marriage. As the bill now stands, settlement by birth is not substituted for settlement by hiring, service, or apprenticeship; but the right by renting or purchasing a tenement is left untouched, except that rating in addition to renting is made requisite; so that if a child hereafter born do not acquire a settlement in the last-mentioned mode, its settlement will be the settlement of its parents.

There is every reason to believe that under the new system it will become extremely unimportant upon what particular principle the law of settlement may be arranged. The following observations, which we have been permitted to extract from a report by Mr. Chadwick, not yet printed, place this point in a clear light:—

"It appears, from the evidence which I have been enabled to collect on this subject, that labour circulates in the greatest quantity in the immediate neighbourhood of the labourer, so that the circulation from any given spot diminishes as the distance from that spot increases. The greatest circulation appears to be within the compass of a moderate day's journey. From some returns which I have obtained from five of the larger parishes in the metropolis, it appears, that of 12,785 cases of removals which were made during five years, only 1426 cases were removals from those parishes to places beyond a limit of twelve miles from Saint Paul's Cathedral; so that there is only about one case out of nine removed from these parishes to any part of the kingdom beyond the limit of twelve miles. Subsequently to these returns having been obtained, well-informed witnesses have stated, that had a circle of double the extent been taken for the inquiry, the proportion of those removed beyond that limit would have been found to be so small as to be of little comparative importance. Evidence of this kind appears to be the most conclusive from the metropolis, inasmuch as there is probably no other district where the supply of labour is derived from such great distances. It is usually found in the rural districts, that not more than one-fourth of the cases of removals arising amongst the parishes comprehended by the comparatively narrow boundaries of the incorporations are cases of removals to parishes beyond those boundaries.

"If for the narrow and capricious boundaries afforded by parishes, districts of the size of those to which we have alluded could be substituted, nearly at least three parts out of four, or in the case of the large districts nearly eight parts out of nine of the evils arising from settlement would be removed.

"I would further submit, that, by the extension of districts, the object of the law of settlement in preventing any district being suddenly, by design or accident, unduly burthened will be best obtained.

"The progress of the arts and manufactures leads to the aggregation of large bodies of labourers in particular employments in small localities, for the purpose of division of labour and united action. In the same progress, and especially in the manufactures dependent on fashion, the demand for labour is liable to extreme fluctuations. Particular manufactures leave one part of the country and are established in another; some branches expire, whilst new ones spring up. We have seen that the present administration of the poor laws, and in some degree the state of the law itself, frequently operate mischievously, by indisposing workmen to follow into new districts the demand for employment, and by weakening the motives to seek new employments when old ones have ceased. The subdivision of the country into small districts or parishes has occasioned very serious burthens to be thrown upon parishes where the manufactures which are subject to these fluctuations have been located. We find in various parts of the country parishes which ascribe their present burthens to the fact of manufacturers having once existed and failed there, and left their workpeople and their descendants to be paupers. The township of Winlaton, in the county of Durham, affords an instance of these complaints:—'This township,' says Mr. Wilson, 'has felt, with more than ordinary severity, the effects of a system which imposes on every narrow locality the support of its population under every change of circumstances. The failure of Crowley, Millington, and Co.'s ironworks, in 1815, not only threw great number of hands out of employment, but annihilated a benefit-fund, which the workmen had entrusted to the care of their employers for a long series of years. The consequence was, that the poor's rate instantly rose in Winlaton township to 16*s.* in the pound upon the rack rent, while in the five other townships which compose the parish of Ryton, they remained at 2*s.* or 3*s.* They have continued higher in Winlaton ever since, than in the other townships.'

"Mr. Mozley, who has paid great attention to the amendment of the poor laws, states, in a communication on the subject—'Agriculturists are cruelly used: a village happens to have a fine stream of water running through it; a set of adventurers build a large mill; hundreds of apprentices are taken; the concern becomes in a few years bankrupt, and the farmers, who had no interest in its prosperity, are *ruined* by its adversity: they are drawn into the vortex. Four years ago, I was about purchasing an estate six miles from Derby. I consulted a friend, who said "the cotton-mills in the parish are an insuperable objection: they are now occupied by men of immense fortune, but should *they* take themselves out of business, *other* hands might become bankrupts, and then what will the land be worth?" Thus a fine stream, which constitutes the beauty of the country, becomes a dreadful evil.'

"It must be obvious, that in these cases it cannot be prevented by any alteration in the grounds of settlement. If birth, marriage, and parentage were the only remaining forms of settlement, the existing localities would still be exposed to such calamities. In a large proportion of the instances adverted to, the parishes are burthened with the pauper descendants of the work-people of a past generation.

"Besides these accidental burthens, arising from causes which must increase with the progress of manufactures, we have seen that parishes are liable to sudden increases of paupers by fraud.

"The frauds to which the agricultural parishes are subject, have been already described. Instances of similar practices on the part of the manufacturers are comparatively few; but we cannot hope that so obvious a source of profit will long be overlooked. If the present system continues, we may expect to see manufactories erected on one side of a parochial boundary, and cottages for the work-people on the other; so that all the casualties to which the labourers are subject, and the great casualty of the failure of the manufactory, may fall exclusively on that parish in which the master manufacturer owns perhaps nothing but the three or four acres which he has covered with his cottages. In the larger parishes such shiftings of burthens do not take place, and the reason is, that the diminution of burthen to be obtained by such means in parishes of considerable population, being shared by a number, the saving to any *individual* would be too small to constitute a motive to make the requisite arrangements. The employer of labourers in a single parish might, for example, by making arrangements to prevent their gaining settlements, save himself fifty pounds a year; but if his parish be incorporated with fifty others, in which the future burthens are equalized, the saving reduced to one-fiftieth part would not repay him for the labour and attention. The utmost reduction which the largest manufacturer, or the most considerable employer of labourers could make in such parishes as Manchester, Liverpool, or Mary-le-bone, by any arrangements as to the settlement of his labourers, could scarcely be worth his exertions.

"Witnesses who have had long experience in parochial affairs have stated, to me that the removals to and from large districts, on an average of a few years, balance each other more closely than the scanty returns which we have obtained on the subject appear to indicate, and we anticipate a considerable diminution. In proportion as there is an approximation to uniformity of management, the motives, on the part of paupers, to shift from a parish where there may be rigid management, or 'a bad parish,' to a parish where there is profuse management, or 'a good parish,' will decrease. In proportion as there is an approximation to the main object of the change as regards able-bodied paupers, *i. e.*, rendering their condition less eligible on the whole, than that of the independent labourer, it is proved by all existing experience, that such labourers will cease to avail themselves of any settlement whatever, whether immediate or distant.

"Mr. Thomas Langley, out-door inspector of the parish of Mary-le-bone, was asked, what effect regulations upon the principle last mentioned, would have upon removals and the general operation of the law of settlement? He states in answer—

"I think the law of settlement would then be of very little consequence. Where a pauper has a doubtful settlement, it is now our practice to offer him labour, or to take him into the workhouse, as an experiment. We even take families in, and we now, under all our disadvantages, get rid of three out of four such cases. If we were under such regulations as would make a pauper's condition, whether in or out of the workhouse, not so good as the condition of a hard-working labourer of the lowest class, the experiment being much cheaper, we should naturally resort to it more frequently. In fact, if such regulations were established, I think we should very seldom incur the expense and trouble, or the risks, of a removal in any case.

"'Would the law of settlement remain then of any consequence in any case?—I do not know that it would; I cannot see that it would. I think that if such regulations were adopted as those mentioned, the labourers would become more provident, and that their habits would be greatly improved.'

"If, after these measures have been carried into practical operation, it should be found that the removals beyond the limits of the new districts nearly balance each other, settlements might, without danger or loss to any district, be extinguished, and the indigent obtain relief in whatever district they needed it."

The only other alteration which requires to be noticed, is that which has been made in the part of the measure relating to bastardy. The original proposition, it will be recollected, was, that the putative father of an illegitimate child should no longer be subject either to any punishment or to any liability to maintain the child, but that its maintenance should fall upon the mother in the first instance, and after her upon her parents. The clause making the parents of the mother liable was withdrawn without any debate; and probably there will be little difference of opinion as to the expediency of this amendment. Another alteration, however, which was afterwards made, is of a more questionable description. On Saturday last, the Committee, by a majority of 114 to 39, adopted a clause proposed by Mr. Miles, which, by partially restoring the liability of the putative father of an illegitimate child to be pursued for its maintenance, and moreover sanctioning the conviction of the father on the mother's oath, may be considered to run counter to the fundamental principles upon which this part of the bill was originally founded. This is by far the most serious mutilation that the measure has undergone; and the point, as Lord Althorp confessed, has been yielded to clamour rather than to reason. The new clause enacts, that when any illegitimate child shall have become chargeable, it shall be received with its mother into the workhouse, upon which it shall be lawful for two Justices of the Peace, on the application of the overseers, to ascertain who the father of the child is upon the oath of the mother and such additional evidence as they may think fit to require, and then to require the father to pay all expenses already incurred and such additional sum weekly as shall be equal to the cost of maintaining the child. If he refuse or neglect to make payment, the arrears may be levied upon his estate or effects, or his wages may be attached; and should the money not be recovered by any of these means, he may be sent, for three months, to the House of Correction, there to be kept to hard labour. The weekly payments, however, are not to be given to the mother, but are to be received wholly for the use and benefit of the parish. We fear that, notwithstanding the qualifications by which the clause is guarded, it will tend to perpetuate many of the worst evils of the existing system, productive as that system has been proved to be of perjury, injustice, and profligacy.

SERVIA.

This country, which is far from insignificant in resources and extent, has very seldom been visited by the traveller. Like Bosnia, and other of the back provinces of European Turkey, its condition, the character of its inhabitants, and their modes of political existence, have been almost entirely overlooked. These provinces lie out of the high-road of civilized intercourse; and the fierce predatory habits of their mountaineers, and the absence of roads, have deterred strangers from exploring them. Now and then a courier or a merchant from Constantinople has made his way in a hurry across Servia, by Semlin and Belgrade, and so on to Vienna; but he has seldom seen more than a strip of these countries. Taken collectively, however, the great tract, extending from the Adriatic to the Black Sea—and which forms the back ground alike of the new Greek kingdom and of the Turkish dominions in Europe—is one of very great importance, and probably destined some day to form an Illyrian or Sclavonic kingdom. The population, whether called Albanians, Bosniaks, or Servians, are all of the Sclavonic race,—brave, hardy, and devotedly attached to their independence. Indeed, they have never properly been subdued since their first settlement in the seventh century. Though Russia, if unopposed by other powers, might drive the Turks into Asia with little difficulty, we are convinced it would take a long time, and cost her enormous sacrifices, to establish her sway over the whole of what is nominally European Turkey. With her usual art, she has, however, long kept her eye on Servia, aiding that province in all its insurrections against the Turks; and, at every treaty of Peace with the Porte, inserting clauses favourable to the Servians, and calculated to win their gratitude and affection to herself. By the last treaties of Adrianople and Hounkiar-iskellesi, the independence of Servia was acknowledged by the Sultan, the government was left in the hands of Milosch, a native prince, and the Emperor Nicholas was recognised as Protector of the Servians—a Christian people after a fashion.

Through the kindness of a friend, in the quickness and justice of whose observations we have great confidence, we are enabled to lay before our readers some very interesting and recent information. This gentleman passed through Servia on his way from Constantinople to London, during the winter of 1833-4.

The first town he reached, after crossing the Servian frontier, was Parakin, which he describes as rather a large place, furnished with Bazaars. The people, he says, were armed and dressed in the style of the Mussulman Albanians, with a strong cast of the features of that race, and a stern, independent look, that strongly contrasted with the tameness of the Bulgarians, and other rayah, or non-Turkish subjects of the Sultan.

"There was no mistaking the men we now saw, as being the lords of the soil; and the recent acknowledgment of their independence by the Porte had, no doubt, given considerable animation to their national pride. Our landlord, on the preceding evening—a respectable, intelligent Greek, settled for some years in the country—talked of the new government under the native prince Milosch with evident satisfaction, describing the people as naturally turbulent and marauders, but restrained by him so thoroughly, that a woman loaded with gold might travel in safety on the high road we were now passing. We made allowance for some exaggeration; but after getting a few hundred yards beyond the town of Morava Kurpris, where there is a long wooden bridge across the Morava, we had palpable proofs of the truth of part of his description. Stretched on a wheel suspended to a post on which they had been impaled, were the withered carcases of several robbers executed two years before, on the very spot where their crimes had been committed. There were more villages and signs of cultivation than in the Turkish districts we had passed; but the greater part of the surface of the soil was waste, and seemed to offer little encouragement for clearing and cultivation."

The traveller went on by Jagodina to Gregojovatz, the residence of Prince Milosch. The day he arrived at the latter town happened to be the festival of St. Nicholas, the prince's patron saint, and he found the Servians celebrating it with great rejoicings and feastings at the prince's castle. He then says,—

"Our host at Pattarina, the subsequent stage, who spoke Greek and Turkish, and in very loyal terms of the hospodar, or prince, yet assured us that, with all his authority and severity, his countrymen were still committing assassinations and other disorders among themselves. This was more unfavourable than our previous account; but we saw no signs whatever of their turbulence, and had heard of no injury done to strangers, of late years, in passing through their country. The Servians are, however, but rough Christians at best, and shew that Christianity, which must precede true civilization, requires also its aid to bear any fruits of its genuine spirit. Thus the European Turks are, for the most part, further advanced in the moral scale for intelligence, manners, and humanity

of disposition than the Servians, and probably the latter are somewhat indebted to the former for the example of subordination and respect for their superiors, which now makes them submit to the sway of Milosch. On the other hand, the calamities they suffered, and their successive struggles with the Turks, tended to keep up a restless martial spirit, opposed to moral improvement, and time may soften their rugged character. Meeting everywhere as we passed, the same suspicious looks of fierce half-civilized people, armed alike to assail or to repel aggression, it was rather surprising that there was so little public display of acts of violence. We met with some Turks likewise armed, but with dejected looks, returning from Belgrade, and quitting a country where they had hitherto resided, but were no longer masters. It was more pleasing to turn to a view of nature, and observe how many cultivated and cheerful spots the industry of the natives—superior in that respect to the Turks—had conquered, in these parts, from the thick forests which overspread their soil.

"The villages, which improved in neatness and substantial dwellings as we advanced towards the Danube, are often remote from the roads, and discernible only by the smoke ascending from them. This, we found, was owing, in some cases, to the dangers and persecutions to which they were formerly exposed from the Turks, which made them prefer the more remote places for concealment, or facility of escape. The roads are wide, and in the dry season afford good travelling; but now, in winter, they were one mass of deep, black mud, strewed with stumps and branches of trees, against which the horses stumbled, sinking at every step to the knees incessantly for hours. It was only within a few years that this road had been improved by Milosch, and become the usual route for the post and travellers between Constantinople and Vienna. From its inconvenience and insecurity owing to the lawless state of the country, they were previously obliged to make a detour by way of Bukarest and Hermanstadt, or Ulidin and Orshova, through Bulgaria, occasioning several days' longer journey."

Our friend thus speaks of Belgrade, that city so celebrated in the annals of the warfare between Ottomans and Christians, and now the last stronghold of the Turks in Servia:—

"A Pacha commands in the Castle of Belgrade, with a few hundred soldiers only for a garrison. The outer walls are naked and neglected, but the upper fortifications are maintained in good order, with the guns mounted, though insufficiently manned for defence. The situation and appearance of the place fully justified the imputations that might be entertained of a fortress long the bulwark of Hungary against the Turks, and of the latter, in return, against the House of Austria. Defences rise within defences, and walls over walls, to the very summit of the hill, from the level of the waters of the Danube and Saave, which unite at its base. From the river it might be deemed impregnable; but the approaches by land, though powerfully guarded by nature and art, were unable to withstand the genius and valour of England. As Belgrade now remains isolated from the rest of the territory under the Sultan's direct sway, and in charge of such a trifling force, it is of no value to him unless deemed of too much consequence to be yielded to the Servians, a notion which is understood not to be disagreeable to Austria. The few Turkish residents and soldiers are under the jurisdiction of their own Pacha: the rest of the population—a mixture of Servians and Sclavonians from the adjoining Austrian territory, with some other strangers—have for some time enjoyed the privilege of being governed by their own laws. Milosch had never yet entered the town till the time we were performing quarantine at Semlin, when he had an interview with the Pacha in the castle, and received the right of collecting the customs of the port, hitherto enjoyed by the Turks, and now ceded in consideration of the annual tribute of 40,000 ducats, agreed to be paid by Servia to the Porte. This falls very light on the population, their numbers, formerly estimated at 600,000, being, by an extensive addition of territory on the side of Bulgaria, now increased to near 1,000,000. The accession of territory was obtained under the auspices of Russia, by which power the basis of Servian independence was stipulated at the peace of Adrianople, though the terms have but now been adjusted. With the condition of the tribute already mentioned, the country is exempt from Turkish jurisdiction."

The whole of the conclusion of our friend's communication is especially deserving of attention.

"The government is absolute in the hands of Milosch, and conducted, without expense, through the medium of the principal inhabitants of each town or village for local objects. He has a few hundred men as guards about his person, and maintains no costly establishments. There is no military force to pay, as the whole population is armed, and it is computed that, on a general call for their services, he could collect from forty to fifty thousand men in a few days. Although this constant use of arms is opposed to internal peace and the progress of civilization, it is Milosch's policy, in accordance with the disposition of the people, to be prepared, in case of danger, to defend universally their independence. They can have little to fear from the Porte, against which, besides, they have the protection of Russia, but they are viewed with jealousy by Austria. They adjoin her territory on the Saave and Danube, and, in the event of any assault on the Ottoman empire, it is believed that Austria would look to the acquisition of Servia, Bosnia, and Albania for indemnity against the aggrandizement of Russia. The Servians are good marksmen, not deficient in courage, and a united people in religion, which is that of the Greek church. The population of the neighbouring province of Bosnia is more numerous, but composed of a mixture of Catholic and Greek Christians and Mahommedans,—the latter of course the oppressors of the rest, and possessing the chief power. There is, therefore, no chance of amalgamation or mutual union; and the Bulgarians, though of the Greek church, and a hardy race, are quite untrained to arms, and unimbued with warlike habits, having, for ages, remained in quiet submission to the Turks. Their dull apathetic disposition is utterly opposed to any views or exertions for independence. The Wallachians and Moldavians are of a still more servile cast, and thus the notion of a confederacy in their northern provinces, to check the power of Russia, is a visionary theory, or highly improbable on consideration of facts. Any convulsion to call such a confederacy into existence would be much more likely to overthrow the nascent independence of Servia, which was achieved with such perseverance. Their great champion was Czerni George, as he is usually called in other countries, but in his own universally by the Turkish name of Carra Jorghi, which has the same signification of Black George. It is supposed that he was treacherously deprived of his asylum in Russia, and given up by that power to be put to death by the Turks; but another version of the facts, far more circumstantial, and corroborated by authentic testimony, would show the charge to be destitute of foundation. Carra Jorghi, tired of remaining inactive, was returning to Servia of his own accord. The Pacha of Belgrade got advice of his secret arrival in the confines, and sent notice to Milosch that he should make him answerable with his life unless he brought him Carra Jorghi's head; and Milosch, then the first among his countrymen, and perhaps unable to disobey, sent a party of stout fellows, who assailed Carra Jorghi near Semendria, and put him to death. Milosch himself had been one of his slaves. Originally a boy who looked after the pigs in the forest, he distinguished himself amidst the troubles of the country, and became one of the capitani, or leaders. On Carra Jorghi's expulsion and subsequent death, he remained the foremost, and managed to preserve his life and influence. He was always, however, very suspicious of the Turks, and never had even entered Belgrade, to avoid any danger from their individual resentment or the designs of the government. He has now passed his sixtieth year, with children grown up, but is of vigorous health and constitution, blunt and ordinary in his manners, but bold and decided in his character. He understands well the people he has to govern, and has the merit of being a universal favourite among them, and of being neither charged with ambition nor oppression. He is not averse to improvements, and has some officers with him fugitives from the Austrian service. He has a few companions near his person trained to regular exercise, but has not yet attempted to carry his military experiments further, either from the expense, or as deeming the innovation too dangerous. He is about removing his residence from Gregojevatz to Semendria, on the Danube, which he intends to make his capital as more convenient, and had already sent to England for plans for the erection of a palace.

"Servia is bounded on the north by the Danube and Saave, which separate it from the Austrian dominions; by Bosnia on the west; Bulgaria on the east; and it adjoins the Turkish territory of Nissa, the Sangiak of Sophia, and Albania, on the south. Its vicinity to the Danube, along which it extends longitudinally, gives it considerable facilities for commerce. Its chief resources for export are wool, skins, a spirit made of prunes, of which a great deal is sent to Hungary, and pigs, which are bred in the forests with very little care, and left to feed on the acorns. They are a diminutive species; a few short bristles arise from the back; the rest of the hair looks so curled and woolly, that an English traveller arriving at Constantinople is reported to have said there was nothing remarkable in that part of his journey but an odd sort of animal between a sheep and a pig. They are so numerous, however, and so easy to rear, that they form a great part of the Servians' wealth. Their country has already gained by the opening of the steam navigation on the Danube between Vienna and Semlin, and will still more when it is extended to Constantinople. British manufactures are little known amongst them, but there is an opening which may become important for their introduction, now limited to small supplies from Trieste through the Austrian territories. Their consumption in Austria is subject to a heavy duty, and Belgrade, where the duty is trifling, being the great place of transit to and from Servia, and opposite the quarantine station of Semlin, on the other side of the Saave, is a place of much superior commercial importance.

"The Austrians at Semlin have a strong dislike of the Servians, and reproach them with being indolent; but they are evidently on the increase, and, as they go on clearing their forests, so will their agriculture be extended, and their resources improved. Their language is a dialect of the Sclavonic, called Ruz, common, with the difference of some local idioms and phrases, to Austrian Sclavonia and Transylvania, and to the Bulgarians and Bosnians. They are quite a separate race from the Greeks, with whom they only hold a community of faith, and who officiate as their priests; but the service is in the ancient pure Sclavonic, which neither themselves nor their instructors often understand."

BUSINESS OF THE HOUSE OF COMMONS.

The following report and resolutions of the Business Committee were brought up and read in the House of Commons on the evening of June the 6th

1. Resolved, that it is the opinion of this Committee, that, with a view to promote the convenience of members, and to facilitate the despatch of private business, it is expedient that certain measures which, under the existing laws must be brought separately under the consideration of Parliament, should be provided for by general enactments, enabling parties interested therein to proceed to their accomplishment, without having constant reference to the special sanction of the legislature.

2. Resolved, that it is the opinion of this Committee, that, if possible, a general Inclosure Act should be passed, which may enable parties having an interest therein to inclose lands, subject to such provisions as may secure the rights of all concerned, without subjecting themselves to the heavy penalties which are now incurred.

3. Resolved, that it is the opinion of this Committee, that powers provided for paving, macadamizing, watering, draining and otherwise improving towns, cities and places, should be vested (under certain conditions and regulations) in the inhabitants, to be carried into effect without the necessity of appealing to parliament.

House of Commons.—New Members.

Place.	New Members.	In the room of
Edinburgh	Sir J. Campbell, Att.-Gen.	Rt. Hn. F. Jeffrey, judge.
Fermanagh	M. Archdall, Esq.	General Archdall, res.

There are vacancies in the counties of Wexford and Kirkcudbright, and the boroughs of Chatham, Elgin, and Finsbury.

ABSTRACTS OF PARLIAMENTARY PAPERS.

House of Commons.

Sittings of the House in the two last Sessions.—The following is the substance of two Returns on this subject, lately laid before the House. The Session 1831-1832 commenced on the 6th of December, 1831, and continued to the 16th of August, 1832. In this period the House sat on 140 days, in which its sittings occupied 1187 hours. A particular statement is given of the days on which the House sat, and the number of hours in each day. The following is an analysis of this statement.

| The House sitting at a time | | |

Poor-Rates.—Abstract of Returns, showing the Amount of Monies levied by Assessment for Poors'-Rate and County Rate, in each County in England and Wales, in the Year ending March 25, 1833; distinguishing the Payments made thereout for other purposes than the Relief of the Poor, and the Sums expended for that purpose, specifying the Rate of Increase or Diminution as compared with the preceding year; and stating the Number of Parishes in each County in which Select Vestries have been formed, or Assistant Overseers appointed, pursuant to Act 59 Geo. III. c. 12.

COUNTIES.	Total Sums levied.	Sums expended for Relief of the Poor.	Payments for other purposes than Relief of Poor.	Total Sums expended.	Increase per Cent.	Decrease per Cent.	Select Vestries.	Assistant Overseers.

N. B.—Several returns from the British plantations for the last year have not yet been received. The statement for 1832 is corrected from returns received since the last account was made up.

Brewers, Licensed Victuallers, &c.—The number of brewers in England, is 1814; in Scotland, 214; in Ireland, 231: total for the United Kingdom, 2259. The number of licensed victuallers in England, is 52,611; in Scotland, 17,378; in Ireland, not stated: total, 69,989. The number of persons licensed under the Act "to permit the general sale of beer by retail in the United Kingdom," is in England, 33,451; the number in Scotland and Ireland is not stated. The number of victuallers who brew their own beer in England, is 25,125, and in Scotland, 350: total, 25,475; the number in Ireland not stated. The number of bushels of malt used by brewers, is 14,499,283; in Scotland, 955,715; in Ireland, 1,683,285: total, 17,138,281. The number of bushels used by licensed victuallers in England, is 9,012,706; in Scotland, 130,154: total, 9,142,860. The number of bushels used by persons licensed for the general sale, who brew their own beer in England, is 3,284,984.—The Account for London is included in the above, but is thus stated separately also:—Brewers, 98; licensed

victuallers, 4,293; persons licensed for the general sale of beer, 1,112; victuallers who brew their own beer, 23; persons licensed for the general sale who brew their own beer, 135; bushels of malt used by brewers, 4,575,375; by licensed victuallers, 33,089; by persons licensed for the general sale, 167,670.

Beer Exported.—The following is an account of the total number of barrels of beer exported from the United Kingdom during the year 1833, distinguishing the countries to which they were sent:—Africa, 1,695¾; Madeira and the Azores, 85¾; East Indies, 29,256¾; West Indies, 18,407¾; British settlements in America, 2,225¼; United States, 3,195; South America, 4,280½; New South Wales, 11,441¾; Ports in the Mediterranean, 954¾; Guernsey and Jersey, 437¼; other parts of Europe, 9,107¼. Total number of barrels exported, 81,088; the drawback on which amounted to 20,272*l.*

Grain, Meal, and Flour, Imported, &c.—Abstract of an Account of the quantity of Grain of all sorts, Meal and Flour, stated in Quarters, Imported into Great Britain, in the year 1833, from foreign parts, showing also the quantity Imported from Ireland.

	Foreign and Colonial.	Irish.
Barley and Barley Meal	93,332	9,057
Beans	23,007	19,858
Indian Corn and Meal	120	1,162
Oats and Oatmeal	23,942	1,793,569
Pease	15,873	2,773
Rye and Rye Meal	3,369	—
Wheat and Wheat Flour	321,915	844,905
Buck Wheat	33	—
Bear, or Bigg	—	834
Malt	—	8,266
Totals	481,596	2,761,635

The following are the foreign countries and colonies from which the largest proportions of the above amount were obtained:—Prussia, 105,979 qrs. (chiefly wheat); Van Diemen's Land, 100,215 qrs. (wheat); Denmark, 70,533 qrs. (chiefly barley); Germany, 70,533 qrs. (chiefly wheat); Russia, 42,231 qrs. (chiefly wheat and oats); and from Guernsey, Jersey, Alderney, and Man, 33,879 qrs. (chiefly of wheat)

Prices—The average prices in Great Britain during the year were:—Barley, 27*s.* 6*d.* per quarter; Beans, 33*s.* 2*d.*; Oats, 18*s.* 5*d.*; Pease, 36*s.* 5*d.*; Rye, 32*s.* 11*d.*; Wheat, 52*s.* 11*d.*

Coals Exported.—The following are the quantities of large and small coal exported during the year 1833, distinguishing the countries to which they were sent:—Russia, 42,736 tons; Sweden, 8504; Norway, 3622; Denmark, 74,445; Prussia, 24,068; Germany, 69,896; Holland, 114,238; France, 45,218; Portugal, Azores and Madeira, 13,532; Spain and the Canaries, 1710; Gibraltar, 9994; Italy, 9997; Malta, 7031; Ionian Islands, 1049; Turkey and Continental Greece, 562; Morea and Greek Islands, 1174; Cape of Good Hope, 2954; other parts of Africa, 7423; East Indies and China, 8355; New South Wales, Van Diemen's Land, and Swan River, 15; British North America, 55,313; British West Indies, 46,142; Foreign West Indies, 1195; United States of America; Columbia, 20; Brazil, 1863; States of the Rio de la Plata, 868; Chili, 85; Peru, 121; Isles Guernsey, Jersey, Alderney and Man, 53,886. Total, 634,448 tons; the total amount of duties on which was 65,008*l.* Of the above quantity 233,709 tons were exported from Newcastle, and 176,487 from Sunderland.

Tobacco and Snuff Imported.—Abstract of an Account of the quantity of unmanufactured Tobacco, of manufactured Tobacco and Cigars, and of Snuffs imported into the United Kingdom, in the year 1833; with a statement of the quantity retained for home consumption, and the amount of duty paid thereon.

	Quantity Imported.	Retained for Home Consumption.	Amount of Duty.
	lbs.	lbs.	£
Unmanufactured tobacco	22,082,579	20,626,800	3,090,782
Manufactured tobacco and cigars	386,608	143,868	64,726
Snuffs	3,864	138	41
Totals	22,473,051	20,770,806	3,155,550

It appears from the same paper that 20,748,317 lbs. of the above quantity of unmanufactured tobacco was imported from the United States of America, and 219,576 lbs. of the manufactured tobacco and cigars. Of the snuff, 3631 lbs. are from the Cape of Good Hope

Copper Imported and Exported.—The quantities of copper imported into the United Kingdom, during the year 1833, were:—Unwrought, in bricks or pigs, rose copper and cast copper, 2474 cwts. Part wrought; viz., bars, rods, or ingots hammered or raised, 1281 cwts.; plates and coin, 16 cwts.; old, for re-manufacture, 559 cwts.; ore, 118,632 cwts.; copper manufactures, value, 3921*l.* Nearly all the unwrought and partly wrought copper came from Chili; nearly all the copper manufactures from France and Germany; and the principal quantities of copper ore were imported thus;—from Columbia, 61,745 cwts.; Cuba, 24,880 cwts.; and Sweden, 15,798 cwts. *Exported British Copper:*—Unwrought, 47,887 cwts.; coin, 15 cwts.; sheets, nails, &c., 91,366 cwts.; wire, 16 cwts.; wrought copper of other sorts, 16947 cwts. Total of British copper, 156,233 cwts. Copper smelted in the United Kingdom from foreign ore, exported unwrought, 32,493 cwts. *Foreign Copper Exported:*—Unwrought, 2039 cwts.; old, fit only for re-manufacture, 383 cwts.; partly wrought, 1278 cwts.; ore, 15 cwts., manufactures valued at 167*l.* The following countries took the largest quantities of British copper:—Asia, 76,77¼ cwts.; United States of America, 30,684 cwts.; France, 18,116 cwts. France also took 18,275 cwts. of the copper smelted in this country from foreign ore.

Lead Imported and Exported.—The following is the account of the quantity of lead and lead ore imported into the United Kingdom in the year 1833:—Pig lead, 790 tons 7 cwts.; lead shot, 7 tons 10 cwts.; lead ore, 1592 tons 15 cwts; white lead, 8 tons 3 cwts. Total, 2,398 tons 16 cwts. Net amount of duty upon the quantities entered for home consumption, 121*l.* 1,580 tons were imported from the Isle of Man; 527 tons from Spain; 135 tons from the Hanseatic towns, and 109 tons from Gibraltar. *Exported:*—Pig and rolled lead, 9015 tons 3 cwts.; litharge, 587 tons 18 cwts.; red lead, 565 tons; white lead, 906 tons 15 cwts.; lead ore, 60 tons. Total of Britishh lead and lead ore, 11,145 tons. *Foreign Lead and Lead Ore Exported:*—Pig lead, 856 tons 10 cwt.; lead shot, 7 tons 10 cwt.; white lead, 3 tons 25 lbs. The chief exports of British lead and lead ore are, 2455 tons to the East Indies and China; 2357 tons to the United States of America; 1238 tons to Russia; 587 tons to Brazil, and 501 tons to British North America.

Tin Imported and Exported.—Imported:—From Holland, 2015 cwts.; Belgium, 3181 cwts.; East Indies, 1822 cwts.; Singapore, 26,105 cwts.; Java, 724 cwts.; China, 1274 cwts. Total, 35,124 cwts. *Exported*, 24,989 cwts. of British tin and 39,849 of foreign tin. The chief exports of British and foreign tin were as follows:—

	British Tin.	Foreign Tin.
	cwts.	cwts.
Russia	3,753	5,011
Holland	687	4,285
Belgium	42	15,745
France	8,986	1,554
Italy	3,087	5,388
Turkey	3,790	1,498
United States of America	1,177	3,569

STATISTICS, TRADE, &c.

French Revenue and Expenditure.—The following particulars are from a summary given by M. Dupin, the President of the Chamber of Deputies, during the debate of the 19th of May:—"The budget of *Expenditure* for 1835, which has been recently voted, amounts to a sum of 40,360,340*l.*, (or 1,009,008,531 francs,) and the budget connected with the Ministry of Commerce to 1,103,600*l.* (or 27,590,000 francs). Besides these amounts, votes have been made, under special enactments, to be appropriated to the wants of the years 1833, 1834, and 1835; for these provision must also be made; they form altogether a sum of 3,313,240*l.*, (or 82,831,199 francs,) and when added to the budget for 1835, constitute a total of 44,777,180*l.* (or 1,119,489,730 francs). The sum total of the *receipts* does not amount to more than 993,792,420 francs (or 39,751,690*l.*) The *deficit* is, therefore, 125,637,310 francs, or 5,025,490*l.*; and besides this, there exists a *floating debt* of 500,000,000 francs (or 20,000,000*l.*)." In the same debate, on a motion which was brought forward, but not carried, it was stated that the net produce of the extensive system of *lotteries* in France did not exceed 12,000,000 francs or 480,000*l.*

Trade of Russia with Foreign Parts.—In the ten years' interval, between 1824 and 1834, the *Importation* of foreign merchandize into Russia amounted to 1,951,844,619 roubles, (89,392,230*l.*,) which gives an average value of 8,939,223*l.* per annum. During the preceding ten years' interval it was 1,646,904,710 roubles (75,475,230*l.*) The average increase in the importations during the last ten years has therefore been 1,391,700*l.* per annum. The amount of *Exportations* between 1824 and 1834 was 2,307,399,005 roubles, (105,669,950*l.*,) or, on the average, 10,566,995 yearly, bring also an excess of 125,504,581 roubles (5,752,290*l.*) over the exportations of the preceding ten years, or an average annual increase of 575,229*l.* In the last ten years the excess of exportations over importations has, therefore, amounted in the whole to 16,277,729*l.*, which give a yearly average of 1,627,772*l.* The *Duties of Customs* between 1824 and 1834, so far as foreign merchandize is concerned, produced 673,339,401 roubles, or 30,861,370*l.*, and the excess in that

produce over the duties collected in the preceding interval (1814 to 1824) amounted to 277,213,113 roubles, or 12,705,650*l.*, which gives an increase of 70 per cent. In the last ten years also, 5000 vessels more arrived in the Russian ports in ballast, for the purpose of taking in Russian produce, than in the ten years preceding.—H.

Dutch Army.—The peace establishment of the Dutch army has been raised to 74,000 men, and may be increased in time of war to 124,000. The army is thus divided:—

Infantry.		
2 regiments of guards	3,400	
11 ——— the line	31,350	
1 battalion of royal chasseurs	1,000	
1 ——— the reserve	1,200	
36 battalions of communal guards	24,000	
5 ——— volunteers	2,000	
Garrison troops	800	
		63,750
Cavalry.		
3 regiments of cuirassiers	2,160	
2 ——— dragoons	1,200	
1 regiment of hussars	500	
1 ——— lancers	1,200	
		5,260
Artillery.		
Train and 'pontoniers' *	5,000	
Engineers	400	
		5,400
Grand total		74,410

Upon the war footing the infantry consists of 18 regiments, and the cavalry of 10.

The 11 regiments of infantry of the line preserved in time of peace, bear the numbers 2, 5, 7, 8, 9, 10, 12, 13, 14, 17 and 18; the numbers 1, 3, 4, 6, 11, 15 and 16 remain vacant, and are not preserved even in form. The regiments of cavalry maintained upon the peace establishment bear the numbers 1, 3, 4, 5, 6, 9 and 10; the numbers 2, 7 and 8 remaining vacant in the same manner as in the infantry.—*French Journal.*

Belgian Army.—The Belgian army, which is now perfectly organized, is composed, on the peace establishment, of 71,000 men, well disciplined, well maintained, well armed, and well equipped. This force is divided as follows:—

Infantry.		
10 regiments of the line	44,000	
3 ——— light infantry	7,000	
Foreign corps	1,000	
13 battalions of civic guards	8,000	
		60,400
Cavalry.		
1 regiment of cuirassiers	1,200	
2 ——— chasseurs	1,600	
2 ——— lancers	1,600	
		4,400
Artillery.		
14 batteries of field artillery, including 1 of horse artillery	3,000	
10 batteries of the civic guards, and 1 company of workmen	1,000	
Train of artillery	600	
		4,600
Engineers.		
5 companies of miners	800	
Miners and workmen of the maritime engineers	200	
		1,000
Troops not of the line		600
Grand total		74,000

Upon the war footing this force may be raised to from 90,000 to 100,000 men, comprehending the moveable civic guards. Belgium has sixteen fortified places, namely, Ath, Anvers, Ghent, Liege, Tournay, Marienbourg, Maestricht, Menin, Mons, Namur, Nieuport, Ostend, Philippine, Philippeville, Sas de Gend and Ypres.—*French Journal.*

Total from the commencement of the year, 502.

POLITICAL RETROSPECT FOR JUNE, 1834.

GREAT BRITAIN.

THE secession from the Government of the Earl of Ripon the Duke of Richmond, Mr. Stanley, and Sir James, Graham, in consequence, as stated at the close of our last retrospect, of a difference among the members of the Cabinet on the subject of Mr. Ward's proposed resolution as to the Irish Church, or, at least, on the most advisable mode of meeting that motion, led in the course of a few days to the following new arrangements. The place of Lord Privy Seal, resigned by the Earl of Ripon, has been conferred upon the Earl of Carlisle, who had before a seat in the Cabinet without any office. The Marquess of Conyngham has been appointed Postmaster-General, but without a seat in the Cabinet, in room of the Duke of Richmond. It is understood that this office was in the first instance offered to the Earl of Mulgrave. Mr. Spring Rice has succeeded Mr. Stanley as Secretary for the Colonies. Lord Auckland has been appointed First Lord of the Admiralty, in room of Sir James Graham. Mr. Ellice, the Secretary at War, has been taken into the Cabinet. Mr. Spring Rice has been succeeded as one of the Secretaries of the Treasury by Mr. Francis Baring. Lord Auckland's former office, of President of the Board of Trade, has been given to the former Vice-President, Mr. Poulett Thomson, whose place will not be filled up. Mr. Thomson, however, does not sit in the Cabinet. Finally, Mr. Abercromby has been appointed, with a seat in the Cabinet, to the place of Master of the Mint, also previously held by Lord Auckland.

We may likewise here mention that Mr. Jeffrey, promoted to the bench in Scotland, has been succeeded as Lord Advocate by Mr. J. A. Murray, member for Leith; that the seat, which has been for some time vacant at the Treasury Board, has been filled by the appointment of Captain Byng, the member for Chatham; and that Colonel Leith Hay has been appointed Clerk of the Ordnance, in room of Colonel Maberley, now a Commissioner of the Customs. Mr. Robert Grant, also, who has accepted the governorship of Bombay, has been succeeded as Judge-Advocate by Mr. Cutlar Fergusson, the member for Kirkcudbright.

Although the movements that have taken place amount only to a reconstruction of the Cabinet, and not to what can properly be called the substitution of a new ministry, since Lords Grey, Brougham, Lansdowne, Melbourne, Auckland, Althorp, John Russell, Palmerston, and Mr. Charles Grant, who before constituted about three-fourths of the Cabinet, still remain at the head of affairs; yet the political complexion of the Government has undoubtedly undergone a change from these events. The direction of the change is towards what is called liberalism; but it would be more difficult to say exactly how far it goes in that direction. The obvious measure of its amount would seem to be the difference between having in the Cabinet the four ministers who have retired, and having Mr. Abercromby and Mr. Ellice there. The other members, however, who retain their places, constitute so preponderating a majority, that with them must really rest the guidance of the State. Supposing them to be unanimous, their new colleagues can have little or no weight, except by following as they may lead.

In the mean time, both the votes of the House of Commons and other indications appear to show, in so far as they may be trusted, that the strength of the ministry is not less than it was before its late modification. In all the new elections that have since taken place, namely—at Edinburgh, at Leith, at Cambridge, and at Greenwich, the government candidates have been returned.

On the meeting of the House of Commons, pursuant to adjournment, on Monday the 2d of June, the debate on Mr. Ward's resolution was resumed, the Honourable Member having declined to accede to the request of Lord Althorp, that he would not press the motion. Lord Althorp stated, that since the subject had been brought before the House his Majesty had been advised to issue a lay commission, having power to visit all the parishes in Ireland, and to report upon the number of the members of different communions residing in each, as well as upon a great variety of other particulars calculated to exhibit a full view of the religious state of that country. When Mr. Ward declared his intention to persevere, his Lordship moved the previous question, which, after a protracted and warm debate, was carried by a majority of 396 to 120. On this occasion the conservatives, and the friends of Mr. Stanley, voted, with few exceptions, with the Ministry. The debate possessed great interest, from the explanations both of the Ministers who remained in office, and of Mr. Stanley, on behalf of himself and those who had acted with him. Mr. Stanley's speech was even more than usually vehement and powerful. Of the Ministers, Lord John Russell, Mr. Rice, Mr. Charles Grant, Lord Palmerston, and Mr. Ellice, as well as Lord Althorp, addressed the House. The speeches delivered by Mr. O'Connell and Sir Robert Peel also produced much sensation.

Before the House adjourned this evening, the Bill for repealing the Inhabited House Duty from the 5th of April last, was read a third time and passed.

On the following day, a motion brought forward by Mr. Buckingham, for a select committee to inquire into the extent, causes, and consequences of the vice of drunkenness among the labouring classes, was carried by a majority of 64 to 47. It is but fair to Mr. Buckingham, to state that he professed to look to the diffusion of education, as, after all, affording the only sure prospect of a remedy for the evil against which he purposed to legislate. The chief legislation which he contemplated, accordingly, he stated to be the foundation of district libraries, reading-rooms, museums, and other establishments for promoting the intellectual improvement of the people. A more direct and comprehensive effort to effect this object was made, after the above motion had been disposed of, by Mr. Roebuck, who moved for a select committee to inquire into the means of establishing a system of national education. After a short debate, in a thin House, the liveliest passage of which was an invective against the proposal delivered by Mr. Cobbett, the motion was withdrawn, and the House unanimously agreed to an amendment proposed by Lord Althorp, "That a Select Committee be appointed to inquire into the education of the people of England and Wales, and into the application and effects of the grants of last Session, for erecting school-houses, and also to consider the expediency of effecting further grants in aid of education." The appointment of this committee deserves to be considered as a great and valuable concession to the growing public opinion in favour of the establishment of a system of general education; and it can scarcely fail to lead to the practical recognition, at least to a certain extent, of the principles upon which that opinion is founded.

In the latter part of this evening another Select Committee was appointed, on the motion of Mr. Charles Grant, to inquire into the best means of promoting communication with India by steam. Now that this important subject has at length been taken up by the Government, it may be anticipated that effectual steps will be taken to carry into execution one or other of the schemes of steam navigation to the East Indies, which have been for some time before the public.

On the 4th, the Bill which had been sent down from the House of Lords, entitled the Labourers' Employment Bill, being substantially the same with one having the same

title which had been defeated last Session, was thrown out on the proposition that it should be read a second time, by a majority of 80 to 36. No other fate could be expected for so pernicious a measure, in an assembly which had received with so much favour the Poor Law Amendment Bill, to the whole spirit and principles of which the present attempt at legislation was diametrically opposed. The object of the Labourers' Employment Bill was to compel the rate-payers to give employment at a certain fixed rate of wages to all the labourers in the parish, who could not procure work in any other way, whether the said rate-payers required the labour thus forced upon them or not. Sir C. Burrell, who moved the second reading of the Bill, let out its true character and object when he said that it would prove a safety valve to the Poor Law scheme of the Government. It would have been a valve by means of which no small portion of the efficiency of that great reform would have escaped and been dissipated into air.

This evening the Bill brought in by Mr. Ewart, for allowing prisoners charged with felony to address the court and jury through their counsel, was read a second time without a division, though not without opposition from several Members. Various other Bills, most of which we shall have occasion to notice again, were also advanced a stage. And on the motion of Mr. Hume a select committee was appointed to consider the case of the suppression of Mr. Buckingham's paper, the Calcutta Journal, in 1823, by the Indian Government; and to report whether any, and what amount of, compensation should be awarded to Mr. Buckingham for his losses on that account.

On the 5th, Mr. Young's motion for leave to bring in a Bill to repeal the Reciprocity of Duties Act was negatived after a long debate, by a majority of 117 to 52. The statements and arguments of the Honourable mover were replied to in a very able speech by Mr. Poulett Thomson.

On Friday the 6th, and also, on Monday and Tuesday following, the House of Commons was engaged in considering the Poor-Law Amendment Bill in committee. The successive clauses have been for the most part carried by large majorities. The Bill only got through the committee on Saturday the 21st. On Monday an Address to his Majesty was agreed to, on the motion of Lord D. Stuart, praying that the sum of 10,000*l.* should be granted for the relief of the Polish Refugees now in this country.

On Wednesday the 11th, the third reading of the Religious Assemblies Bill was carried by a majority of 88 to 33. A motion by Mr. Maxwell for a select committee to inquire into the distress complained of in the petition of the Hand-Loom Weavers was also carried, notwithstanding the opposition of Mr. Poulett Thomson and Lord Palmerston, by a majority of 70 to 42. The Bill for the removal of the Civil Disabilities of the Jews was then read for the third time, after a short debate followed by a division in which the numbers were, 80 for, and 14 against the motion. This measure of reason and justice, however, has since been thrown out on the second reading in the House of Lords, by a majority of 130 to 38. This decision took place on the 23d, and was preceded by a debate of some length.

On the 12th, a resolution moved by Colonel Evans, for the discontinuance of the payments under what is called the Russian Dutch Loan, was met by Lord Palmerston with the previous question, and lost without a division. A motion by Mr. Wallace, for an Address to his Majesty, praying that the office of Postmaster-General might be put under the management of a board of commissioners, being opposed by Ministers, was withdrawn after a short debate. Lord Ebrington moved for the appointment of a select committee to inquire into the claims of British subjects for compensation from the government of Spain, on account of losses of property in 1804 and 1805; but the motion was resisted by Lord Althorp, and negatived on a division, by a majority of 62 to 28. The Attorney General then brought in the Bill for which he some time ago obtained leave, for abolishing imprisonment for debt, except in cases of fraud, and for otherwise amending the law of debtor and creditor. In concluding a speech in which he explained the leading provisions of the measure, he pledged himself to do his utmost to have it passed this Session.

Friday the 13th, and the following Monday, were chiefly occupied in the House of Commons by the further consideration of the Poor Law Amendment Bill, as were also some other days in the course of the week. On the 16th, in the House of Lords, after counsel had been heard against and in support of the Bill for Chartering the London and Westminster Bank, it was agreed that the opinion of the Judges should be taken as to whether the Bill is any infraction of existing statutes, before the consideration of it should be further proceeded in.

On the 17th, the House of Commons, on the motion of Sir Edward Codrington, agreed to address his Majesty for some pecuniary recompense to the officers and seamen who had been engaged in the battle of Navarino. The motion was at first resisted by Ministers, but the feeling of the House appearing to be in its favour, they withdrew their opposition.

This evening the subject of the distress of the Coventry riband-weavers was brought before the House of Lords by Lord Strangford, who moved that their petitions should be referred to a Select Committee. After a short debate, the motion was negatived without a division. On the 19th, the subject was discussed at greater length in the House of Commons, on a motion of Mr. H. Bulwer for leave to bring in a Bill to restore, in regard to this branch of the silk manufacture, the prohibitory system which had existed previous to 1826. On a division, the motion was negatived by a large majority,—the numbers being 22 for, and 122 against it.

In the earlier part of this day Sir Edward Knatchbull's Bill for the amendment of the Beer Act was discussed in Committee, and a long debate took place on an amendment, proposed by Mr. Warburton, for striking out that part of the first clause which prohibited beer being drank on the premises where it was sold. The amendment was eventually rejected by a majority of 141 to 23. The further discussion of the Bill was then postponed to the 9th of July. At the evening sitting, a resolution moved by Colonel Evans for the repeal of such clauses of the Reform Act as required the payment of rates and taxes, in order to the exercise of the elective franchise, occasioned a short debate, but was negatived, on a division, by a majority of 121 to 37.

On the 20th, an interesting discussion took place in the House of Lords, on a motion made by Lord Wharncliffe, for an address to the Crown, praying for the appointment of a Commission to inquire into the state of prisons. It was stated by Viscount Melbourne, in the course of the debate, that a gentleman had some time ago been sent out by the Government to the United States, to obtain information with regard to the state of prison discipline, and the result of the experiments which had been made in the application of secondary punishments, in that country. This gentleman had now returned to England, and his Lordship suggested that it would be better to defer the consideration of the subject until a report from him, which was in preparation, should be on the table of the House. Lord Wharncliffe eventually withdrew his motion.

This evening, in the House of Commons, Mr. G. W. Wood moved the second reading of the Bill for admitting Dissenters to the Universities; and Mr. Estcourt having moved that the Bill should be read that day six months, a long and interesting debate arose. The Bill was supported by Mr. Rice, Lord Althorp, and Mr. Stanley; but the latter Right Honourable Gentleman intimated that, from a recent alteration in the conduct of the Dissenters, who had assumed a new ground, and a more violent tone, in opposition to the Established Church, he was not prepared to advocate their claims with the same zeal which he had expressed when he had some time ago declared his concurrence in the Cambridge petition. The altered position of Mr. Stanley himself gave considerable interest to this announcement of his present views. Mr. Estcourt's amendment was negatived by a large majority.

On Monday the 23d, Mr. Littleton, on moving the recommittal of the Irish Tithes Bill, explained certain alterations which he proposed to make in that measure. They consisted principally in the omission of the provisions for the eventual investment of the revenues of the Church in land. When the Right Honourable Gentleman had sat down, Mr. O'Connell rose, and concluded a long speech by moving the following resolution:—"That after any funds which should be raised in Ireland, in lieu of tithes, had been so appropriated as to provide suitably, considering vested interests and spiritual wants, for the Protestants of the Established Church of Ireland, the surplus

that remained should be appropriated to the purposes of public utility." The motion was resisted by Ministers, and gave rise to an interesting debate, in which the recent explanations of the different Members of the Government in regard to their views as to the appropriation of any surplus revenue that might be discovered to be incumbering the Irish Church, were very freely canvassed. On the division, Mr. O'Connell's resolution was negatived by a majority of 360 to 90.

The House of Lords, which, as already noticed, had, on this evening, thrown out the Bill for the repeal of the Civil Disabilities of the Jews, was engaged on the 24th in discussing, incidentally, the claims of the Dissenters to admission at the Universities; the subject having been introduced by some remarks offered by the Bishop of Llandaff, on presenting a number of petitions against the claims. From the tone of most of the speeches, it may be predicted that the Bill now in the House of Commons, is not likely to be favourably received by their Lordships.

The morning sitting of the House of Commons, this day, was chiefly occupied in the discussion of an amendment, proposed by Sir E. Wilmot, to the Prisoners' Counsel Bill, which was negatived, on a division, by a majority of 32 to 25. In the evening, Mr. Ewart moved, after a short speech, that the duties upon articles the produce of the East Indies, should be reduced to an equality with those levied on the produce of other parts of his Majesty's dominions; but the debate was prevented from proceeding by the House being counted out.

On the 25th, in the House of Lords, the Lord Chancellor moved, that an address should be presented to his Majesty, praying, that there should be laid before the House the First Report of the Commissioners appointed to inquire into the means of forming a Digest of the Criminal Law. His Lordship described the report as one of the ablest and most important documents ever presented to Parliament. The Lord Chancellor afterwards stated, in reply to a question of the Duke of Cumberland, that he hoped to be able to carry his bill respecting the non-residence of the clergy, through the House this session; but that, as to the Pluralities Bill, he thought it would make very little difference whether it was passed at the end of the present session, or early in the next. Viscount Melbourne repeated the intimation, which had been before given by Ministers in the House of Commons, that the Irish Coercion Bill, which will shortly expire, will again be brought forward, with certain modifications. It will be introduced first in the House of Lords.—This evening the greater part of the time of the House of Commons was taken up in considering the Highways Amendment Bill, the clauses of which, amounting to 113 in number, were successively discussed in Committee.

On the 26th, the House resolved itself into a Committee on Mr. Poulter's Sabbath Bill (that designated No. 2) and the several clauses were all passed, though divisions took place on some of them. The Game Law Amendment Bill was thrown out, on the proposition that it should be read a second time, by a majority of 55 to 24. In the latter part of the evening, Mr. Wallace moved an address to his Majesty for the appointment of a Commissioner to inquire into the management of the Post Office and Packet service; but the motion, after a short debate, was negatived without a division. Mr. Thicknesse then brought forward a motion, of which he had given notice, for a new and, as he contended, more equal assessment of the window duty; but afterwards withdrew it. A motion, made by Mr. Hesketh Fleetwood, for a Select Committee to inquire into the appointment and duties of his Majesty's Consuls in foreign states, was also, after a short discussion, withdrawn.

FRANCE.

The French papers have contained few interesting facts, and have been almost entirely devoted to details of the current elections, and to matters connected with the numerous trials for open insurrection and other political offences.

These journals are, with a very few exceptions consisting of papers paid by government, most violent in their abuse of Louis Philippe, and in their animadversions on those who vote for deputies known to be attached to his cause. This, however, does not seem to interfere with the return of a vast majority of moderate men, determined to stand by his throne and prevent any new revolution. The elections that have been already announced show an immense preponderance of decided friends of the present government. A few moderate oppositionists have been returned, one or two absolutists, and three or four republicans.

To judge from the state of the public mind, as compared with the tone of the newspapers, the influence of the French press should seem to be on the decline. The general wish of the nation is for peace at home, and men see, without emotion, the power of the King strengthened beyond the proper constitutional degree, hoping that so he may be able to crush the *Mouvement* party for ever.

Since the fearful tragedy at Lyons, and the *émeute* at Paris, in April, the tranquillity of the country has suffered no serious disturbance.

The evil spirit of the Trades' Unions has, however, been again at its mischievous work, the journeymen dyers of Lyons having entered into a fresh combination against their masters. The woful ignorance of these men—their utter blindness to their own true interests, and the recklessness with which they seem always ready to venture life and limb on what is only a mistake in political economy, threaten the second city in France with ruin. The orderly part of the workmen are continually leaving Lyons to seek employment for their industry in less turbulent places; and if the present spirit prevails much longer, her commerce will be wholly transferred elsewhere.

We rejoice to see that an increased and increasing liberality of view, in relation to the free-trade system, obtains in Louis Philippe's cabinet. By an ordonnance, published in the 'Moniteur' on the 3rd of June, old prohibitions on the import and export of certain commodities are entirely removed, and moderate duties on the imports fixed in their stead. The tonnage duties, levied on foreign ships in French ports, are also reduced. Cotton yarn, or twist, is free of entrance, on payment of a reduced duty. Chain-cable, another great article of British manufacture, is to be admitted, at the same rate of duty as is paid for unwrought iron bars of the smallest size.

The most important part of this document, however, is the plain assertion, made by the Minister of Commerce, that this removal of prohibition is only a step towards free trade. In the report which introduced the ordonnance, it is said, "Our navy will no longer be deprived of the powerful advantage of the best iron cables that are made. If the duty imposed on the importation of these cables appears too high, it is so *because we must not pass without precaution from entire prohibition to free entry: and, moreover, the prohibition being once abolished, the duty can be settled, at any future time, in accordance with the advantages of trade.*"

The adoption of views and measures like these does more real honour to France than any of the battles in her splendid register 'Des Victoires et Conquêtes.'

We are encouraged to hope, that the visit to England of M. Dupin, the President of the Chamber of Deputies, and his friendly intercourse with the best of our public men, will not fail in producing effects beneficial to both countries. In the meantime, it affords us great pleasure to remark that this observant and able gentleman has been much struck by the general good condition and conduct of our people.

Lucien Bonaparte has put forth, in London, an address to 'The French citizens, and members of the electoral colleges' in France. He begins by demanding justice, and the revocation of the sentence that proscribes all his family—he calls that friend to liberty, his brother Napoleon, "the man of the people"—he attempts to show that France has lost, instead of gaining, by the substitution of Louis Philippe for Charles X.—he deplores the wounds inflicted upon freedom—the anarchy that prevails in France, and then proposes, as a cure for all evils, the immediate recall of the Bonapartes, who, he affirms, will unite with the true patriots attached to the ancient dynasty, the republicans of the convention, the directory, and the consulate, the heroes of the empire, and, in short, with all the good men of old and young France, in labouring to obtain the blessings of liberty and good government. According to Lucien, the only government good for France is a republic.

This curious document appeared among the advertisements of the 'Morning Herald' of June 5th.

PORTUGAL.

It is with great pleasure we announce something like 'the beginning of the end' of the unnatural contest that has so long desolated this unhappy country. Santarem, so long the strong-hold of the Miguelites, surrendered to the Pedroite army. After that event Don Miguel attempted to retreat upon Elvas; but his diminished forces were weakened by disease, and thinned by the rapid desertion of those who now considered his cause desperate. Moreover, by quick and well-concerted movements, he was pressed by Marshal Saldanha on one flank and by the Duke of Terceira on the other. After some fighting, he was completely hemmed in and brought to bay at Evora. But his own personal valour never appears to have been great—he dreaded the unequal conflict, and proposed an armistice to Saldanha. The Marshal consented to suspend military operations until he should receive instructions from Don Pedro's government at Lisbon. When those instructions arrived, they severely censured the forbearance of Saldanha in allowing the Miguelites an hour's delay, and rejected the proposed truce. Before Saldanha could move his troops to the attack, Don Miguel capitulated on such terms as he could procure. The personal preservation of himself and his followers was the first clause. He and his suite were to be allowed unmolestedly to quit the kingdom, and go on board an English, French, or Spanish ship, for any port in Europe he might choose. All his honours, as a prince of the blood, were to be secured to him, as also an annual income from Portugal of about 12,000*l.* sterling. The officers, and others who accompanied him, were to be permitted freely to dispose of their property in the kingdom.

The conditions attached to these concessions were—first, that Don Miguel should surrender to his niece, Donna Maria, all the crown jewels:—(these jewels were once the most valuable in the world, but it seems more than probable that the collection has been reduced during the Prince's straits for money); second, that he should rid the country of his presence within six days; and third, that he should solemnly declare that he would never return to any part of the Portuguese dominions, or of the Spanish provinces, nor in any way concur in disturbing the tranquillity of the Peninsula. When these terms were made known at Lisbon, they excited great dissatisfaction, as a very general feeling prevailed in that city that Don Miguel was treated with too much leniency. One party would have had him brought to trial to answer for his misdeeds and the loss of thousands of Portuguese lives; and another, more moderate, would have had him so secured as to render him incapable of doing future mischief. It was urged, with some reason, that no reliance could be placed on his word or oath, and tha this ambitious, intriguing disposition was incorrigible.

On the night of the 27th of May, when Lisbon was illuminated, and Don Pedro and his family went in state to the Opera House, the more violent of the anti-Miguelites enacted a very disgraceful scene, and gave occasion to one of those ebullitions of temper and undignified displays for which the ex-Emperor seems to be unfortunately distinguished. Cries that Miguel ought to be put to death—that those who spared him and sent him where he could prepare new plots, or at least revel in wealth and luxury, were traitors to the country, echoed through the house. A party of young men, who are described as being persons of condition, forced themselves into a box close to the royal one, and called for the democratical hymn of 1820, instead of the constitutional hymn of 1826. On this the Emperor came to the front of the royal box, and begged they would forbear, as the Queen was present. His interference only increased the tumult. Don Pedro then sternly addressed the rioters, telling them that they must respect the laws and good order—that if they did not, he would make them; and, getting into a passion as he went on, he let drop the unroyal word of *canailla*, or blackguards. Confusion was then at its height, for while some of the audience cried 'Long live the laws! Long live Pedro the Liberator! Long live the father of our Queen!' the rioters, exasperated at the term *canailla*, shouted 'Down with the Tyrant!' &c. &c. The young Queen, terrified at the noise and the rage of her father, burst into tears. At last the military governor of Lisbon turned the rioters out of the boxes, and tolerable tranquillity was restored. The mob, however, is said to have hooted the royal party as they retired homeward in their carriages.

Such was the decent, dignified manner, in which the final triumph over Don Miguel was celebrated at the capital of Portugal.

We would have spared our readers such offensive details, but that they give an insight into the character of Don Pedro and of certain of the ultra-liberal parties.

On the 31st of May, Don Miguel embarked on board a British man-of-war for Genoa, being naturally disinclined to re-visit England. It is said he intends honouring Rome with his residence.

On the same day the government 'Chronica' notified the elevation of Saldanha to the rank of a Marquis, with a pension so enormous for a country like Portugal, that we fancy the amount will never be paid; it also declared Terceira to be a relation-duke (Duque Parente), or of the blood royal; but this family adoption was made subject to the approbation of the Cortes when they shall be assembled.

The prize-money for the Miguelite squadron captured by the brave Napier has been fixed at 115,000*l.*, and the shares are supposed to be paid to the officers and men (nearly all English) by this time. As the navy is no longer wanted, the foreigners will be dismissed, and only a few vessels re-commissioned by Portuguese officers and seamen.

A Royal decree has abolished all the privileges and monopolies of the Oporto Wine Company; henceforward the cultivators may sell their grapes or their wine to whom they please, and at whatever price they can obtain. This is a wise measure, and like everything that sets trade more free, must produce beneficial effects; but there is another decree of greater magnitude and of more questionable merit, namely, one that suppresses all the regular orders of monks in the kingdom. We, indeed, doubt not only the policy, but the justice of this sudden sweeping measure; and, at all events, such a measure should not be passed, in a country claiming to be constitutional, by the absolute decree of a Regent, signed only by himself and one of his ministers and creatures. If ever there was a subject that ought to have been discussed by the national Cortes, it was this.

We subjoin the substance of the decree, reserving for an early occasion some remarks on the effects it is likely to produce:—

"Art. I. All convents, monasteries, colleges, hospices, and establishments whatsoever, of monks of the regular orders, in Portugal, Algarve, the adjacent islands, and Portuguese dominions, whatever may be their denominations, institution, and rules, are henceforth extinguished.

"Art. II. All the estates of these convents, &c., are incorporated with the national domains.

"Art. III. The sacred utensils and ornaments employed in the divine service are placed at the disposal of the respective ordinaries, to be distributed among the churches of their dioceses which have most need of them.

"Art. IV. Each of the monks of the suppressed convents, &c., shall receive an annual pension for his support, unless he receives an equal or greater income from a benefice or public employment. The following are excepted:—

"'*a.* Those who took arms against the legitimate throne, or against the national liberty.

"'*b.* Those who abused their ministry in the confessional or the pulpit, in favour of the usurpation.

"'*c.* Those who accepted benefices or public employment from the government of the Usurper.

"'*d.* Those who denounced or directly persecuted their fellow-citizens for their fidelity to the legitimate throne and the Constitutional Charter.

"'*e.* Those who accompanied the troops of the Usurper.

"'*f.* Those who, on the re-establishment of the authority of the Queen, or since, in the districts in which they resided, abandoned their servants, monasteries, &c.'

"Art. V. All laws and ordinances to the contrary are abolished. The Minister of Ecclesiastical Affairs and Justice is charged with the execution of the decree.

"D. Pedro, Duke of Braganza.

"Joaquim Antonio D'Aguiar.

"Palace da Necessidades, 28th May, 1834."

Many Miguelites have returned to Lisbon, since the

Don's departure, relying on the pledged word of Don Pedro that they should not be molested. The mob of the town have, however, killed some ten or a dozen of them in cold blood. Two of the murdered men were monks, and it is said they were all individuals who had made themselves obnoxious during Miguel's harsh rule. Government has issued an earnest order to the proper authorities, to prevent the recurrence of these inhuman, disgraceful scenes, and has also made an appeal to the good feelings of the Portuguese, praying them to forget all past differences, and to consider each other as members of one great family. With the fierce passions and uneducated minds that belong to so large a portion of that nation, we fear that it will be long before this appeal is listened to. We hope, however, for the sake of humanity, and the honour of the badge they wear, that the constitutionalists will not be hurried on, by the spirit of re-action and revenge, to anything approaching the cruelties, spoliations, and other severities, exercised by the now overthrown Miguelite faction in their day of triumph and power.

SPAIN.

The entire ruin of Don Miguel's affairs, in Portugal, has relieved Spain from the dangerous presence, or neighbourhood, of the absolute pretender, Don Carlos. That prince, with his family and a numerous retinue, fled for refuge to a British man-of war, 'The Donegal,' which safely landed them at Portsmouth on the 18th of June, the anniversary of the battle of Waterloo. It is said that the expatriated prince intends taking up his abode in the neighbourhood of London; but we suppose England will only be his temporary asylum.

It is not yet known how far his departure from the Peninsula will affect the spirits and hopes of his partisans and the insurgents in the north of Spain. Some assertions are abroad, that the event was long expected, that a proclamation entreated his followers not to despair, but to continue to organize themselves, and that he (Don Carlos), their lawful king, would soon be in the midst of them. We are confirmed in the opinion we expressed some months since, that he is deficient in boldness and decision of character, and is not a man to carve his way to a throne through great difficulties.

We fear, however, his desperate party will prolong the struggle, and keep a considerable tract of the Spanish kingdom plunged in the horrors of civil warfare. The insurgent army, in the north, is estimated as high as 20,000 infantry, and 1000 cavalry; but this force is much scattered. The recent conflicts, which have been sanguinary, though on the small scale of partisan warfare, are said to have mostly terminated in their favour. The Queen is, however, now much strengthened, by the return from Portugal (where his services were no longer necessary to the constitutionalists) of General Rodil, with a fine *corps d'armée*, cheered by recent success, and stated to be devoted to her cause. This is one positive and great advantage that has resulted from the discomfiture of Don Miguel.

The convocation of the Cortes has been fixed, by a royal decree, for the 24th of July next, or a month later than was contemplated when we last wrote.

This decree, which was published in the Government Gazette, on the 24th of May, provides that an electoral junta shall be assembled, in each department, on the 20th of June, then to nominate two electors by ballot, which electors shall proceed to the capital town of their respective provinces, and select the stipulated number of deputies for the Cortes.

The recent proceedings of the Queen Regent's government seem to us to have been cautious and wisely moderate. The ultra-liberal and impatient party, who would do what must be the work of years in a day, would ruin the country, and the cause of rational liberty in it, were they permitted to guide affairs.

A decree, appointing a censorship over the press, has caused some discontent; but another, conveying a remodelled amnesty for all political offenders, without any exception or reservation whatever, has given unalloyed satisfaction to the constitutionalists.

The envoys of the northern courts have all left Madrid, in disgust, it is said, with the liberal line of conduct pursued by the Spanish court and ministry. The only ambassadors or ministers that remain are the English, French, Portuguese, and Neapolitan. According to the latest news M. Martinez de la Rosa is to be the Speaker or President of the new Chamber of the Cortes, and his present post, as Minister for Foreign Affairs, is to be filled by the President of the Chamber of the Council of Castile.

The Queen Regent's government is about to enforce with great rigour a law passed against secret societies. It appears that in spite of the vigilance of the police, these conclaves meet in Madrid and most of the great cities, and correspond with each other. They include a variety of political associations, but the most active of them appear to be an ultra-liberal club, after the fashion of the Italian Carbonari, and an ultra-royalist Carlist association, which may be compared to the Caldarari of Naples, the secret society created by the notorious Prince of Canosa, to counteract the Carbonari. The members of these associations are bound to secrecy by solemn oaths, and undergo a long, formal initiation. The Spaniards may be more true to their oaths, but in Italy the governments became regularly acquainted with all that passed in the Carbonari *vendite*, through sworn members of the society, who were paid for that purpose. The quadripartite treaty mentioned in our last Retrospect as having been concluded between England, France, Spain, and Portugal, has been laid before the public. It relates wholly to the pacification of the two Peninsular kingdoms, and is introduced by the following preamble:—

"Her Majesty the Queen Regent of Spain, during the minority of her daughter, Isabella II., Queen of Spain, and his Imperial Majesty the Duke of Braganza, Regent of the kingdoms of Portugal and the Algarves, in the name of Donna Maria II.:—

"Perfectly convinced that the interest and safety of the two crowns require the vigorous and immediate employment of reciprocal efforts to put an end to hostilities, which, having been at first directed to the overthrow of the throne of her Portuguese Majesty, now afford support and protection to the discontented subjects of Spain, their said Majesties, desirous at the same time of providing the means necessary for re-establishing peace and internal happiness, and of fixing the future prospects of the two countries upon a solid and reciprocal basis, have agreed to unite their forces, with a view to compel the Infante Don Carlos of Spain, and the Infante Don Miguel of Portugal, to quit the domains of the latter kingdom.

"In pursuance of these conventions, their Majesties the Regents have applied to their Majesties the King of the French and the King of Great Britain and Ireland. These two last Princes, considering the interest they ought always to take in the safety of the Spanish monarchy, and animated by the most ardent desire to contribute to the establishment of peace in the Peninsula as well as in Europe; and his Britannic Majesty, considering besides, the special obligations which emanate from his ancient alliance with Portugal, have consented to act as parties to the said treaty.

"To this effect their Majesties have appointed their Plenipotentiaries in the following order:—

(The names of Florida Blanca for Spain, Talleyrand for France, Palmerston for England, and Moraes-Sarmento, are then introduced).

The following are the articles agreed upon by these Plenipotentiaries:—

"Art. I. His Imperial Majesty the Duke of Braganza, in the name of Queen Donna Maria II., engages to put in action all the means in his power to drive the Infante Don Carlos from the Portuguese dominions.

"2. Her Majesty the Queen of Spain, on the application and request of his Imperial Majesty the Duke of Braganza, having, besides, very just and very serious grounds of reproach against the Infante Don Miguel for the support he has afforded the Infante Don Carlos of Spain, engages herself to send into the Portuguese territory a sufficient number of Spanish troops to co-operate with those of his Imperial Majesty in compelling Don Carlos of Spain and Don Miguel to quit the Portuguese territory; the Queen of Spain engaging, moreover, to support, on her own account, and without any charge upon Portugal, the Spanish troops, which shall everywhere be received and treated in the same manner as the troops of his Imperial Majesty the Duke of Braganza. And her Majesty engages to withdraw her troops from Portugal immediately after the expulsion

of the two Infantes shall be accomplished, and when the presence of these troops shall be no longer required by her Most Faithful Majesty of Portugal.

" 3. His Majesty the King of Great Britain engages to co-operate, by employing a naval force to second the operations and other measures rendered necessary by this treaty.

" 4. In case the co-operation of France shall be deemed necessary by the high contracting parties, his Majesty the King of the French engages to do all which his august allies shall in common accord determine upon.

" 5. The high contracting Powers have agreed that, in consequence of the terms of the preceding articles, a declaration shall be immediately issued, announcing to the Portuguese nation the principles and object of the present treaty; and his Imperial Majesty the Duke of Braganza, animated with a sincere desire of effacing all remembrance of the past, and of rallying around the throne of his daughter the whole nation, declares his intention of publishing a general and complete amnesty in favour of all the subjects of her Most Faithful Majesty who shall, within a time to be fixed, return to their allegiance. And the said Regent also declares it to be his intention to ensure to the Infante Don Miguel, as soon as he shall have left the Portuguese and Spanish territories, an income suitable to his rank and birth.

" 6. Her Majesty the Queen of Spain, by this present article, declares her intention to ensure to the Infante Don Carlos, as soon as he shall have left the Portuguese and Spanish territories, an income suitable to his rank and birth.

" 7. This present treaty shall be ratified, and the ratifications exchanged at London in a month, or sooner if possible."

The treaty is dated London, the 22nd day of April, 1834. According to some French writers, this treaty has ceased almost as soon as it was ratified, the departure from the Peninsula of both the pretenders rendering its provisions unnecessary. But, in fact, the pacification contemplated by the contracting parties is not yet accomplished. A great part of the north of Spain is still in arms, and the Carlist Chief, Zumalacarreguy, seems to be as bold and confident as ever.

GERMANY.

An event has occurred, which has excited less interest than we could have expected. The troops of the Emperor of Austria have taken possession of the free town of Francfort. That city had been the scene of some disturbances, arising out of differences of political opinions among its inhabitants; but these commotions were scarcely sufficiently serious to call for any armed interference; nor does it appear, from any article of existing treaties, that Austria had any right so to interfere.

The city of Francfort has issued a protest to this effect. Some of the papers published there have expressed an alarm lest the independence of Francfort should be annihilated, and the city incorporated with some neighbouring state. These fears are allayed, in some minds, by an assurance that Prince Metternich declared to its representative, at the Congress of Vienna, that the independence of Francfort should be respected. The advocates of the recent trade league, and of the formation of a general system for the Germanic body, are, however, constantly talking of the necessity of "simplifying that body, by consolidating the smaller states." In carrying such a system into execution, we may reasonably apprehend that the rights and inclinations of the "smaller states" may not be allowed sufficient weight.

The Austrian Government has been negociating with Prince Milosch, on the truly important subject of the navigation of the Danube, or of that part of the river that runs through Servia.

The Congress assembled at Vienna has, we suppose, closed its labours, for it was announced that the last protocols were to be signed on the 12th of June. Some of the latter sittings of the Congress were very protracted; and as it is reported that the particular resolutions adopted at them will be made public at Francfort, they probably relate to the occupation of that city, and the fate reserved for it. The Luxembourg question, which is known to have occupied part of the time of the diplomatists, is supposed to be left just where they found it, no definitive arrangement being agreed upon.

M. Ancillon has been arranging, for Prussia, the differences that exist, relative to the frontier line between her duchy of Silesia and the kingdom of Poland. The Russian government, it should appear, is disposed to be liberal to Prussia in this respect. It is supposed that many similar differences, as to territory and lines of demarcation that exist within Germany—that country of many governments—have been put in a train for arrangement during the sitting of the Vienna Congress. By next month we may probably have something more than conjectures to offer on the decisions of this close body.

EGYPT.

We have received, in a letter from a friend at Cairo, a few interesting details of the improvements making by Mehemet Ali, and the general aspect of things in Egypt.

The Pacha has accomplished many works of important utility, and is projecting others. The two branches of the Nile which inclose the Delta are to flow under two bridges, which are to be connected with each other, and with Suez on the Red Sea on the one side, and with Alexandria on the Mediterranean on the other, by means of a railroad. Our correspondent, however, regrets that the construction of these bridges, which will have to withstand the tremendous tide of the inundation, and which occasionally must be closed by flood-gates, so as to retain the water above them sufficiently high to fill the canals by which the Delta and the adjacent provinces are irrigated, is committed to persons who have had very little practice in architecture. Each of these bridges is to be built in the neck of a peninsula, formed by a bend of the river; a new bed for the river is then to be cut across the isthmus, and the old bed round the peninsula is to be filled up.

Our friend, while admitting that the country is in some respects improved—that during the last nine years civilization has made rapid strides in certain quarters—and that the manners and customs of the higher orders, particularly of the persons connected with government, have become more and more assimilated to those of Christendom, regrets, on the other hand, that the government has become more and more oppressive, and that the misery and the crimes of the lower classes have increased in proportion with that oppression.

The accounts which have lately appeared from time to time in the English and other newspapers, and which have represented the whole of Egypt, and the masses of its population, as being in the most flourishing condition, he accuses of gross exaggeration. He says that the peasantry—that the people, properly so called—are reduced to a degree of misery that can scarcely be conceived by those who have not seen it with their own eyes. We are emboldened, by the reports of several other English travellers who have lately visited Egypt, to assert that our friend's picture of distress is a correct one. The Pacha's officers, both civil and military, his numerous commercial agents (for Mehemet Ali, correctly speaking, is the only merchant in the land of Egypt), the many Europeans he has employed to carry on his internal improvements, and the others who either directly or indirectly act as factors for the sale of his produce in the markets of Christendom, live in a prosperous, and, in some instances, even a splendid manner. His troops are also well equipped, and generally decently maintained; but the aspect of prosperity does not extend beyond these limits. All the rest of the population of Egypt seem sunk into one common condition of wretchedness.

The native labourers, who are called Fellahs (a term answering to our old word *villanus*, and which is almost equivalent to villain as a term of reproach), are not, it is true, subjected to such various and frequent caprices of tyranny, as they were under the Beys and the Mamelukes; but they are crushed by one steady, unvarying load of oppression, which is only slower in its operations, and just as sure to end in utter exhaustion and impoverishment.

There is one great fact, not to mention many minor ones, which is altogether opposed to our notions of a country's prosperity, and which seems to have escaped the attention of those who have devoted themselves to the task of praising the enlightened government of Mehemet Ali. It is simply this: the Pacha has established the

very worst kind of monopoly all over Egypt. The farmer who produces corn or rice, must sell all above a certain modicum to the government, and *at a price fixed by the Pacha himself.* It is the same with cotton; it is the same with every species of produce that is sufficiently important to figure in Mehemet Ali's list of exports. As long as this abominable system prevails—but it must in time kill itself—as long as government absorbs everything, though by means of disciplined armies it may keep Egypt, Nubia, and Syria tranquil—though it may cut canals, throw bridges across them, and connect them by railroads—though it may civilize some few hundreds of selected youths, and do sundry other things, it can never render those countries truly flourishing, nor effect what ought to be the end of all government—real civilization.

CHRONICLE OF OCCURRENCES.

January 9. Calcutta papers of this date bring the melancholy information of the loss of the 'Lady Monro,' bound from Calcutta to Madras and Sydney. The vessel, in addition to a valuable cargo, had, at the time of the fatal catastrophe, upwards of ninety persons on board, only twenty of whom were saved. The individuals who survive the loss of the vessel are J. M'Cosk, Esq., of the Bengal infantry, one convict, and eighteen Lascars. Of the seventy-six persons who perished, nine were European convicts, four European servants, nine native servants, and twenty-four Lascars; the remainder were European ladies, gentlemen, and children.

May 9. The Ottoman Moniteur of this date contains a firman of the sultan for the organization of a new Turkish militia, for the purpose of providing, in case of war, a sufficient body of disciplined troops for the defence of the vast territories of the empire, and garrisoning the frontier fortresses, without in the mean time withdrawing from agriculture, trade, and the other branches of industry, too many hands, whereby the country would be impoverished, and the revenues of the state be diminished. The Seraskier Pacha has been commanded to make, without delay, all the necessary preparations for organizing this new militia or national guard, which is to be distinguished by the denomination of Redifii-asakiri-mansoueri-Mouhammedige. It is not to be constantly embodied, but to be assembled from time to time to receive instruction in military discipline and manœuvres, and in the use of arms, so that in times of war there may be a sufficient force to join the regular troops in defence of the empire, when they will be clothed, fed, and lodged, and receive the same pay. This new system will, without interfering with the progress of the industry of the country, obviate the disastrous consequences hitherto arising from a precipitate calling of numerous bodies of men to take up arms, without examining whether they are young or old, fit or unfit for military service, and without their being acquainted with the use of arms.

23. This was the day appointed for the celebration of the completion of that gigantic undertaking, the Nene Outfall Cut; and at the same time it was determined to present a handsome piece of plate to Tycho Wing, Esq., through whose exertions the work has proceeded and been successfully finished. The plan was laid down by Mr. Rennie, who reported, in the year 1814, his opinion of the best direction of the cut, and the result has been to render the drainage complete, and to scour out the Wisbeach river so effectually that vessels of 250 tons burthen can now ship goods at Wisbeach, where, but a few years back, none but vessels of less than 60 tons could penetrate. Nearly 1500 acres of marsh land have been embanked from the sea, and are now nearly all of them in cultivation, and about 6000 acres more are rapidly becoming fit for inclosure. In consequence of the more rapid discharge of the upland floods through the Nene Outfall, the danger of inundation by a breach of bank is incalculably diminished to the fens on each side of the river Nene, between Peterborough and Wisbeach. The value and security of the lands in Moreton's Leam Wash, containing about 3500 acres, and even of the upland meadows beyond Peterborough, is much increased, for the purposes of summer grazing or mowing. The north level, containing 48,000 acres, and situate in the contiguous parts of the counties of Cambridge, Northampton and Lincoln, is the first great division of the fens which has proceeded to avail itself of the advantages thus placed within its reach. The expense of executing the Nene Outfall has been about 200,000*l.*, that of the north level drains about 150,000*l.* The present Duke of Bedford has been the great patron and promoter of both undertakings.

24. The 'Ami de la Charte' of Nantes states, that on this evening that town was visited by a tremendous storm of thunder, lightning, hail, and rain, which did immense damage, the extent of which could not be easily ascertained or calculated. It raged also in many of the surrounding communes, entirely destroying the fruits, and greatly damaging the other productions of the earth, breaking innumerable panes of glass, and throwing down walls and buildings. At Rézé, in particular, a large manufactory was carried away, and a great many men narrowly escaped perishing. We do not, however, find that any lives have been lost. One hailstone was taken up which was found to weigh between four and a half and five ounces.

25. Upwards of thirty families at Axminster were deprived of their homes by the destruction, through fire, of a long range of houses near the church. This calamity occurred during divine service, and has occasioned very considerable distress. The fire broke out in a baker's house, by which that and twenty other houses were destroyed. Fortunately the wind was in a favourable quarter, or it is apprehended that full half of the town would have been consumed.

June 2. At the Salford intermediate sessions, on Monday, twelve men and lads were tried for the riotous attack on Mr. Thompson's premises at Oldham, when eight of them were sentenced to terms of imprisonment, varying from six to eighteen months, and four of them were acquitted. At the same sessions, Daniel Brierly and James Taylor (trades' unionists) pleaded guilty to an indictment charging them with having, together with other persons unknown, entered into a conspiracy for the purpose of administering unlawful oaths, and were ordered to enter into their own recognizances of 50*l.* each to abide the judgment of the court when called upon.

4. The 'Echo de Rouen' states, that several villages of the canton of Boos having been lately annoyed by the presence of wolves, a hue-and-cry took place on Sunday in a wood contiguous to the commune of Yonarve, the result of which was the discovery of seven cubs about a month old, which were taken and destroyed, but no full-grown animal was met with. It is supposed that the father and mother of the litter took to flight on hearing the pursuers approach.

5. This morning, at an early hour, a considerable number of workmen, principally consisting of excavators, were put into employ by the surveyors and contractors who are engaged in the intended railroad, to be termed the London and Birmingham one, which will commence from the Hampstead-road, Camden-town, close to the bridge over the Regent's Canal, and will pass within about one hundred yards of the gardens of Chalk Farm Tavern. The road will then incline to the right, leaving Primrose Hill on the left, which is entirely avoided, and afterwards proceed through the farms of Messrs. Rhodes, Wilberforce, and Balkus, until it arrives at Kilburn Wells Tea Gardens, Edgeware-road. The carriage road in the Edgeware-road, Kilburn, as well as the new north one, will be arched, and supported by twelve substantial arches. The works will be carried on at the same time in various parts. The ground for the intended railroad is being railed off through the fields to Kilburn by strong wooden fencing. An immense number of implements, consisting of wheelbarrows, new planks, and every description of articles used by excavators, have arrived for the undertaking. A number of tall powerful countrymen have been engaged as excavators. The length of time before it is completed, it is understood, will be four years.

7. As some labourers in the employ of the Rev. E. Goddard, of Cliffe Pypyard, were removing earth on the summit of the hill forming the north boundary of Broad Town Fields, they discovered, a few inches below the surface of the soil, some human skeletons of gigantic stature. By removing the earth with great care the workmen were enabled to expose the skeletons to perfect view. They were lying with the feet towards the east, but the skulls and several bones of each appear to have been fractured. A surgeon of the neighbourhood was of opinion, from the mouldering appearance of the bones, that they were of great antiquity. The place where they were found is contiguous to a Roman station, where other skeletons have heretofore been discovered, with several ancient weapons or implements of warfare buried with them. An iron point of an arrow was also found on this occasion near one of the skeletons. Such was the curiosity excited by the discovery, that crowds of persons visited the spot on the following day, and although care had been taken to cover up again these relicts of mortality, the earth was removed by some of the visiters, the skeletons disturbed, and most of the bones have since been taken away.—*Devizes Gazette.*

9. In pursuance of a notice circulated round the metropolis, calling a public meeting to be held at five o'clock on Monday, at the National Exchange Bazaar, Charlotte Street, Fitzroy Square, of the trades' unions and their friends, to take into consideration the cause of the industrious classes, in consequence of the new position in which they are placed by the declaration of the master tailors and manufacturers over the kingdom not to employ any unionists, a vast number of mechanics of various grades collected; but it was not until half-past six that the chair was taken by a delegate of the name of Goldspink, who addressed the meeting, enjoining them to act peaceably, when Mr. Owen proposed a string of resolutions indicative of the feelings of the working classes respecting the conduct of certain workmen, who, the first speaker said, had signed away their birthright in consequence of their poverty, and concluded by stating that it was their

intention to call a grand meeting of all classes throughout England on a day hereafter to be fixed, to take into consideration their oppressed and starving condition. The resolutions were put *seriatim*, and, after considerable debate, carried unanimously, when the meeting separated.

10. *Tuesday.*—This being the day appointed for the ceremony of the installation of the Duke of Wellington as Chancellor of the University of Oxford, the city presented considerable animation and bustle at an early hour. The Duke of Wellington, the Duke of Cumberland, and several illustrious and distinguished personages arrived on Monday. A little before eleven o'clock, a long procession, with the Duke in his robes of office, set out from University College, and advanced up the High Street, which was crowded with spectators, and then turning down by St. Mary's Church, by the side of which a scaffold had been erected for the accommodation of the visiters desirous of seeing the procession, proceeded to the theatre. The splendour of the dresses (among which the noblemen's, richly laced with gold bars, and the habits of the heads of houses, being scarlet with black velvet sleeves, were highly conspicuous) made it a very gay scene, and the cheering with which it was accompanied gave it additional interest. In the theatre cheers were given for the Duke of Wellington, and three more for his Grace as Chancellor; the name of Earl Grey was received with disapprobation; that of the Lord Chancellor with a few cheers; and the bishops with almost appalling shouts. The Duke of Cumberland, Lord Wynford, and Lord Lyndhurst, were received with applause. Shortly after eleven o'clock the procession entered the theatre, the Duke dressed in his splendid robes as Chancellor, and the Vice-Chancellor and doctors in their robes of office. The noblemen who followed wore military or naval uniforms. In the Duke's train came the Marquis of Londonderry, Lord Montagu, Lord Apsley, Lord Hill, Lord Mahon, Sir G. Murray, Sir H. Hardinge, Sir T. Acland, Sir R. Inglis, Mr. Estcourt, Sir C. Wetherell, Drs. Burton, Fox, and Rowley, and a number of heads of houses. There were eleven members of the Episcopal Bench present, among whom were the Archbishops of Canterbury, York, and Armagh; the Bishops of Oxford, Worcester, Exeter, Gloucester, Llandaff, and Barbadoes. When the cheering had subsided into silence, the Duke of Wellington, as Chancellor, opened the business of the Convocation in a short Latin speech, by stating that it was convened to confer the degree of Doctor of Laws, *Honoris causâ*, upon several individuals of rank and distinction whom he named. The names of the Dukes of Buccleuch and Newcastle, the Earls of Winchelsea, and Sir J. Scarlett, were received with thunders of applause. After the Chancellor had gone through the list once, he went through it a second time, and after each name on proposing the admission, said, "Placetne vobis Domini Doctores, placetne vobis Magistri?" The Convocation replied with one voice—"Placet." This ceremony over, Dr. Phillimore, as Professor of Civil Law, presented the incepting doctors. The new-made doctors then took their seats amid the cheers of the audience, and the public orator delivered the Creweian Oration. There were several very well-turned compliments in it to the Duke of Wellington, an eulogium on the Duke of Cumberland, and also a panegyric on the bishops. After this oration was concluded, the Latin poem which gained the Chancellor's medal this year, was recited by its author, Mr. Kensington, of Trinity College. The subject is—"Cicero ab exilio redux Romam ingreditur." It was received with great applause. Then Mr. Anstice, late student of Christ Church, and now the Professor of Classical Literature at King's College, London, delivered his Prize Essay "on the influence of the Roman conquests upon literature and the arts in Rome." At its close, the Chancellor, who spoke his Latin orations with much emphasis, terminated the proceedings of the Convocation by declaring "Dissolvimus hanc Convocationem." The procession returned to University College, and, on their arrival at the college, the different members who formed the procession took leave of his Grace, and separated for the colleges to which they belonged or were invited. In the afternoon the concert in the theatre was attended by a host of ladies, gownsmen, and strangers. The Duke was present for a short time, and was again received with enthusiastic cheers, which were repeated on his departure. It was half past seven when the assembly dispersed, and thus closed the business and interest of the installation day.

Wednesday.—At eleven o'clock the Duke proceeded in his state carriage to the Clarendon Printing House, and thence entered the theatre, followed by the visiters of distinction, bishops, heads of houses, proctors, &c. The under-graduates, as on the preceding day, called out the names of various heads of the government and the High Church party, most of the former of which were received with hisses and groans, and the latter with acclamations. The Chancellor opened the Convocation, by stating that it was called for the purpose of conferring honorary degrees on several noblemen and gentlemen whom he named. The University having signified its assent to the proposition of conferring these degrees upon them, Dr. Phillimore proceeded as before to present them to the acceptance of the Chancellor; and in so doing he made a Latin speech in their praise. When Lord Encombe was presented, Lord Eldon was much affected, and shed tears of joy at the honour conferred on his grandson. The Installation Ode was then performed, set to music by Dr. Crotch, Professor of Music to the University. It is described as calculated to increase the reputation already acquired by that eminent musician. After the Ode, Mr. Scott of Christ Church recited the Chancellor's Prize Essay in Latin, which was much applauded. Sir R. Newdigate's English Verse Prize had been gained by Mr. Arnold of Wadham, who also read his composition from the rostrum with immense effect. The subject is, 'The Hospice of St. Bernard,' and the poem was much applauded. Several other complimentary odes upon the Duke's achievements were also recited. The Convocation was then dissolved. There was afterwards a concert, which commenced at four o'clock and lasted till eight. A ball at the Star Inn concluded the amusements of the second day.

Thursday.—This morning the Bishop of Oxford preached in St. Mary's Church, for the benefit of the Radcliffe Infirmary, before the Chancellor, the Vice-Chancellor, and the noblemen and gentlemen recently made doctors. The edifice was crowded to repletion, and the heat so overpowering that many were obliged to leave before the sermon was finished. The concert in the theatre at three o'clock was attended for a short time by the Dukes of Wellington and Cumberland, who retired with the Chancellor's suite to dine with the President and Fellows of St. John's College.

10. The Betsey arrived at Liverpool on Tuesday last, with a cargo of tea (nearly 2200 chests) from Dantzic. This is the first cargo of tea imported into Liverpool, and it is consigned to Messrs. Rathbone, Brothers, and Co. It is imported under the new act, which says that tea may be imported into any port of Great Britain and Ireland from a port or place to the eastward of the Cape of Good Hope. Dantzic is fifteen miles to the eastward of the Cape, and some enterprising merchant has availed himself of the permission of the act to import tea from the Baltic. The arrival of the first cargo of tea excited quite a sensation on the Liverpool Exchange. It has been since stated, however, that the tea has been seized on the ground that the act specifies east of the Cape with certain qualifications, and that Dantzic does not come within them.

12. On this day, pursuant to annual custom, the children belonging to the different charity schools of the metropolis, and the surrounding districts, attended divine worship at St. Paul's cathedral. The number of children, both male and female, ranged round upon the vast decagon under the dome, could not be less than from 8000 to 10,000; and it was computed that the whole assemblage within the walls of the sacred edifice comprised about 15,000 souls. The Bishop of Chester preached upon the occasion, taking for his text the 13th chap. of Matthew, 38th verse. "The good seed are the children of the kingdom, the tares are the children of the wicked."

13. The 'Leeds Mercury' thus narrates the progress of the Leeds Trades' Union towards that complete dissolution which took place this day:—On Monday, the unionists assembled, as usual, on Hunslet Moor, abused the masters, the 'Leeds Mercury' and its correspondents, and resolved never to sign the declaration. Tuesday, the pay-day, however, produced a great change of tone. A small sum of money being in hand, the committee paid those of the men whose secession they most feared, 2*s.* 6*d.* each, including the men who had been in the employ of Messrs. Sheepshanks and Co., though these had only been standing a week; while the poor fellows who had been out a month, including a great majority of the whole, received not a farthing. What followed is characteristic: the men who had got paid were the first to run and sign the declaration renouncing the Union, and Messrs. Sheepshanks soon had their mill full of hands. Another meeting took place on Hunslet Moor on the Wednesday, but the rain, and the cause still more damping, reduced the attendance to a few hundreds. Still there were big words; and a declaration, vowing inviolable attachment to the Unions, whatever might be the consequences to the masters, was agreed upon. But when signing was talked about, the men ran and signed the wrong document—namely, that renouncing the Union! In short, on Wednesday, Thursday, and yesterday, there was a race among the applicants at the mills; and we regret to say, great numbers who applied for work will not be able to obtain it, owing to the depressed state of trade, and to the numbers from other trades and other places who have been taken into the mills during the strike. About forty-five mills and dressing shops have been standing, but nearly all are now at work again. The masters having completely triumphed, we trust they will use their victory generously, and not suffer the slightest feeling of resentment towards a class, or towards individuals, to sully it.

14. The pole of the Criterion, Brighton coach, broke this afternoon when passing over London bridge, in consequence of the coachman suddenly pulling up to avoid running over a person on horseback, who was crossing before the leaders. The horses became unmanageable, and set off at full speed. The injudicious attempts of persons in the road to stop them, increased their fright; and the coach was finally upset at Stones-end, by which Sir W. Cosway, Bart., who was on the box, was so seriously injured that he died within fifteen minutes, and Mr. Tedhunter, of Eastcheap, had his thigh broken. Sir William Cosway, many years since, had both his thighs broken by a similar accident near Temple-bar, which prevented his marriage with the daughter of Admiral Lord

Collingwood, to whom he had been secretary while in the naval service. At the last election, Sir William was the unsuccessful candidate for East Kent, in which he had considerable estates.

16. *Destructive Fire in Bishopsgate Street.*—A most alarming and destructive fire broke out in Bishopsgate Street about two o'clock this morning, which in little less than two hours and a half reduced eight houses to a heap of ruins, together with nearly all the property they contained, and had nearly proved fatal to the lives of several families.

18. At six o'clock this morning, the Admiral superintendent's yacht was dispatched to the Donegal for the purpose of conveying on shore Don Carlos's family and suite. At a quarter before seven o'clock, the Donegal was seen to "man yards," and a royal salute of twenty-one guns was fired from that ship, when the party embarked on board the yacht. Captain Fanshawe accompanied the illustrious strangers, who, on landing at Sally Port-stairs, were received with a second salute of twenty-one guns from the Platform Battery. A captain's guard of honour was drawn up in the street, and the marine band, as the Prince and Princess entered the post-carriages which conveyed them to their apartments in High-street, struck up "God save the King." Though an early hour, seven in the morning, the platform was crowded with well-dressed people. Sir F. Maitland, the superintendent, Lord Adolphus Fitzclarence, Captains Harcourt, Codrington, and others, paid their respects at twelve o'clock. Sir Frederick Maitland is the same distinguished officer who received Napoleon Buonaparte on board the Bellerophon in Basque Roads.—*Portsmouth Paper.*

22. Such was the intensity of the heat of the atmosphere at two o'clock yesterday afternoon, that the thermometer stood at 77 in the shade. Severe losses have been incurred by stage-coach proprietors during this and the preceding day. Upon the Greenwich road, three horses dropped down dead on Friday, between three and five o'clock.

Dr. Doyle.—The celebrated Catholic prelate, Dr. Doyle, died, after a lingering illness, at his house near Carlow. Another Catholic bishop, Dr. Waldron, died on the 27th of May, in consequence of an accidental fall down stairs in his own house.

Dennis Collins.—Dennis Collins, the old sailor who was transported to Van Diemen's Land for throwing a stone at the King when at Ascot races, three or four years ago, died at Port Arthur on the 1st November, in consequence, it is said, of his fixed determination to refuse all necessary nourishment, although the best diet that the settlement could afford was daily offered to him.

Mauritius.—It appears that the island of Mauritius was, on the 20th of January, visited by a violent hurricane which occasioned a considerable loss of life and property. The Government subscribed 1000 sacks of rice and 5000 dollars to be distributed among the poor surviving inhabitants. There was besides a large public subscription. Subsequent information, dated March 18, states, that sixty vessels were at that island in want of freight, and that, in consequence of the great scarcity of produce, from thirty-five to forty would be obliged to proceed without cargoes.

Trinidad.—Advices from Trinidad state that the colonists there were discussing the propriety of receiving into that island 20,000 emancipated Africans, proposed to be sent to that colony by the mixed Commission at the Havannah.

Jamaica.—Late accounts from Jamaica state that severe storms of hail and rain had been experienced there during the latter part of April, by which the coffee blossoms had suffered considerably; in other respects, the crops were favourable, and the island was healthy. The Governor-General, the Marquis of Sligo, had promulgated a plan for the formation of an efficient police, which had been satisfactorily received, and some of the leading planters and proprietors were discussing a proposition for encouraging the settlement of moral and industrious Europeans in Jamaica. Symptoms of insubordination had been displayed by the slaves of Spring-garden estate, Portland, but the circumstance was not considered of any great importance.

Demerara.—Demerara papers of the 26th of April contain accounts of the state of that colony, which, taken altogether, are not unsatisfactory. Allusion is made in them to the recent establishment of district criminal courts, which, it is said, promise to become an inestimable benefit to the community, by the enforcement of the due observance of the law, and the insurance of due obedience from the labouring population. It is a general source of complaint that the negroes will not work without coercion. Owing to the long continuance of dry weather, it was feared that the sugar crop would fall very short.

By Demerara papers to the 10th of May, it appears tha tthe colony was still suffering from the dry weather, which had almost destroyed the crop of plantains, the main subsistence of the labourers, and that other provisions had become very scarce and dear. The Governor of British Guiana had issued a proclamation to the [illegible] of the united colonies (Demerara and Berbice), explaining to them the classification of prædials and non-prædials, with a view principally to remove an impression on the minds of the carpenters, coopers, &c., attached to estates, that they would be classed as non-prædials, and therefore have their term of apprenticeship confined to *four years*. The Governor added some very good advice to the negroes, as to their behaviour in their new condition. At Berbice, it appears that on plantation "Providence," corn flour had been ground by machinery attached to a steam-engine.

Steam-Communication with India.—We are glad to observe that, on the motion of Mr. C. Grant to institute an inquiry into the subject of steam-communication with India, a select committee of the House of Commons has been granted, to collect evidence, and to report on the best means of effecting an object which is admitted on all hands to be extremely desirable. The present aspect of society, both in Europe and in Asia, cannot be contemplated with indifference by those who are interested in the improvement and happiness of mankind; and a measure which would give increased facility to our intercourse with the East must be considered to be eminently calculated to promote those objects. It would not only prove of great utility to private interests, but would bring an accession of political and commercial power which would unite England more firmly with those distant possessions which, as integral parts of the empire, can be better maintained by the exercise of a paternal policy, than the despotism of the sword. Facility of intercourse would fix more of the public attention on the affairs of the East: it would bring back from the shores of India an energetic and intelligent race of government servants, who would support and advocate the interests of the natives against false opinions and unjust measures, generated in this country by ignorance, prejudice, or self-interest; and it would ultimately help to reconcile a conquered people to the yoke of rulers, whose dominion should have a more firm foundation in the affections than in the fears of the governed. There are other reasons that render it of still greater importance, arising from the increased means it would hold out of augmenting our political and mercantile influence in Egypt, Syria, the banks of the Euphrates, and in Persia, through a more constant intercourse with our agents on all subjects of interest connected with those countries, and the opportunity it would open to us of familiarizing the natives with the character and operation of our free institutions. Since we have withdrawn our agents from the Red Sea, and the shores of Arabia, the native commerce between those countries and India has decreased progressively; but a more regular and permanent communication with the Arabs would encourage the spread of commerce, and inspire their Sheikhs with the fear of the discovery and reprisal of any acts of piracy such as they have been in the practice of committing upon the boats that navigate to that quarter from the coast of Guzerat and Katewar. Whether the communication be established *via* Egypt and the Red Sea, or by Syria, the Euphrates, and the Persian Gulf, it must be followed by certain, although not by equal, advantages; and while our Russian rivals are labouring to weaken our power in the East, it is of manifest necessity that we should arm ourselves with a weapon of defence that promises to break the strength of our opponents.—*Atlas.*

Law for Political Journals in Spain—No periodical journal, unless it be exclusively dedicated to the arts, literature, and science, is henceforth to be circulated in Spain without a license from the Queen. The editors must individually possess a pecuniary qualification, equivalent to that which entitles a citizen to exercise the elective franchise. They must, moreover, deposit a certain sum by way of security for the payment of fines which they may incur; and, besides all this, their journals are to be subjected to a previous censorship. The quantity of matter disapproved of by the censor is not to be indicated by blanks or asterisks, as was the case in France under the former regime; and offences against this decree are to be punished by fine, and by removal from the culprit's place of residence to a distance of not less than twenty leagues.

Captain Ross.—Captain Ross has arrived at Copenhagen, where he has it in view to engage some Greenland seamen, preparatory to another expedition towards the frozen regions. At Copenhagen, Captain Ross had the honour to be presented to the King. He remained there three days. He intends, it is said, to have some ships built of deal in Sweden and Norway, and with these vessels, which, on account of the pliability of the material, are peculiarly qualified for voyages among the ice, to go to the North Pole. He had become intimate with M. Kale, an enterprising man, who had an opportunity of doing him some service in Greenland, in which country M. Kale intends to form a private establishment; and he expects that, in the almost unknown spot which he has selected, he shall obtain abundance of fish and wild fowl of all kinds. The merchants are much interested about the undertaking, as the trade to the north, and especially to Iceland, since it has been made free, has greatly increased in extent and importance.

CIVIL AND POLITICAL DISSENSIONS IN SWITZERLAND.

THE two-and-twenty Cantons, or independent republics, which compose the Swiss Confederacy, may be divided into two great classes, differing from each other in their form of society, and in the spirit of their institutions. The first order or class, which is the oldest, and in which Swiss liberty originated, consists of the little mountain cantons, namely—Schwytz, Unterwalden, Zug, Glarus, Appenzell, and the Grisons. These are chiefly pastoral; cattle constitutes their wealth, although agriculture is to some extent attended to in the valleys, and manufactures have been established in some districts. The manners and habits of the people are conformable to the nature of their prevailing occupations and means of subsistence. They are simple, independent, contented with little, attached to their mountains, pious and unsophisticated. Their ideas are necessarily contracted within a narrow span. Their government is pure democracy—all the men of age assemble once a year, to the number of several thousands, in a field or other public place, and there elect or confirm their magistrates, vote the supplies, and decide upon other questions of general importance. The current business of the year is transacted by several councils, the members of which are generally confirmed on the expiration of the term of their office, and may be said to be for life; unless some grave charge, or an ebullition of party spirit, causes the general assembly to withhold its confirmation. The larger of these democracies has 50,000 inhabitants, men, women, and children included, and the smallest 12,000. These cantons have remained to the present day unchanged in the spirit and form of their institutions.

The second class of Swiss republics is that of the representative, or town cantons, where national independence originated in the principal town of each, which at first constituted the whole republic. Such are Luzern, Bern, Freyburg, Soleure, Zurich, Basle, Schaffhausen, and Geneva. By degrees various neighbouring districts placed themselves under the protection of the town, in order to be safe from the exactions of the feudal barons, and from the violence of the marauding parties, which were so common in the middle ages. Other districts were conquered by the towns, or purchased by them from the country barons, or from the emperors and the house of Austria. The towns leaving to these districts their municipal administration, did not give them any share in the central government, which remained in the hands of the citizens, or of such of the country people who purchased the freedom of the city. This was, in reality, the case with all republics, in ancient times as well as in the middle ages; the country people were the subjects of the towns. In the course of ages, however, the country districts increased in population, and made progress in their industry—villages grew into towns, the established manufacturers acquired wealth, and then began to aspire to a share in the central government of the state. They were the more strongly urged to this—that the ruling city, where trade and manufactures had long been established, as was the case especially at Zurich and Basle, might keep in its hands a strict monopoly of several branches of commerce, and forbid competition to the country people. The country people were also excluded from most offices in the Church or State. They on the other side paid hardly any taxes, except to supply their own municipal expenses. But they were obliged to do military duty at the request of the city, and were subject to the courts both civil and criminal, appointed by the latter, and to obey the general laws made by the citizen legislators. Such was the condition of most of the Swiss republics, and thus the name and the forms of a republic were found united with the exercise of real absolutism over a greater part of the population. The headiness, good sense, and honesty of the Swiss contributed, for a long time, to smooth the feelings of dissatisfaction; yet occasional and partial insurrections took place among the peasantry of several districts against the towns, which however were speedily suppressed, and then the penal code, which was that of the Gothic ages, was put in full vigour against the revolted, and torture, cruel modes of death, and long imprisonment, were not spared by the republican triumphant rulers. But fortunately things came but seldom to such extremes.

During the last thirty years several concessions were made by the towns to the country people. After the general peace in 1814, new constitutions were framed, by which a certain proportion of country representatives were admitted into the legislative council. The canton of Basle, where the most serious disturbances have taken place, may serve as a specimen of these new arrangements and modifications, which, as it often happens, have satisfied no one, because old rancour and recent violence, and the selfish passions of men have interfered on both sides to prevent conciliation.

By the Constitution of 1814, the Great Council, or legislative assembly of Basle, consisted of 154 members, chosen out of a population of 50,000 souls (all these little states have a disproportionate number of legislators, in order, it would seem, to satisfy the cravings of the citizens after power, however ephemeral and insignificant). Thirty members were named by the city electors, and thirty-four by the country, the rest were chosen by the Great Council itself, sixty from the city, and thirty from the country, —in all ninety city members, and sixty-four country ones. The qualifications required of a member were his being twenty-four years of age, and his being citizen or *bourgeois*) of the canton—that is to say, being registered as a burgher or freeman of one of the communes: which freedom, once purchased, entitles the legitimate offspring of the purchaser to all the rights and privileges of the commune; as in Switzerland, birth or residence without the *bourgeois* are not sufficient to make any one citizen of the state, nor entitle him to assistance, nor, indeed, secure him from expulsion, if he become destitute. The third qualification required of a member was his being possessed of 5000 Swiss livres, or 300*l.* sterling in real property. The Great Council is sovereign. The executive, called little council, was composed of twenty-five members, chosen by the Great Council out of its body, of which four at least were country members. The court of appeal, or supreme court of justice, composed of twelve members, was likewise chosen by the Great Council from among its own members. By these means, a majority in the Great Council might keep all the power of the state in their hands in perpetuity. The same citizen could be legislator, member of the executive, and judge at the same time. Such was, in substance, the constitution of most of the Swiss republics till 1830. The people in several cantons had become clamorous for a revision of the constitution, and in June,

[WILLIAM CLOWES, Printer, Duke Street, Lambeth.]

1830, nearly two months before the revolution at Paris, the Swiss canton of Ticino quietly effected a change in its constitution, substituting direct election of all the members, to be renewed every four years, and the division of the legislative, executive, and judicial powers. In that and the following year the other cantons, after some opposition, adopted a similar principle.

At Basle a new statute was framed by the Great Council itself, by which 79 members were in future to be elected directly by the country districts, and 75 by the city, the members to be renewed periodically, and the division of the three powers to be strictly maintained. The country members who were at the time sitting in the old Great Council highly approved of the new statute; but a party of country people, led by some agitators, assembled at Leichstall, a large village about ten miles from Basle, demanding to have 110 members returned for the country, threatening to march against the city in case of refusal. Basle is a wealthy city, numbering about one-third of the population of the whole canton, bearing three-fourths of the whole taxation, supporting all the public and the charitable establishments, the university, hospitals, &c., and having among its citizens nearly all the education and intelligence of the canton. The citizens of Basle would not give themselves and their property up to the discretion of a rude and tumultuous peasantry, and they prepared to resist. In the first encounter, in January, 1831, the revolters were dispersed, some fled out of the canton, others were pardoned: and tranquillity being thus restored, the new constitution was then laid before all the citizens and burghers, both of town and country, assembled in their respective communes, and was approved of by five-sevenths of the votes. The constitution was thus fully legalized: but soon after the people of Liechstall broke out into a fresh insurrection, the citizens marched against them, and several lives were lost on both sides. After this, a reconciliation became more distant than ever, and although the Federal Diet repeatedly interfered, it was unable to restore order for any length of time. Acts of violence committed by the peasants brought on retaliation on the part of the citizens; many lives were lost, houses were plundered and burnt, and, after two years of a lamentable contest, it was found impossible for the city of Basle to live in peace with the rest of the canton. The consequence has been a separation into two minature states, Basle city, and Basle country, each having its separate legislature and government.

The people of the other cantons have been somewhat wiser. At Zurich the country-people willingly consented that the city of Zurich, although numbering but one-thirteenth of the whole population of the canton, should return one-third of the members to the legislature, in consideration of its superior wealth, industry, and intelligence.

At Bern, the most considerable and most illustrious state in Switzerland, the change that has taken place has been greater, because the forms of its government were the most aristocratic in Switzerland, Freyburg excepted. The ancient families who had exercised the power for ages, and, it must be confessed, not without wisdom or moderation, have displayed a bitterness of feeling, which has destroyed the good relations of society; many have refused to swear allegiance to the new constitution, and have even refused employment under it, which was offered to them in consideration of their acknowledged abilities and past services; others have voluntarily emigrated; and this has perhaps contributed to throw the reins of affairs into the hands of persons of the opposite extreme. Yet, fortunately, there has been no bloodshed or open violence.

The little democratic canton of Schwytz has had, also, its civil dissensions. Some districts or valleys of that mountain region had been incorporated with the old territory and town of Schwytz later than others, and they were always considered and called the new districts. As such, they had not an equality of rights with the old ones, and although they all assembled together in the landsgemeinde, or general assembly: yet, by an old regulation, the new districts could only furnish one-third of the members of the executive and judiciary. This was made, in 1831, a subject of controversy, two separate landsgemeinde were assembled, and the hardy mountaineers on either side threatened at one time to decide the feud by the strength of their brawny arms; but German good sense at last prevailed; and as they could not live together in peace, they agreed to separate, and yet remain friends and good neighbours. Thus, Schwytz forms now two separate roden or states, exterior and interior, the population of both being about 30,000 souls. When the deputies of Schwytz exterior first appeared in the Federal Diet last year, those of Schwytz interior, or old Schwytz, in a friendly cordial manner shook them by the hands, and introduced them to their colleagues in the assembly, who were delighted in seeing this mark of genuine old Swiss feeling triumphing over past petty animosities.

The canton of Neufchatel has afforded, and still affords, another instance of civil disturbance. The circumstances of this little state are very peculiar. Its system of government is extremely complicated, and the machinery of it is not easily explained. The principality of Neufchatel is a constitutional monarchy, of which the King of Prussia is the sovereign, in consequence of the voluntary election by the states of the country, in 1707, of Frederick I., then King of Prussia, who was next heir to the old Counts of Neufchatel. It forms, however, a state quite distinct from and independent of the other Prussian dominions. Its allegiance is not to the King of Prussia, but to Frederick William of Brandenburg, Prince of Neufchatel. In all wars between Prussia and other powers, Neufchatel remains neutral. In 1806, however, after the reverses sustained by Prussia, the king was obliged to give up Neufchatel to the Emperor of the French. But even in this, Neufchatel was more fortunate than many other countries, for, instead of being merged into the great French empire, it was given by Buonaparte to Berthier, who changed little or nothing in the old institutions of the country, and Neufchatel continued free from the conscriptions, taxes, police, and all the burthens of Napoleon's system. By the peace of 1814, Neufchatel was restored to its old sovereign the King of Prussia, and at the same time was received as a canton in the Swiss Confederacy.

The legislative power at Neufchatel resides in the states, called Audiences, which are composed of 45 members, appointed by the king, and 30 elected by the commons. The laws framed by them must be approved of by the king, or in his name by his governor, who resides at Neufchatel. No tax can be imposed without a law being passed by the audiences. The executive power is vested in a council of state presided over by the governor. The towns of Neufchatel and Vallengin have their own respective councils, and form two little republics, almost independent of the rest. No one but a native of the country can fill any situation, civil or military, in it, with the exception of the governor. Trade is perfectly free, no duty is levied upon either importation or exportation. The manufactures of Neufchatel have free ingress to the other states of the Prussian monarchy as national goods. No one can be sent for trial out of the country, nor condemned without being tried by the competent court. No magistrate or other public functionary can be deprived of his office, except for misconduct, and then only by a sentence of the competent judges. These and other rights and liberties and customs, *written* or *unwritten*, of Neufchatel, the king on his accession swears to maintain.

Under these institutions, and the liberal encouragement given to industrious strangers to come and settle within this favoured territory, the principality of Neufchatel has gradually risen in wealth, population, and industry within the last hundred years. Valleys before uninhabited, have become covered with habitations and manufactures, especially of jewelry, watches, and other ingenious machinery. The districts called le Locle and la Chaux de fonds are populous colonies of thriving mechanics. Many rich families live at Neufchatel, and one finds merchants from Neufchatel in almost every commercial town of Europe, and generally in a good way of business, the natives of Neufchatel having a peculiar talent for commerce. Nor is agriculture neglected; the country is well cultivated, rich in vineyards, which produce the best wine in Switzerland.

In 1831, however, political discord broke out at Neufchatel. One party wished for a new constitution on the principle of equality. They were supported by the democratic party in the neighbouring states. A young Frenchman, who had become bourgeois of one of the communes of Neufchatel, established a democratic paper, which he was desired to discontinue, and as a douceur, received eighty louis d'or. But he soon after resumed the publication, saying that he had no other means of subsistence. The position of Neuf

chatel was infinitely more difficult than that of the other Swiss states, on account of its Prussian connexion. The bourgeois of the four towns of Neufchatel, Vallengin, Boudry, and Landevors, who enjoyed a great influence in the councils, were opposed to change. Some of the country communes sided with the towns. The King of Prussia sent a commissary to endeavour to conciliate matters, who behaved with apparent cordiality. A project of a new constitution was framed in March, 1833, by a deputation of the bourgeois; according to which, fifty-one members to the future legislature were to be returned directly by the people at large, and to be renewed at stated periods; twelve more to be named by the burghers of the four towns, and twelve others by the King. This, with other liberal provisions of the project, might have settled all disputes, had not the extreme democratic party started up with a new demand, that of throwing off the allegiance to the King of Prussia. This was more easily said than done. To widen the breach still more, a troop of violent partisans, led by some retired officers of the French service, took possession by surprise of the castle of Neufchatel, demanding that general assemblies of the people should be convoked, to decide upon all these important questions. They at the same time threatened the citizens of Neufchatel with the fire of the castle if they did not submit, and they required provisions to be regularly supplied to themselves by the town, under the same threat. Confusion was now at its greatest height. Families ran away from Neufchatel; the friends of a constitutional monarchy assembled in a considerable force at Vallengin, and the peasants assembled in other quarters to support the insurgents. Prussian cockades, Swiss cockades, Neufchatel cockades, trees of liberty in one place, the Prussian eagle in another—it was a real carnival of misrule and anarchy. Acts of violence were committed by both parties. The Swiss Diet now interfered, and after much difficulty induced the insurgents to leave the castle: but, of course, could not dictate any internal arrangement between the conflicting parties. The King being informed of this, sent M. von Pfiel as his commissary, to restore order. Of the leaders of the revolt some escaped into France; others were tried, and condemned to long imprisonment. Tranquillity, however, was not re-established, although the bourgeois, or town party, supported by the King's authority, regained their influence. Many people who did not approve of the insurrection, now disapproved of the reaction. Party bitterness poisoned the social, and even domestic, intercourse. Families were, and are still divided between themselves. Several men in a good way of business have sold their stock by auction and emigrated, rather than submit, and this resolution has been attended with great loss to themselves and relatives. Neufchatel continues to this day in a very unsettled state, and may be considered as no longer forming part of the Swiss confederacy. The principality of Neufchatel contains somewhat above 50,000 inhabitants.

Another subject which has much occupied Swiss politicians for the last three years, is that of the Federal Diet. Every canton sends one or more deputies to the Diet, which assembles every year alternatively in one of the principal towns. Every canton has but one vote in the assembly. The chief business of the Diet is to transact all foreign affairs, and to act as umpire in the internal disputes between the various cantons, and between parties within each canton. It has also a small regular force at its disposal, and can order out the militia of each canton. Its powers, however, are much more limited than those of the Congress of the United States. The Swiss of each canton are very tenacious of their municipal independence, which has been, in fact, the foundation and the strength of their liberties. The manners of the various cantons, their language and religion are also different. Through such a country it would be impossible to establish uniformity. The French Directory attempted it by bayonets, deluged the country with blood, and failed in establishing a single government all over Switzerland. Buonaparte perceived the blunder, and the injustice of the attempt, and restored the Swiss to their federal form of government. The congress of Vienna respected it likewise. In these latter years there was a party, small, but composed of men of talents, who wanted again to try a central supreme government; they framed a plan for the purpose, but the people, especially those of the democratic cantons, rejected it. No doubt there are inconveniences in a too great subdivision of states, but yet a federal system in a republican country seems the best safeguard of the liberties of each; a great republic, one and *indivisible*, as the French styled theirs, is apt to degenerate into a tyranny of factions, or into military despotisms. Besides the municipal liberties and the federal system are adapted to the nature of the country, and have become in the course of five centuries, interwoven with the habits and ideas of the people. People must not be forced into a system of government they do not like, however superior that system may appear in a general and abstract view.

With the exception of the affairs of Neufchatel, tranquillity may be said to be now restored in Switzerland: many improvements have taken, and are taking place in various Cantons, especially concerning the judicial administration, and the education of the people which in many parts had been sadly neglected. A late source of great difficulty to Switzerland has been the question concerning the foreign emigrants, Poles, Italians, and Germans, of whom a considerable number repaired to that country, and were hospitably received, until the rash, not to use a harsher term, attempt upon Savoy, by a band of about five or six hundred of them, awoke the jealousy of the neighbouring powers. Of that attempt and its results we have spoken in a former Number of the Companion. But a still worse feature of this business was their countenancing a revolt of the lower classes in the peaceful Canton of Geneva, into which they had forced themselves arms in hand, and which they kept in a state of alarm for a week, during which time all the citizens were obliged to be under arms, to prevent a repetition of the scenes which have afflicted Basle, for it was proposed to divide the little Canton of Geneva also into two. From Geneva these troublesome guests went into the neighbouring Canton of Vaud, where the authorities were obliged to take measures for preserving peace, to have an additional force under arms, at Bern, where the refugees resided at first, refused to admit them again, until the Canton de Vaud agreed to pay a certain sum, in order to obtain their admission into their old quarters. All this business, we are told, has cost the Canton de Vaud 80,000 Swiss livres, nearly 5000 pounds sterling, which the Canton can but ill spare, being a poor Canton and already burthened with a great number of its own destitute citizens. Another consequence has been that the neighbouring powers, Sardinia, Austria, and the German Diet, have threatened to interrupt all communications with Switzerland, if measures were not taken to prevent the refugees assembling again and attempting to pass the frontiers. Some of the demands of these powers were couched in an angry and peremptory tone, but the justice of the principle of international law to which they appealed, could hardly be denied. On the other side the stoppage of all commercial intercourse with Switzerland, would have been ruinous to many of the Cantons, especially the manufacturing ones. It seems that ultimately a law or compromise has been accepted, that whenever it shall be proved that any of the refugees have actually conspired against the peace of any neighbouring country, they shall be expelled. Those who are peaceful, are allowed to remain undisturbed as before, within however a certain distance of the frontiers. If some such regulations were not adopted, if bands of armed men of all nations were to be allowed to assemble on neutral ground, ready to pounce upon any country, at the first appearance of symptoms of political discontent: Europe would speedily return to the state in which it was in the middle ages, to the times of the condottieri, and the free companies, and the Black bands.

REFORM OF THE COURT OF SESSION, SCOTLAND.

In June, last year, a commission was appointed by the crown to inquire into various matters connected with the administration of the law in Scotland; and their first Report, dated the 2d of May last, and ordered to be printed by the House of Commons on the 24th of the same month, has just appeared. It forms, with the Appendix, a volume of upwards of four hundred pages, and is in many respects an interesting and important document.

The subjects of inquiry enumerated in the commission are the following, as they are briefly stated in the title of the Report:—1. The Fees and Establishment of Clerks in the

Court of Session; 2. The Preparation of Records in that Court; 3. The Constitution and Jurisdiction of the Sheriff Courts; 4. The Law and Forms of Imprisonment for Debt; 5. The Expense of Criminal Proceedings; and 6. The Forms for the Completion and Transference of Heritable Rights. The Report embraces the first form of these heads; and we propose in the present paper to give an abstract of what it contains on the subject of the fees now exigible from suitors in the Court of Session, and the practicability of diminishing those fees either by reducing the establishment of clerks and other officers, or otherwise.

It may be necessary for the information of the English reader to premise that the Court of Session is the supreme court in Scotland for the trial of all civil causes, including matters of equity. It was established by James V., in 1532, in room of an ambulatory committee of parliament, by which, under the name of the Lords of Council and Session, justice had been till then administered throughout the kingdom. Ever since its establishment, till very lately, the Court of Session has consisted of fifteen judges or lords, one of whom is styled the Lord President, while the others assume titles either from their names, as Lord Monerief, Lord Gillies, or more commonly from some landed property of which they may be possessed, as Lord Kames (Home), Lord Hailes (Dalrymple), Lord Monboddo (Burnett), Lord Auchinleck (Boswell), Lord Conehouse (Cranstoun), &c. By a recent act the number of lords has been reduced to fourteen, and according to its present constitution the Court consists of two divisions, the first of which is composed of the Lord President and six other lords; the second of the Lord Justice Clerk and six other lords. The Lord Justice Clerk is the Lord of Session, who also officiates as chief of the Supreme Criminal Court, called the Court of Justiciary, (instituted in 1672). It is composed of the Lord Justice Clerk and five other Lords of Session, called Lords Commissioners. The Lord President of the Court of Session has a salary of 4300*l.*; the Lord Justice Clerk 2000*l.* as Chief of the Court of Justiciary, and the same sum as a Lord of Session; the other Lords of Session 2000*l.* each: and such of them as are Lords Commissioners of the Court of Justiciary 600*l.* each in addition. Four of the Lords of Session also sit as Lords Commissioners of the Jury Court, instituted in 1815 for the trial of civil cases. It is presided over by a Lord Chief Commissioner, who holds no other office.

Before 1815 jury-trial in civil cases was unknown in Scotland; all such cases were decided either by the subordinate local judges, the district justices of peace, and the sheriffs of counties, or by the Lords of Session acting at once as jurymen and as judges. The Court of Session sits only in Edinburgh; but the Lords of Justiciary, in addition to their sittings in the capital, make twice in the year, during the recesses of the Court of Session, a circuit throughout the kingdom, and hold what are called Circuit Courts in several of the principal towns. There is no appeal from the decisions of the Court of Justiciary, whether sitting at Edinburgh or on circuit; but from those of the Court of Session there is an appeal to the House of Lords.

The Court of Session holds only two terms, or sessions, in the year: the summer session extending from the 12th of May to the 12th of July, and the winter session from the 12th of November to the 12th of March. During the two intervals of four months each, which occur every year between these short sessions, a single judge, under the title of Lord Ordinary, sits occasionally for the dispatch of certain summary matters; but the progress of all causes of importance is wholly suspended. In a note appended to the examination of one of the witnesses called before the present commission, Mr. Peter Campbell, solicitor, there are some curious details respecting the comparative quantities of labour undergone by the Scotch and English judges, and the amount of duty which they severally perform. While in the King's Bench, for instance, the judges sit annually for 116 days at the rate of six hours per day, besides 185 in chambers for more than two and a half hours a day, 75 days in the Bail Court for one and a half hour each day, 126 days at Nisi Prius, in London and Middlesex, 74 days on circuit, besides the sittings of some of their number at the Court of Delegates, at the Old Bailey Sessions, at the Admiralty Sessions, and their attendances on the House of Lords and in the Privy Council—to omit a variety of minor duties—the judges in the inner house of the Court of Session sit only for about two hours each day for 114 days in the year; and the other public duties of such of them as are not Lords of Justiciary or Commissioners of the Jury Court are of exceedingly trifling amount. The fifteen judges of the Court of Session, Mr. Campbell states, have decided only about 2700 causes a year on an average of thirty years—the decisions on about one half of which are pronounced *in absence*, and give the judges little or no trouble. It appears, on the other hand, that in the Court of King's Bench there have been wont to be heard annually above 56,000 causes; in the Common Pleas, above 16,000; and in the Court of Exchequer, between 7000 and 8000. The number of actions brought into the last-mentioned court since the recent alterations in the forms of process, is understood to be not less than 30,000 yearly.

The reform of the constitution of the Court of Session, however, in so far as respects the number or duties of the judges, was not among the matters of inquiry directly submitted to the consideration of the present commissioners, although some propositions having that tendency were incidentally brought before them in the course of their investigations.

By the act 50 Geo. III. c. 112, it was directed that certain fees which had been heretofore paid by suitors to different officers of the court should go to form a common fund, called the Fee-fund, from which the officers in question should be paid each a certain fixed salary, any deficiency or surplus that might occur being made up by, or paid over to, the Exchequer. On an average of five years, the annual produce of this fee-fund has been 13,165*l.* 3*s.* 4*d.* But, besides this large sum, fees have continued to be collected by the clerks and other officers, to the average annual amount of 12,042*l.* 11*s.*—making the total annual amount of fees paid by suitors, 25,207*l.* 14*s.* 4*d.* This sum, however, is still inadequate to defray the salaries fixed by the act; and accordingly, on an average of five years, the following payments appear to have been made for that purpose by the Exchequer—namely, to make good annual deficiency of the fee-fund, 3,970*l.* 9*s.* 7*d.*; to the clerks and other officers of the Jury Court (which is merely an appendage to the Court of Session) 3,645*l.*; and for compensation to clerks of the court, under former statutes, 2,232*l.* 14*s.*

The commissioners recommend, in the first place, that all fees levied from suitors ought to be abolished, on the principle that the administration of justice, and the protection of the property and character of individuals, are matters of public polity, in which the whole nation has an equal interest, and the expenditure demanded by which, therefore, ought not to be borne by individuals. They remark that it is an additional "evil springing from the present system, that there is levied from every suitor, without reference to the amount of the claim or the nature of the action, the same amount of contribution towards this expenditure. It matters not whether the suit relate to the humble pittance of the poor man, or to the most extensive estates of the rich, one inexorable rule of action is followed. Thus, while the stake at issue, and the consequent benefit to be derived from the suit, vary from the smallest to the greatest sums, the parties are made to contribute according to an uniform rate." They propose that for the future the clerks and other officers of the court should in every case be paid by salaries in lieu of fees.

The following is a list of the clerks and other officers forming at present the establishment of the Court, with the emoluments drawn by them, and the sources whence these emoluments are derived, omitting fractions of pounds:—

Paid by fixed salaries from the Fee-fund—	
4 Principal Clerks of Session, 1000*l.* each	£4000
5 Depute Clerks of Session, 400*l.* each	2000
13 Clerks of Judges and Keepers of the Rolls	4334
Clerks of Judges receiving Annuities	785
4 Extractors, 250*l.* each	1000
1 Keeper of Judicial Records and Edictal Citations	450
1 Assistant ditto	130
1 Collector of Fee-fund	600
1 Accountant ditto	200
1 Principal Clerk to King's Processes	40
1 Depute Clerk ditto	10
2 Issue Clerks in Jury Causes	1400
2 Principal Record Clerks ditto	1000
2 Assistant Clerks ditto, 600*l.* and 300*l.*	900
7 Macers	951
2 Ditto for Jury Causes	195
Total paid in Salaries	£17,996

Paid by Fees—	
6 Inner House Assistant Clerks	2360
5 Outer House ditto	4242
2 Principal Clerks of the Bills	1283
2 Depute ditto	673
1 Assistant	200
4 Extractors	824
8 Clerks of Extractors	824
1 Minute Book-Keeper	383
1 Keeper of Records	60
1 Auditor of Accounts	1190
Total paid by Fees	£12,042

Making the total salaries and fees, 30,038*l*. There is besides an expenditure on account of retired allowances, offices in the general register house, and printing, to the amount of 1530*l*. The total amount, therefore, of the expense of the present judicial establishment of clerks and officers of the Court of Session (exclusive of the compensations under former statutes payable from the exchequer) is 31,569. The commissioners add, that "during the last five years several offices have been abolished, in consequence of which, the expenditure of the present establishment is considerably lower than the general average of these years."

By altogether abolishing some offices, and reducing the salaries attached to others, in a manner which is stated in detail in the report, the commissioners propose to bring down this actual expenditure to little more than one half of its present amount. The following table, in which are collected the propositions they make as to the several offices, will, when compared with that given above, show the nature and extent of the reductions that will result from the new arrangement:—

4 Principal Clerks of Session, 1000*l* each	£4000
4 Assistant Clerks in the Inner House, 300*l*. each	1200
4 Depute Clerks, 100*l*. each	1600
1 Depute Clerk for the Outer House and Bill Chamber	500
5 Assistant Clerks in the Outer House, 300*l*. each	1500
1 Assistant Clerk in the Bill Chamber	300
13 Judges' Clerks and Keepers of the Rolls	3000
Annuity Fund for do.	750
1 Principal Extractor and Keeper of Judicial Records	600
1 Assistant do.	300
Clerks of Extractors (say)	800
1 Keeper of Minute Book and Edictal Citation	300
1 Clerk to do.	130
1 Collector of Fee Fund	600
1 Accountant of do.	100
1 Auditor of Accounts	700
7 Macers, 100*l*. each	700
Total	£17,080

"We cannot conclude this branch of our report," say the commissioners, "without respectfully submitting to your Majesty the expediency of immediate effect being given, by a legislative enactment, to our recommendations. The fees exigible from suitors will be materially diminished; and we feel confident, that the measures which we have proposed will be beneficial to the establishment of clerks and other officers, and contribute to the general usefulness of the Court of Session."

THE SOUTH AUSTRALIAN ASSOCIATION.

The public meeting of this association, held in Exeter Hall, on the 30th of June last, and the introduction of a Bill into Parliament on the 17th of July by Mr. W. Whitmore for the establishment of a colony in South Australia, will we presume have made most of our readers in some degree acquainted with the principles and prospects which actuate the promoters of this new scheme of colonization. The general facts therefore need not be stated. The evidence in favour of the province selected is various, satisfactory, and complete. Different individuals, agriculturists and men of science—ship-captains, who visited the spot for purposes of commerce or discovery—some who only visited the spot in passing, and others who have remained there for months—in their unanimous testimony combine in displaying the part of New Holland chosen for this colony, as a region distinguished for the mild temperature of its climate—the abundance of animal food in its fields, and of fish in its rivers—placed in an advantageous position for intercourse and commerce with other parts—and besides the exchangeable commodities which it naturally produces, capable, from the excellence and fertility of its soil, of yielding under the hand of cultivation, alike the fruits of pastoral and of agricultural industry. There are no doubt differences and discrepancies in the testimony, but they confirm the conclusion supported by the greatest amount of evidence since they arise from differences in the degree and kind of information existing necessarily among the witnesses; while all the testimonies of those who had the greatest advantages of previous knowledge, and of time and opportunity for the formation of their opinions—the most accurate and therefore the most valuable testimonies, are most decidedly in favour of the spot as highly suitable for a colonial settlement. Assuming on evidence which we deem superior to cavil, the suitableness and eligibility of the spot for a colony, our object at present will be to develope briefly the mode of colonization to be pursued—a subject of vital importance to the whole scheme, since an erroneous principle here might, in spite of all the advantages of soil, climate, and position, render all these very "rich gifts of nature poor," and, as in the recent case of the Swan River settlement, blight all the rational prospects of the colonists with sterility, starvation and disgrace.

The Swan River is a warning to projectors. If the South Australian Association cannot give the public a clear disclosure of the cause of its failure, and a prospect of avoiding it in the colony they propose, there is no ordinary temerity in their proceedings and something worse than folly in their hope of encouragement. Believing, however, that they have discovered in the mode of colonization adopted in the Swan River settlement, a cause adequate of itself to account for all its evils—a cause which has had a similar baneful influence wherever it has existed—they feel amply warranted in proposing a new scheme of colonization established on a principle supported by universal experience—its neglect having been the ruin, and its adoption the success of every colony of which we have an account.

The cause of the Swan River failure was the dispersion of the colonists, caused by the way in which grants of land were obtained. A colony is a community of persons who have taken possession of waste lands. The object of a colony is the production of wealth, and the laws which regulate the process by which it is produced, the combined influence of land, labour, and capital, of course determine the success of the colony. These call wealth into existence—without these it cannot exist. Disperse capital, and its productive power evaporates in proportion to its dispersion. When labour is scattered over an extensive tract, the strength which union imparts ceases to exist—the wonders which it alone can achieve become impossible, and the miracles of skill and quickness which we owe to the division of labour are at an end. When labour and capital are combined with land the wilderness blossoms into fruitfulness; but when either of them are scattered over an extensive tract, labour wastes itself, and capital perishes. The dispersion of labour is the creator of barbarism—its union of civilization. Land is not wealth, it is only an element which, along with labour, is essential to its production. In Britain it is reckoned wealth because it is a source of riches to landowners. It is not therefore to be wondered at, that emigrants should forget that the value of land which labour alone can elicit varies even here, in accordance with the density of the population which covers it, when we remember how even philosophers have erred on this point.—Quesney declaring land to be the sole source of wealth because rent does not require the pre-existence of wealth: and Adam Smith, referring the prosperity of colonies "to the mere trifle" for which land can be purchased. This delusion was the ruin of the Swan River. The blame of its failure will of course fall on its projectors—the injurious desire of land among the colonists, and the lavish grants of it by the government are very naturally forgotten, though they are the only source of the evil. The grants of land ought doubtless to be large enough to prevent the waste of labour on inferior soils—but they cannot be so far extended as to disperse labour over remote parts without causing poverty and ruin. Naturally desirous of changing the

character of a labourer for the character of a landowner, every colonist seizes the first opportunity of obtaining land; and hence the division of labour into fractional and separate parts ensues until the dissolution of society prevents the production at once of a surplus for the purposes of foreign, and of a variety of articles for the purposes of internal exchange. The productive power of exchange is lost, and all the advantages of exchanging instead of making; are hindered from contributing to the general prosperity of the colony. This was the case at the Swan River. Excessive grants of land scattered the colonists—one individual received 500,000 acres—unlimited tracts were sold at 1s. 6d. per acre; five times as much land was granted in one year, as was disposed of in New South Wales in forty. Upwards of a thousand labourers were sent out, but the extreme cheapness of the land, and the extravagant price of labour furnished them with such facilities and inducements to become landowners, that the capitalists were everywhere left without persons to cultivate their lands. In consequence capital to the amount of 200,000*l.* perished.—A scene of desolation ensued. The labourers having deserted their masters from the delusive desire of being the owners of land, implements of agriculture were allowed to rust on the banks of the river—seeds of various kinds rotted in casks on the beach for want of sowing, and sheep, cattle, and horses perished because there was no one to attend to them. The crisis came—hunger cured the labourers of their infatuation, and they returned and demanded from the capitalists they had ruined, the work which they had deserted. It was not to be had. Mr. Peel, after being left alone by three hundred servants whom he sent out, so that he had not one to do him a single service, was at last compelled to make his escape to an island in order to avoid the fury of his labourers, when they returned to demand that employment which they deprived him of the power of giving, by the destruction of capital to the amount of 50,000*l.*

Similar effects have been produced wherever the proportion between labour and land has not been kept up by the arrangements or circumstances of the colony. The maintenance of this proportion has uniformly been attended with prosperity. The Greek colonies in Asia Minor flourished to an extraordinary extent, and for a time outstripped the mother country in prosperity and civilization, because their slaves supplied them constantly with an adequate amount of labour, and they kept together in one great fortified town which they built on the coast. The first English colony was founded in Virginia in the time of Queen Elizabeth. Although the colony was fertile, and the emigrants provided with everything that appeared necessary to success, instead of flourishing, three successive embarkations of Englishmen belonging to that heroic age perished before the colony was established. About the same time the prosperity of the Spanish colony in the island of Hispaniola was exciting the admiration of Europe. The Spaniards compelled the natives to labour, and flourished until the natives decayed, which stopped the prosperity of the colony. It was restored, however, when the natives of other islands were made slaves. In Virginia, the English spread themselves over the country, and, as the natural consequence of their separation, perished; until the proportion of labour to land was adjusted by the wreck of a Dutch vessel on the shore full of slaves, which began the prosperity which Virginia continues to enjoy. The Dutch established two colonies, the one at the Cape of Good Hope, and the other in New York. The colonists in New York were compelled by the warlike natives to keep together, and labour was accordingly combined and divided—they flourished. At the Cape it was otherwise. Every settler placed himself in the centre of a wide circumference of land: in this way every family was isolated and laboured apart; the hardship and misery which proceeded from this source was extreme. The colony advanced, but very slowly, to prosperity; and to this day the colonists are among the most barbarous of the inhabitants of the globe. We add but one other illustration. The United States give no free grants of waste lands without a special decree of Congress; every grant is paid for at the rate of a dollar and a quarter per acre. In British Canada, "crown reserves" have been given to the clergy, and numerous extensive tracts bestowed gratuitously. The effects of the different systems are remarkably displayed in the following extract from 'Pickering's Emigrants' Guide, 1830.' "On the United States' side of the Niagara are large towns springing up; the numerous shipping with piers to protect them in harbour; coaches rattling along the road; and trade evidenced by waggons, carts, horses, and people on foot in all directions. On the Canadian side, although in the immediate vicinity, an *older settlement*, and apparently *better land*, there are only two or three stores, a tavern or two, a natural harbour without piers, but few vessels, and two temporary landing-places." It thus appears from an induction of facts, that the due combination of land and labour is the essential element of colonial success. Although sanctioned by neither philosophers nor statesmen, this principle of the concentration of labour and society, in order to secure the success of colonial enterprise when casually brought into play by either the wreck of a slave ship, the density of a forest, or the hostility of a warlike tribe, has been in every age a secret, but infallible infuser of prosperity into all the thriving colonies of the globe.

The object of the South Australian Association is to secure the development of this principle—a due proportion between land, labour and capital. It is to embody in practice this one great lesson of colonial history. The constitution of the system and the provisions of the act of parliament have been framed with this object in view. They provide first for the disposal of all waste lands by public sale; secondly, for the expenditure of the purchase money in sending out labourers, who are, thirdly, to be persons of both sexes, just arrived at the age of puberty—a class the most likely to insure a rapid increase of population.

1. Land is to be sold publicly at the highest price that can be got. There are to be no gifts of land. There will be no favouritism. This is secured by the following provisions of the act:—

"I. All that part of Australia which lies between the 132nd and the 141st degrees of East longitude, and between the southern ocean and the tropic of Capricorn, together with the islands adjacent thereto, is erected into a British province, by the name of 'South Australia,' and declared, with respect to government, independent of every other colony.

"II. All the lands within the above limits are declared to be public lands, and are placed under the management of a Board of Commissioners sitting in London.

"III. There is but one way in which every individual may obtain a private property in any of the said lands; namely, by paying for the same in ready money.

"IV. Subject to the above condition, and to the necessity of previous surveys, every one shall be free to acquire a private property in the said lands, and without limit as to quantity or situation.

"V. The lowest price at which public land shall ever be sold in this colony, is 12*s.* per acre.

"VI. Subject to the above provision, Commissioners are authorised to raise or lower the price of public land; always giving public notice of any intended change in the price, and of the period during which the higher or lower price is to be required.

"VII. All sales to be conducted in public.

"VIII. The foregoing provisions declared to be fundamental articles of the constitution of South Australia, and not to be changed without the authority of Parliament."

The advantages of these regulations are obvious. The disposal of land will be uniform and permanent in its mode of procedure, and complete impartiality will be secured in the bestowal, and perfect liberty in the appropriation of it. Wealthy and selfish men will not be able by political influence to obtain free grants, which, as in the case of most of our colonies, they allow to lie waste, and only sell when the industry and capital of contiguous colonists have raised them into a value to the creation of which they have not contributed. These lands, indeed, instead of assisting the general prosperity, obstruct and retard it by occupying the place which might have been filled by more active cultivators with a thriving agriculture. The Board of Commissioners by regulating the price of land, and securing adherence to the provisions of the act, seem highly calculated to exercise a beneficial influence on the prosperity of the colony.

2. The purchase-money received for land is to be laid out in sending labourers to the colony.

"IX. That the whole of the money obtained by the sale

of public land shall form an emigration fund, and shall be employed by the Commissioners in conveying poor labourers to the colony."

This will render the payment, though nominally the price of land, really an investment for labour; the money will not only give the purchaser the possession of land, it will secure labour to improve it, and by being laid out in increasing the population, it will be at the same time enhancing the value of the land it purchased. If we reckon the cost of each labourer's passage at 15*l.* and the minimum price of land 12*s.* per acre, the proportion of labour secured to the land would be at the rate of four persons to every 100 acres. The prosperity of the colony would raise the value of land, and consequently the proportion of labour which would be still further swelled by the rising population of the colony. The Board of Commissioners, by having the disposal of land, have it in their power to prevent the labourers from becoming landowners, to the destruction of the proportion between labour and land. To adopt a comparison from the able author of 'England and America,' they will surround the colonists with an elastic belt, in order to secure the combination of labour and land, but which will be capable of constant enlargement in accordance to a pressure from within.

3. None but persons at the age of puberty are to be sent out as labourers.

"X. All the poor persons taken to the colony by means of the emigration fund shall be, as far as it is possible to make the selection, young adult persons of both sexes, in an equal proportion."

This will diminish the cost of enlarging the population. It will secure its advancement at the most rapid rate possible. The greatest amount of labour will be got at the least possible expense. Persons of this class, too, can leave their country with less pain than any other. Persons who will add to the population to the highest amount alone will be sent, and thus the elements of increase will be in the greatest possible proportion, and those of decrease in the weakest and lowest.

The last provision of the act which we shall quote, provides for the supply of labour from the outset of the first emigrants, lest the colony should perish before the arrival of labourers.

"XI. The Commission of Public Lands and Emigration is empowered to anticipate the sales of land, by receiving purchase-money on account from emigrants intending to buy land, and, if necessary, by raising a loan or loans, to be secured on the whole Public land of the Colony; and to employ such loan or loans in conveying selected labourers to the colony."

Such is an outline of this scheme. It was first proposed in an acute, spirited, and ingenious letter from Sydney, published in 1832, and edited by Mr. Robert Gouger, the Secretary of the South Australian Association. It appears to us to be founded on one of the soundest principles in political science, judiciously and practically applied.

Various objections to the scheme have been stated. It is opposed to the interest of various parties. In the shape of aspersion, insinuation, and abuse, a good deal of matter has appeared, but the arguments are few and feeble indeed. It is alleged that the minimum will never be paid for land in Australia. It may be paid, however, for both land and labour; for mere land higher prices are paid in various colonies. The American Land Company sell their land at from 15 to 30 shillings per acre; and the value of land in New South Wales and Van Diemen's Land exceeds 12*s.* There does not, therefore, appear to be any thing very chimerical, in expecting that sum for land and labour combined, so as to ensure colonial success.

It is a futile objection to say that, by the removal of labour and capital to colonies, we lessen the skill and resources of the mother country. Even if this were true, the object of skill and capital is happiness, and they are worthless except as means to this end. It is a bad superiority that can be kept up only by the perpetual struggle of suffering and famishing labourers. It is, indeed, true, that emigration lessens capital, and capital is the chief employer of labour; but it does not follow that emigration lessens employment in Britain, a country in which there is at once a redundancy of labour and capital. There is a surplus of both. The redundancy of capital is seen in the eagerness with which every enterprise that promises even the smallest profits is embraced; while the overflow of population is conspicuous in every profession and department of labour. Capital and labour want room. The greater capitalists are preying upon the smaller, and thus diminishing the profits and common capital of both. The remedy is obvious, and odious epithets applied to emigration will not prevent a properly-regulated colony from being precisely what this case demands—an open sphere for the operations of capital, and a fair field for the achievements of industry. Colonies increase both capital and labour, by giving full developement to their powers of mutual and self production. Exchange and production, prosperity and enjoyment, are the consequences—wealth is produced in a thriving community, and the wilderness blossoms with a flourishing people, who unfold anew the powers of labour, land, and capital, for the advancement of civilization and the diffusion of happiness. Such are the blessings of a successful colony. It is for the reader to judge if they are likely to be realized by the present scheme. This only we may be permitted to remark, that if it recommends itself to our readers as it has done to us, as a scheme founded on a principle approved by the voice of universal experience, as the essential element of colonial success, and incorporated in arrangements which are at once judicious in themselves and flexible to suit every emergency no capable mind will be scared from giving it his approval because it suits certain parties to call the South Australian Association at once a joint-stock company, formed for interested purposes, and a band of enthusiasts, held together only by the sympathies of a Utopian benevolence.

THE INFLUENCE OF NEWSPAPERS ON PUBLIC OPINION.

Every one has heard of the saying of Burke, that the man who reads a newspaper every day for six months will certainly become a convert to its opinions. The saying has grown into a truism. It appears to us, however, that new circumstances have arisen in our social condition, through which a great deal—much more than people in general are apt to believe—of this newspaper-power has been destroyed. We think that the saying of Burke—true as it was in his own day, and applicable as it has been to the state of political knowledge in this country, at any period since that day till the first session of the reformed Parliament—*now describes a past state of society.* We are perfectly aware of the fury we shall provoke by the declaration; but we do not shrink, on that account, from expressing our belief that the *prestige* of newspaper wisdom is shaken, and for ever. The age of leading articles is gone.

It is not our intention, in the present paper, to enter into any nice investigation of the causes of this curious phenomenon. The main cause may be described in a few words:—*The people have taken the business of thinking into their own hands.* In the quaint language of Hobbes, they are no longer in a condition either "to be tainted with dependence on the potent, or scribbled over with the opinions of their doctors."

The great legislative measure of the present session of Parliament has been the Amendment of the Poor Laws. This was no abstract measure whose bearings the people could not understand, and in whose consquences they would take no interest. Every man was to be affected by it in some way or other. The lowest in the scale of society, the mendicant and the pauper—the most numerous and important class, that which comprises the independent labourers—the employers of these independent labourers—the contributors to the fund by which pauperism was upheld—all these, in which are comprised the whole population, are deeply affected by such a vital change in the administration of the poor-laws, as is contemplated by the Bill which, in a very few days, will be inscribed in our statute-book. Have they been taken by surprise in the introduction of this Bill into Parliament?—Have they been ignorant of its provisions?—Have they wanted encouragement to oppose the Bill from those who have claimed the title of the best public instructors? Precisely the contrary. In this instance—and it is perhaps a solitary one in the history of our legislation—the Bill for the amendment of the poor-laws has not only been founded upon the most carefully collected evidence, but that evidence has been promulgated with the greatest

anxiety, before a single step was taken in legislation. In this case the materials for thinking were placed in the hands of the people, by the publication, in a very cheap form,—first, of Selections from the Evidence before the Commissioners, and, secondly, of the Report of the Commissioners. The people understood the effects of pauperism, and were made familiar with the projected remedies, long before the question became a subject of discussion within the walls of Parliament. The moment the Bill was brought in, a cry was set up against it by the two most powerful of the London daily papers, 'The Times' and 'The Morning Herald,' to say nothing of lesser oracles. Without the preparation for a right judgment which we have described, this cry would have been echoed through the country,—the people would have been goaded into a belief that the liberties of Englishmen were about to perish,—the Legislature would have been acted upon by the excitement,—the Bill would have been lost. But mark the difference. For three months these two powerful daily papers have exerted all their rhetoric to crush the Bill,—the one has poured forth all its hard names, and the other has huddled together all its common-place,—and the result has been that, out of a population of fourteen millions of persons affected by the operation of the Bill, only sixteen thousand, according to the last Parliamentary return, have been brought to petition against it! One person in 800 has been influenced by the declamation of 'The Times' and 'The Morning Herald.'

It may be instructive to trace the course of one, at least, of these papers during the three months in which the Poor Laws Amendment Bill has been before Parliament.

On the 30th of April 'The Times' issued its declaration of war against the Bill. Like most other potentates, 'The Times' commenced its manifesto with professions of peace. "The more we consider the new system of poor-laws, the more (*involuntarily, and really against our wishes*) do our apprehensions increase respecting it." But the timid and modest "apprehensions" of the first lines of the manifesto became the most truculent and mouthing hostility towards the end. The lion lashed himself into a fury. "It will disgrace the statute-book which contains Magna Charta and the Bill of Rights, and no Englishman who is not dead to shame will again hear the words 'British liberty' pronounced without a blush or a sigh." This is the true key-note, thought the diurnal agitator; this is the war-whoop which is to be echoed from St Pancras to the Tower Hamlets, and, spreading through the land, is to produce an universal denunciation of "the parish-pauper triumvir," * the "mountebank nostrummongers"†—the vile Central Board, who seek "to tax the people, and to torture the poor at their mere will and pleasure."‡ St. Pancras responded, and so did the Tower Hamlets. "The householders and other inhabitants of the parish of St. Pancras, Middlesex," out of the 103,508 inhabitants of which that parish is composed, found 173 who were "not dead to shame," and these few "faithful among the faithless" heroically recorded their names in a petition against taxing the people and torturing the poor. St. Mary, Whitechapel, one of the Tower Hamlets, out of its 30,000 of population, found 375 supporters of 'the Bill of Rights;' and Mile End, another of the Hamlets, enrolled, out of its 34,000 inhabitants, 368 who still clung to 'Magna Charta.' With such support, the 'Times' ventured to prophesy. On the morning of the day when the second reading of the Bill was carried by a majority of 299, 'The Times' consoled itself (relying, no doubt, especially upon the 173 of St. Pancras) by saying "We cannot believe that it is intended to press the measure another stage at present." On the morning after this second reading, relying upon the parliamentary *minority* of twenty, the sanguine soothsayer affirms, "There is not the slightest chance of such a Bill ever receiving the sanction of the House of Commons." This was truly leaping into the gap, and bravely was the fight continued. Hear the voice of the mighty man of war:—"The most offensive innovation upon the usages and customs of the Constitution, and the most atrociously wanton aggression upon the liberties of the people, that were ever before attempted in this, or perhaps in any other but a purely despotic country"—"a worse than Egyptian bondage"—"that absolute, arbitrary, and despotic tribunal denominated the Central Board, upon which it is proposed to confer unchecked and uncontrolled power and authority over the liberties and the property of all the King's subjects, for the dangerous and inhuman purpose of deteriorating the condition of the most miserable portion of the community." That voice was not uplifted in vain. Petitions rushed in to scare the House of Commons from their "inhuman purpose." Up to the 27th of May eighty petitions had been presented against the "worse than Egyptian bondage," and these were signed by no less than 7226 persons. It is true that the number of signatures against this "most atrociously wanton aggression upon the liberties of the people" was inferior to the number petitioning "against the employment of children to sweep chimneys,"—and did not amount to one-sixth of those who petitioned "for inquiry into the extent and causes of drunkenness." But still the one petitioner in 800 was demonstrative of public opinion—as reflected in 'The Times.' Symptoms, however, began to be shown, that the House of Commons would not listen to the *one* petitioner, while the 799 other interested persons were silent. 'The Times,' therefore, had to point to another tribunal: "Let Lord Althorp reflect well upon the headstrong course he is pursuing. The Bill will not become the law of the land, even if it should pass the House of Commons, which we again declare we believe it never will. There happens, however, to be another branch of the legislature"* The mode in which this branch of the legislature is to be worked upon soon suggests itself to the fertile invention of 'The Times.' "The advocacy of the arbitrary and irresponsible tribunal to be called the Central B[illegible] s proceeded from professed REPUBLICANS." This [illegible] to the fears of the Upper House. We next have a cunningly-compounded unction of flattery—"We do not believe that pence squeezed out of the pauper's pittance will be thought desirable acquisitions by the Lords." The Compromise that 'The Times' at last [illegible] was desirable to rescue the funds for the maintenance of labour from the constantly increasing ravages of those who would have entirely converted them into funds for the maintenance of want,—although the saving of capital might be called "pence squeezed out of the pauper's pittance,"—they passed the Bill. The House of Commons was, of course, to be abused when 'The Times' saw that its prophecies of the non-passing of the Bill were coming to an issue. "Most assuredly no unreformed House of Commons ever made up their minds so speedily on a complicated question which required such mature deliberation, or delivered themselves so wholly and resignedly over to the dictation of a Minister."

The House of Commons passed the Bill, and the last fight was to be made in the Lords. Public opinion was to be brought to bear upon the votes of the Upper House. On the 8th of July, 'The Times' says "The vast majority of the people are opposed to this measure." A reinforcement had arrived to the one petitioner in eight hundred inhabitants of Pancras, and Mile-End, and St. Mary, Whitechapel. A petition had been presented from 55 "inhabitants and rate-payers of the parish of Wisbeach St. Mary, in the Isle of Ely," and another from "the visiters and guardians of the parish of Alverstoke, Hants," six in number. "The vast majority of the people are opposed to this measure." Public opinion being so clearly expressed, 'The Times' throws itself and public opinion upon the House of Lords. "It is a melancholy circumstance that the people of England should have occasion to look to the House of Lords for the reparation of the mischief perpetrated by their own representatives; but, unsupported as they are by those who ought to be their friends, they must, in their necessity, appeal to those on whom they ought to have fewer claims, *but who will have a glorious opportunity of acquiring a just popularity*, if they will indignantly reject a measure which we thought at first, which we still think to be, a true mode of degrading the English labourer into a miserable serf." But no symptoms amongst the Peers were presented to the longing eyes of 'The Times,' of a desire to acquire "*a just popularity*." A new species of tactics was, therefore, to be resorted to. The Lord Chancellor was to introduce the bill,—was to carry the measure through the House of Lords. On the 16th of May, because Lord Althorp was successfully conducting the bill through the House of Commons, 'The Times' exclaimed, "God help him and us who are governed by a Government of which a man with such an understanding forms

* 'The Times,' May 3rd. † May 6th. ‡ May 8th.

* 'The Times,' May 16th.

a part." On the 16th of July, 'The Times' began to abuse the Lord Chancellor about "his ugly bantling." From that day to the present hour these attacks have never ceased. The offence which the Lord Chancellor had given to 'The Times' was mortal. He had dared to think that a *poor man's magistrate*,—a maker of orders for relief on overseers,—a hunter after pauper-popularity,—was, in these respects, a mischievous member of society, although he might represent a county, and have some remote influence on 'The Times' newspaper: moreover, the Lord Chancellor had dared to praise a gentleman connected with the Poor-Law Commission, who had acquired the honour of having 'The Times' for his personal enemy. These were offences never to be forgiven. We commend those who are curious in the analysis of those meeties of language which some people call "strong writing," and others "Billingsgate," to read the articles in 'The Times' against the Lord Chancellor, from the 19th of July to the 26th, they were never excelled even by 'The Times' itself in its old days of 'Dr. Slop.' In the mean time, in spite of the hankerings after a "just popularity,"—in spite of the sympathy which some Peers might feel in the abuse of their Speaker,—the Poor-Laws Amendment Bill is read a second time in the House of Lords, with a minority of 13!—a fit parallel with the 173 petitioners of St. Pancras. Upon this affecting occasion, we quote the lamentations of 'The Morning Herald,' they form a sweet harmony with the ravings of 'The Times.' "We must, therefore, make up our minds for a change, a total change of system in regard to the poor." With this prospect before us, we are still happy to find that petitions are pouring in, that exertions are making without doors, and that the *few Noble Lords who have escaped the inoculation of political economy* continue to exert themselves within.'

"The inoculation of political economy!" This is the real secret of the gross mistakes of 'The Times' and 'The Herald,' with regard to their influence upon public opinion. The *people*, as well as their representatives, have *not* escaped "the inoculation of political economy." They now know that there are certain unalterable principles upon which the *science* of politics is founded, which they do not discover in the daily and weekly stimulants of the newspapers. The newspapers (at least some of them) affect to despise these principles, and they still fancy that every thing is to be carried by a clamour. Let them know their own weakness and their own strength. Their strength, when judiciously exerted in furnishing full and correct information, their weakness, their belief that the world, *in spite of the full and correct information which they give*, will be "scribbled over by their Doctors," who think that public men are merely the nine-pins to be set up and knocked down at their own good pleasure, and that public measures are to take their hue from their caprices, and be entirely moulded by their power of phrase-making. Let them not believe, either, that they can conduct a system of *espionage* with advantage to themselves individually, or with credit to their *caste*. When 'The Times' tells us that on Friday last the Chancellor "sent for a poor-law commissioner,—the least of the Apostles,—to cram him for the part he is to play,"—we *know* that 'The Times' either hazards an untruth, or that 'The Times' has spies amongst the eaves droppers of a great man's house, and carries on a confidential intercourse with lacqueys and public-office messengers. Truly, such things expound the secret which 'The Standard' let out a month or two ago, and which 'The Times' repeated,—"There is no doubt in the world that we gentlemen of the Press are, as such, thought by our happier fellow-citizens little better than gentlemen by courtesy."—We wish it were otherwise.

ABSTRACTS OF PARLIAMENTARY PAPERS.

Newspaper Stamps for Ireland.—The number of Newspaper Stamps which have been issued for Ireland, from the 5th of January 1833, to the 5th of April, 1834, is 5,300,000—of which 175,38[illegible], were cancelled. Of this number, there were issued for Dublin alone, 3,120,939—of which were cancelled, 114,445.

Salaries and Emoluments of Receivers of Taxes for England.—The total amount of the salaries paid to the receivers of taxes in England and Wales, for the year ending the 5th of January, 1834, is 2,900*l.*; and the sum allowed for travelling expenses, during the same period, is 6,339*l.* 4*s.*

Poor's Rates, &c.—The Return, for the year ending 25th March, 1833, of the monies levied for poor's and county rates, and of the expenditure of the same upon purposes connected with the care of the poor, and with the local expenses of each county, has lately been printed by the House of Commons. The total amount of monies so levied was, for England (with a population, in 1831, of 12,086,675 souls), 8,229,798*l.*, or rather more than 13*s.* 7*d.* per head: and for Wales (with a population, in 1831, of 803,000 souls) 376,702*l.*, or rather more than 9*s.* 4*d.* per head. The total amount of the money levied was 8,606,501*l.*, which, if we take the population, as in 1831, at 12,086,675 souls, makes an average of rather more than 13*s.* 4*d.* per head. For this object alone, therefore, England and Wales are taxed twice as much as the *Austrian* dominions, which do not raise more than 6*s.* 8*d.* per head for the whole expenses of the state; and three times as much as the *Papal* dominions, which for those expenses, do not exact above 4*s.* 5*d.* per head. It is more than equivalent to their amount in *Prussia*,

whose entire expenditure is about 12*s* per head. The whole sum expended upon the poor, in the year 1832-33, was 6,790,799*l*., which is at the rate of somewhat more than 10*s* 6*d*. a head—namely, in England, 6,486,534*l*., and in Wales, 304,265*l*., the average expenditure for the former, supposing the population to have been 12,086,675 souls, being about 10*s* 8*d* per head, and for the latter, with a presumed population of 803,000 souls, being about 7*s*. 7*d*. per head The county in which the largest expenditure on the poor took place was *Middlesex*, where 647,013*l*. was expended amidst a population of 1,358,000, or about 9*s* 6*d*. per head; Lancaster stands next, with a population of 1,335,000 souls, and an expenditure on its poor of 274,981*l*, or about 4*s*. 1*d*. per head. The smallest expenditure was in the county of Rutland, where, with a population of 19,400 souls, it amounted to 897*l*., averaging nearly 9*s* 3*d* per head Since the year 1818, there has been an apparent diminution of 761 291*l* in the whole sum expended for the relief of the poor in England and Wales, making a difference of between 11 and 12 per cent. in favour of 1832-33, but the decline in the prices of the necessaries of life is more than equivalent to this difference.

Silk.—The quantity of this material, which was exported from Lombardy in the five years, 1827 to 1831, amounted to 20,888,499 pounds weight, of which one half was forwarded to London, 2,000,000 to Lyons, and 4,000,000 to Germany and Switzerland.

Hanover —In consequence of the consolidation of the royal treasury with that of the kingdom in general, the Hanoverian Chambers have, in their present session, been called upon for the first time to consider a complete budget of the revenue and expenditure of the country It appears that the total of receipts for the official year of account (1834-1835) is estimated at 6,065,020 rix dollars (about 866,130*l*.), of which 383 455*l*. or 2,684,186 rix dollars derivable from the royal revenues, and 482.975*l*, or 3,380,83[illegible] dollars, from the public revenues The estimate of expenditure, submitted to the revision of the Chambers, amounts, on the other hand, to 6,061,910 rix dollars (about 865,980*l*.), of which the proportion chargeable upon the royal revenues amounts to 382,980*l*., or 2,680,863 rix dollars, and that chargeable upon the public revenues amounts to 382,980*l*, or 3,381,047 rix dollars.

Saxon Mines, &c—We observe among the votes of the second chamber of the legislature of Saxony, on the 19th June, that the net produce of the mines, of all descriptions, is estimated at 120 907 dollars, circa 17,690*l* The expenses of management seem to be somewhat excessive, for though the gross amount of monies received, for instance, by the general smelting establishment is 898,614 dollars (131,240*l*.), the actual net produce of the department does not exceed 23,000 dollars (3350*l*) The coalpits of Saxony appear to be of trivial importance, as the net revenue derived from them is not estimated at more than 14,331 dollars (2090*l*), their gross produce, however, being 84,265 dollars (12,290*l*.), the expense of working them, therefore is 10,200*l* The net produce of the national domains, royalties, and other property, is, on an average of the three years (1834-6), 106,977 dollars, or 15,650*l*.

British Consuls.—Return of the Names, Stations, Amount of Salaries and Fees, of British Consuls, General Consuls, and Vice Consuls, holding appointments, at the commencement of the year 1834.

Note—The amount of Salaries paid to British Consuls in various parts of the World for 1833, is 62,460*l*, and the amount of Fees, 12,143*l*. The amount paid in 1825 was 71,716*l*, and the Fees were 37,691*l*. There is a diminution in favour of 1833, on Salaries and Fees of 14 804*l*. The diminution arises from abolition of Consular stations, and reduction of Salaries. There are about 240 Vice Consular Agents who receive no Salary from Government, and who act under the Consuls within whose districts they respectively reside

Fire Insurances—The Sums paid to the Stamp Office for Duty on Insurance from Fire, for 1833, is as follows—

Insurance Offices	£	s.	d.

The Coal Trade—From an Account published by authority of the Coal and Corn Committee of the City of London, it appears that, during the year 1833, 2,010,409 tons of Coals were imported into London and sold in the Coal Market. Of that quantity—

	Tons
Newcastle sent	1 060,147
Sunderland	664,383
Stockton	170,187
Blyth	48,689
Scotland	15,138
Wales	28,416
Yorkshire	16,050
Small Coals, &c. (part of which were from Newcastle)	7,399

Metropolitan Police.—The amount actually paid on account of the metropolitan police for the year 1833, is 198,987*l* 6*s*. 4*d*. This includes all the various items of salaries, clothing, premises, gratuities, lamps and gas lights, and other incidentals The total amount received during the same period is 235,180*l* 6*s* 6*d*. But, in addition to the disbursements, there has to be added 15 000*l*. paid into his Majesty's Treasury, returned balance of loan, and a sum of 9,173*l*. 4*s*. 8*d*., owing 31st December, 1833, which extends the expenditure to 223,160*l*. 11*s*.

Militia Estimates—Comparative Abstract of the Total Amount of the Militia Estimates for the Years 1833-4, and 1834-5:—

	1833-4	1834-5
Total amount for Great Britain	£187,534 11 4½	£176,426 15 9
Total amount for Ireland	56,015 11 3	53,866 18 9

There is a decrease in the estimate for 1834-5 of 13,256*l.* 8*s.* 1½*d.*

New Churches.—Under the direction of his Majesty's Commissioners, during the last year, there have been finished ten new churches and chapels; fourteen are in progress of building; plans for three have been approved of; and grants are proposed for other five. Under the Act, there have been erected, in all, 198 churches and chapels, which, with those building and proposed to be built, amount to 220. The accommodation in churches and chapels completed, is, in pews, 119,223; and in free sittings, 147,015—total, 226,238. The amount of Exchequer bills issued for this object, up to August, 1833, is 1,480,000*l.*

Acts of Parliament.—The total number of Acts of Parliament public, local, and personal, which have been passed during the last thirty-three years, viz., from 1800, to 1833, is, 11,189. Of this number, 4,146 are public Acts, and 7,043 of a local and personal nature.

Timber Imported—Abstract of the quantity of Timber imported into the United Kingdom from the north of Europe, through Ports in North America, from 5th January, 1831, to 15th February, 1834.

	Loads	Feet	Pieces	Fathoms.
Fir Timber	5,658	4	3,467	—
Oak Timber	16	9	—	—
Lathwood	—	—	2,003	73⅜
Wainscot Logs	3	40	—	—

		Cr. hds.	Qrs.	No.
Masts 8	Staves	399	1	28

These were imported in 28 vessels, whose tonnage amounted to 7,172.

Tithe Owners' (Ireland) Relief Fund—The total number of applications on the part of owners of tithes in Ireland for relief, during the years 1831, 1832, and 1833, is 2,736, and the total amount of their applications is 818,518*l.* 16*s.* 4*d.* Of the number, 2,113 were clerical, amounting to 631,219*l.* 1*s.* 4*d.*, and that of impropriate claims were 623, amounting to 187,299*l.* 15*s.*

Number and Tonnage of Steam Boats—The number and tonnage of British steam vessels which entered and cleared out at the London Custom House, during the year ending 5th January, 1834, is as follows:—

	Inwards	Tonnage	Outwards.	Tonnage
From and to Foreign Ports	1458	158,161	1306	131,921
Coastwise	11,328	1,633,663	11,401	1,652,089

Of those belonging to other countries, there were—

	Inwards.	Tonnage	Outwards.	Tonnage
France	92	6,584	87	6,264
Holland	17	4,777	16	4,496

Bankers' Notes.—The aggregate Amount of Notes circulated in England and Wales, by private Bankers, and by Joint Stock Companies, between the 28th December, 1833, and 29th March, 1834, is as follows:—

Private Banks	£8,733,400
Joint Stock Banks	1,458,427
	£10,191,827

Criminal Offences in England and Wales—The number of persons in England and Wales charged with Criminal offences, and committed, who were either acquitted, or sentenced to various degrees of punishment, for three several periods, is as follows:—

	For the 7 years ending 1819.	For the 7 years ending 1826.	For the 7 years ending 1833.
Males	58,810	80,315	110,567
Females	13,106	15,313	21,251
Total	72,406	95,628	131,818

During these three several periods of seven years each, the number of sentences for execution, and of actual executions, stand as follow:—

	Period ending 1819.	Period ending 1826	Period ending 1833
Sentences for execution	6,584	7,659	9,457
Sentences carried into effect	662	528	391

Of these numbers, the following is the proportion of sentences and executions in London and Middlesex—

	Period ending 1819	Period ending 1826	Period ending 1833
Sentences for execution	1,254	1,145	1,043
Sentences carried into effect	138	162	81

Bankrupt Petitions.—From November, 1823, to Easter Term, 1827, Lord Eldon heard and decided 623 bankrupt petitions; from Easter Term, 1827, to November, 1830, Lord Lyndhurst, 475; and from November, 1830, to Easter Term, 1834, Lord Brougham, 210.

Revenues and Charges of India—The following is an Abstract of the Revenues and Charges of India, for the years 1829 to 1832, with the estimate for the year 1832 to 1833.

	1829-30	1830-31	1831-32
Revenues	£14,629,388	£14,603,951	£14,198,155
Charges	£15,356,061	£14,494,752	£14,506,540

The total deficiency for these four years is, 925,958*l.* The estimated revenue for 1832-3 and 1833, is 14,218,733*l.*, and the estimated charge is 13,933,120*l.*, leaving an estimated surplus of 285,613*l.* The charges include expenses for St. Helena, and disbursements in England, which stand as follows:—

	1829-30	1830-31	1831-32.	1832-33.
	£	£	£	£
St Helena	104,399	100,257	94,152	95,553
Disbursed in Engd.	1,715,084	1,446,581	1,476,655	1,227,536

The disbursements in England consist of charges for consignments of stores, passage of military, retired pay to officers, payments on account of King's troops in India, retiring pay to King's troops, absentee allowances to civil servants, expense of the Tanjore Commission, with other general and miscellaneous charges.

New Table of Custom Duties, proposed by Mr Poulett Thomson on the 2d of July

Article	Proposed duty £	s	d	Present duty £	s	d
Apples, dried, the bushel	0	2	0	0	7	0
Books, being of editions printed in or since the year 1801, bound or unbound, the cwt	2	10	0	5	0	0
Currants, do.	1	2	2	2	4	4
Figs, do	0	15	0	1	1	6
Grapes, for every 100*l.* of the value	5	0	0	10	0	0
Liqueurs, the produce of, and imported from the British possessions in America, the gallon	0	9	0	1	0	0
Oil, animal the cwt.	0	2	6	50 per cent.		
— cocoa nut, do.	0	1	3	0	2	6
— olive, the tun	4	1	0	8	8	0
—— if produced in, or imported from the dominions of the king of Naples	8	8	0	8	8	0
—— imported in a ship belonging to subjects of the king of Naples	10	10	0	10	10	0

Total	544	564	557	601	661	633	681	697	685	653

There are five Professors in the Royal Academy,—viz, those of Anatomy, Perspective, Architecture, Sculpture, and Painting, each of whom is to deliver six lectures annually. During the last ten years there have been 189 lectures delivered.

In the early years of the institution, the members were not limited in their contributions to the annual exhibitions; but as the artists of the country became more numerous, the members restricted the number of their own works, and opened additional rooms for the general accommodation. The following is the number of works exhibited since 1823—of the portraits it is to be observed, that between two and three hundred, annually, are miniatures:—

1824—Historical and Poetical Works	109
Landscapes, Views, Animals, &c.	219
Carried over	328

Brought forward	328
Portraits	517
Sculpture, Statues, Relievos, Gems	59
Busts	34
Architecture	99
	1,037
1825—Historical and Poetical Works	136
Landscapes, Views, Animals	342

POOR RATES.

(From a Correspondent.)

A Table showing the Amount contributed towards the Poor Rate by every Individual in the Kingdom, as represented both in Money and in Wheat, at various periods, from 1748 to 1832.

Years.	Population of England and Wales	Expended on the Relief of the Poor.	Per Head on the Population		Price of Winchester Bushel of Wheat.		Contributed per Head in Wheat.
		£	s.	d.	s.	d.	Hundredths of a Bushel.
1748							
1749	6,467,000	0,689,000	2	2	4	5	49
1750							
1760	6,736,000	0,965,000	3	0	4	10	62
1770	7,428,000	1,306,000	3	6	6	5	54
1776	7,228,000	1,521,000	3	11	6	9	58
1780	7,953,000	1,774,000	4	5	5	11	74
1783							
1784	8,233,000	1,912,000	4	7	7	7	60
1785							
1790	8,675,000	2,567,000	5	11	6	4	93
1800	9,140,000	3,861,000	8	5	10	2	82
1803	9,423,000	4,077,000	8	8	8	1	107
1810	10,370,000	5,407,000	10	3	12	1	83
1813	10,844,000	6,656,000	12	3	16	8	73
1814	10,915,000	6,294,000	11	5	12	3	93
1815	11,186,000	5,418,000	9	8	8	10	109
1816	11,358,000	5,724,000	10	0	7	9	129
1817	11,530,000	6,918,000	11	2	10	11	102
1818	11,702,000	7,890,000	13	4	11	3	118
1819	11,874,000	7,531,000	12	7	10	4	105
1820	12,046,000	7,329,000	12	2	8	8	111
1821	12,218,000	6,947,000	11	4	7	10	143
1822	12,402,000	6,358,000	10	3	6	9	151
1823	12,586,000	5,772,000	9	2	5	5	160
1824	12,770,000	5,736,000	8	11	6	5	141
1825	12,954,000	5,786,000	8	11	7	9	115
1826	13,139,000	5,928,000	9	0	8	3	109
1827	13,344,000	6,441,000	9	7	7	4	130
1828	13,539,000	6,298,000	9	2	7	1	129
1829	13,734,000	6,332,000	9	2	7	6	122
1830	13,924,000	6,829,000	9	9	8	3	118
1831	14,161,000	6,795,000	9	7	8	0	119
1832	14,372,000	7,036,000	9	9	8	3	118

I understand the year for which the price of Wheat is given to end in March in each year, to correspond with the period at which the Poor Rate Accounts are made up. And (excepting the four decennial periods) the Amount of the Population is of course matter of computation and calculation only.

PUBLIC PETITIONS.

Ten Reports have been issued since our last publication. Their dates extend from the 2d of June to the 1st July; and the last is numbered the thirty-fifth.

	No of Petitions.	No of Sigs

POLITICAL RETROSPECT FOR AUGUST, 1834.

GREAT BRITAIN.

OUR last Retrospect carried down the account of the proceedings in Parliament to the evening of the 26th of June. On the following day a matter, which for the moment excited considerable interest, was brought under the notice of the House of Lords by the Lord Chancellor. A paragraph had appeared in the 'Morning Post' of that day, charging his lordship, in the most distinct and, indeed, vehement language, with the extraordinary crime of having inserted in the journals of the House a false entry of one of the judicial decisions of their lordships. This attack probably deserves to be accounted the wildest extravagance into which any body has been hurried by the fury of party ever since the commencement of the present tempestuous state of the political world on the accession of Earl Grey's administration. The accusation was so improbable in every view of it, that it could only, one would have supposed, have been believed or deliberately advanced in a paroxysm of the most blinding passion. It appeared that the Chancellor had never so much as seen the entry which he was accused of having falsified, and that the entry, besides, was perfectly correct and in the customary form. It has been misapprehended by the ignorance and precipitation of the newspaper writer, who showed at the same time how far he could forget in his zeal all reason and common sense by his monstrous supposition that a judgment solemnly pronounced in public court, and especially in the presence of the parties most interested on both sides, or their agents, was an act which any one was likely to attempt to smother, or conceal from the world, by such an expedient as the one assumed to have been resorted to,—the false entry of it in the journals On the motion of Earl Grey, the House resolved that the article was a gross breach of its privileges, and the printer of the paper was ordered to attend at the bar on the following day. He appeared accordingly, but upon stating that he was merely the publisher of the paper, and had no control over its management, he was discharged; and the person whom he named as the editor was ordered to attend on Monday. The affair was terminated on the Wednesday following by the discharge of the editor from custody on payment of fees, after he had acknowledged that a breach of privilege had been committed for which he was responsible, and had been reprimanded by the Lord Chancellor.

The Dramatic Performances Bill was lost in the House of Lords on the 27th of June, on the motion of the Marquis of Clanricarde that the House should resolve itself into a committee. Only eight noble lords voted for the motion, twenty-two against it.

In the House of Commons, on the same evening, the Report of the Committee on the Poor Laws Amendment Bill was agreed to without a division, after a debate of some length The House then resolved itself into committee on the Postage of Newspapers Bill, when it was agreed that, as an interior arrangement, foreign newspapers should be transmissible through the Post Office on payment of a postage of *2d.* for each.

On Monday, the 30th, the Bill for the Prevention and Punishment of Bribery at Elections was read a second time in the House of Lords, but was afterwards referred to a select committee. On this evening, in the House of Commons, Mr. Littleton moved that the House should resolve itself into committee on the Irish Tithes Bill; but after some discussion, in the course of which Mr O Connell moved that the bill should be committed that day six months, the Right Honourable Gentleman consented to postpone further proceedings till the Friday following.

On the 1st of July the new Bill for the Suppression of Disturbances in Ireland, commonly called the Irish Coercion Bill, was proposed in the House of Lords by Earl Grey in a masterly and impressive address, and read a first time. The measure was the same with that passed last session, except that the clauses relating to courts-martial were omitted. In the House of Commons the third reading of the Poor Laws Amendment Bill was, after a protracted debate, carried by a majority of 187 to 50. The bill was then passed. On the following day, it was, on the motion of Earl Grey, read for the first time in the House of Lords. On that evening, in the House of Commons, several of the clauses in the Registry of Births Bill were discussed in committee and agreed to, after which the House resolved itself into committee on the Custom House Acts, and, on the motion of Mr Poulett Thomson, agreed to a series of resolutions reducing the import duties on certain articles of foreign produce 'The Bill for the Admission of Dissenters to Degrees in the Universities was then committed, *pro formâ*, on the motion of Mr. G W. Wood. In the course of a short discussion which took place, the Speaker took occasion to express himself as distinctly opposed to the principle of the measure, on the ground that its tendency was to overthrow the present system of instruction at the universities, and to introduce either acrimonious disputation or total indifference on the subject of religion. A motion for bringing up the report of the committee of the whole House on Mr. Poulter's Sabbath Bill was afterwards carried by a majority of 30 to 7.

In the House of Lords, on the 3rd, the Lord Chancellor presented a petition from the inhabitants of Hull for the repeal of the stamp duty on newspapers; and after stating that he had been lately examined on the subject before a committee of the House of Commons, intimated his inten-

tion of moving that a copy of the evidence taken before that committee should be laid on the table of their lordships' house.

This evening, in the House of Commons, an altercation arose between Mr. Littleton and Mr. O'Connell, which led to important results. It appears that the renewal of the Irish Coercion Bill, with the exception only of the clauses relating to courts-martial, had been determined upon in the Cabinet, without any dissenting voice, on the representation of the Marquis Wellesley, in April, that the measure was necessary for the good government of Ireland. After this resolution had been taken, however, Mr. Littleton, in concert with another member of the Government, whose name has not transpired, had written to Lord Wellesley in such terms as to induce him to believe that Ministers would experience great difficulty or embarrassment in attempting to obtain the consent of Parliament to that part of the measure which gave the Lord Lieutenant the power of preventing public meetings; and upon this his lordship, about the middle of June, transmitted a communication to Earl Grey, in which he expressed his willingness to attempt to carry on the government without being again armed with that power. But Earl Grey, who was now apprized for the first time of the correspondence which his two colleagues had been carrying on with Lord Wellesley, replied to his lordship's letter by intimating that he would not be expected to regulate his views of what the new bill ought to be by such considerations regarding the state of parties in this country as it appeared had been submitted to his attention; and accordingly the bill as has been mentioned above, was brought forward in the shape originally determined upon. Meanwhile, however, Mr Littleton, convinced, it should seem, that the concession which had been obtained from the Lord Lieutenant would lead to a change in the views of the Cabinet, had unfortunately entered into communication with Mr. O'Connell, and informed him that the clauses prohibiting public meetings would not be renewed, but that all that would be proposed would be merely a short bill for the suppression of agrarian disturbances. It is admitted, that in making this communication, the Right Honourable Gentleman had had the concurrence of Lord Althorp, who, however, advised him to be more cautious than he appears to have been; and that the proceeding was taken without the knowledge of Earl Grey. This recital, collected from statements made in the two houses at various times, brings us to the debate in the House of Commons on the evening of the 3d.

From the statements of Mr O'Connell and Mr. Littleton, although they were directly contradictory as to some minor points, it appeared the communication of the latter had been strictly confidential, and well understood to be so, but that upon finding the expectations which it had excited disappointed, the former had considered himself entitled to disregard his promise of secrecy, and had, in point of fact, divulged all that had been stated to him. The excuse which Mr O'Connell offered for this conduct, was, that he considered himself to have been intentionally deceived or cheated, and that Ministers had gained, or nearly gained, certain advantages over him by the mistake into which he had been led as to their intentions. He afterwards acknowledged that there were no grounds for imputing to Mr. Littleton any intention to mislead him. Meanwhile, on the following evening, the Coercion Bill was read a second time in the House of Lords, on the motion of Earl Grey, Lord Durham alone objecting to the part of the measure prohibitory of public meetings. The same night a warm debate took place in the House of Commons, on occasion of Mr. Littleton's propositions in a committee of the whole House for the modification of the Irish Taxes Bill. The new scheme of the Government in regard to this matter, was denounced in particular by Mr. Stanley, in a speech of remarkable vehemence, and characterized as nothing better than a miserable compound of jugglery and spoliation. It was at the same time assailed on opposite grounds by Mr. Hume, who moved an amendment, which, on a division, was rejected by a majority of 354 to 71. The committee then divided on the resolution proposed by Mr. Littleton, which was carried by a majority of 235 to 171.

On Monday the 7th the Coercion Bill passed through the committee in the House of Lords in the form in which it had been originally brought forward. In the Commons, Lord Althorp, in laying upon the table some papers relating to the state of Ireland, intimated that Mr. Littleton had, on the Saturday preceding, tendered his resignation, but had been prevailed upon to remain in office on the earnest request of Earl Grey and his other colleagues. An animated debate then arose on an amendment moved by Mr. O'Connell to the effect that the papers should be referred to a select committee, which, however, on a division was rejected by a majority of 156 to 73. The avowed object of this proposition was, that the select committee might call for the entire correspondence between the Government and Lord Wellesley, and that it might thus be ascertained on what grounds his lordship had twice, as was alleged, changed his opinion as to the portion of the Coercion Bill referring to the suppression of public meetings, having been in favour of those clauses in April, opposed to them, or at least willing to dispense with them in June, and again in favour of them in July. The Ministers resisted the motion principally on the ground that the letters were private communications, and that it was unprecedented, and would be in the highest degree inconvenient, for such papers to be produced.

The latter part of this evening was principally occupied in debating a resolution moved by the Marquis of Chandos, for an address to his Majesty, representing the depressed condition of the agricultural interest, and requesting relief by a reduction of taxation. The motion, which was opposed by Ministers, was only rejected by a majority of 16, in rather a full House, the numbers being 174 for, and 190 against it. After this, the second reading of the Irish Tithes Bill was carried, against the opposition of Mr. Hume, by a majority of 181 to 106.

* The publicity, however, which had been given by the above-mentioned debate, to the fact that Lord Wellesley had at one time expressed his willingness, at least, to attempt to carry on his government, without the power of prohibiting public meetings, had convinced Lord Althorp and other members of the Cabinet that it would not now be possible to carry the Coercion Bill through the House of Commons while it contained the clauses conferring that power. The Ministers who agreed with Lord Althorp in this view, were afterwards stated to be Mr. Abercromby, Mr. Ellice, Mr Charles Grant, and Mr Spring Rice. The majority of the Cabinet, however, being still in favour of proceeding with the measure in its original shape, Lord Althorp conceived that he had no other course than to tender his resignation. On receiving intimation of this resolution of his noble friend, Earl Grey appears to have felt that the loss which his government was about to sustain, was so serious, that, considering especially his advanced age, and the injury his health had for some time been suffering from the cares and fatigues of office, there was no chance that he should be longer able to conduct the affairs of the country with satisfaction to himself. In these circumstances, he also formed the determination of resigning, and forthwith asked and obtained his Majesty's leave to retire from the public service. The first intimation which the public received of these events was from the postponement, on the 8th, in the House of Lords, of the report on the Irish Coercion Bill, and the second reading of the Poor Laws Amendment Bill, both of which stood for that evening. No allusion to what had occurred was as yet made in the House of Commons, where the principal business of the evening was the discussion of a plan for taking down the names of members on divisions, recommended by a committee which had been appointed to consider the best means of effecting that object. The proposition was adopted by a majority of 76 to 32; but after having been tried once or twice, the process was found not to answer, and the resolution which sanctioned it has been rescinded.

On Wednesday the 9th, Earl Grey in the House of Lords, and Lord Althorp in the Commons, explained the reasons which had induced them to resign their offices. The most material circumstances which they detailed, have been embodied in the preceding narrative. Earl Grey's speech was one of the noblest and most affecting addresses ever delivered within the walls of Parliament, and formed a worthy close to the official life of a statesman whose whole political course has been a brilliant example of patriotism and unsullied honour.

The Ministry being thus deprived of its chief, a suspension of public business became necessary in order to afford time for the formation of a new Government. Accordingly, after the transaction of some business of minor importance, the Commons on the 10th, and the Lords on the day following,

adjourned to Monday the 14th. During this interval, Lord Melbourne was sent for by his Majesty, and an address, numerously signed by members of the House of Commons, was presented to Lord Althorp, begging him to retain office should his Majesty desire his services. On Monday it was announced in both Houses that Lord Melbourne had received his Majesty's commands to form a new administration; and the House of Commons again adjourned till Thursday, the 17th. On the 16th the Lord Chancellor stated in the House of Lords that the new Government was formed, and that Lord Melbourne as its head would be in his place on the following day. The arrangements that had been made were the following.—Lord Melbourne, as premier, had been appointed First Lord of the Treasury; Lord Althorp continued Chancellor of the Exchequer; Lord Duncannon, created a peer by the title of Baron Duncannon, of Besborough, had become Secretary for the Home Department; and Sir John Cam Hobhouse had succeeded his Lordship as Chief Commissioner of Woods and Forests, with a seat in the Cabinet. A lively debate followed the announcement of these changes by Lord Althorp in the House of Commons on the day that body re-assembled.

But a much more acrimonious discussion arose in the Lords, when the new premier, in reply to a question of Lord Ellenborough's, informed their Lordships that it was not his intention to move the third reading of the Coercion Bill then before the House, but that another Bill would immediately be introduced into the House of Commons with the clauses about public meetings omitted. Ministers rested the defence of their change of procedure upon the consideration which has been already stated, namely, that after the disclosures which had been made of Lord Wellesley's willingness to attempt to carry on the government of Ireland without the extraordinary powers in regard to public meetings which the original bill conferred upon him, it would be impossible for the bill to be carried through the House of Commons.

This evening considerable opposition was made in the House of Commons to the motion that the House should resolve itself into committee on the Beer Act Amendment Bill; but, on a division, the motion was carried by a majority of 105 to 35. The most important clause of the bill—that compelling every person applying for a licence for the sale of beer to be drunk on the premises to produce annually a certificate signed by six inhabitants of the parish rated at 10*l*.—was afterwards carried by a majority of 77 to 51. The division was upon an amendment for omitting the word "annually."

On Friday, the 18th, both Houses were again chiefly occupied with the Irish Coercion Bill. In the Lords, Lord Wharncliffe moved for the production of the letter understood to have been addressed by the Marquis of Wellesley to Earl Grey which had occasioned the change of opinion in certain members of the Cabinet. The motion, however, after some discussion, was withdrawn. In the Commons, the new Coercion Bill was brought forward by Lord Althorp. The motion for leave to bring in the Bill was opposed by Mr. O'Connell, but was carried on a division by a majority of 140 to 43. This evening Mr. Poulter's Sabbath Bill, after having been read a third time by a majority of 57 to 24, was lost on the question that it should pass, the ayes being 31 and the noes 35. A clause, proposed by Mr. Cayley, had been previously carried, legalizing all games of exercise in the open air on Sundays, except during the hours of divine service.

On Monday, the 21st, the second reading of the Poor Laws Amendment Bill was moved in the House of Lords by the Lord Chancellor. His Lordship addressed the House at great length, and the measure was also strongly supported by the Duke of Wellington, the Earl of Winchelsea, and other peers. On a division, the second reading was carried by a majority of 76 to 13. The clauses up to the 51st inclusive have since been considered in committee, and agreed to without any material modifications.

In the House of Commons this day a conversation of considerable interest arose on the subject of a petition presented by Mr. Tennyson complaining of the inhumanity of a late case of military flogging at the Charing Cross barracks. Mr. Ellice intimated that cases of violent insubordination in the army were on the increase, and that it was his intention to recommend to his Majesty to issue a commission to inquire generally into the existing code of military law with a view to its improvement where necessary. The order of the day for the second reading of the Coercion Bill was then moved, when Mr. P. Scrope moved a resolution intended to pledge Parliament to the introduction of a system of poor-laws into Ireland. The resolution was negatived by a majority of 89 to 34, and the second reading of the bill was then carried by a majority of 146 to 25.

After this division, Mr. O'Connell, as chairman of the committee appointed to inquire into the case of Mr. D. W. Harvey, brought under the notice of the House a statement which it appeared had been made by Lord Western in his examination before the committee, to the effect that at the election of 1831 a sum of 500*l*. had been transmitted by Mr. Ellice, then one of the Secretaries of the Treasury, to further the election of Mr. Mayhew, one of the reform candidates for Colchester. It was alleged, or at least left to be inferred, that the money was from the public treasury. Mr. Ellice, however, explained that it was derived from the funds of an association of the friends of reform, and he read several letters in corroboration of his statement. The subject was again brought forward on Wednesday by Mr. O'Connell, who moved that it should be referred to a committee of privileges; but the motion was rejected, on a division, by a majority of 114 to 34. After this business had been disposed of on Monday a grant of 60,000*l*. was voted by the House to be distributed among the officers and men who had been engaged in the battle of Navarino.

No business of importance was transacted in either House on the 22d, though both on that and the following day various bills were advanced one or more stages. On the 23d, Mr. F. O'Connor moved, in the Commons, that an address should be presented to his Majesty for the release of Mr. Grant and Mr. Bell, of the 'True Sun,' from the King's Bench prison; but after a debate of some length, the motion was negatived by a majority of 62, there being 46 for and 108 against it. The Irish Coercion Bill was afterwards carried through the committee, and the South Australian Colonization Bill was read a second time by a majority of 33 to 17. On Thursday, the 24th, the House of Commons did not meet in the evening.

On the 25th, the Great Western Railroad Bill, which had been sent up from the House of Commons, was, after some debate, thrown out in the House of Lords, on the second reading, by a majority of 47 to 30. The chief objection taken to it was that it proposed the formation of a railway only on two small portions of the line between London and Bristol, namely, from London to Reading at the one end, and from Bristol to Bath at the other. It was argued that so imperfect a scheme had no claim to the sanction of the legislature.

On Friday the 25th, the House of Commons having resolved itself into a committee of ways and means, after a conversation of some length had arisen on some remarks made by Mr. Goulburn in reference to the numerous new appointments made under the act for the grant of 1,000,000*l*. to the Irish Church and other recent measures, which led to explanations on the part of Ministers that were apparently to the general satisfaction of the House, Lord Althorp brought forward the budget for the financial year which has just commenced. His Lordship stated that the receipts for the year ending the 5th of July, 1834, amounted to 46,911,586*l*., and the expenditure to 44,737,556*l*., leaving a surplus of 2,177,030*l*., being the largest he had ever had the satisfaction of announcing. The receipts of the last year had also rather exceeded those of the preceding year (the difference was nearly 20,000*l*.), notwithstanding that reductions of taxation had taken place to the amount of a million and a half. On the other hand, the expenditure had been diminished to the extent of 650,000*l*. The supplies that had been either already voted, or had to be provided, for the year ending the 5th of April, 1835, were, for the army, 6,497,903*l*.; the navy, 4,578,009*l*.; the ordnance, 1,166,914*l*.; miscellaneous, 2,228,387*l*., and for the consolidated fund, 30,500,000*l*.; making a total of 44,971,213*l*. The diminution of supplies, as compared with last year, was only 149,274*l*. instead of 500,000*l*. as he had anticipated, but the deficiency was accounted for by the following charges which had unexpectedly arisen, or were peculiar to the year, namely, payment, according to arrangement, to the East India Company, 125,000*l*.; to the same for St. Helena, 99,000*l*.; grant to the officers and men at Navarino, 60,000*l*.; to encourage steam navigation to India, 20,000*l*., advanced to pay seamen, 100,000*l*.; in all,

404,000*l.* But for these payments, and one or two others of trifling amount still to be voted, the surplus would have been 661,584*l.* In looking to the means of providing the income for the present year, he enumerated the following as the reduction of taxation that had either been already made, or were intended to be proposed:—the house tax, 1,200,000*l.*; the reductions in the customs, stated some days before by Mr. Poulett Thomson, 200,000*l*; the duty on starch, 75,000*l.*; the duties on stone bottles and sweets, 6000*l.*; assessed taxes on shepherds' dogs: horses belonging to poor clergymen, dissenters as well as of the church; windows in small farm-houses, &c, 75,000*l.*; and duty on almanacs, 25,000*l.* He calculated that notwithstanding these reductions, if the sources of revenue that remained untouched should merely prove as productive as they had since last year, he would still have a surplus of receipts over expenditure, to the amount of about 400,000*l.* This being the case, he considered that he might safely venture, in addition to the reductions he had already proposed, to reduce the duty on Irish spirits from 3*s.* 4*d.* to 2*s.* 8*d.* the gallon. He anticipated that the loss to the revenue from this source would not probably exceed 200,000*l*, so that he might still count upon a surplus of about as much more Such is the statement of the noble lord, in so far as we have been able to collect it from the only sources of information that have appeared up to the time at which we go to press—the reports in the newspapers There may be some inaccuracies, however, in these accounts, which we shall probably have the means of correcting in our next number.

FRANCE.

The royal ordonnance which summoned the Chambers for the 20th of August, has been superseded by another which convokes them for the 31st of July. The returns of the members of the Chamber of Deputies are then to be verified, and after sitting for a few days, a prorogation is to take place According to this mode of proceeding, the terms of the charter, which exact that France must never be left without a regularly constituted parliament, for more than three months, will be properly complied with. By the former ordonnance, an unconstitutional mistake would have been committed. Unless the state of Europe should become more troubled than it is, the Chambers, after their *pro forma* meeting at the end of July, will be prorogued till autumn.

The cabinet has been much agitated by the changes in our own, particularly during the days of uncertainty as to the extent of the changes likely to take place in our administration. The absolutists, not only in France but in every country in Europe, seem to have looked to the fall of Lord Grey and a succeeding Tory cabinet for the speedy realization of all their hopes This was only to be procured by new revolutions, sanguinary reactions, and something like a general war, but for these evils the legitimists were prepared.

Marshal Soult has quitted office, and has been succeeded as president of the council and minister of the war department, by Marshal Gerard, a more honourable but much less able man. Soult's fall is attributed by some to his having insisted on raising the standing army of France to 400,000 men, but the government journals endeavour to prove that his age and infirmities necessitated a retirement from the toils of office. It does not appear that this event will effect the slightest change in the spirit or views of the French government, nor, is it expected that Louis Philippe will consent to any reduction of his army as long as the great Northern Powers remain in their present attitude.

The arsenal and the dock-yards at Toulon have been kept in a state of extraordinary activity in preparing ships, the destination of which is said to be the Levant, where they are to join and act with the British squadron.

A marriage has been concluded between Louis Philippe's second daughter and (her cousin) a brother of the King of Naples. This union, it is contemplated, will strengthen the the King of Naples' adhesion to the quadruple alliance, for which treaty he has already expressed his affection. He has even intimated a desire of giving to his own states a moderate representative form of government—not a constitution like that established by the revolution of June 1820, but something more like the French charte, with an upper house of parliament, &c. It appears, however, to require all the exercise of French address and energy to remove the fear of Austria from before the young king's eyes.

At Paris considerable sensation has been excited by the arrest of M. Jauge, who announced himself as banker to his legitimate majesty, Charles V. of Spain (Don Carlos) and advertised a loan in his favour. According to the showing of some of the French journals, by a particular clause in their constitutional laws, the penalties attached to treason are extended to those who plot against or otherwise injure any ally of France. The ally, in this instance, is the recognized infant Queen of Spain.

The French troops that have been for some time gathering at the foot of the Pyrenees and near the Spanish frontier are now put in full campaign order, and are ready to march, should the armed intervention contemplated in the quadruple alliance be called for.

PORTUGAL.

It appears that Don Pedro did not ratify the quadripartite treaty, of which we gave the heads in our last monthly retrospect, without some delay.

The serious difficulty he raised was against the title of Infanta being preserved to his brother Don Miguel, which it was by the treaty! Out of the splitting of a straw like this he thought fit to make matter for long cabinet discussions and diplomatic correspondence.

Several sanguinary retaliations have taken place on the defeated partisans of Don Miguel, and on several occasions where they have had the opportunity the Pedrotes, taking the law into their own hands, have done summary execution on obnoxious members of the opposite faction. Private pique, jealousy, and enmity have not lost this opportunity for indulging themselves. We learn with pleasure that government has expressed its disgust at these personal excesses, and has taken measures to prevent their being repeated. We are told, however, at the same time, that the police is wretchedly deficient in its operation even at Lisbon, and that at the provincial towns and in the interior it is altogether inefficient, and scarcely makes a show of resistance to the will and passions of the party triumphant.

The decree we gave in our last Number, by which Don Pedro, without the concurrence of the Cortes or the nation, without any authority but his own temporary authority as Regent for his daughter, suppresses all the regular orders of monks in the kingdom of Portugal and its dependencies, and seizes their property, has caused indignation and horror in some quarters, and astonishment in all except in his own cabinet and the circle of his advisers. When the news first reached Rome, the capital of the Catholic world, it was not credited; but on being properly confirmed it made a deep impression on the Papal court, already sufficiently indisposed to Don Pedro. This sweeping measure will most assuredly prevent the Pope from recognizing Donna Maria as Queen, and in a country like Portugal that recognition is not to be despised nor forfeited without great risk

By the fourth article of the monastic suppression decree it is regulated that every monk who is not otherwise provided for shall receive an annual pension for his support, unless, indeed, he have in any way favoured the usurper Don Miguel Now, we are not at all surprised when we consider how wide and indefinite are the grounds of exception—how naturally men with the confiscated property in their hands, are disposed to invalidate the claims of those who are to receive any indemnity from it, and how remorseless are all commissions, especially when acting on behalf of a new government with a beggared exchequer,—we say, when we reflect on all these things, we are no ways surprised to be told, as we are from Lisbon and other parts of the kingdom, that nearly all the monks who have been driven from their homes and thrown upon the world have been left not wholly unprovided for now, but without any hope of future provision We are familiar with the history of monastic confiscation in Italy during the sway of the French republic. Then and there also it was agreed to allow the suppressed unhoused monks annual pensions for the support of life; but similar exceptions were also taken, and by asserting this friar to be a royalist—that a friend to the Bourbons, &c. &c., the names on the pension list were reduced to very agreeable financial limits. But even those left on the list rarely received the miserable pittance fixed by government. Every claimant was allowed to take precedence of them.

From about 12*l.* to 15*l.* sterling per annum was the maximum of the monastic pensions. Many of those to whom such an insufficient sum was allotted, particularly monks of the Benedictine and others of the higher orders, were men of noble birth, whose ancestors enriched the monasteries in which they had lived up to the days of the revolution. Their style of living, though certainly not always luxurious, was decent and gentlemanly in the extreme, and such as could not be maintained individually out in the world for less than 100*l.* or 120*l.* a year (even in Italy) for each monk. The sum fixed for them by the commissions on church property was less than the wages of the commonest servant, and even this, as we have already stated, was most irregularly paid to them.

We are also far from being surprised at the excessively low prices the confiscated monastic estates and other property fetch in the market. These estates are now selling in Portugal at a tithe of their value, and purchasers are few and reluctant even on these terms. We shall commit a mistake if we attribute this fact wholly to the impoverishment of the country and a want of capitalists. There is another cause at work. The Portuguese consider the tenure of such property, so seized and sold, *as insecure*, and the more devout among them regard the transaction as a sacrilegious spoliation. Self-interest might overcome the latter feeling, but only time and a firmly-rooted government can remove the worldly apprehension, that in buying monastic property they are not giving away their money for what will soon be taken from them by a return of the old system. In the same manner, particularly in the south of that peninsula, when Italian church property was brought to the revolutionary hammer, it was impossible to obtain a tenth part of its value for it; and even in after years, when every thing in Europe seemed to fall prostrate before the will of Napoleon, who guaranteed the rights of the purchasers of monastic and church estates, the popular notion as to the insecurity of such rights was never much altered. At every reverse sustained by the French who upheld the new system, the spirit of alarm flew abroad—the holders of church property wanted to sell, and only the very sanguine and better informed would buy, nor did such estates rise much in their marketable value, nor did their purchasers ever feel wholly secure in their title-deeds until the counter-revolution of 1815, when the old government was restored, and, unable to undo what had been done for so many years, recognized their rights with the tacit consent of the Pope.

But even now, after nineteen more years are past, in many parts of the kingdom of Naples the peasantry think that there is a curse attached to the church grounds in the hands of laymen. All this has *nothing* to do with our notions of monastic institutions and wealth, but *a great deal* with the ideas entertained on those subjects by the great body of the Portuguese people. This subject, with relation to such a country, is most important, and would require many pages of discussion. For the present, however, we will only allow ourselves one remark, which we give in shape of a wish but scarcely of a hope. May the Portuguese regency make a better use of the money procured by the sale of church property than did the French and Italian republicans!

A violent, and it was thought a dangerous, illness which Don Pedro has suffered at Lisbon, has given rise to some cabals and intrigues with reference to the formation of a new regency, but these have all been defeated by his recovery. The opening of the Cortes is finally to take place on the 15th of August. All the primary elections have been completed. It is expected that the Duke of Palmella will join the ministry, and be president of the Chamber of Peers when the Cortes assemble. In the mean time the regency has decreed that the money due from Brazils to Portugal, a sum amounting to about 1,600,000*l.* sterling, is to be applied to the payment of the British loans. It has also redressed some commercial grievances complained of by English merchants resident at Lisbon and Oporto. The meddling spirit and restless activity of the Regent, if left to themselves, will evidently leave little for the Cortes to do. Don Pedro's papers abound with fiscal and financial regulations. Is the Portuguese lower chamber, or house of commons, to have no faculty, beyond that of approving and confirming the measures and regulations he prescribes with so much confidence and with such a dictatorial air?

The beautiful and important island of Madeira, which during the whole of the long struggle between the two brothers remained *firm* in its attachment to the younger one, despising alike the invitations and flattering promises and the threats and warlike demonstrations of Don Pedro, surrendered without striking a blow as soon as it was known that Don Miguel and Don Carlos had capitulated. Alvaro da Costa, the governor, who had been created "Count of the Island of Madeira" by Don Miguel, was, at least as long as there was any hope, one of the most devoted adherents of that pretender; but seeing nothing better left for it, he changed his flag, took the oath, and himself swore in all the officers both civil and military to "fidelity to her Majesty Donna Maria II., and the constitutional charter granted by his Imperial Majesty the Duke of Braganza to the Portuguese nation." In return for the acts of allegiance, Don Pedro, by a decree in a Lisbon paper, lowered the export duty on Madeira wine.

SPAIN.

THE approach of the cholera to Madrid, and the re-appearance of Don Carlos on the Spanish territory, have thrown the affairs of this country into fresh confusion. The important events to be narrated are, however, few.

At the rumour of the cholera, and before a single authenticated case of the malady had occurred in Madrid, the Queen Regent, panic-struck (it is said), fled with her infant daughter and court to the country palace, called La Granja, which was forthwith surrounded by a military cordon to prevent all ingress or egress. To supply men for this cordon, nearly all the troops were marched from Madrid, and the capital, at a season of great excitement and discontent, was left almost without any garrison. The moral impression produced was also very unfavourable to the Queen Regent and her government. Most of the ministers went with the queen, and the nobility generally fled in all directions. For several days, Madrid exhibited the appearance of a city about to be taken by a foreign conquering army. Carriages, carts, and waggons, filled with people and household goods were seen hurrying through the streets to gain the open country. The Infant Don Francisco de Paulo (Don Carlos younger brother) alone remained firm amidst this general court terror, and declared that he and his family were all determined to stay in Madrid and share in the dangers of their fellow-citizens. Of the cabinet, the Count Toreno, who has recently joined the ministry, seems to have been the only one who had courage to remain at his post. This thoroughly honest man, whose prudence, moderation, and true patriotism have long been tried, ought to be a valuable accession to the cabinet. His labours in arranging the distracted finances of the country and settling the basis of a new loan have, however, as yet been unaccompanied by success.

While the court was trembling at the cholera, the Carlist chief, the now noted Zumalacarreguy, was at least maintaining his ground, if not gaining advantages, in the revolted provinces of the north, and on the 9th of July, as it is now confidently asserted, Don Carlos, who was supposed by the Spaniards and every body else to be quietly living in London, threw himself *in propriâ personâ* among his adherents. By this bold step he has somewhat altered the estimation in which he was generally held, as an undecided, timid man. We can scarcely believe that he will be allowed to prolong the horrors of a civil war, or to triumph in his attempt against his infant niece; but the recommencement of his enterprise, and his expedition from London to Elisondo, are certainly touched with the interest and mystery of romance. With most people we were at first inclined to believe that the story had originated in the fertile imagination of the Stock Exchange, and even now we can scarcely venture on the details. According to the current account, however, he left London in secret, and in a most admirable disguise on the night of the 1st of July, passed through Paris (where he spent several hours in the house of M. Jauge the banker, and had interviews with several influential friends and partisans) on the 4th; reached Bayonne on the 8th; crossed the frontiers of Spain the next day, and proceeded as far as Elisondo, the seat of the junta of Navarre, without a single suspicion having been awakened during his passage from one extremity of the French kingdom to the other. Some rumours got abroad on the 10th, and in consequence of communications received through the same medium, Thiers, the French minister of the interior, is said to have transmitted a telegraphic dispatch to the sub-prefect of Bayonne, assuring him, on the authority of the

Spanish ambassador at Paris, that Don Carlos could not be in Spain as he was known to be in London, where he did not entertain the most distant idea of renewing the contest in person. There is, however, another report, according to which Don Carlos arrived in the neighbourhood of Bayonne by sea, and from England direct. Both accounts agree in describing his reception as very flattering, and the whole expedition as having been conducted with singular secrecy. Those who advocate his cause say, that "his presence excited an electric shock," and the 'Morning Post' is very happy to affirm that a letter dated Elisondo, in the Don's own handwriting, has been for some days in London. In this letter, he is said to speak with enthusiasm of the courage and constancy of his adherents in the Biscayan provinces and Navarre, "*who only want a supply of arms and money*." This only want is, to be sure, a rather important one; but on the same side it is asserted that *one* loan in Don Carlos' favour has already been raised in Germany, and that another will be concluded, on favourable terms, at Paris. With regard to the latter, it may be apprehended that Louis Philippe's summary way of proceeding with the unlucky Carlist banker, M. Jauge, who is still in prison, may raise some serious obstacles in the way of its fulfilment. In the mean time, the queen's faithful and successful general, Rodil, has been marching towards the central scene of the insurrection. He is said to have reached Logrono, a town in Old Castile, on the Ebro, on the 7th of July, with a well-appointed force of 10,000 men. If this and other *data* are correct, Rodil must have been in presence of the Carlists long before the end of July, but whether any decisive action has taken place we have yet to learn. He is represented by his friends as carrying every thing before him, and as being at Salva Tierra on the 18th of July, keeping in check Don Carlos, who had made demonstrations for moving upon Alava. But on the other side it is said, he has been obliged to shut himself up in Pampeluna, leaving the whole open country to the Carlists. One thing, however, is certain, and that is, that Rodil's troops, whom Don Carlos expected to seduce, have remained firm and faithful. Another thing almost equally certain, is, that for the present the pretender's party is nowhere very strong or decided beyond the limits of the Biscayan provinces and Navarre.

As far back as February last we endeavoured to explain to our readers that the main cause of the discontents of those provinces was the apprehension that the new constitutional government, acting on the centralization and uniformity system, would invade the municipal rights and peculiar privileges which they have always heroically defended, and have enjoyed for ages, and we can now repeat, on the authority of an enlightened Spaniard, who knows his country well, that if the Queen Regent and her cabinet would remove the grounds of that apprehension, they would at once disarm those who are arrayed against them, and whose affection for Carlos arises solely out of the circumstance of his having solemnly pledged himself to respect all their ancient privileges. It is for this, and for nothing else, that they care for the Don, or prefer his rule to that of his niece.

Those municipal institutions to which we have alluded more than once as being the foundation and the bulwark of all civil liberty, long existed in Spain, and in no part of the kingdom in greater force than in the northern provinces. These provinces also were slightly taxed. It is perhaps but fair and right that they should be made to bear their proper portion of the public burdens, but this (particularly in times of dissension and trouble) might have been delayed for awhile and corrected by degrees, while their municipal institutions ought never to have been touched or threatened. The whole of the last-mentioned subject merits the attention of those who watch the march of the Spanish constitutionalists.

The Ayuntamiento, or municipal council of every provincial town and village in Spain, from the oldest times of the monarchy, was composed of all the resident fathers of families. They elected their municipal officers with the Alcalde or first magistrate at their head. These essentially popular institutions lasted till the time of Charles V., and in the encroachments then and in after years made upon them by the crown, is to be traced one of the sources of the decay of Spain. In the face of despotism men were no longer so disinterested or energetic as to aspire to places of little or no emolument and considerable danger. By degrees the crown appointed all the members of the Ayuntamientos of towns for life, and at last these offices became hereditary, and were even sold by the court and its creatures. These civil officers were thus the obsequious servants of the crown that kept to itself the entire disposal of the places of Alcalde, &c. In the villages and rural districts, however, where these places were not of sufficient importance to attract ambition, the old customs prevailed, and, indeed, still prevail in great measure. In the northern angle of Spain, now the seat of civil war, where they were secured by treaties between an obstinate and brave people and their sovereign, they were scarcely ever touched. The late King Ferdinand, not long before his death, issued a decree by which a certain number of new members for the Ayuntamientos were to be freely elected as of old, by every town or district, as a counterpoise to the court members, who, through the creeping abuses of ages, enjoyed their offices for life. This was a step towards the recognition of the old principle of popular municipal election, for which step Spain was indebted to the absolute Ferdinand VII.!

Now, the present government of the Queen Regent has since issued an ordonnance, by which peculiar qualifications are required in a member of the Ayuntamientos. A triple list is made of persons paying a certain quota of taxes, and out of three the sovereign chooses one. The old Spaniards, whether liberal or constitutional, deem this an innovation at variance with their national habits, and in those parts, as in the northern provinces, where the municipal spirit is strong and unbending, it is regarded with the utmost detestation.

TURKEY.

The Sultan, who continues arming as fast as the reduced state of his finances will permit, has been thrown into great alarm by the report that the English and French fleets in the Levant were receiving reinforcements and were about to concentrate near the mouth of the Dardanelles. An English squadron, with a small force of land troops, has been lying at Vourla, near the mouth of the gulf of Smyrna, for some time, to watch events, and probably to interfere in an amicable manner between the Greeks of the island of Samos and the Turkish force now blockading them. The massacres and atrocities committed by the Turks a few years since in the neighbouring island of Scio are hardly to be feared now for Samos; but still if these islanders hold out, as they seem determined to do, the Sultan may send some of his barbarous and undisciplined troops from the coast and interior of Asia Minor against them, and in that case plunder and bloodshed are sure to prevail. The Turks of Asia Minor have a long score against the Samiotes, who, from the beginning of the war of the Greek revolution to its close, incessantly harassed a long line of coast, and often penetrated far into the interior, carrying off flocks and herds, and destroying all the Mohammedans they met. Near the sea none but large towns were, indeed, safe from these hardy marauders. A fleet, sent against them by the Sultan, was destroyed or dispersed by Canaris, the best naval captain of the Greeks; and in consequence of this event, an irregular army of some fifteen thousand men that had been collected on the coast of Asia Minor, near to the narrow channel that separates Samos from the main, was checked in its progress, and left to perish of malaria fever in sight of the lofty island. The loss sustained by the Asiatic Turks on this occasion was enormous.

Though the Samiotes were among the most lawless of the Greeks, and though at times they just as willingly plundered the Greeks and other Christians resident in Asia Minor as they did the Mussulmans, still they were of incalculable service to the cause of Greek independence. When, however, the new Greek kingdom was formed, the allies, taking into consideration the geographical position of Samos, which is barely a mile and a half distant from the Turkish coast, determined that it should be among the Grecian islands (like Scio and many others) that were left to the Turks. As the Samiotes have resisted this arrangement, and have asserted, fairly enough, that it is hard that they who maintained their independence during the whole of the struggle should be given back to the Sultan, while many parts of Greece which had fallen beneath his arms have been included in the new Greek kingdom, it seems but fair that we should be at hand to prevent any sanguinary collision proceeding from a curious measure

in which we were a party. The moral effect of the presence of two or three British men-of-war in such scenes as these is always great; and we think the cause we have slightly mentioned quite enough to account for the stay of our squadron in the neighbourhood, without speculating on the forcing of the Dardanelles, and the alarming probability of an immediate war.

GREECE.

THE trial of Colocotroni, Kolliopulis, and the other conspirators against the government of the young king, has been brought to a conclusion. A general sentence of death has been commuted into imprisonment for twenty years, which, taking the age of the persons concerned in the plot, is equivalent to imprisonment for life. The Mainotes, who were always nearly independent of the Porte, even when its power in Greece was most perfect, and who only obeyed their Capitani or feudal chiefs, have been very slow in paying their contributions, and submitting to the new order of things established by the erection of the Greek kingdom. On more than one occasion they have also committed depredations on the peacefully disposed subjects of King Otho. In consequence of this state of things, government has sent a disciplined *corps d armée* into Maina. According to the last intelligence, these troops had behaved well, and reduced a considerable portion of the turbulent district to obedience —for the present.

CHRONICLE OF OCCURRENCES.

June 21. The inhabitants of Ripon in Yorkshire were alarmed this morning by a tremendous explosion, which shook the whole neighbourhood. On ascertaining the cause, it was found to have been occasioned by a convulsion of nature in a field about a mile from the town The earth had shaken to such a degree as to leave a fissure nearly 20 yards in width, and on plumbing the depth it was found to be 24 yards. It still remains in the same state.

24. One of the most sanguinary faction fights that ever disgraced Ireland took place this day at the races of Ballyheagh, 13 miles from Tralee, between two clans, the Cooleens and Lawlors, who have been at feud during half a century. The two factions appeared on the ground in great numbers, but remained quiet until the races were over at 3 o'clock; and then the appointed battle began in earnest on the river strand with sticks and stones The soldiers, who had been brought to preserve the peace, could do nothing to stem the torrent of fury and blows which raged on every side. At least 1000 men were engaged, for, in addition to the resident parties, numbers came from miles around to take part in the conflict against men whom they had never seen before. The magistrates present with the troops caused the Riot Act to be read, but nobody would listen to it. The very women were occupied in supplying their friends on both sides with stones, which they carried in their aprons. The battle soon spread over such an extent of ground, that neither the soldiers nor police could possibly interfere effectually to separate the parties. By the magistrates' orders they endeavoured to make individual prisoners, and it appears that about 20 were lodged in Listowell Bridewell, but they were not permitted to fire a shot. Indeed, the work of destruction was going on fast enough, no quarter was given, and ghastly wounds were given both to those who fell and to those who stood up. At length the Cooleens retreated to the river's brink, where many were driven in, and drowned. Several attempted to escape by swimming, but were still barbarously pelted by the victorious Lawlors It was full tide, and two sand-boats on the shore were afloat, into which numbers of the defeated party crowded, and pushed off across the ferry, but being overladen they sunk, and all on board perished. Four bodies were found next morning at this ferry, and 12 others, men and women, have since been taken up in other parts of the river. It is not yet accurately known how many have been sacrificed, either on shore or in the melancholy *noyades* that followed, but 8 or 10 lay dead on the strand of battle at the northern side of the river, and their friends on the southern dare not venture across to remove them Up to the 30th, the bodies of 18 men had been found in the river. The persons captured by the police had all been discharged or admitted to bail, and there seemed a very general reluctance to prosecute or to investigate the affair at all.—*Abridged from the "Times"*

25. A letter from Faenza of this date mentions, that two days before there had passed through the town two pieces of cannon and two howitzers, on their way from Ferrara to Rome. They were supposed to be a present from the Emperor of Austria to the Pope. On the 24th the representation of one of Alfieri's tragedies drew a great crowd to the theatre, when all the political allusions in the dialogue were loudly applauded. On quitting the theatre the young men who had been most forward in applauding were brutally assaulted by a numerous band of bravos, armed with sabres, daggers, and bludgeons. Twenty-two persons were wounded, two of whom are not expected to recover.

25. Admiral Napier with his family arrived at Portsmouth in the 'Braganza,' a fine frigate which he captured from Don Miguel. He was saluted as a Portuguese Admiral by the 'Victory,' the ship of the Port-Admiral, and when he landed was received with great enthusiasm by the inhabitants of Portsmouth, of which place we believe he is a native. The gallant Admiral has since left England on his return to Portugal.

28. Within the last few days a singular discovery has been made at Wheal Prudence Mine, St. Agnes. Some men employed in extending the adit found what was at first considered a communication with some old workings. Pursuing their researches, it was found that the bottom was as complete a beach as that over which the ocean rolls daily, but nothing in the shape of a communication with that element could be traced. So complete was the state of the internal beach, that had there not subsequently been discovered a variety of conic pillars of oxide of iron, varying from 6 to 18 inches in height (caused by dropping of water from the roof), it would have been conjectured that the barrier between the cavern and the sea had not been long formed, these cones, however, together with the hard irony incrustations of some particular portions of the sand, put it beyond doubt that the present obstruction to the sea's entrance has existed for many a long year. On proceeding southward about 120 feet, a very hard head of ground presented itself, which was at first considered the termination, but on stooping down a small aperture was seen, through which the captain of the mine groped, and on raising his eyes, one of the most magnificent excavations ever beheld expanded to his view—the whole extent of the chasm measuring longitudinally 200 feet, varying from 30 to 70 feet in height, and in width from 20 to 10 feet. Amongst other things found is the skeleton of a fish, measuring from the head to the lower extremity about two feet, the bones were apparently as perfect as possible, but the most trifling pressure would immediately crumble them to dust, with the exception of the skull, which was hard and firm. The whole distance from the sea to the southern extremity of the cavern is 400 feet —*Falmouth Packet.*

The shoemakers of Derby have struck for an advance of wages. The masters have determined to resist the demand, on the ground that neither the present prices of provisions nor the circumstances of the trade will admit of an advance of prices.

24, 26, 28, and *July* 1 Those days were distinguished by the grand musical performances in Westminster Abbey, in commemoration of Handel. The performances consisted of selections from the works of that great composer, and from those of Haydn, Mozart, Beethoven, and other eminent composers, performed with great effect by a numerous and splendid orchestra of able instrumental performers from all parts of the country; while several distinguished vocalists were employed to deliver the songs and recitatives. We cannot enter into the details, which are given in all the daily and weekly papers; but may mention that, on the eight days of rehearsal and performance, the attendance at the Abbey, notwithstanding the high prices of the tickets, is said seldom to have been below 2000 persons, and sometimes to have reached nearly 3000. The performances were attended by the King, the Queen, and other members of the royal family. The proceeds of the festival are said to have amounted to 20,000*l*, and as it is not calculated that the expenses will exceed 8000*l*, a large balance will remain to be applied to charitable purposes.

July 1 A few days ago, as the Regulator coach was on its way to Carmarthen and Tenby, near Dolgelly, a furious boar, which was in the middle of the road, attacked the leaders, and succeeded in throwing the off-side leader down, by which its knees were much lacerated. The savage animal then laid hold of the near-side horse, and bit it through a vein, which bled profusely, but being trampled upon, the boar ran away and made its escape over an adjoining hedge. The coachman was unable to procure bandages to stop the bleeding for some time, and the poor horses were obliged to go in that state two or three miles before he could get assistance.

2. This morning, about 9 o'clock, a serious accident occurred at Hallfield Colliery, near Bilston, owing to an explosion of fire-damp; when, unfortunately, out of 16 men down at the time, 7 were very seriously injured, and the lives of three of them at first despaired of, but we understand that hopes are now entertained of their recovery. The remaining 9 escaped with slight hurt. The pit had been tried with the safety-lamp on commencing work at 6 o'clock in the morning, and it is supposed that the accident arose from one of the men going unnecessarily into the old workings.—*Derby Mercury.*

4 Upwards of 340 female emigrants, under the direction of the Emigration Committee, embarked in the Hero steamer, at St. Katharine's wharf. The great majority of these females are young persons whose ages vary from 16 to 25, and among them were many whose personal appearance was certainly prepossessing. They are all young women of good character, and they are all obliged to furnish testimonials of their respectability before they are allowed to embark. There were in the whole fifteen agri-

cultural families. These emigrants are to be conveyed to Sydney, in Australia, at an expense to themselves of 5*l* a head, the Government paying the additional expense of their passage; and in cases where they are not in a situation to pay the 5*l*. immediately, time is allowed them to make the payment after their arrival at the place of their destination. They were all in the best possible health, but showed great sorrow at taking leave of friends and relations.

5. The Queen embarked this morning at Woolwich for the Continent, in order to visit her illustrious relatives at Meiningen. Her Majesty was accompanied by her brother, the Duke of Saxe Meiningen, and attended by the officers and ladies of her household. The Lord Mayor, accompanied by the other City authorities, attended the royal yacht to the limits of their jurisdiction at Southend, in the Magnet steam-vessel. Her Majesty landed at Rotterdam on the evening of the 6th. It is expected that six weeks will be the duration of her absence. Her Majesty travels incognito, under the title of 'Countess of Lancaster.'

6. The blind man, Edwards, and his associates in the attack on Mr. Gee, the solicitor, were tried at the Old Bailey, on a charge of demanding, by force and menace, the sum of 1200*l* from the prosecutor; but the court ruled that, as the prisoners had not taken money, the indictment could not be sustained, and they were acquitted. They were then indicted for demanding certain valuable deeds of Mr. Gee. On this charge they were also acquitted, as the court thought that there was no difference between this and the previous case. The check for 800*l*, to which they had obtained Mr Gee's signature, was not stolen from him, as he never had it; therefore the offence was no felony. The prisoners, however, with Mrs Canning, whose concurrence in the transaction was rendered probable by the evidence, will still be tried on the charge of conspiracy. But this indictment having been traversed by Edwards and his associates, the trial will not come on until the 14th of August.

A frightful event occurred at St Jugbert, in Bavaria Several children, from seven to eleven years of age, were playing together, when suddenly their joyful frolics were interrupted by the appearance of a wolf, which rushed upon them from the adjoining wood The ravenous animal seized a boy nine years old, and carried him off The pursuit, which soon after took place, was unsuccessful, and no trace of the child can be found Such an occurrence is quite uncommon, especially at this season of the year, when beasts of prey find abundance of food in the forests. Many are therefore of opinion that the wolf was in a rabid state from hydrophobia

8. Above 600 men paraded Thurles, preceded by a man carrying a loaf of bread on a pole, in a similar manner to the procession which took place in Clonmel and Fethard, in the same county. The half-famished creatures conducted themselves with great decorum, and said that they made the display in that peaceable manner for the first time, in order that the gentry and respectable and wealthy inhabitants of that town should timely take their wretched situation into consideration, but if their appeals either for food or employment were not attended to, they should have recourse to those means pointed out by the first law of nature A subscription on a large scale has been set on foot to provide provisions and work for them

Mr. Barrett, the editor of the *Pilot*, was liberated from Kilmainham gaol, after having suffered six months' imprisonment.

Mr. Purcell, a surgeon residing at Stockbridge, obtained a verdict in the Court of Common Pleas of 500*l* damages against the printer and editor of the *Christian Advocate* newspaper for a libel, in an advertisement in that paper, imputing to him gross misconduct as a professional man, in the treatment of a patient who was affirmed to have been subsequently cured by taking 'Morison's universal medicine'—Later in the month, a coroner's inquest, which was held at York, on the body of a young man named Richard Richardson, whose death was said to have been occasioned by the use of 'Morison's pills, pronounced a verdict of 'manslaughter' against Joseph Webb, the local agent for the sale of the pills, and he was committed for trial. In the course of the inquest the results of a chemical analysis of the pills were stated, and several medical men testified, that so powerful a drastic medicine, taken in the quantities administered under the direction of the agent, was alone sufficient to occasion death, independently of the disease under which the patient laboured. Mr. Webb has since been tried and found guilty; but recommended to merciful consideration, on the ground that he was ignorant of the injurious effects which the pills he administered were calculated to produce.

11. A large portion of the cliff directly in front of the Royal Crescent, at Ramsgate, consisting of several tons of chalk, fell with a tremendous crash, and, singular to relate, five or six men, who were at work at the foot of the cliff at the time, were most providentially saved from being buried alive by a small piece of chalk which fell first, hitting one of them on the back, who instantly exclaimed to his companions—"For God's sake, run for your lives." They had scarcely time to get out of the way, ere the whole mass fell, and buried the spot where they were standing, fifteen or twenty feet.

12. At Manchester, three of the 6th Dragoon Guards, who were in a state of intoxication, after insulting the wife of a workman, on the husband remonstrating, they took him into custody as a deserter, drew their swords and attacked the multitude, wounding twenty persons. They were at length secured by the courageous efforts of Daggett, a police-officer, and locked up.

The tea imported from Dantzic into Liverpool has not been seized, but allowed to be sold at Liverpool for exportation. The *Liverpool Times*, in noticing the advertisement of the sale, remarks, that it is the first tea-sale that has ever taken place there; but hopes it will not be the last by many hundreds.

14. Mr. Beauclerk and others have gained the suit which they instituted in the Court of Première Instance at Sancerre, by which they claimed that the Aubigny estates in France, of the late Duke of Richmond, should not be retained by the present Duke, but should be divided among the plaintiffs, according to the French law of inheritance. The court would, however, only allow them the profits of the estate from the date of the commencement of the suit, not from that of the demise of the late Duke of Richmond, as they claimed.

A dreadful accident, attended with loss of life, occurred at Manchester. About a quarter before one o'clock, the front of a pile of empty buildings, lately occupied as shops, at the corner of Duciestreet, Long Millgate, fell with a tremendous crash into the street, burying in the ruins several children and young persons who were playing in the street, or passing along it at the time. In a few minutes the spot was surrounded by crowds of persons, and the most exaggerated rumours were circulated as to the number of the individuals buried; but after the most diligent inquiries, it was ascertained that only one youth was killed on the spot, and that five others, three boys and two girls, were seriously hurt, one of whom, a girl about thirteen years of age, died at the infirmary, in about four hours afterwards, of concussion of the brain

A desperate ruffian, named Young, was sentenced to death for a robbery on the premises of Mr. Crockford, at Basingstoke. He has since confessed that he was one of the parties engaged in the murder of Mr Richardson at Epsom, which occasioned so strong a sensation a short time since.

15. Knockton Hall, the splendid mansion of the Earl of Ripon, situated five miles from Lincoln, on the Sleaford road, was reduced to a heap of ruins by a fire, which commenced this night at eleven o'clock, and continued to burn until six the following morning No lives were lost.

16 The Right Hon Michael Angelo Taylor, M.P., died this day, in his 77th year. Since the retirement of Mr. Coke, he has been the father of the House of Commons, having been a member of that assembly for fifty years His death creates a vacancy in the representation of the borough of Sudbury, and in the recordership of the borough of Poole.

North Tawton, Devonshire, again fell a victim to the same dreadful calamity that occurred there two years since, when forty houses were burnt down. This frightful number of sacrifices was exceeded on Tuesday, the flames having levelled to the ground from sixty-five to seventy houses. The fire commenced at about half-past eleven o'clock, and in less than one hour thirty houses presented but one mass of fire, the sight was awfully grand. Among the buildings burnt down is the workhouse, and all the poor, aged, halt, and blind, who escaped only with their lives, are at present in the church for shelter.—*Plymouth Journal.*

17 *Islington Cattle Market.*—The Committee of the House of Commons on the Islington Market Bill, having reported 'that the preamble to the bill introduced has not been proved,' the measure is for the present at an end. At a meeting of the Common Council of the city held this day, Mr Hale (the Chairman of the City Lands Committee) brought up the report relative to the bill. He stated the proceedings up to the period when the House of Commons' Committee resolved that the preamble was not proved, and the bill was consequently lost, and it recommended the immediate enlargement of the market in Smithfield, to suit completely the convenience of the public. It recommended that several houses on the north side, and some property in Long-lane, should be purchased to increase the size of the market, the expense to accomplish which would, according to estimate, amount to 71,000*l*, upon an additional toll of 2*d* per head on oxen, and 4*d*. per score on sheep, lambs, &c, being granted, by way of indemnity, to the extent of 50,000*l* It concluded with recommending that application should be made to Parliament for the necessary powers to have the same effected forthwith, and for raising the additional toll, and with expressing the grateful sense of the services of those city members who resisted the proposed measure in the committee. After some conversation, in which the immediate necessity for the enlargement of Smithfield Market was strongly enforced by Mr. Hale, Mr Hicks, and other members, notices were ordered to be sent to the House of Commons, and the report was ordered to be printed. We are happy to understand, however, that the proprietor of the new market is not at all discouraged, but purposes to renew his application to Parliament in the next session. He has taken care to explain that he does not, and never did, contemplate demanding higher tolls than those which are at present paid in Smithfield Market.

Salaries of Scotch Judges.—The salaries of the Judges in the Court of Session in Scotland are to be increased, those of the heads of the two inner courts to 5000*l*. each, and those of the other

judges to 3000*l.*, all the judges to do duty as Lords of Session, Justiciary, and Jury Court. It is also proposed that any judge of the age of 75, who has done duty for fifteen years, shall be allowed to retire on full salary. The following judges may, and very likely will, avail themselves of this privilege: Lord President Hope, Lords Glenlee, Balgray, Gillies, and Cringletie.—*Edinburgh Paper.*

Duration of Ministries.—Lord Grey held office as Premier for three years, seven months, and twenty-two days, his predecessor, the Duke of Wellington, not so long by nearly a year and a half. Since 1754, only four Premiers have held office for a longer period, namely, the Duke of Newcastle eight years, Lord North twelve, Pitt upwards of seventeen, and Lord Liverpool nearly fifteen years.

French National Guard.—By the law establishing and organizing the National Guard in France, foreigners having establishments therein are liable to the duties and service the same as Frenchmen. An Englishman, established in Paris, lately refused to mount guard, though regularly summoned at different periods, and, in consequence, was condemned to one day's imprisonment. From this sentence he appealed to the Cour de Cassation (the Supreme Court,) and pleaded, amongst other grounds on which he relied to be entitled to exemption, that he was a Quaker, and all military services were contrary to his religion, and repugnant to his conscience. The court overruled this objection, because it had not been pleaded in the courts below. It is to be presumed that this gentleman will again refuse to mount guard, and being again sentenced to imprisonment, will plead, in the first instance, his religion in bar of liability. We shall then see whether the Cour de Cassation will grant him relief. We fear not. This, however, is an important question for all our Quaker countrymen who have established themselves in France, or think of doing so.

Sweden.—A petition, signed by upwards of 2000 persons of distinction, has been lately presented to the king of Sweden, praying for a reform in the representation of that country.

Portuguese Prize-money.—130,000*l.* have been allotted to the Queen of Portugal's fleet as the value of the Miguelite ships captured in the gallant action of the 5th of July, 1833, of which the admiral receives one-eighth, equal to 16,000*l.*; captains and commanders 2000*l.* each; lieutenants, 800*l.*; surgeons, &c, 500*l.*; midshipmen, &c, 300*l.*; sailors, 200*l.* Besides the above, the officers and men of the queen's fleet are promised a share of captured merchant vessels, to the admiral, 4000*l.*; to lieutenants, 200*l.*; and to the others in like proportion.

Trade of Antwerp.—The merchants and shipowners of this place have just addressed a petition to the Chamber of Representatives The petitioners point out the progressive decline of its commercial navy, which is still farther endangered by the fetters which are imposed upon it. Under the preceding government, they say, the port of Antwerp had 120 ships; now it has only 39, and of 78 ships which entered the port in 1833, from the coasts of France, there were only eight under Belgian colours.

Madeira.—On the 28th May, the Don Pedro, a 64-gun frigate, arrived here with despatches for the governor (which he refused to accept), desiring him to give up the island in favour of Donna Maria. They put the island under a rigorous state of blockade, and on the following Sunday a schooner of war arrived to assist them. The governor still refused, and they informed us by signals that Miguel was completely driven from Portugal, and on Thursday, after a great many councils of war, the governor quietly gave up the island, and hoisted Donna Maria's colours on the palace and all the forts The schooner left yesterday for Lisbon, and they will shortly send a new governor here—till then the former still holds his office. Amongst the first things they did was to make a regular 'gaol delivery.' It was a very affecting sight to see the poor prisoners, many of whom had been confined for several years, and mostly for political offences; but they made no distinction between them and the common criminals

Steam Navigation to India.—The Committee on Steam Navigation to India have made their report to the House of Commons, giving it as their opinion that a regular and expeditious communication with India by the means of steam-boats, is an object of great importance both to Great Britain and India, and accompanying this opinion by recommending a Parliamentary grant of 20,000*l.* for the purpose of ascertaining the practicability and expense of such communication by the line of the Euphrates. This route, in the opinion of the committee, besides having the prospect of being ultimately less expensive, presents many other advantages, physical, commercial, and political, over that by the Red Sea, justifying therefore the proposed outlay in bringing it to the test of a decisive experiment.

Goa.—The 'Bombay Gazette' contains a proclamation by the viceroy of Goa. The editor states that the viceroy is nearly connected by blood with both the contending princes, and he now spontaneously proclaims his adhesion to the cause of Donna Maria and the constitutional charter of the monarchy. On the occasion of the publication of the proclamation, the troops at Goa, amounting to 5000, burnt Don Miguel in effigy, and they have supported the change with great enthusiasm. A brig of war has sailed from Goa with a military force under Captain De Gama, who has received orders to [illegible] the government of Damaun, the governor of that settlement being still in the interest of Don Miguel. He will no doubt be compelled to submit.—*India Gazette.*

Ibrahim Pacha.—A letter from Aleppo, dated May 18th, states, that Ibrahim Pacha is occupied at this moment in bringing the Arabs of the Desert to reason. Those of Koram and Zara have been completely beaten, and are entirely dispersed. These last especially, who comprise nearly 3000 families, after having defended themselves in a wood against 1500 irregular cavalry, have been cut in pieces by a reinforcement of 400 regular infantry, who, came to join the former. The sudden increase of the waters in the woods where these Arabs were, assisted to hasten their ruin. Forty thousand head of cattle and considerable booty have been the fruit of this attack, provoked by the complaints made by the Shah of Persia to Mehemet Ali, on the subject of a caravan of Persian pilgrims, who, on their return from Mecca, had been plundered. The damage is estimated at more than 2000 purses (300,000 francs), as well in goods as specie. Ibrahim Pacha, by the orders of his father, after having in vain employed all mild means, resolved to attack them. This general has taken for his share of the booty 8000 sheep and 1600 oxen. The troops shared the remainder which they are selling at low prices. It is said that a great deal of specie was found in the tents of these Arabs. The wandering hordes which have been thus destroyed are the same who pillaged, about a year ago, a caravan coming from Lattaquia, and in which the European merchants in Syria suffered a loss of nearly 400,000 frs. A few days ago an expedition was made against the Anezian Arabs, who occupy all the desert between Damascus and Bagdad. We flatter ourselves that it will also be attended with complete success.—*French Paper —Times.*

Cape of Good Hope.—The slave-owners had a meeting on March 31st, and resolved that the slaves when free should work as they do now (same hours), and become all free together at the expiration of five years Commissioners have been appointed to make a valuation of the slaves, and it is proposed that a sum of 400,000*l.* should be immediately advanced to pay off mortgages, which, if not granted, must ruin many families At the Mauritius all is quiet.

New South Wales.—Accounts from Swan River speak favourably of the growing prosperity of the colony It was in contemplation to establish a company for creating a medium of exchange, by opening a mart, or general store, for the reception, purchase, and sale of goods of all descriptions. The company was to issue its own notes, payable on demand, in exchange for all goods brought for sale It was expected this would put an end to a system of monopoly by which, on more than one occasion, the colony had been greatly inconvenienced.

By a return made of the imports and exports from the port of Launceston during the year ending the 5th of January, 1834, it appears that the value of imports from Great Britain was 70,225*l.*, from New South Wales 23,457*l.*, and from other ports 9400*l.*, showing a total of 103,082*l* The exports to Great Britain amounted to 15,798*l.*, to New South Wales 17,000*l.*, other ports 8198*l.*, being a total of 71,086*l* The exports of greatest value to Great Britain were in wool, valued at 33,504*l.*, the same commodity to New South Wales amounted to 9027*l.*, and to other ports 4950*l.*, showing that the export in wool alone amounted in value to 48,481*l* The principal imports from Great Britain were in ironmongery, which is stated at 11,316*l*

Municipal Regulations in Van Diemen's Land.—The recent act for [illegible] the towns of Hobart Town and Launceston, and [illegible] preventing nuisances therein, seem formed, in general on the model of acts for similar purposes in this country Nevertheless, it necessarily contains some provisions which result from and therefore indicate, the peculiar circumstances of that interesting colony and its towns We select the following from the summary which is given in the 'Hobart Town Courier.' The Surveyor General is to define the limits of the towns of Hobart and Launceston, and a penalty of 5*l.*, for the first offence, is to be paid by any one defacing the boundary marks Persons wishing to flag their own door must give notice to the town surveyor and receive his instructions A person dragging timber along a road or street may be apprehended and made to pay a penalty of 5*l* Persons permitting their dogs to roam at large are liable to a penalty of from 1*s* to 5*l* As the operation of this regulation is not limited to particular seasons, we presume it is the result of the panic occasioned by the wild dogs No swine are to be kept within 10 yards of the road. Persons wishing to blast rock within the limits of the towns are to give notice to the town surveyor. Persons having wells between their houses and the street, or in any public place, must have them closed up, and must only draw water from them with pumps, under a penalty of 2*s.* 6*d* each day. The Justices in Quarter Sessions are to fix the rates and fares of porters, boatmen, and carmen, which are to be published in the Gazette, and in a newspaper at Launceston, *if such there be.* Convicts, whether holding a ticket of leave or not, or assigned or not in the public works, must not be out after eight o'clock at night, or before day-break. Drunken persons, and persons swearing and using obscene and indecent language in the streets, may be apprehended and fined 5*s.*, and if they do not pay it in an hour, they are to be put in the stocks for six hours. The Editor of the paper from which this is taken expresses a hope that

the constables will take care to enforce this regulation. Sailors without a pass from the captain, or producing their discharge, after nine o'clock, are to be locked up. It appears, from other documents, that the judges represented this provision to be repugnant to the laws of England; the operation of the act was therefore suspended until the Governor, who continued to feel the necessity of the measure, was enabled to bring it before the Legislative Council, the decision of which is final in such cases. The Governor thus stated the necessity of the measure to the Council:—"The discipline of the convicts requires that they should, as much as possible, be deterred from ever even attempting to escape from the territory, which, of course, can only be accomplished by water; and it is matter of fact that these men, when endeavouring to get on board of vessels for the purposes of concealment, are generally dressed as mariners. It is therefore most important that constables should always be enabled to distinguish between sailors and convicts disguised as such; and it will be evident that the precaution of requiring all manners, passing along the streets after dark, to be provided with passes, or written permissions, for the purpose of proving their identity when questioned, will tend greatly to enable them to do so." The council seems to have been satisfied of the expediency of the measure, as the majority of seven to three decided that the Act should be adhered to in its original form. We may mention, by the way, that on each of the three days preceding this decision, the Legislative Council did no business, "there not being ten members present at half-past two o'clock." One of the items of the Act provides, that the informers are to have one half of the penalties, and that the other half is to be applied towards the expenses of repairing the roads.

Hayti.—Advices from Hayti give a very unfavourable account of that island. The determination of the French government to enforce payment of the 5,000,000*l* sterling of indemnity, continued to cause much embarrassment. All the splendid sugar estates in the north, in and about the plains of the Cape, which formed so valuable a constituent part of the national domains in the time of Christophe, were almost entirely abandoned for all foreign commerce.

Demerara.—Advices of the date of May 28th from Demerara, state that the Commission appointed for ascertaining the value of negroes, had finished their labours, and forwarded the documents to England. The average value of the slaves by their return, is, for Demerara, 121*l.* 5*s* sterling per head, and, for Berbice, 113*l* 4*s*; consequently, the colony of British Guiana will be entitled to a large portion of the 20,000,000*l*.

West Indies.—Jamaica papers, to the 17th of May, state that the House of Assembly was expected to meet on the 3rd of June. The accounts from the country are neither flattering nor disheartening. Some residents seem to dread the approach of the 1st of August, while others anticipate happier times. It is pleasant to hear that the police force is organising with a greater rapidity than was expected, yet some complaint of the inadequacy of pay, &c. When the House meets their first duty will be to settle this question.

The following is the Proclamation which has been addressed by the Marquis of Sligo, the Governor of Jamaica, to the Negro population of the island:—"To the Negro Population throughout the Island of Jamaica.—My Friends—Our good King, who was himself in Jamaica a long time ago, still thinks and talks a great deal of this island. He has sent me here to take care of you, and to protect your rights, but he has also ordered me to see justice done to your owners, and to punish those who do wrong. Take my advice, for I am your friend—be sober, honest and work well when you become apprentices; for should you behave ill and refuse to work, because you are no longer slaves, you will assuredly render yourselves liable to punishment. The people of England are your friends and fellow-subjects—they have shown themselves such by passing a Bill to make you all free. Your masters are your friends, they have proved their kind feeling towards you all by passing, in the House of Assembly, the same Bill. The way to prove that you are deserving of all this goodness, is by labouring diligently during your apprenticeship. You will be on the 1st of August next no longer slaves, but from that day you will be apprenticed to your former owners for a few years, in order to fit you all for freedom. It will therefore depend entirely upon your own conduct, whether your apprenticeship be shorter or longer, for should you run away, you will be brought back by the maroons and police, and have to remain in apprenticeship longer than those who behave well. You will only be required to work four days and a half in each week, the remaining day and a half in each week will be your own time, and you may employ it for your benefit. Bear in mind that every one is obliged to work—some work with their hands, others with their heads, but no one can live and be considered respectable without some employment. Your lot is to work with your hands, I pray you, therefore, do your part faithfully; for if you neglect your duty, you will be brought before the Magistrates whom the King has sent out to watch you, and they must act fairly and do justice to all, by punishing those who are badly disposed. Do not listen to the advice of bad people; for should any of you refuse to do what the law requires of you, you will bitterly repent it, when, at the end of the appointed time, all your fellow-labourers are released from apprenticeship, you find yourselves condemned to hard labour in the workhouse for a lengthened period, as a punishment for your disobedience. If you follow my advice, and conduct yourselves well, nothing can prevent your being your own masters, and to labour only for yourselves, your wives, and your children, at the end of four or six years, according to your respective classes. I have not time to go about to all the properties in the island and tell you this myself—I have therefore ordered this letter of advice to be printed, and read to you all, that you may not be deceived, and bring yourselves into trouble by bad advice or mistaken notions. I trust you will all be obedient and diligent subjects to our good King, so that he never may have cause to be sorry for all the good he has done for you.

"Your friend and well-wisher,
"SLIGO, Governor of Jamaica."

SOCIETY FOR THE DIFFUSION OF POLITICAL KNOWLEDGE.

We have the pleasure to announce the formation of a Society from whose labours we anticipate the most beneficial results. In that anticipation we have readily consented to place our own publication under their Superintendence, in the conviction that the good which we may have been enabled to effect with our individual means will be proportionately increased when we have the advantage of the co-operation of a Responsible Body, the names of whose Members will be a Pledge both for the opinions which we shall continue to support and for the mode in which we shall exhibit them. It is scarcely necessary for us to add more than that our next Number,—that of September 1,—will be issued "under the Superintendence of the Society for the Diffusion of Political Knowledge." We subjoin a Prospectus of the nature and objects of the Society, which is now first published.—

Prospectus.

An Association has been formed for the purpose of effecting, for the Science of Politics, the same sort of good that has been accomplished, in another direction, by the Society for the Diffusion of Useful Knowledge. What that Society has done towards making the stores of general learning and taste accessible to the humblest person in the community, is now proposed to be imitated with reference to subjects upon which the mind of the people has been too long accustomed to be excited rather than to be instructed. It is proposed to advance Political Knowledge by the diffusion of those facts and opinions upon which most men are agreed who consider public questions with calmness and the love of truth, and by discussing any questions which involve differences of opinion with the candour which can alone lead to the discovery and establishment of what is extensively and permanently beneficial.

In several of the larger divisions of Political Economy and Jurisprudence, men of all parties, who have studied Politics as a science, have a common agreement, and yet, upon many of these topics, men who have now to a very considerable degree the direction of the public mind choose to lead it in a course entirely adverse to the opinions of the best informed, and affect to despise those principles which the reasoning politician has long ceased to treat as matter of controversy. The evil of this course is evident. Opinions based upon error are not without their influence even upon Legislation, and therefore a foundation of knowledge must, if possible, be laid in place of a groundwork of prejudice.

Upon subjects of Political Science it has now become necessary that the people, without distinction, should be educated. Their want of political knowledge places them under the influence of leaders,—in most cases uninformed,—often imprudent,—and sometimes corrupt; their share of political power renders this want of knowledge practically dangerous to the community. With a keen desire to improve their position in society, but without a due consideration of the permanent and unalterable conditions upon which social happiness is based, they engage in unavailing struggles, or surrender themselves to hopeless indifference. The advocates of a separation of interests between the labourer and the capitalist

are working mischievously in one direction,—the upholders of Pauperism in the other. In the one case, their disciples lose their natural sense of justice; in the other, they abandon their self-respect. The advancement of Political Knowledge will naturally lead to the increase of social happiness, by the destruction of those factious prejudices which are fostered by too many public writers.

It is intended by this Society to endeavour to effect the objects which they have in view by issuing, in the first instance, two Periodical Works, at a cheap price.

The Society have made arrangements for the future publication, under their superintendence, of the 'COMPANION TO THE NEWSPAPER.' This work, which has already a large circulation, has, under its past management, accomplished some of the designs which the Society have in view. It proposed "carefully to examine those materials which the writer of the day has not always leisure to consult; and to bear in mind those comprehensive principles of political philosophy by which every passing question must eventually be tried." This intention the 'Companion to the Newspaper' is well calculated to realize; and the Society hope to increase its usefulness, by adding to its materials and extending its circulation. Some of its principal objects will be, as they have been, to present the fullest information upon subjects of statistics; to watch the progress of legislation; and to collect such facts upon commercial questions as may lead to sound and practical conclusions.

The other work, which the Society propose immediately to publish, is one which is greatly wanted in a country where the people are extensively intrusted with the management of their own affairs; and in which their collective opinions, even without responsibility, have a great influence on legislative proceedings. It cannot be denied that the bulk of the people have little precise instruction on the performance of their social duties. The Citizen comes into a Court of Law as a Witness or a Juror with very imperfect helps to direct his understanding and confirm his integrity:—he is appointed to important offices—Constable, Overseer, Surveyor, Churchwarden—without a fit preparation of knowledge;—he sometimes exercises that most important trust of an Elector without such an education as will enable him to select the best Representative. Again,—even the commonest private duties and social relations require to be placed upon a foundation of knowledge:—Master and Servant, Husband and Wife, Parent and Child, Landlord and Tenant, Debtor and Creditor, have rights and duties which ought to be clearly defined and understood;—while in the more complicated relations of Guardian, Executor, Trustee, Assignee, &c., a very accurate notion of obligation is equally essential, and, for ordinary purposes, may be attainable. Under a more perfect expression of the Law than we yet possess, such instruction would be less needed than at present; but still the legal responsibility of particular situations would need to be made plain to the understanding of those concerned. And, further, all persons, and especially those in the humbler walks of life, require to be instructed in the operation of new laws affecting themselves,—whether to yield them obedience or to assist in their enforcement;—and in cases where judicious enactments are capable of being resisted and misrepresented, it is necessary to exhibit their whole bearings clearly and impartially. With these objects, therefore, it is intended to publish a second periodical work, to be entitled 'THE CITIZEN.'

In both these works, Supplementary Numbers will occasionally be given, devoted to the complete elucidation of an important subject. The Society will bear in mind that, on all occasions where a portion of the popular feeling is taking a wrong direction, as in the case of machinery, it will be their duty at once to endeavour to clear up the mistakes which lead men into temporary hostility to the laws.

The two works thus intended to be immediately undertaken by the Society will be adapted to a very large and general circulation amongst all classes of the community, but especially the working classes. Much good, however, remains to be effected by additional means. One important object for the Society will be that of preparing the public to understand any large measure of legislation, by putting into a popular shape the evidence that may have been officially collected for a right judgment upon it. The REPORTS of Parliamentary Committees, and of Commissions, require to be more generally diffused. In several isolated instances, these Reports, and the evidence upon which they have been founded, have been already distributed in a cheap form with signal advantage; and that such a preparation is of great importance in carrying changes into effect is sufficiently apparent. It will be the duty of the Society to bear this principle constantly in mind, and to do systematically what has proved of so much public benefit, even when casually performed. Another object, which they will endeavour as soon as possible to realize, will be to follow the course of Legislation, so as to make every new enactment intelligible to all, but especially to those who, professionally or otherwise, assist in carrying its provisions into effect; and this will probably be attempted by a Publication of the STATUTES, with *Notes*.

The future operations of the Society will be determined by circumstances,—amongst others, by the public opinion of its usefulness.

The SOCIETY FOR THE DIFFUSION OF POLITICAL KNOWLEDGE consists of the following Members:—

THE LORD CHANCELLOR.
CHARLES HAY CAMERON, ESQ.
EDWIN CHADWICK, ESQ.
WILLIAM COULSON, ESQ.
J. W. COWELL, ESQ.
G. L. CRAIK, ESQ
LIEUT. DRUMMOND, R.E. F.R.S
SAMUEL DUCKWORTH, ESQ.
LORD EBRINGTON, M.P.
W. EWART, ESQ., M.P.
HENRY GAWLER, ESQ.
I. L. GOLDSMID, ESQ., F.R.S.
GEORGE GROTE, ESQ., M.P.
M. D. HILL, ESQ., M.P.
EDWIN HILL, ESQ.
ROWLAND HILL, ESQ.
DAVID JARDINE, ESQ. A.M.
HENRY B. KER, ESQ.
GEORGE C. LEWIS, ESQ
THOMAS BARRET LENNARD, ESQ., M.P.
SAMUEL JONES LOYD, ESQ.
GEORGE LONG, ESQ., A.M.
J. W. LUBBOCK, ESQ., F.R.S.
D. LE MARCHANT, ESQ.
JAMES MILL, ESQ.
JAMES MORRISON, ESQ., M.P.
GEORGE WARDE NORMAN, ESQ
WILLIAM H. ORD, ESQ., M.P.
SIR HENRY PARNELL, BT., M.P.
REDMOND PILKINGTON, ESQ.
E. ROMILLY, ESQ. M.P.
NASSAU W. SENIOR, ESQ.
SUTTON SHARP, ESQ
JOHN SMITH, ESQ., M.P.
EDWARD STRUTT, ESQ., M.P.
H. WAYMOUTH, ESQ.
JOHN WROTTESLEY, ESQ., A.M. F.R.S.

All future Members will be elected by Ballot. The number of Acting Members is limited to Sixty.

When a number of persons associate together in publishing a series of works containing arguments and statements, a uniform agreement in opinion is manifestly impossible. The Society, therefore, does not consider any individual member as pledged to any particular doctrine contained in its publications, or to anything beyond a general concurrence in principles friendly to peace, to rational liberty, and to the great cause of human improvement.

In addition to the Acting Members of the Society, Honorary Life Members will be elected, consisting of those who may desire to advance the objects of the Society by Donations of Ten Guineas or upwards; or of the Authors of gratuitous Treatises, published by the Society.

The Society will promote the formation of Local Committees throughout the United Kingdom, principally with the view of obtaining information upon facts connected with Political Science. With the same object, they will be ready to elect a few Honorary Members from foreign countries.

The business of the Society will for the present be conducted at 13, Pall-Mall East, to which place all Communications may be addressed to Mr. JOHN MARTIN.

The COMPANION TO THE LIBRARY AND THE NEWSPAPER, Part VI., containing "The Printing Machine, or Companion to the Library," Nos. X. and XI., and the present Number of "The Companion to the Newspaper," is now issued, price 1*s.* sewed in a Wrapper.

LONDON:—CHARLES KNIGHT, 22, LUDGATE STREET.

Printed by WILLIAM CLOWES, Duke-street, Lambeth.

UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF POLITICAL KNOWLEDGE.

THE DIFFUSION AND ADVANCEMENT OF POLITICAL KNOWLEDGE.

In Mr. Austin's admirable 'Lectures on the Province of Jurisprudence,' the connexion between the *diffusion* and the *advancement* of ethical science (of which it is scarcely necessary to say *political* knowledge forms a most important branch) is distinctly and forcibly put:—

"The *diffusion* of ethical science amongst the great bulk of mankind will gradually remove the obstacles which prevent or retard its *advancement*. The field of human conduct being infinite or immense, it is impossible that human understanding should embrace and explore it completely. but, by the general diffusion of knowledge amongst the great bulk of mankind—by the impulse and the direction which the diffusion will give to inquiry—many of the defects and errors in existing law and morality will in time be supplied and corrected."—(Sect. iv.)

This "most cheering truth," as Mr. Austin expresses it, is more distinctly worked out in the third lecture:—

"The diffusion and the advancement of ethical truth are certainly prevented or obstructed by great and peculiar obstacles; but these obstacles, I am firmly convinced, will gradually disappear. In two causes of slow but sure operation, we may clearly perceive a cure, or, at least, a palliative of the evil. In every civilized community of the old and the new world, the *leading principles* of the science of ethics, and also of the various sciences which are nearly related to ethics, are gradually finding their way, in company with other knowledge, amongst the great mass of the people; whilst those who accurately study, and who labour to advance these sciences, are proportionally increasing in number, and waxing in zeal and activity.

"Profound knowledge of these, as of the other sciences, will always be confined to the comparatively few who study them long and assiduously; but the multitude are fully competent to conceive the *leading principles*, and to apply those leading principles to particular cases; and, if they were imbued with these principles, and well practised in the art of applying them, they would be docile to the voice of reason, and armed against sophistry and error. There is a wide and important difference between ignorance of principles and ignorance of particulars or details. The man who is ignorant of principles, and unpractised in right reasoning, is imbecile as well as ignorant. The man who is simply ignorant of particulars or details, can reason correctly from premises which are *suggested* to his understanding, and can justly estimate the consequences which are drawn from those premises by others. If the minds of the many were informed and invigorated, so far as their position will permit, they could distinguish the statements and reasonings of their instructed and judicious friends, from the lies and fallacies of those who would use them to sinister purposes, and from the equally pernicious nonsense of their weak and ignorant well-wishers. Possessed of directing principles—able to reason rightly—helped to the requisite principles by accurate and comprehensive inquirers—they could examine and fathom the questions which it most behooves them to understand; though the leisure which they can snatch from their callings is necessarily so limited, that their opinions upon numerous questions of subordinate importance would continue to be taken from the mere *authority* of others."—(Sect. iii.)

The preceding passages so clearly define the good which is aimed at by "the diffusion of political knowledge," that what we have to add upon the occasion of issuing the first work of a society formed for that object, will be little more than an elaboration of the principle thus laid down.

A people in the condition of political ignorance are plastic tools in the hands either of rulers or of demagogues. In the *infancy* of good government, the commonest elements of political knowledge can scarcely be said to exist: to fear and to obey is the only law of the popular mind. In the *childhood* of free institutions, the same fear becomes blended with fierceness and obstinacy: the terrors of the governors are met by the violence of the governed. In the *manhood* of freedom and law, obedience is built upon reason: the principle of utility supersedes the contest for right; the alternations of popular violence and terror are no longer to be dreaded or despised. No people on earth have yet completely reached this glorious manhood: the most free and the most discreet still wear the school-boy shackles, and still exhibit the school-boy passion and caprice.

One of the main causes of this tedious nonage of states is the belief that was once so diligently kept up by governments, and is still so carefully spread by the "weak and ignorant well wishers" of the people, or by "those who would use them to sinister purposes," that in politics there is nothing to learn: that to feel and to act—to dash at an object through thick and thin—to follow some *leader*, careless where he leads them—to set up an idol one day, and pull him down the next—that these are the rights and duties of a free people, and that those who would establish their rights and duties upon a foundation of knowledge are closet dreamers, or, to use the more common jargon, cold-blooded and hard-hearted political economists. Doctrines such as these are mainly to be found in some of the leading newspapers of our day, whose conductors do not perceive that a great change is working in public opinion—that there are times when men will *rush* towards the attainment of a good, and others when they will steadily advance upon it, with a purpose which is not to be hurried or kept back even by the remoteness or indistinctness of the object which they seek—that the partial attainment of a great advantage has a tendency to make honest and reflecting people tolerant and even minded—that a state of constant political warfare is not of itself to be desired, and is not desired by any intelligent and prosperous community—and that the cry of "boot-and-saddle" of newspaper trumpeters is an ignorant and somewhat ludicrous call, when a people were diligently to set about improving the field they have won. We dare say these "doctors" will seek wisdom in time; and, "having bandied their fustian phrases, and bawled till their lungs be spent," will apply themselves to learn a few of the *leading*

[WILLIAM CLOWES, Printer, Duke Street, Lambeth.]

principles of political science, in common with the rest of the world.

The ignorance and the imbecility of certain newspapers—their packed opinions and their personal animosities—their sudden loves and virulent hatreds—their utter contempt for consistency even in their prejudices—are no proof to us that the public mind is not advancing in the knowledge of political *principles*. The people are beginning to value their *facts* while they despise their *opinions*. Even the popular estimate of the characters of public men has ceased to be formed upon newspaper authority. It has become perfectly evident that the most miserable private motives almost invariably determine their friendships or their enmities. The public, therefore, have no faith in their angels, and no fear of their devils. It is their vocation to call names for the amusement of the crowd; and, indeed, it is rare pastime. No one, now-a-days, is weak enough to take it in earnest.

> "The coxcomb bird, so talkative and grave,
> That from his cage cries cuckold, fool, and knave,
> Though many a passenger he rightly call,
> We hold him no philosopher at all."

The disposition of the people to cast off their newspaper shackles is to us a decided proof of the advance they have made in political knowledge. We have no doubt that this onward step has been the effect of the diffusion of the leading principles of political science. Within a few years, the debates of parliament have lost much of their old party character; and several important measures have been supported or opposed pretty much, if not altogether, with reference to fixed principles of jurisprudence or political economy. The diffusion of the debates has taught the people to look in the same direction. Nor have publications been wanting, upon particular questions of popular interest, which have sought to direct the public mind to right conclusions from accurate premises, by grappling with the principles which the most enlightened student of political science takes for his guidance, and making them comprehensible by all. We have already seen what powerful effects have been produced in the instance of the amendment of the poor-laws, by the diffusion of the facts which were necessary for a right understanding of the complicated evils of pauperism, and of the principles which showed how these evils were to be remedied. Without this diffusion, there would have been little or no advancement in this particular case. The people would have been unable to "distinguish the statements and reasonings of their instructed and judicious friends, from the lies and fallacies of those who would use them to sinister purposes, and from the equally pernicious nonsense of their weak and ignorant well-wishers." As it is, parliament, with the consent and approbation of the people, and in spite of clamour such as was never before raised by those whose vocation it is to make their believers rave instead of reason, has legislated for the poor upon principles of political science. The diffusion of the science has clearly, in this case, removed the obstacles which prevented or retarded its advancement.

"The Society for the Diffusion of Political Knowledge" is desirous of accomplishing the great good which Mr. Austin has so clearly pointed out—to furnish the great body of the people with "directing principles," so that they may be "able to reason rightly" upon premises supplied to them "by accurate and comprehensive inquirers." The leisure which they can snatch from their callings is undoubtedly limited; but this only renders it the more necessary that they should be provided with unerring tests to enable them rapidly, but not carelessly, to examine "the questions which it most behooves them to understand." There may be many opinions of subordinate importance which they must continue to take from the *authority* of others; but then the knowledge of principles, and of details in the larger questions, will enable them to choose their authorities discreetly. They will not be led, as they have been, by the watchwords of party—by the blues or the reds of a borough or a county—by the declamation of the hustings—by the sneers or foul names of the newspaper—when they have the power of comparing the progress of legislation, and the course of public events, with the standard which they have established by careful investigation. To this salutary end we may contribute something *directly*, but we shall do more *indirectly*. It is possible to give a more sober and healthy tone to discussion, by showing that honesty is the one thing needful in public men of all ranks, whether legislators or writers. Writers especially, the recklessness of character and contempt for truth, which are too commonly exhibited, is one of the most disgusting features of our times. Those who ought to be the instructors of the people are far behind them. They too often forget the deep responsibility of all those who deal with the press, and shamefully cast away the restraints of honour and decency by which the intercourse of private life is regulated. What difference is there between a lie of the pen and a lie of the tongue, except that the one is infinitely more dangerous than the other? It has been said that one murder makes a villain—millions a hero. Upon the same principle is it that a printed lie goes by the gentle name of a figure of speech—that a dirty scandal, well circulated, is called a good joke—that foul language, spread over ten thousand sheets, is eloquence—that the daily threats of an anonymous bully are held for courage? These things stand in the place of political knowledge; for the people have been long accustomed to the garbage, and the old fillers of the trough know not where to cater for better food. The people, however, are tired of their purveyors; and that being the case, they will very soon command a change of diet.

THE SESSION OF PARLIAMENT.

In the present article we propose to take a survey of the proceedings of parliament during the session which has just been brought to a close, with the view of endeavouring to ascertain and sum up the amount of advancement in our laws and institutions, for which we have to consider ourselves indebted to the year's labours of our legislature. The monthly summaries which we have given in preceding Numbers may be referred to for a detail of the matters which came before both Houses, and the discussions which arose upon them, in their chronological order.

The newspaper outcry raised on the alleged do little character of the session of 1833 (in which were carried through the measures for the suppression of disturbances in Ireland—for the reform of the Church, and the commutation of tithes in the same country—for the Abolition of Colonial Slavery—for the establishment, upon another and more liberal basis, of the government of India—and for the re-chartering of the Bank of England—besides many others of inferior, but still of considerable, importance) has been renewed against the session of 1834, and, it must be confessed, with somewhat greater plausibility. Indeed, of all the sessions which the history of parliament records, that of 1833 is nearly the last against which such a reproach as that alluded to, could, with any fairness, be brought. It was a session distinguished not more by the length of time over which it extended—by the extraordinary number of days, and of hours in each day, during which the Houses, especially the House of Commons, sat—than for the magnitude of the questions which were discussed and settled in the course of these prolonged and arduous deliberations. The chief thing which is likely to make the session of 1834 seem to have been one of small performance, is the circumstance of its having been immediately preceded by a session of such unexampled activity, and the proceedings of which were of such vast moment.

We think, however, it will appear, upon a fair review, that, measured by any other than this trying standard, the last session is also entitled to be ranked, for the work done in it, among those not the least worthy of remembrance. But our object and intention is to state facts, and not to get up a case; and therefore we will proceed to a plain exposition of what has been actually accomplished by the legislature since the commencement of its sittings on the 4th of February. We shall mention, at the same time, what has been attempted without being accomplished, and also what has only been promised, and neither accomplished nor attempted.

The votes of the House of Commons for the last session—that is to say, the daily published enumeration of the matters discussed by the House, and of its decisions in regard to them—extend to the number of 1278 pages folio. Among the earliest articles in the huge volume, is a list of notices of motions given by different members on the first day of the session: they amount to sixty-one in all. It will be remembered that the number of notices standing in the order-book at the close of the preceding session, was a hundred and thirty-four; so that here were very nearly two hundred propositions announced for discussion during the coming six months, before the first four or five hours of that

talking-time had passed. If we even suppose a few of the new notices to have been repetitions of those formerly given, the number of distinct announcements will still be very great; and every day that the session lasted made an addition to the list. There must have been, we should think, at least two hundred more notices given in the course of the session. If so, there must have been in all about four hundred projects of reform or innovation waiting for the consideration and decision of the House in this one half year.

It is needless to say, that of this mob of unborn schemes of legislation, a large proportion has never yet seen the light. We shall not be expected to enumerate, one by one, the whole multitude of threatened motions which have never been so much as brought forward; but two or three of the more remarkable of those which stand in this predicament, we may mention by way of illustration. Mr. Bish, for instance, has not found time this year to submit his plan of an itinerating parliament; nor Mr. O'Connell his, of one which should rise every day before dinner. Nothing more has been heard of Mr. Finn's threatened tax upon Irish absentees. Colonel Williams has suffered the repeal of the Royal Marriage Act to stand over for a few months longer. Most persons will probably think that the patrons of such speculations as these have acted wisely in deferring their several propositions till they may have a chance of receiving a little more attention than would probably be bestowed upon them in these busy times. However, we find that all the motions we have mentioned (with the exception only of that of Mr. Finn) are still threatened for the next session. The votes for the present year conclude with a list of a hundred and two notices which now stand in the order-book. We shall mention the most important, or otherwise remarkable.

Mr. T. Duncombe is to call the attention of the House to a more direct prohibition of the interference of peers, prelates, or lord-lieutenants, in elections. Mr. Ward is to revive the question of giving publicity to lists of the divisions. While Mr. O'Connell is to move that the House adjourn every evening at eight o'clock, Mr. Ewart is to propose that it shall never sit later than twelve. Mr. Ruthven, in a more moderate spirit of reform, is only to contend that no petitions shall be received after the last mentioned hour. Mr. Ward is, very early in the session, to "call the attention of the House to the state of the Protestant establishment in Ireland, and to the necessity of so remodelling it, upon the death of the present incumbents, as to afford permanent and substantial relief to the Roman Catholic population."

A resolution for an increase of the duties on foreign ribbons is to be moved, with but little chance or expectation of success, we should suppose, by Mr. Dugdale. Mr. Young having failed last session in persuading the House to repeal the Reciprocity of Duties Act, will attempt, in the next, to obtain a select committee to inquire into the state and prospects of British navigation, in the hope, probably, of reaching his old object by that new and more circuitous road. Mr. Lyall, however, frankly announces his intention to propose an inquiry into the effects produced by the recent modifications of the old Navigation Acts. Mr. Ewart is to ask for a committee to examine into the state of the Royal Academy: and Mr. Slaney is to bring in a bill for the securing of open spaces as public walks (why walks, and not places for sport and exercise generally?) in the vicinity of large towns. Mr. Ewart is also to move an address to his Majesty praying for the appointment of a number of peers for life, "with a view to promote the harmony between the different branches of the legislature." But Sir Samuel Whalley hopes to effect the same object more completely, as well as more directly, by means of a bill which he is to bring in for the abolition of the hereditary peerage altogether.

The entire and immediate abolition of military flogging is to be the subject of a motion by Major Fancourt. A bill for the relief and employment of the destitute poor in Ireland - that is, a measure for the establishment of a system of poor-laws in that country—is to be proposed by Mr. Poulet Scrope. Something apparently of the same kind is to be attempted by means of a select committee, by Mr. O'Dwyer; and Mr. Law Hodges also gives notice of a "motion relating to the poor of Ireland, with the view of adopting some mode for their relief." Mr. Lynch, too, is to move for a committee "to consider whether, for the better employment of the labouring poor in Ireland, the powers of the commissioners of the present board of public works in that country ought not to be enlarged." Mr. O'Reilly, again, announces an address to his Majesty, praying him to recommend to the House the grant of 120,000*l.* next year, to assist in building Roman Catholic churches and chapels in Ireland. The better to enable the public to spare this sum, the same honourable member is to move a second address, praying his Majesty to abolish the office of lord lieutenant.

The present exclusive system of the English universities is to be assailed from various quarters. Colonel Williams is to move an address to his Majesty, for an order to Oxford and Cambridge no longer to demand from students who "take any degree in schools," either subscription to the Thirty-nine Articles, or any declaration that they belong to the Established Church. Another address is to be moved by Mr. Tooke, beseeching his Majesty to grant such a charter of incorporation to the University of London as shall enable that institution to confer all academical degrees, except degrees in divinity. Mr. G. W. Wood is again to bring forward his bill to permit students to be matriculated and to take degrees at Oxford and Cambridge, without either subscription to the Articles, or other religious test. And Mr. Wilks is to propose, not only a select committee "to consider the expediency of establishing one or more national universities in the metropolis, or other places in England and Wales," but also an address for a commission of inquiry into the universities of Oxford and Cambridge.

Mr. Buckingham is to bring in a bill to consolidate and amend the laws against drunkenness; and Colonel Williams is boldly to move a resolution, "that from (a time to be fixed) the distillation of ardent spirits from grain should be at once and entirely prohibited." A bill to abolish grand juries is announced by Mr. Pryme. The present state of the education of the people in Scotland—the establishment of a system of registration of births, marriages, and deaths, in the same portion of the United Kingdom—the repeal of so much of the Copyright Act as enjoins the delivery of eleven copies of every new book to the public libraries—the prevention of prize-fighting—the collection, into a manual, of the several rules and orders of the House—the reduction of the expenses of elections—and the erection of a new House of Commons—are the subjects of other notices.

The last entry in the list, is the notice, by Mr. Halcomb, of a motion, that all bills, both public and private, which shall have passed through any or all their stages in the House, and shall not have been rejected, may, by leave of the House, be resumed in the next session of the same parliament, without passing through the same stages a second time; a fortnight's notice being given of the motion for such leave. The adoption of the arrangement here proposed would certainly tend to facilitate the business of parliament; but the introduction of so important an innovation into the present system of procedure, might possibly be attended with greater difficulties than are apparent at first sight. The plan might also be found objectionable in some respects. For one thing, it probably would have the effect of making it much more difficult than it now is, to get the House to allow bills which had not the advantage of a strong feeling in their favour, to be read a second, or even a first time; and how far that change would be desirable may be matter of question.

If this prospectus of work for the next session shall be followed up by anything like a proportionate amount of performance, the business done will far exceed what has been accomplished in the session that has just terminated. The parliamentary campaign of 1834 will be eclipsed by that of 1835, in a far greater degree than it can be considered to have been by that of 1833. But it is evident enough that we have here occupation in abundance for many sessions. Even if all that is really good in this long roll of projected innovations could be accomplished in a single six months, or in a single day, it may be doubted whether it would be advisable to venture upon so many changes with so much precipitation. At all events, there is a necessity of more deliberate procedure imposed by the very nature and forms of such a constitution as ours. It is part of the price which we pay for our public freedom—for the right which we assert and exercise of canvassing to the utmost all public measures, and of suffering nothing to be done by the state, until every thing that can be urged for and against the act shall have been brought to bear upon it in repeated discussions. The jealousy of the constitution may, it is possible, have provided somewhat over amply for this thoroughness of examination which it has been one of its great objects to secure;

or the established forms, though not more than sufficiently rigorous in general, might, perhaps, admit of being relaxed with advantage in particular cases. But it would be extremely difficult, if not impracticable, to lay down any rule which should limit their application, so as to suit precisely the exigencies of each individual case. And admit even that the spirit of caution in which they are conceived is upon the whole in excess; still the evil is slight compared with the good. The presence of this spirit and of the securities which it generates, is one of the things that mainly distinguish a free constitution from a despotism. As to mere convenience, if that were the only consideration to be looked at, the latter form of government has many advantages over the former. But in a free constitution these advantages are willingly sacrificed for the sake of what is better than any degree of convenience.

We shall commence our review of the proceedings of parliament during the late session by stating shortly the matters with which the two Houses were chiefly occupied during each month.

In February there was not much actual business done; but in the House of Commons, several interesting and important debates took place. Besides that on the address on the first night of the session, there were those on Mr. Hill's speech at Hull, on the charges against Baron Smith, on Mr. Harvey's motion respecting the Pension List, on that of the Marquis of Chandos respecting the distress of the Agricultural Interest, on the prosecution of the Pilot newspaper, and on Sir William Ingilby's motion for the Repeal of the Malt Tax. In all these cases the vote of the House was not followed by any further proceedings; and in one sense it might therefore be said that the time of parliament had been spent to no purpose. But if we are to have a parliament—an assembly for the discussion of matters of public concern,—at all, it is clearly impossible that such questions as those just enumerated, should not be brought before it and occupy a large portion of its attention. Such an assembly is not to be regarded as having no other use except to make new laws or to mend the old ones. They are appointed, not only to make laws, but to watch over their administration; and even to take cognizance of many things affecting the rights and liberties of the subject, or the general welfare of the realm, which lie altogether beyond the province of the law. In England, the parliament is no mere legislative chamber, in the strict sense of that expression, but a high court for the hearing and determination of all complaints respecting public grievances, and even of all matters appertaining to the interests of private individuals (and there are, and must be many such) into which the regular courts of law have no commission to inquire. It is more than all this. Here the voice of public opinion finds at once its most legitimate and its most effective means of expression on all affairs, both of domestic and of foreign policy. Is it to be contended that no effect is ever produced by such declarations of the national heart and judgment, not only making themselves heard to the remotest corners of the land, but ringing through all Europe,—except when they are embodied in a statute? The statute-book is indeed the most conspicuous monument of its labours which parliament has raised; but we are not sure that that bulky pile is the best thing which it has produced. If this admirable contrivance for the free utterance of the popular sentiment upon all topics, and at all times, has preserved the liberties of the country from being destroyed either by anarchy on the one hand, or despotism on the other, here, we apprehend, are we to look for its chief glory and the best service it has performed for us.

Some business, however, in the ordinary sense of that word, was also done during this first month. The Chancellor of the Exchequer explained his financial plans for the year. Both the navy and the army estimates were brought forward by the First Lord of the Admiralty, and the Secretary at War. The plan of the Government for the extinction of the Tithe System in Ireland, was propounded. And a measure was submitted for the amendment of the Marriage Law, with a view to the relief of the grievances of the Dissenters.

In March the subjects of the most remarkable debates in the Commons were the Abolition of Impressment in the Navy, the Repeal of the Corn Laws, the Ejectment of the Bishops from the House of Lords, the practice of Flogging in the Army, the Repeal of the Malt Tax, the conduct of Russia, the relief of Dissenters from the payment of Church Rates, the Amendment of the Law of Libel, and the Cambridge petition for the admission of Dissenters to degrees at the Universities. Upon this last subject there was also an animated debate in the House of Lords. In the Commons, ministers brought forward their plan for the reform of the Court of Exchequer; and the ordnance estimates were moved. In the Lords, the Lord Chancellor submitted and explained his bill for the establishment of a new central court in place of that of the Old Bailey.

In April, the miscellaneous estimates were moved in the House of Commons; and the plan of the government for the commutation of tithes in England was laid before the House by the Chancellor of the Exchequer. There were debates on the state of the Canadas, and on the admission of dissenters to the universities; and the month was concluded by the discussion, which lasted for six days, on the Repeal of the Irish Union.

In May, the Lord Chancellor laid on the table of the House of Lords, two bills for the prevention of pluralities and of non-residence in the church. In the Commons there were brought forward the bill for the amendment of the Poor Laws, and other bills for establishing a General Registry of Deeds, for a General Registry of Births, for the Amendment of the Sale of Beer Act, for the Removal of the Disabilities of the Jews, and for the Abolition of Arrest on Mesne Process. The Chancellor of the Exchequer also announced his plan for the reduction of the interest of the four per cent. annuities. There were discussions on different bills previously brought in, and likewise on a proposition for making it unnecessary that Members should vacate their Seats when they accepted Office, on a motion for a Revision of the Pension List, on the Repeal of the Act preventing Clergymen from holding Seats in the House, on the case of Mr. Harvey and the Inns of Court, on Shortening the Duration of Parliaments, on the Abolition of the Newspaper Stamp Duty, on different Bills for the Better Observance of the Sabbath; and lastly, on Mr. Ward's motion for the further reduction of the Irish Church.

Various matters of interest came before the House of Lords in the course of the month of June. Among them were the question of Secondary Punishments, the Prohibition of Foreign Ribbons, the Bill for the Removal of the Disabilities of the Jews, that for the Regulation of Dramatic Performances, and that for the Prevention of Bribery at Elections. Towards the close of the month the libellous attack of the 'Morning Post' on the Lord Chancellor was the subject of several discussions. In the Commons, among the matters debated, were the Establishment of a System of General Education, the Repeal of the Reciprocity of Duties Act, the Distress of the Hand-Loom Weavers, and the Reform of the Post-Office. The Bills for the Amendment of the Poor-Laws, for the Relief of the Jews, for the Commutation of Irish Tithes, for the Admission of Dissenters to the Universities, and others which had been previously introduced, also underwent more or less of further discussion.

The New Irish Coercion Bill was submitted to the House of Lords by Earl Grey on the 1st of July, and the Bill for the Amendment of the Poor-Laws was brought up from the Commons on the day following. Both were repeatedly discussed in the course of the month. The reconstruction of the Cabinet, and the circumstances connected with it, gave rise to several debates in both Houses. In the Commons the great subject of discussion was the Irish Tithe Bill, and the new shape which it now assumed. There were also debates on the Depressed Condition of the Agricultural Interest, on Flogging in the Army, on the case of the 'True Sun' Newspaper, and various other matters. The Irish Coercion Bill was received from the Lords, and carried through both the second reading and the committee. The Budget was brought forward by the Chancellor of the Exchequer, and the Bills for the Reduction of the Custom-house Duties by the President of the Board of Trade.

During the first two weeks of August, which formed the last fortnight of the Session, the two Houses were chiefly occupied in disposing finally of different bills which had been previously introduced. Among these were the Dissenters' Admission to the Universities Bill, the Beer Act Amendment Bill, the Irish Tithe Bill, the Poor-Laws Bill, the House of Commons Offices Bill, the Warwick Borough Bill, the Inclosure Bill, the County Coroners' Bill, the Bribery Bill, and the Capital Punishments Bill. Many of these measures were rejected, but most of them underwent ample

h

discussion. There was also a debate in the House of Lords on the foreign policy of the government; and the estimates for the miscellaneous services were agreed to by the House of Commons.

This rapid detail, in which, from the multiplicity of questions that came before the two Houses, we have touched only upon those of most prominent importance, will show that at least the six months and a half during which the parliament remained assembled, were not spent in inaction. Of the whole time, very few days passed in which some measure of greater or less public moment was not proposed or discussed. That many of the measures which were introduced were not passed into laws is true: this is unavoidable in the business of legislation, conducted according to the free and popular forms of such a constitution as ours. But we are not to suppose that nothing has been gained by those discussions, the objects of which have failed for the present. If the object is a right one, we may be sure that every discussion of it, be the immediate result what it may, will work towards its eventual realization. It is in this way that all our great reforms have been carried. How many years, for instance, were spent—how many debates took place in both Houses—how many hard struggles were followed by mortifying defeats—before the great victory of Catholic emancipation was won? It was the same with negro emancipation. In all such cases, an impression is made by the debate, which the vote, be the majority as overwhelming as it may, is powerless to remove. The argument may be all on one side, though the vote is on the other; and whenever this is the case, woe, in the long run, to the cause that has the uppermost of it for the moment. The spoke that now stands highest in the revolving wheel is not more sure to be brought to the opposite position by the natural operation of the forces that are acting in the machine of which it forms a part, than such a cause is, ere long, to sustain a similar depression. Only let the friends of improvement not stand still; every pull they make, be the effect for the moment what it may, is bringing things round to the desired state. There can be no doubt that many of the measures which did not succeed in forcing their way through parliament in the last session, have nevertheless been most effectively advanced by that mere agitation of them which seemed at the time to end in nothing. By such agitation, many a feeling of opposition, resting on ignorance, is dissipated in one quarter—many a rooted prejudice shaken in another—much interested hostility intimidated in a third—public enthusiasm is roused to might and potency for another occasion—all bad influences are weakened—all good influences encouraged and strengthened—the victory is not gained, but all the preparations for it are hastened.

The whole work of the session, however, has been by no means that of preparation for the future. Some most important and valuable reforms have been effected; and these we shall now proceed briefly to notice.

First in order, because by far first in magnitude and in moment, we place the Poor-Laws Amendment Act. This is a reform enough alone to signalize the session, had nothing else been accomplished in it. It would not be easy to reckon up many sessions having each to boast of any achievement so memorable or so useful. This act may be said to rebuild and set up anew an extensive portion of the social fabric which had all but fallen into ruins. In one sense, indeed, it may be said to place the whole of society in this country on a new foundation. It brings at least a combination of forces, altogether new, to bear upon the condition of the class which forms the basis of the community, and which, occupying that position, is the most important of all classes—the labouring population. We shall not here return to the task of defending the measure against either the argument or the abuse and misrepresentation of its opponents. It is now in action as the law of the land, and we shall soon have facts, which are better than any reasonings, whereby to form our judgments. But assuming its provisions to be—what we firmly believe they will prove—the best adapted for the exigencies they are intended to meet, we may pronounce it to be, viewed in every way, one of the very greatest reforms ever undertaken and carried through by the government of this or any other country. Regarded as a mere experiment, it is one of the boldest in the history of legislation. The urgency of the question had been long felt; it had been growing more pressing every year; but the courage to encounter its difficulties was nowhere found. Much honour, therefore, is due to those who at last took it up, and manfully faced not only all the intrinsic difficulties of the subject, but all that risk of popular opposition which had chiefly frightened others from the attempt. It has turned out, it is true, that the apprehensions entertained on this latter score had been much greater than there was any ground for; there has been no popular opposition to the measure; every effort has been made to excite such an opposition, and made in vain. The people, the very poorest classes of the people, have shown their good sense and their right feeling in refusing to be made the instruments of the agitators who would gladly, if they could, have defeated the measure even at the cost of a general insurrection of the industrious orders. But it might have happened otherwise, or at least, it seemed to many, we may say to most people, that there was great danger of less enlightened views obtaining the ascendency in the minds of some considerable portion of the population. Then, in its scope and its anticipated effects, the measure is also one of the very greatest magnitude. When brought fully into operation, it will probably save the country an expenditure of not less than two or three millions annually. It will put that much into our pockets, or, which is the same thing, it will leave that much there which would otherwise have been abstracted from them. But that is the least part of the benefit which it promises. Its moral effects—its tendency to elevate the habits of the people, and to improve their condition generally, must be accounted vastly to transcend in importance even the large saving of the pecuniary resources of the country which may be expected to result from it. It proposes to diminish the expense of maintaining the poor by diminishing the amount of pauperism. The saving of the money is to be accompanied by the lessening of the evil which occasions the present outlay. If the class of rate-payers is to be benefited by the former of these two things, the classes paying no rates are to be still more benefited by the latter. The industrious labourer is to be sustained in the prosecution of his honest industry, and prevented from sinking into a pauper. The pauper is to be restored to the condition of an independent labourer. The tide of recklessness and profligacy that is fast overspreading so many of our parishes is to be stayed. The virtues which the administration of the old poor-law has well nigh withered up in many parts of our land, we may hope to see springing once more into life under the better system now established. We ask again, is not a measure which is to do all this, well worth, even if it stood alone, a hundred acts of an ordinary session?

Another important act, which was passed early in the session, was that for the reform of the Exchequer. The pecuniary saving effected by this measure, when it comes into full operation, will not be less than 30,000*l.* a year. Along with this we may mention the House of Commons Offices' Act, which, by abolishing certain sinecures, and limiting salaries and emoluments in other cases, greatly reduces the expense of the establishment of the House.

Something has also been done in the reduction of taxation. The house tax has been entirely repealed, and the country thereby relieved to the extent of 1,200,000*l.* per annum. The other reductions that have been made may not be much felt in regard to the mere pecuniary pressure which they remove: but some of them put an end to annoyances which are often more irksome than a considerable pecuniary pressure, and others will tend to clear the channels of trade and commerce, and in that way do more than larger remissions of taxation sometimes can do in augmenting the national wealth, by simply allowing the fertilizing stream that creates it to flow in freedom. This latter effect we may anticipate, for instance, from the abolition of the duty on almanacs,—a concession which is also in a high degree valuable in another point of view, as being the extinction of one of the most objectionable of all taxes, those upon the diffusion of knowledge. We trust that another session of Parliament will not pass before all the remaining taxes of this description shall have followed the fate of the duty on almanacs. And here let us notice certain other votes with which we are as much pleased as we are with that abolishing the almanac duty, although they do not go like that to diminish taxation, but rather in a slight degree, to increase it. Their character, however, is the same in the more important respect, that their object is the advancement of popular intelligence, the only sure foundation of good government, or of permanent national prosperity. We allude to the second grant of 20,000*l.* in aid of local

subscriptions for the building of schools in England; to a grant for the first time of a sum of 10,000*l.* for the same object in Scotland; and also to the vote of 11,500*l.* for the purchase of the two Correggios for the new National Gallery. We do not enumerate various other liberal grants which were also voted for the support of the British Museum, and the purchase of articles to be deposited there, and for the promotion of education in Ireland, because such grants have long been customary. In the others, the legislature may be said to have entered upon a new course: they constitute a proud distinction of the two first sessions of a Reformed Parliament.

Among the measures of economy of the last session, we ought not to forget the reduction of the four per cent. Annuities, by which it is calculated that a saving of above 50,000*l.* per annum will be effected; and among the new facilities given to the diffusion of knowledge should be mentioned the arrangements that have been made for the admission of foreign newspapers into the country, and their transmission at a small charge through the Post-Office.

Among acts amending the law may be mentioned that removing all the penalties imposed by former statutes on the celebration of marriages in Scotland by Roman Catholic priests, or other ministers not of the Established Church; and that abolishing capital punishment in case of returning from transportation. But the most important reform connected with the law is that effected by the act for establishing a new court for the trial of offences committed in the metropolis, and parts adjoining, which was brought in by the Lord Chancellor. We have given an abstract of this act in another place. The measure has been universally received as a great improvement in the administration of justice, and must tend to repress crime, both by diminishing the expense of prosecutions and by otherwise facilitating the conviction of offenders.

The last measure of the session which we shall notice, is the act for the colonization of South Australia, on a principle which appears to promise a very superior result to that by which experiments in colonization have hitherto been usually attended. If this new scheme shall be followed by the success which its projectors anticipate, it is impossible to over rate the extent and importance of the social amelorations to which it may lead the way.

In reckoning up the parliamentary work of the year, that done by select committees of the two houses ought not to be forgotten. Among the committees appointed last session by the House of Commons, and most of which have made reports, while all have investigated to a greater or less extent the subjects with the examination of which they were charged, may be mentioned those on Sinecure Offices; on the Law of Libel; on the grievances complained of by certain of the inhabitants of Lower Canada: on the cases of Mr. Harvey, Mr. Buckingham, the Baron de Bode, and Mr. Gurney; on Steam-Navigation to India: on Medical Education; on the Tea Duties; and on the general State of the Education of the Poor in England and Wales.

PUBLIC GENERAL ACTS

Passed in the Second Session of the Eleventh Parliament of the United Kingdom of Great Britain and Ireland. 4 and 5 Gul. IV.

1. An act to explain and amend an act of the last session of parliament, for regulating the labour of children and young persons in the mills and factories of the United Kingdom.

2. An act to apply certain sums to the service of the year 1834.

3. An act for raising the sum of fourteen millions by Exchequer bills for the service of the year 1834.

4. An act for the regulation of his Majesty's royal marine forces while on shore.

5. An act for continuing to his Majesty, until the 5th of July, 1835, certain duties on sugar imported into the United Kingdom for the service of the year 1834.

6. An act for punishing mutiny and desertion, and for the better payment of the army and their quarters.

7. An act to repeal, at the period within mentioned, so much of an act passed in the fifth year of the reign of his late Majesty King George the Third, intituled 'An act to alter the rates of postage, and to amend, explain, and enlarge the provisions in an act made in the ninth year of the reign of Queen Anne,' and in other acts relating to the revenue of the post office, as authorizes the taking of certain rates of inland postage within his Majesty's dominions in North America.

8. An act to amend an act passed in the last session, for consolidating and amending the laws relative to jurors and juries in Ireland.

9. An act to indemnify such persons in the United Kingdom as have omitted to qualify themselves for offices and employments, and for extending the time limited for those purposes respectively, until the 25th day of March, 1835; to permit such persons in Great Britain as have omitted to make and file affidavits of the execution of indentures of clerks to attorneys and solicitors to make and file the same on or before the first day of Hilary term, 1835; and to allow persons to make and file such affidavits, although the persons whom they served shall have neglected to take out their annual certificates.

10. An act for continuing, until the 1st day of June, 1836, the several acts for regulating the turnpike roads in Great Britain, which will expire with the present or the next session of parliament,

11. An act for continuing to his Majesty, until the 5th day of July, 1835, certain duties on offices and pensions, for the service of the year 1834; and to appropriate any sums arising from the redemption of the land tax.

12. An act to apply a sum of seven millions, out of the Consolidated Fund, to the service of the year 1834.

13. An act to repeal so much of an act of the last session of parliament, for the prevention of smuggling, as authorizes magistrates to sentence persons convicted of certain offences to serve his Majesty in his naval service, and to alter and amend the said act.

14. An act to repeal so much of several acts as authorizes the issuing any sums of money out of the Consolidated Fund for the encouragement of the raising or dressing hemp or flax.

15. An act to regulate the office of the receipt of his Majesty's Exchequer at Westminster.

16. An act to abolish the office of recorder of the great roll or clerk of the pipe in the Exchequer in Scotland.

17. An act to indemnify witnesses who may give evidence before the lords spiritual and temporal on a bill for preventing bribery and corruption and illegal practices in the election of members to serve in parliament for the borough of Warwick.

18. An act to indemnify witnesses who may give evidence before the lords spiritual and temporal, on a bill to exclude the freemen of Liverpool from voting at the election of members of parliament for that borough.

19. An act to repeal certain duties on inhabited dwelling-houses.

20. An act to explain and amend an act passed in the thirty-third year of the reign of his late Majesty King George the Second, to regulate the conveyance and sale of fish at first hand.

21. An act for amending certain provisions of an act of the thirty-sixth of George the Third, for regulating the buying and selling of hay and straw.

22. An act to amend an act of the eleventh year of King George the Second, respecting the apportionment of rents, annuities, and other periodical payments.

23. An act for the amendment of the law relative to the escheat and forfeiture of real and personal property holden in trust.

24. An act to alter, amend, and consolidate the laws for regulating the pensions, compensations, and allowances to be made to persons in respect of their having held civil offices in his Majesty's service.

25. An act to alter and extend the provisions of an act passed in the eleventh year of the reign of his late Majesty King George the Fourth, for amending and consolidating the laws relating to the pay of the Royal Navy.

26. An act to abolish the practice of hanging the bodies of criminals in chains.

27. An act for the better administration of justice in certain boroughs and franchises.

28. An act to amend the laws relative to marriages celebrated by Roman Catholic priests, and ministers not of the Established Church, in Scotland.

29. An act for facilitating the loan of money upon landed securities in Ireland.

30. An act to facilitate the exchange of lands lying in common fields.

31. An act for transferring certain annuities of four pounds per cent. per annum into annuities of three pounds and ten shillings per cent. per annum, and for providing for paying off the persons who may dissent to such transfer.

32. An act for reducing the tonnage rates payable in the port of London.

33. An act to repeal so much of several acts as requires deposits to be made upon teas sold at the sales of the East India Company.

34. An act to repeal the laws relating to the contribution out of merchant seamen's wages towards the support of the Royal Naval Hospital at Greenwich, and for supplying other funds in lieu thereof.

35. An act for the better regulation of chimney-sweepers and their apprentices, and for the safer construction of chimneys and flues.

36. An act for establishing a new court for the trial of offences committed in the metropolis and parts adjoining.

37. An act to prohibit any further lotteries under an act passed in the first and second years of the reign of his present Majesty, for the improvement of Glasgow.

38. An act to continue, under certain modifications, to the 1st day of August, 1835, an act of the third year of his present Majesty, for the more effectual suppression of local disturbances and dangerous associations in Ireland.

39. An act to give costs in actions of *quare impedit*.

40. An act to amend an act of the tenth year of his late Majesty King George the Fourth, to consolidate and amend the laws relating to friendly societies.

41. An act to regulate the appointment of ministers to churches in Scotland, erected by voluntary contribution.

42. An act to facilitate the taking of affidavits and affirmations in the Court of the Vice-Warden of the Stannaries of Cornwall.

43. An act to authorize persons, duly appointed, to act as justices of the peace in the islands of Scilly, although not qualified according to law.

44. An act to regulate the conveyance of printed newspapers by post, between the United Kingdom, the British colonies, and foreign parts.

45. An act to amend an act of the present session, for altering and consolidating the laws for regulating the pensions and allowances to persons in respect of their having held civil offices in his Majesty's service.

46. An act to amend an act passed in the fifty-eighth year of King George the Third, for establishing fever hospitals, and to make other regulations for relief of the suffering poor, and for preventing the increase of infectious fevers in Ireland.

47. An act for preventing the interference of the Spring Assizes with the April Quarter Sessions.

48. An act to regulate the expenditure of county rates, and funds in aid thereof.

49. An act to amend, and render more effectual, two acts of the fifth and sixth years of the reign of his late Majesty King George the Fourth, relating to weights and measures.

50. An act to amend an act passed in the forty-ninth year of the reign of King George the Third, for amending the Irish road acts.

51. An act to amend the laws relating to the collection and management of the revenue of excise.

52. An act to amend an act of the twentieth year of his Majesty King George the Second, for the relief and support of sick, maimed, and disabled seamen: and the widows and children of such as shall be killed, slain, or drowned, in the merchant service; and for other purposes.

53. An act to continue for one year, and from thence to the end of the then next session of parliament, several acts relating to the importation and keeping of arms and gunpowder in Ireland.

54. An act to continue for five years, from the 5th day of April, 1835, and to amend, the acts for authorizing a composition for assessed taxes.

55. An act to amend three acts, made respectively in the seventh year of the reign of his late Majesty King George the Fourth, and in the first and second years and in the second and third years of the reign of his present Majesty, for the uniform valuation of lands and tenements in the several baronies, parishes, and other divisions of counties in Ireland; and to provide for the more effectual levy of grand jury cess.

56. An act to continue for one year, and from thence to the end of the then next session of parliament, the acts for the relief of insolvent debtors in Ireland.

57. An act to repeal the stamp duties on almanacks and directories, and to give other relief with relation to the stamp duties in Great Britain and Ireland respectively.

58. An act for raising the sum of fourteen millions three hundred and eighty-four thousand seven hundred pounds by Exchequer bills, for the service of the year 1834.

59. An act to extend the term of an act of the first and second years of his present Majesty, for ascertaining the boundaries of the forest of Dean, and for inquiring into the rights and privileges claimed by free miners of the hundred of St. Briavel's, to the 21st day of January, 1835, and from thence to the end of the then next session of parliament.

60. An act to amend the laws relating to the land and assessed taxes, and to consolidate the boards of stamps and taxes.

61. An act for the more effectually providing for the erection of certain bridges in Ireland.

62. An act for improving the practice and proceedings in the court of Common Pleas of the county palatine of Lancaster.

63. An act to defray the charge of the pay, clothing, and contingent and other expenses of the disembodied militia in Great Britain and Ireland; and to grant allowances in certain cases to subaltern officers, adjutants, paymasters, quartermasters, surgeons, assistant-surgeons, surgeons mates, and serjeant majors of the militia, until the 1st day of July, 1835.

64. An act to suspend until the end of the next session of parliament the making of lists and the ballots and enrolments for the militia of the United Kingdom.

65. An act for the more effectual administration of justice at Norfolk Island.

66. An act for empowering the commissioners of his Majesty's woods, forests, land revenues, works, and buildings, to pay the net proceeds of the tolls of the Menai and Conway Bridges into the receipt of his Majesty's Exchequer at Westminster, to the account of the Consolidated Fund.

67. An act for abolishing capital punishment in case of returning from transportation.

68. An act to authorize an advance out of the general fund of monies belonging to the suitors of the courts of Chancery and Exchequer in Ireland, towards the purchasing of ground, and building thereon offices necessary to the courts of justice in Dublin.

69. An act for placing the Mumbles Head lighthouse in the county of Glamorgan under the management of the corporation of the Trinity House of Deptford Strond.

70. An act to regulate the salaries of the officers of the House of Commons, and to abolish the sinecure offices of principal Committee Clerks and Clerks of Ingrossments.

71. An act to repeal certain provisions of two acts of his Majesty King George the Third, affecting the printers, publishers, and proprietors of newspapers in Ireland.

72. An act to amend several acts for authorizing the issue of Exchequer bills for carrying on public works and fisheries and employment of the poor; and to authorize a further issue of Exchequer bills for the purposes of the said acts.

73. An act to grant relief from the duties of assessed taxes in certain cases.

74. An act to continue until the 5th day of March, 1835, and from thence to the end of the then next session of parliament, an act of the fifty-fourth year of his Majesty King George the Third, for rendering the payment of creditors more equal and expeditious in Scotland.

75. An act to repeal the duties on spirits made in Ireland, and to impose other duties in lieu thereof; and to impose additional duties on licences to retailers of spirits in the United Kingdom.

76. An act for the amendment and better administration of the laws relating to the poor in England and Wales.

77. An act for repealing the duties on starch, stone bottles, sweets or made wines, mead or metheglin, and on scaleboard made from wood.

78. An act for the amendment of the proceedings and practice of the High Court of Chancery in Ireland.

79. An act to amend the law relating to insolvent debtors in India.

80. An act to provide for the repayment to the Gowsy of and Company of the Bank of England, of one-fourth ration of the debt due from the public to the said Company ate and suance of an act passed in the last session of parlia

81. An act to amend an act of the third year of King George the Fourth, for regulating turnpike roads in England, so far as the same relates to the weights to be carried upon waggons with springs.

82. An act to amend and extend an act of the second year of his present Majesty, to effectuate the service of process issuing from the Courts of Chancery and Exchequer in England and Ireland.

83. An act to amend an act passed in the third year of his present Majesty, intituled 'An act for shortening the time required in claims of *Modus Decimandi*, or exemption from or discharge of tithes.'

84. An act to apply a sum of money out of the Consolidated Fund and the surplus of grants to the service of the year 1834, and to appropriate the supplies granted in this session of parliament.

85. An act to amend an act passed in the first year of his present Majesty, to permit the general sale of beer and cider by retail in England.

86. An act to explain certain provisions in an act of the third and fourth years of his present Majesty, to provide for the election of magistrates and councillors for the several burghs and towns of Scotland, which now return, or contribute to return, members to parliament, and are not royal burghs.

87. An act to explain certain provisions of an act of the third and fourth years of the reign of his present Majesty, to alter and amend the laws for the election of the magistrates and councils of the royal burghs in Scotland.

88. An act for the more effectual registration of persons entitled to vote in the election of members to serve in parliament, in Scotland.

89. An act to amend the laws relating to the customs.

90. An act to amend an act made in the third and fourth years of the reign of his present Majesty, intituled 'An act to alter and amend the laws relating to the temporalities of the Church of Ireland.'

91. An act to continue for one year, and from thence to the end of the then next session of parliament, the several acts, for regulating the turnpike roads, which will expire during the present, or before the end of the next session of parliament, and to amend the several acts regulating the post roads, in Ireland.

92. An act for the abolition of fines and recoveries, and for the substitution of more simple modes of assurance in Ireland.

93. An act to amend the laws relating to appeals against summary convictions before justices of the peace in Ireland.

94. An act to enable his Majesty to invest trading and other companies with the powers necessary for the due conduct of their affairs, and for the security of the rights and interests of their creditors.

95. An act to empower his Majesty to erect South Australia into a British province, or provinces, and to provide for the colonization and government thereof.

PRIVATE BILLS OF THE SESSION OF PARLIAMENT, 1834.

I.—*Numerical Abstract of the Petitions and Private Bills for the Session*, 1834:—

Petitions presented to the Commons, or Bills brought from the Lords	235
Bills read first time	175
Bills read second time	158
Bills read third time	146
Bills which received the Royal Assent	143

The number of petitions presented, or bills brought from the Lords, during the session just terminated, exceeds that of last session by twenty-three; while the number of bills which, after going through the various stages, received the royal assent, is exactly twenty-three less.

II.—*Comparative classification of Bills passed.*

Agriculture	18
Companies	7
Improvement of Towns and Districts	54
Internal Communications	31
Navigation	9
Private Regulation	21

REPORT OF LORDS' COMMITTEE ON OATHS.

EVIDENCE is the reason or ground on which, in consequence of the conviction it produces, we assent to the truth of a statement or proposition. Testimony is a species of evidence: its object is the production of assent: it is a ground of conviction. Testimony is the report of another. In the absence of the evidence of our senses, when personal observation and experience have not furnished us with materials for the formation of our belief, because either time or distance have removed the case from our cognizance, the testimonies of others, in the shape of documentary or parole narrations of the facts, become the only grounds on which we can found our opinions and conduct. The number of these cases is necessarily immense, and their importance embraces all the interests of man. Hence the importance of testimonial evidence is of course commensurate; deciding the lives and characters of individuals, the laws and government of communities, and forming the basis of every thing history imparts for our good. Testimonial evidence has all the importance which the interests of science and society can give it, while, as the pillar of revelation, it affects the destimes of futurity for ever. The credibility of testimony depends on circumstances. It is the creature of every thing that affects the character of a witness; which, along with the mode and circumstances of its delivery, determines the credence it is to receive. The knowledge, veracity, and competency of a witness—the ingenuousness, clearness, and corroboration of his testimony,—and the solemnity, formality, or indifference with which the testimony is delivered, combine in ascertaining the amount of credence due to it. Hence the credibility attached to the testimony of a dying or a sworn witness. Worldly interests, it is thought, lose their power of seducing us to falsehood when time pales its ineffectual fires before the light and truth of the world to come. The cause of the importance of oaths is similar. The shame of falsehood is changed into the ignominy of perjury in the case of a false testimony affirmed by an oath. The awful facts of religion are outraged: they are at once recognised and contemned. Perjury has peculiar and severer punishments than falsehood.

It is acknowledged that a righteous Omnipresence is reading the heart of the witness,—he declares his accountability, and appeals to an infallible tribunal,—the pledge of his infinite interests is given to the truth of his testimony, so that the supposition of falsehood loses its likelihood in proportion to the impression and importance of these truths. This is the cause of the weight which has been almost universally attached to oaths. Anxious to adopt every possible means of securing the confirmation of testimony, the legislators of almost every country have enjoined the solemnity of an oath in innumerable cases as a means of securing the statement of truth and the performance of duty.

Into the question of the total abolition of oaths it is not our intention to enter: we are merely considering their nature. It is said that oaths suppose a motive to mendacity. This is a one-eyed view of their nature. An oath is a circumstance of testimony, added to it for the purpose of increasing its weight and credibility. It is certainly only a ceremonial circumstance induced by law; it does not happen like the circumstances of a dying testimony, and it is not essential, like the veracity and information of the witness. But still, if it supposes a motive to falsehood, it more evidently supposes the existence and conviction of motives to veracity. The supposition, if at all, is on both sides. If it were otherwise an oath would be a legal affront. An oath is a confirmation of testimony, and makes, in fact, no supposition whatever as to the moral character of the witness, except that he feels the impression of the circumstances which we express by the words Deity, Eternity, and Judgment to come.

Strip an oath of the impression of these circumstances, and it loses its character as a confirmation. The form is nothing. The weight is not in the ceremonial. If the solemn facts we have mentioned cease to make any impression on the mind, instead of being confirmed, the testimony is weakened by the ceremony. Indifference to serious things begets a suspicion of the witness. The violation of sacred things, in turning a solemn rite into a mere form, shows the absence of some of the strongest motives to truth. Irreverence in regard to truths so awful,—a thoughtless appeal to infinite interests,—degrades the character of the witness, owing to the desecration in which he has taken a part, and instead of confirming, casts an imputation and a suspicion on, the testimony. If, therefore, we were to continue blamefully indifferent to the profanity of taking oaths indecently, a regard merely for the purposes for which oaths are administered,—the discovery of truth, and the performance of duty by the confirmation of testimony,—would at once compel a wise legislature by every means to maintain inviolate the solemnity of an oath.

It is notorious that this country is disgraced in no common degree by the desecration of oaths. Required in innumerable petty and trivial occasions, they are made cheap in the minds of the people: persons who do not understand what they swear to,—others who swear to what they cannot possibly know,—and some who swear to the performance of what is impossible,—are cases of actual and frequent occurrence, which have disgraced the moral character of the nation, and attached no little guilt to those whose legislation has enjoined such proceedings.

It is truly gratifying to find that the Lords' Committee appointed to inquire into this subject have felt the nature of the evil, and propose measures for its abatement. We shall extract from their Report the recommendations which they have made for the removal of this national blot. They recommend—

"1. That the Lords of the Treasury be empowered to authorize and direct the substitution of a declaration in lieu of an oath, if they shall think fit, in all cases, not being of a judicial nature, relating to any of the public departments.

"The committee feel it incumbent upon them to recommend that for the future this point should be specially attended to, and that no bill should be suffered to pass your Lordships' house, requiring the administration of an oath, except in cases where it shall manifestly appear that the security sought for cannot be attained by means of a declaration, with penalties attached to falsehood. 'Let the law,' to use the words of an eminent writer, 'continue its own sanctions; but let it spare the solemnity of an oath. And where, for want of something better to depend upon, it is necessary to accept men's own word or own account, let it annex to prevarication penalties proportioned to the public mischief of the offence.'

"In restricting the use of oaths within its proper limits, we must be careful not to remove nor weaken any real security for the discovery of truth, or the performance of public duty. The committee have, therefore, abstained from entering upon the subject of oaths employed in the administration of justice, although they are of opinion that this class of oaths would admit of some diminution in number, and of great improvement as to the form in which they are conceived, and the mode in which they are too frequently administered. They have abstained also from going at large into the question of oaths taken on admission to offices and franchises of various kinds, although they are persuaded that, upon a careful inquiry, but little objection will be found either in principle, or from past experience, to the abolition of by far the greater number of those which are at present administered.

"The committee entertain the same opinion with respect to oaths which bind the parties who take them to the observance of local statutes and customs.

"The act of 1 and 2 Will. IV., c. 4, has very considerably lessened the number of oaths taken in the department of customs, by substituting a declaration for an oath, except in certain cases specified in the act. It has appeared to the committee that in some, if not all of the cases so excepted, a declaration or satisfactory proof would be sufficient.

"In regard to persons receiving pay or pensions for services in the army or navy, the Committee think it highly desirable that the oaths which are not considered to be necessary in one branch of the service should, if possible, be dispensed with in the other. But they have deemed it on the whole most prudent, with respect both to these and to other public departments, to content themselves with recommending, in the first instance, that authority should be given to the Lords of his Majesty's Treasury to dispense with oaths in all cases where it may appear to them that it can be done without prejudice to the public interests. An opportunity will thus be afforded of ascertaining, by actual experiment, how far it will be safe to proceed, and of mitigating the existing evil step by step.

"2. That the same power be given to the Universities, to all corporations, and chartered bodies.

"Looking to the difficulty and hazard of interfering, by any legislative measure, with the statutes and customs of corporate and collegiate bodies, the committee are inclined to recommend that a general permission be given to all such bodies to substitute, at their own discretion, declarations or affirmations in place of the oaths now required by their own charters or statutes respectively, and to alter the subject matter of such oaths, so as may be requisite to obviate the necessity of calling upon any person to affirm that which is not literally and strictly true, or to promise that which he will not be able to perform.

"3. That no accounts should be required to be verified by oath.

"They are prepared to express a decided opinion, that neither on these occasions nor on any other ought accounts of receipts and expenditure to be verified upon oath, because, if they are properly kept, they admit of a much more satisfactory and less objectionable proof by examination and comparison with vouchers.

"4. That a declaration be substituted for the oath now taken by churchwardens, according to a form to be settled by the dean of the arches and the king's advocate general.

"Although the committee have for the present abstained from considering the numerous class of oaths which are required of persons entering upon an office or franchise, yet there is one of that description which seems to demand immediate alteration. Churchwardens are now compelled upon entering into office to swear that they will faithfully perform all its duties according to law; and yet it is perfectly well known that some of these duties are such as it is not possible for them to discharge, in the present state of society, without the most serious inconvenience. Accordingly they are not only not expected to observe their oath in these particulars, but they are sometimes expressly cautioned not to do so; and the consequence is, that little or no respect is in too many cases paid to the obligation of their oath in other branches of their official duty which are essentially important and easy of performance. The committee recommend that a declaration be properly drawn up with reference to the actual state of practice of the ecclesiastical law.

"5. That the penalties which are now by law attached to perjury shall attach to wilful falsehood, in the case of false declarations or affirmations substituted for oaths.

"The impropriety and inexpediency of leaving the occasion of administering an oath to the discretion of a magistrate are so manifest, that the committee cannot hesitate to recommend that the practice should be positively prohibited, and that a penalty should be laid upon every person who shall administer or take any oath not warranted by law.

"6. That all persons administering or taking any oath not warranted by law be subject to a penalty.

"And the committee have directed that the evidence taken before them, with an appendix and index thereto, be laid before your Lordships."

POOR-LAWS AMENDMENT BILL.

We have stated in former Numbers of the 'Companion to the Newspaper' the more important provisions of the Bill for the Amendment of the Poor-Laws, and we have also noticed the alterations the measure received in its passage through the Committee of the House of Commons. We shall now mention the further modifications to which it was subjected before becoming what it now is—the law of the land.

Before the bill finally left the House of Commons it received two alterations, with the consent of the Chancellor of the Exchequer, on the motion for the third reading. The first consisted in the addition of a clause providing that, in case of frivolous grounds for the removal of a pauper, or for repeal against removal, being stated by a parish, it should be discretionary with the magistrates to oblige such party to pay the whole or part of the costs incurred by the other party in disputing such grounds. The other alteration consisted in the omission of a clause for the restriction of actions against the commissioners acting as a Board.

In the House of Lords the bil' underwent some alterations, although not any that affect essentially the principle of the measure. The following are the most important.

It had previously been directed that the commissioners should keep a record of their proceedings. It is now provided that the record shall furnish very minute and complete information, which once a year, or oftener if required, is to be submitted to one of the Secretaries of State.

An amendment on the thirteenth clause directs that it shall be deemed perjury to give false evidence upon any examination under the authority of the act.

The clause concerning religious instruction in workhouses occasioned some discussion in the House of Lords. In the progress of the bill through the Commons, a clause was introduced providing that the inmates of workhouses should attend whatever religious services they pleased; that pauper children should not be brought up in any other religious belief than that which their parents preferred; and that dissenting ministers should be at all times admitted to afford religious assistance to paupers of their own persuasion, or instruction to their children. This clause was withdrawn in the House of Lords, and this withdrawal was the only amendment of the Lords at which the Commons demurred when the amended bill was sent back to their House. They desired a conference, and the result is that the original clause now stands part of the bill.

In the original bill both owners and occupiers were to have cumulative votes, to the number of six, according to the amount of the property they owned or rented. In the Commons' Committee this privilege was limited to owners, but in that of the Lords it was decided that rate payers under 200*l.* should have only one vote; above 200*l.* two votes, and of 400*l.*, or more, three votes.

By other amendments the powers of justices of the peace, in ordering relief, are extended somewhat more than the original bill contemplated. It is now provided that in unions, but not in separate parishes, any two justices of the peace may order out-door relief to aged and infirm persons whom one of the said justices shall certify, from his own knowledge, to be unable to work. Also, in other cases, overseers are empowered to grant, and justices of the peace to order the grant of, medicine and articles of absolute necessity, whether to parishioners or not, in cases of extreme and urgent want.

The clause of the bill by which the system of allowances to able-bodied persons in employment was ordered to be discontinued from the 1st of June, 1835, except in those cases in which the commissioners might permit the practice for some time longer, has been altogether omitted; and a power is simply given to the commissioners to determine, in each particular case, to what extent and for what period such relief may continue to be afforded.

In the original bill the age of sixteen was proposed as that at which paupers might receive relief in their own names. This was afterwards changed to twelve; but the Lords have restored the original age of sixteen.

The non-eligibility for relief of the wives and families of substitutes in the militia has been extended to balloted militiamen. The clauses relating to settlement have undergone considerable alteration. As it now stands, settlement by apprenticeship is retained, except in the case of sea-apprentices; an illegitimate child is to follow the settlement of its mother until the age of sixteen; and settlement by possession of estates is limited to the period during which the person shall inhabit within ten miles of the parish.

The amendment of Mr. Miles, in the House of Commons, on the bastardy clause of the original bill, was expunged by the Lords. Strong efforts were, however, made to restore the liability of the father to maintain his illegitimate child; and the law, as it now stands, takes a middle path between the provision of the original bill and Mr. Miles's amendment. The liability of the mother is still affirmed; but if the child becomes chargeable to the parish, the parish officers may pursue the putative father, and the question of his paternity must be decided—but not on the evidence of the mother only—at the Quarter Sessions. The father cannot be required to maintain the child after it has attained the age of seven years; and that part of the old law which rendered the mother of a bastard liable, as such, to be imprisoned or otherwise punished, has been repealed.

ABSTRACT OF THE CENTRAL CRIMINAL COURT BILL.

The object of this Bill is explained in its title, which is, "An Act for establishing a New Court for the Trial of Offences committed in the Metropolis and parts adjoining."

1. After declaring it expedient, that for the more effective and uniform administration of justice in criminal cases, offences committed in the metropolis and its vicinity should be tried by justices and judges of oyer and terminer and gaol delivery in the city of London, the first clause enacts that the Lord Mayor of London, the Lord Chancellor, the Judges, the Aldermen, Recorder, and Common-Sergeant of London, and such others as his Majesty may appoint, shall be judges of a court, to be called the "Central Criminal Court."

2. The second clause declares that the jurisdiction of this court, commissioned to try all treasons, murders, felonies, and misdemeanours, shall extend over offences committed in London and Middlesex, and certain enumerated parts of the counties of Essex, Kent, and Surrey. The enumeration is so framed as to include all places within ten miles of St. Paul's Cathedral; and it comprehends in Essex the parishes of Barking, East Ham, West Ham, Little Ilford, Low Layton, Walthamstow, Wanstead St. Mary, Woodford, and Chingford: in Kent, the parishes of Charlton, Lee, Lewisham, Greenwich, Woolwich, Eltham, Plumstead, St. Nicholas, Deptford, and that part of St. Paul's, Deptford, which lies within the county of Kent, the liberty of Kidbrook, and the hamlet of Mottringham: and in Surrey, the borough of Southwark, the parishes of Battersea, Bermondsey, Camberwell, Christchurch, Clapham, Lambeth, St. Mary Newington, Rotherhithe, Streatham, Barnes, Putney, the Surrey part of St. Paul's Deptford, Tooting Graveney, Wandsworth, Merton, Mortlake, Kew, Richmond, Wimbledon, the Clink Liberty, and the district of Lambeth Palace.

3. This new district is to be considered as one county for all judicial purposes.

4. The sheriffs of London, Middlesex, Essex, Kent, and Surrey, are subject to the orders of the court, which may summon juries from London or from the counties, or from both indiscriminately, to try all offences cognizable by the act.

5. His Majesty may, by order in council, appoint the places of confinement for prisoners; of these (6) the Penitentiary, at Milbank, is to be one; and (7) to it persons sentenced to imprisonment beyond the limits of this act may be removed; and (8) the regulations in all penitentiary acts

shall apply to prisoners confined there under the authority of this act.

9. Convicted persons may be imprisoned either in the county gaol or in Newgate. If committed to Newgate, the sheriffs of London are to execute judgments, the same as if the offences had been committed in London.

10. Justices and coroners within the limits of this act in Essex and Kent, are to commit offenders to Newgate; and justices and coroners in Surrey to Horsemonger Lane.

11. The court, or any two of its magistrates, may order the removal of prisoners from the Surrey county gaol to the prison of Newgate, if committed for offences cognizable by this court, without a writ of Habeas Corpus.

14. The court of the Lord Mayor and Aldermen may contract with the justices of Essex, Kent, and Surrey, for the support of their prisoners in Newgate. If they cannot agree, the Judges are to settle the amount.

15. The court shall hold its sessions, in London or its suburbs, twelve times at least in every year.

17. The courts of general or quarter-sessions, within the limits of the act, are restrained from the trial of offences cognizable by this court; but (21) the present measure does not affect the existence of such courts.

18. Parties entering into recognizances to prosecute, are to receive notice of any change of court which may have been effected by this measure.

22. The court is authorized to try offences committed on the high seas.

23. The rights and privileges of the Lord Mayor and the corporation of London are in nowise affected by this act, which (24) is to come into operation on the 31st of October.

SALE OF BEER ACT AMENDMENT BILL.

The bill passed in the session lately terminated, to amend the act of 1830, permitting the sale of beer and cider by retail, has very materially altered the character of that measure, as will be seen by the following statement.

The preamble of the amending bill declares that much evil has arisen from the manner in which the houses authorised under the former act to sell beer by retail have been managed and conducted: it therefore directs that while licences shall continue to be issued for the sale of beer, ale, porter, cider, or perry, by retail, the persons obtaining them shall not be authorized to allow the liquor to be drunk on the premises, unless they are expressly licensed to do so. Persons desiring to be so licensed must, in addition to the requirements of the former act, annually produce to, and deposit with, the commissioners of Excise, a certificate of good character from six inhabitants of the parish, rated at six pounds each; and that they are so rated must be attested by the certificate of the overseer. The duties on beer licences under the former bill are repealed, and new duties are imposed, of one guinea for a licence to sell beer not to be drunk on the premises, and of three guineas for a licence authorizing beer to be drunk on the premises where sold.

Permitting beer to be drunk in a neighbouring house, or in any shed, &c., with intention to evade the provisions of the act, will be deemed drinking on the premises.

The provisions in certain acts respecting the billeting of soldiers in victualling houses, are not to apply to the houses in which beer is not sold on the premises.

Justices of the peace are to regulate the time of opening and closing houses, but in no case is a house to be opened earlier than five in the morning, or kept open later than eleven at night.

Constables and police officers are fully empowered to visit the houses licensed to sell beer on the premises, when, and as often as they think proper; and any person licensed under this or the former act, is obliged, on the demand of any two justices of the peace, to produce his licence for their examination.

The provisions of the present bill are not to affect the amount of duty on licences to sell cider and perry only, but such licences must state whether the cider or perry is to be drunk on the premises or not.

No person having a licence under this or the former act is thereby authorized to hold a licence for the sale of wine or spirits; and he incurs a penalty of twenty pounds by having such brought to his premises to be drunk or consumed there. The penalty for selling beer or cider without a licence is 20*l.* if drunk on the premises, and 10*l.* if not drunk on the premises. On the board over the door, after the words "Licensed to sell Beer by Retail," is to be added either "Not to be drunk on the Premises," or "To be drunk on the Premises," according to the tenor of the licence.

As doubts have been entertained as to what is a selling of beer or cider or perry by retail, it is declared that the sale of a less quantity than four and a half gallons is to be deemed a selling by retail.

Certificates, however, as qualifications for licences to sell beer on the premises will not be required in London or Westminster, or within the bills of mortality, or within any city or corporate town, or place returning a member to parliament, provided that the population of such cities, corporate towns and boroughs, exceeded 5000 at the last census. But in such situations a licence cannot be granted for the sale of beer in a house which is not of the annual value of 10*l.*

The act of 1830 is still in force unless so far as altered by the present bill, which will come into operation on the 10th of October.

HOUSE OF COMMONS' OFFICES AND FEES.

In the 12th Number of the 'Companion' (Dec. 1833), an abstract was given of the Report of the Select Committee appointed to inquire into the fees, salaries, emoluments, &c., received by the officers of the House of Commons. The recommendations of the committee were there stated in detail. During the late session, an act, founded on these suggestions of the committee, has been passed, entitled 'An Act to regulate the Salaries of the Officers of the House of Commons, and to abolish the Sinecure Offices of principal Committee Clerks, and Clerks of Ingrossment,' of which the following is an abstract:—

The Speaker.—The annual salary of the speaker is fixed at five thousand pounds, to commence upon the next election of a speaker of the House of Commons. The present speaker is, however, specially exempted from the operation of the act, should he hereafter be again elected to fill that office.

Speaker's Secretary.—The speaker's secretary is to be paid five hundred pounds yearly, in lieu of all former fees, salary, and perquisites. The office of secretary to the Commissioners of the Fee Fund of the House is to be held in conjunction with the office of speaker's secretary.

The Clerks of the House of Commons.—The clerk of the House is to be paid the net annual sum of two thousand pounds; the clerk-assistant, one thousand five hundred; and the second clerk-assistant, one thousand pounds per annum.

The Sergeant-at-Arms.—The sergeant-at-arms is to be paid, in lieu of all former fees, perquisites, and salary, the annual sum of one thousand five hundred pounds; and the deputy-sergeant, eight hundred pounds.

The present holders of these several offices are all specially exempted from the operation of the act, which, of course, only comes into operation as vacancies occur.

Committee and Ingrossing Clerks.—These offices, as intimated by the title of the act, are abolished. Compensation is to be made to the present holders, but the amount is not specified, being left to the Commissioners of the Fee Fund, who are to consider the circumstances of each individual case.

There is also a saving clause in favour of the present clerk-assistant, and second clerk-assistant, of the House of Commons, should either of them be promoted to the offices of principal clerk or assistant-clerk. In that case, they are to receive the same salary as they would have enjoyed had they been promoted before the passing of this act.

BANKRUPT ESTATES' BILL.

A select committee having been appointed by the House of Commons to consider the bill bearing this title, presented a report, which, together with an appendix of evidence, has been printed by order of the House.

This evidence shows the very great advantage which has resulted from the establishment of the New Court of Bankruptcy. By the appointment of official assignees, the assets of bankrupts divided amongst the creditors has been largely increased, while the declaration and payment of dividends have been much accelerated; and very great losses, arising from the fraud, neglect, and insolvency of assignees,

solicitors, and accountants, have been obviated by the immediate deposit of assets in the Bank of England. To the labours also of these functionaries the public are indebted for the means of making available the funds derived from bankrupt estates, the amount of which is stated as follows:—

On the 26th of April, 1834, there were standing at the Bank of England, in cash and securities, in the name of the Accountant-General of the Court of Chancery, to the credit of bankrupts' estates, the following sums:—Cash, 362,385*l.* 9*s.* 10*d*; bills of exchange, 15,758*l.* 7*s.* 2*d.*; Exchequer bills, 247,600*l.*; Bank three per cent. annuities, 26,328*l.* 1*s.* 11*d.*; Bank three and a half per cent. annuities, 52,449*l.* 19*s.* 11*d*; reduced annuities, 7680*l.* 5*s.* 8*d.*; balance on the dividend account, 142,202*l.* 19*s.* 2*d.*

The first item constitutes the account of general unemployed cash belonging to bankrupt estates, in number about 1200, under the administration of the Court of Bankruptcy, which has gone on gradually increasing every month since the establishment of the Court on the 11th of January, 1832; and the other securities stated were either part of the bankrupts' estates, which were found invested at the time of their bankruptcy, or which have been invested at the instance of the assignees or creditors.

When an investment is desired, the Court makes an order for the purpose, and the interest or dividends arising are carried to the credit of the particular bankrupt's estate; and when a dividend is declared, the amount ordered to be divided is taken from the general cash and carried to the credit of the particular estate in respect of which it is directed to be divided, and made subject to the drafts of the official assignees, payable to the several creditors. The actual unemployed cash belonging to the bankrupts' estates at the period referred to, was 504,618*l.* 9*s.*, the use of part of which is taken by the Bank of England as compensation for keeping the several accounts, and making the several payments; and a sum is reserved to meet the continual claim for dividends and for the general expenses of bankrupts' estates. The committee on the bill recommended that of this unemployed cash 300,000*l.* should be invested in the purchase of three per cent. consolidated or three per cent. reduced Bank annuities, for the purpose of being made available as a permanent fund, in the best possible manner, for the benefit of the creditors of the several bankrupts whose estates are administered under the authority of the Court, the interest and dividends arising from such investments to be applied to pay the general expenses of the Court of Bankruptcy. This was thought to be a better mode of relieving bankrupts' estates generally, than to go to the trouble and expense of dividing the interest amongst individual estates.

The committee recommend the appointment of an accountant-general for matters of bankruptcy, distinct from the Accountant-General of the Court of Chancery, with a salary not exceeding 1200*l.*, to be paid out of the interest and dividends arising from the proposed fund. This it is thought would facilitate greatly the transaction of bankruptcy business, and by simplifying the accounts, and attaching official responsibility, diminish both the time and expense hitherto required.

The committee are also of opinion that the six commissioners of bankruptcy have been sufficient for the discharge of the duties of the Court, without any important assistance from the judges; that three judges were therefore sufficient for the Court; and that in the event of the appointment of an accountant-general of bankruptcy, there should not be more than two registrars, and one deputy-registrar, in addition to the six deputy-registrars attached to the commissioners.

CLAIMS OF THE CALCUTTA BANKERS ON THE KING OF OUDE.

As this is a subject which has lately occasioned some discussion in the House of Commons, we shall abstract a statement of the facts connected with it from papers published by order of the House.

Oude is one of the provinces of Hindostan, in the northern part of the country, lying between Agra and Delhi on the west, and Bahar and Nepaul on the east, with Allahabad on the south. It is a British dependency, and the nominal sovereign (styled Vizier of the Mogul Empire and Nabob of Oude) resides at Lucknow, a very ancient and formerly very populous city.

In the years 1793, 1794, and 1795, the then nabob of Oude, Asoph-ul-Dowlah, being in want of money, owing partly to his own misrule and mismanagement, and partly to a subsidy of fifty lacs of rupees * which he had to pay to the East India Company, negociated loans with various individuals, Europeans and natives; among others, with the banking houses of Duarka Doss, and Monhur Doss, natives, and resident inhabitants of Calcutta and Benares, on the security of bonds, bearing interest at 36 per cent. These bonds are seven in number, and were given in consideration of the sum of 1,061,700 sicca rupees, advanced at different periods of the years 1794 and 1795. From that period to the present year, the re-payment of the principal, with interest, has been a constant source of litigation.

Asoph-ul-Dowlah, who appears to have been an indolent and luxurious man, was repeatedly urged by the government of India to put his finances into better order, with a view to the discharging of his numerous debts. An inquiry was instituted by the resident at Lucknow, Mr. Cherry, in the year 1796, and a list of the Oude creditors transmitted to Lord Teignmouth, among whom appear the names of the native bankers. On the completion of this inquiry, Asoph-ul-Dowlah proposed a compromise; the terms of which were, that instead of compound interest at 36 per cent. per annum, only 18 per cent. should be allowed up to a certain period; the Europeans to be paid by instalments in five years, the natives in six. Ultimately, the European creditors acceded to other arrangements for the discharge of their debts, and the native creditors accepted a compromise for payment in six years, with the exception of the bankers, who, claiming to be British subjects, rejected the terms offered, and demanded the same treatment as Europeans.

In 1797 Asoph ul-Dowlah died. Saadut Ali was elevated to the musnud (throne); and in the draft of a preliminary treaty between the Company and him, there was inserted a paragraph, stipulating that the unliquidated portion of the late vizier's debts should be paid off in three years. This paragraph Saadut Ali had the address to procure to be omitted from the definitive treaty, and on the faith of it refused to acknowledge the validity of his predecessor's debts.

The grounds on which the representatives of Monhur Doss and Seetal Baboo pursue the claim as against the East India Company, are, that Asoph-ul-Dowlah was only the nominal contractor of the debt; that he was the vassal of the Company; that the demands of the Company on his treasury necessitated him to effect loans, and that, in fact, they were effected through the secret negociations of the Company's agents; that, therefore, the Company are bound to do one of two things—either to compel the king of Oude to settle the amount, or else take the payment upon themselves.

The Company have uniformly resisted the claims, on the grounds that the king of Oude was an independent ally of the government; that to interfere in the matter would be a departure from a fixed and uniform rule, hitherto strictly observed, of carefully avoiding interference between individuals and allied princes; that it was a *bonâ fide* transaction between the vizier and the bankers, for which the Company is in no way responsible, and interference in which would afford a most mischievous precedent.

In 1832, after a period of nearly forty years, the subject was finally decided upon by the Board of Control. It had previously been referred, in 1822, to a committee of the House of Commons, but the session closed without any decision having been come to. The Board of Control directed the Court of Directors to transmit instructions to the Governor-general in Council, to interfere directly and formally with the present king of Oude, and to require a prompt settlement of the debt, the amount of interest being compromised, and the mode and details of payment being left to negociation. This order the Court of Directors refused to obey, unless compelled by law; and after an interval employed in remonstrance and explanation, the Attorney-General moved, in the Court of King's Bench, on the 31st of January, 1834, for a rule *nisi* for a mandamus, to compel the Court of Directors to obey the decision of the Board of Control, which was of course granted; but the application was subsequently withdrawn. The court still

* A sicca rupee is valued at present at two shillings and a halfpenny; a lac is an hundred thousand.

resisted the order, on the plea that to enforce payment of a debt contracted forty years ago, and which with interest was now supposed to amount to a million sterling, would be an unjust and illegal act, and involve the king of Oude, a sovereign ally, in irretrievable ruin, by legalizing other claims of a similar kind, well known to be of an enormous amount. Various directors, however, dissented from the decision of the court, and assigned as their reasons, that they were bound to submit to law, and that, having used every legal means to prevent the transmission of the 'obnoxious dispatch,' they considered that they were under an obligation to affix their signatures to it ministerially, the entire responsibility of the measure resting with the Board of Control.

On the 28th of July last the subject was brought before the House of Commons. Mr. Grant, the President of the Board of Control, defended the view he had taken of the justice and policy of the Indian government pressing the liquidation of the long-standing debt on the attention of the king of Oude, but denied that he contemplated or recommended the use of force. After a brief conversation, the matter was dropped, and nothing further appears to have been done.

EDUCATION IN ENGLAND.

A PAPER has been printed by order of the House of Commons, giving an account of all the sums of money granted in pursuance of an act passed in the session of 1833, in aid of the erection of schools in England. This document gives copies of the Treasury minutes, lists of the various applications for aid, and other information relative to correspondence with the British and Foreign, and National School Societies. The following is a brief abstract of the paper:—

Twenty thousand pounds were granted, in 1833, to his Majesty by parliament, for the purpose of being issued in aid of private subscriptions for the erection of schools for the education of the poorer classes in England.

In appropriating this money, the following rules were laid down:—1. That no portion of the sum be applied to any purpose whatever except for the erection of new school-houses; and that, in the definition of a school-house, the residence of masters or attendants be not included. 2. That the amount of private subscription be received, expended, and accounted for, before any issue of public money for such schools be directed. 3. That no application be entertained, unless a sum be raised, by private subscription, equal to at least one-half of the total estimated expenditure. 4. That no application be complied with unless upon the consideration of such a report, either from the National School Society, or the British and Foreign School Society, as shall satisfy the Board that the case was one deserving of attention, and that a reasonable expectation existed that the school might be permanently supported. 5. That the applicants, whose cases met with favourable attention, be required to bind themselves to submit to the Board, when called on, statements of their accounts, and reports of the schools. 6. That, in considering all applications made to the Board, a preference be given to such applications as come from large cities and towns, in which the necessity of assisting in the erection of schools is most pressing; and that due inquiries should also be made before any applications be acceded to, whether there may not be charitable funds, or public or private endowments, that might render further grants inexpedient or unnecessary.

In March, 1834, the sums granted amounted to 8280*l.* 14*s.*, in aid of 62 schools, containing 12,191 scholars, in a population of 402,045, and the undisposed applications before the Board amounted to a sum of 31,016*l.*, to meet which there only remained of the fund, 11,719*l.* 6*s.* In making selections, in order to dispose of their limited means, the Board granted to schools in connexion with the British and Foreign School Society, 4754*l.*, and to the National School Society, 7450*l.*, exceeding their funds by 484*l.* 14*s.* At the same time, there were applications for sums amounting to 24,526*l.* in favour of 236 new schools, calculated for the instruction of 55,168 scholars, and local and charitable funds were subscribed in aid of them to the amount of 66,492*l.* 6*s.*, the operation of which would be amongst a population of 1,110,830. Under these circumstances, the Board recommended the application to parliament for a further sum of 20,000*l.*; and a grant to that amount has since been voted.

PENSIONS AND COMPENSATIONS.

THERE has just been printed a return to an order of the House of Commons, containing, first, an account in detail of all pensions granted under the head of compensation, or otherwise, on the abolition of, or for sinecure offices in the different branches of the revenue, and in other departments of the state; and, secondly, an account of all pensions granted under the head of compensation for other civil offices abolished in the same departments, with the periods of service in each case. The document, extending to thirty-five closely printed folio pages, is of course too long to be given entire; and, at the same time, a mere statement of the amount paid under each of the heads enumerated would scarcely convey any information of interest or value. We shall, therefore, in addition to such a summary, present a selection from the list of cases, confining ourselves to those that either best illustrate the principle of calculation upon which the compensations appear to have been granted, or are the most remarkable on any other account.

Under the first head, that of 'Customs, United Kingdom and Colonies,' we find, among others, the following pensions granted for abolished sinecures:—

OFFICE.	NAME.	AMOUNT.*	DATE.
Collector, Outward	Duke of Manchester	£2,928	1811
Patent Searcher	Rev. Geo. Burrard	1,100	1812
Searcher at Gravesend	Nathaniel Well	620	1812
Inspector of Prosecutions	Earl of Abergavenny	1,545	1811
IRELAND.			
Storekeeper	H. Barré Bereford, and L. Claudius Beresford	4,315	1811
Examiner of Customs	Thomas Staples	782	1828
Searcher, Packer, &c.	Earl of Leitrim	935	not known.†
Craner and Wharfinger	Lord George Seymour	1,251	1825
Searcher, Packer, and Gauger, Port of Cork	Lord Avonmore	679	1810
Do. Donaghadee	Earl of Donoughmore	69	1811

There are, besides, enumerated under the subdivision of 'Plantations,' the abolished offices of Naval Officer at Grenada, Barbadoes, St. Lucia, Newfoundland, St. Vincent, St John's N. B., Antigua, Halifax, Dominica, Tobago, Prince Edward Island, Miramichi, St. Kitt's, Bahamas, and Montserrat: the holders of which, under treasury orders dated in 1827 and 1828, have received pensions varying from 91*l.* to 570*l.* The lowest of these two sums is granted to the late Naval Officer at St. Kitts, and the highest to the late Naval Officer at St. John's, N. B. Most of the other grants run from between one and two to between three and four hundred pounds.

The next head is entitled, 'Offices in the Colonies,' not included in the preceding list. It contains the additional particulars of the date of each individual's appointment to his office, and the amount of salary and emoluments in respect of which compensation was granted. Among the cases enumerated are the following:—

R. R. Wood, appointed October 1809 to the office of Vendue Master, Malta, now abolished, the emoluments of which are described as uncertain, has received since June, 1813, an annual compensation allowance of 1000*l.*

Adam Gordon, appointed March 1801 to the office, now abolished, of Naval Officer at Trinidad, the emoluments of which were 858*l.*, has received since January 1826 a compensation of 572*l.* This grant, it will be observed, is the highest made to any "Naval Officer." It is stated to have been made in "compliance with instruction of Secretary of State, for carrying into effect the regulations of act 6 Geo. IV. c. 105, abolishing the appointments of Naval Officers." The other grants to this class of public servants were, as mentioned above, by Treasury orders.

W. D. Farr, appointed December 1806 to the office, which he has relinquished, of First Marshal, at Demerara, worth 1,400*l.* per annum, has received since January 1801

* Fractions of a pound are omitted.

† Application for payment of this pension has not been made during the last four years.

a compensation allowance of 1,000*l.* J. A. Sullivan, appointed December 1803 to the office of Secretary and Registrar in the same colony, worth 4,200*l.*, having relinquished it, is stated to have received a compensation since March 1833 of only 100*l.* Unless Mr. Sullivan has been appointed to some other office, the contrast between his treatment and that of Mr. Farr appears strange.

In the other cases mentioned in this list, the full amount of the salary and emoluments of the office has been granted to each individual, with the exception that Mr. James Chapman, appointed in October 1802 to the offices of Island Secretary, Clerk of the Council, Secretary to the Cabildo, and registrar of deeds, at Trinidad, worth in all 1,500*l.* per annum, has received since his retirement in May 1831 a pension of only 1,000*l.* The pensions in the other instances vary from 200*l.* to 700*l.*

The third head is entitled 'Ordnance.' In this department the only compensation appears to be that of 521*l.*, granted to Lord Mountsandford as Barrack Master, Royal Barracks, Dublin, an office which his lordship holds by patent, but which is to be abolished on his death.

Under the fourth head, entitled, 'Excise,' the only case mentioned is that of Mr. Richard W. Duff, late Comptroller of Excise, Scotland, who, after thirty-three years' service, receives a compensation of 312*l.*

In the establishment of the 'Mint Office,' which makes the fifth head of the account, the only entry is "John Tekell, Comptroller of the Mint—289*l.* 10*s.* per annum." It is stated in a note, that the comptroller's office was regulated in 1815, and that on the termination of Mr. Tekell's interest the present office of deputy comptroller is to cease by the act 57 Geo. III., and the deputy, who is at present performing the duties, to become principal.

In the 'Audit Office' (the sixth head), the only case of compensation is that of Lord William Bentinck, who receives 340*l.* annually, as having been holder of the abolished office of clerk of the pipe.

The seventh head is entitled, 'Late Chamberlain's Office, Exchequer,' and contains the names of Montagu Burgoyne, Esq., late Chamberlain of the Exchequer, and John Penwarne, his deputy, the former of whom, after a service of fifty years, receives 2,000*l.*, and the latter, after a service of five years, 130*l.* per annum, being in each case the full amount of the salary of the office. Mr. Penwarne's allowance ceases upon the death of Mr. Burgoyne.

The 8th head is entitled 'Offices in Scotland.' We may observe that the arrangement of this return is extremely immethodical and confused. Instead of any thing like a digest being attempted, the accounts appear to be merely printed without order, as they were received from the different clerks or other officers who were applied to for the information. Thus, after the Irish and Scotch offices already mentioned, we have, first, this new general title of 'Offices in Scotland,' under which the only cases enumerated are those of the Hon. George Elliot, late Governor of the Mint of Scotland, who appears to receive his full salary of 300*l.*, as well as an additional sum of 49*l.* 10*s.*, in lieu of apartments which he had in the Mint, and that of Henry Scott Alves, late Master Worker, whose salary and emoluments are strangely stated not to be known, the reason assigned being that they are payable in London; and then comes a catalogue extending to more than eight pages, forming the 9th account, of persons receiving compensation for 'Offices in Ireland.' We insert, in the first place, an abstract of this account, omitting, as usual, fractions of a pound in the sums:—

Compensations payable at 5th January, 1834.

	Of 100*l.* and upwards per an.	Under 100*l.* per an.	Total.
CIVIL OFFICES.			
Late Receiver-General to the Exchequer	£553		£553
Late Auditor of Foreign and Imprest Accounts	923		923
Late Alnager of Ireland	500		500
Irish Compensations	14,433	1,666	16,100
Chief Secretary's Office	4,664	117	4,781
Privy Council Office	259	89	349
Treasurer's Office		68	68
Irish Treasury	2,945	382	3,328
Auditor-General	2,700	30	2,730
Late Clerk of the Pells	£3,283		£3,283
Late Muster-Master General's Office	166	10	176
Late Military Audit Office	2,425	1,266	3,691
Late Civil Audit Office	1,383		1,383
Late Linen Board	1,287	898	2,185
Late Board of Works	836	212	1,048
Late Lottery Offices	276	193	470
Late Inland Navigation Board	300		300
Late Pratique Master Port of Dublin	200		200
Officers late of Courts of Justice	32,497		32,497
Kingston Harbour		80	80
Total Civil Offices	69,635	5,115	74,651
MILITARY OFFICES.			
Board of General Officers	130	92	223

Office of Lieutenant-General Commanding	276	37	313
Royal Hospital, Kilmainham	680	30	710
Yeomanry Department	1,431	99	1,530
Late Military Agents	1,052	60	1,112
Adjutant-General's Office		98	98
Quartermaster-General's Office		27	27
Hibernian Military School		50	50
Commissariat Department	100	292	392
Total Military Offices	3,948	863	4,812

'We add a few of the particular cases comprised in this summary:—

The Earl (now Marquis) of Westmeath receives during his life, and the Marchioness during her life, should she survive him, 923*l.* as compensation for the abolition in 1798 of his office of Auditor of Foreign and Imprest Accounts, granted to him in 1789. The emoluments of the office consisted of fees, together with a salary of 6*s.* 8*d.* per day.

Among the largest sums received for loss of emoluments by the Union, are the following:—1290*l.* by the Earl of Mayo, who was Chairman of the Committees of the House of Lords; 846*l.* by the Earl of Limerick, who was Clerk of the Crown and Hanaper; 1015*l.* by John and William Foster M'Clintock, as having held the office of Serjeant-at-Arms, in the House of Commons; 2091*l.* by Sir George F. Hill, who was Chief Clerk of the House of Commons; 3685*l.* by Sir A. B. King, namely, 335*l.* on account of his office of King's Stationer, 850*l.* on account of that of Printer to the House of Commons, and 2500*l.* to compensate him for the revocation of his patent as King's Stationer; 1107*l.* by the Hon. Thomas Pakenham, who was Master-General of the Ordnance; and 935*l.* by William Henry Freemantle, namely, 587*l.* for his office of Joint-Resident Secretary in London to the Lord-Lieutenant, and 348*l.* for that of Joint-Secretary in London for the Revenue of Ireland.

The Earl of Roden has, since the abolition of his office of Auditor-General in 1822, which he had held for twenty-two years, received an annual compensation of 2700*l.*, the emoluments of the office having been 3667*l.*

The Earl of Shannon, who for twenty-three years held the office, now abolished, of Clerk of the Pells, has, since the same date, received the full emoluments, being 3133*l.* per annum.

Lord Manners, since his retirement in 1827 from the office of Lord Chancellor, which he held for twenty years and a half, and the emoluments of which were 10,000*l.*, has received an annual compensation of 3692*l.*

Lord Avonmore, who, as already mentioned, draws 679*l.* on account of another office, receives 4199*l.*, being the full emoluments of Registrar of the Court of Chancery, which was abolished a few years ago.

Four retired Six Clerks of Chancery receive compensations severally of 1088*l.*, 619*l.*, 948*l.*, and 1348*l.*

Lord Ranfurley and the Honourable Vesey Knox, on account of the office of Prothonotaries of the Common Pleas, abolished in 1821, receive an annual compensation of 7150*l.*, being the average value of the fees for seven preceding years.

The Marquis Wellesley and Richard Wellesley, on ac-

count of the office, abolished in 1823, of Chief Remembrancer of the Court of Exchequer, receive a compensation of 5387*l.*

We shall give an abstract of the second part of the paper in our next Number.

SWITZERLAND. (CANTON DE VAUD.)

WITH reference to an article on the "Civil and Political Dissensions in Switzerland," which appeared in our last Number, we have received some interesting notes from a correspondent who signs himself "A Vaudois," or citizen or native of the Canton of Vaud. Paying a compliment, which we well know our writer deserves, "that he appears to be well acquainted with his subject," the warm-hearted Swiss takes objection to his having represented the Canton of Vaud as a poor canton.

The author of the article, alluding to the late rash attempt made from the territory of Switzerland on Savoy, by certain foreign refugees, says, "All this business, we are told, has cost the Canton de Vaud 80,000 Swiss livres, nearly 5000*l.* sterling, which the canton can but ill spare, being a poor canton, and already burdened with a great number of its own destitute citizens." On this our correspondent observes, that he cannot admit that the finances of the Canton de Vaud are at so low an ebb. In proof of his statement of the comparative wealth and resources of his canton, he refers to a case which occurred in 1832, and called for great sacrifices.

"The political dissensions," he says, "which broke out in Switzerland in 1830, and continued through 1831 and part of 1832, obliged the Canton de Vaud to take precautionary measures at an expense of 251,280 livres. Yet this sum, though considerable for a small community of 177,797 inhabitants, which only dates its political existence from the year 1803, and though treble that said to have been incurred in putting down the attempt of the refugees, was liquidated in the course of 1832, without a single sou of additional taxation, by charging 63,000 livres on the budget for 1832, and 188,280 on the reserve fund which government has at its disposal.

"This may appear incredible, but you will be still more surprised to learn that that fund, which was found so useful upon that occasion, has *also* enabled the government to provide for, still without any additional tax, and over and above the ordinary expenditure of the country,

1,715,576 livres deficit on the extraordinary expenditure since 1803,

76,143 for placing the monetary system on a sounder footing,

996,716 for the construction of new roads, in addition to the sum annually voted for that purpose,*

299,959 for completing the general registry of landed property,

100,000 various incidental expenses.

3,188,393 livres; and that it has now at its disposal about 1,000,000 livres to provide for emergencies.

"I am not sufficiently versed in political economy to judge how far it may be wise for a government to keep up such a surplus; but this I shall maintain, that the system which enables a small Swiss canton to provide for an annual expenditure of more than one million livres, and an extraordinary one of seven or eight millions spread over the short period of thirty years, and to be not only without a national debt, but to have one million francs in reserve, cannot be very defective, and that the people which has such resources cannot be said to be poor."

But, after all, the author of our article and our correspondent are scarcely at issue. The first of these gentlemen, knowing Switzerland most intimately as he does, had no notion of representing the Canton de Vaud as being destitute and poverty-stricken—he only intimated that from its extent and population it could not have a large revenue, and that, like every other state, large or small, it had its own proper burdens to support. And surely, even according to our correspondent's showing, it is a fair subject of regret to see eighty thousand livres, out of one million, or nearly a twelfth part of the whole meritorious savings of the Pays de Vaud government, sacrificed at one blow, and in such a manner. We do not doubt that the economical administration and the industry of the citizens of the canton will make up the amount, but, in the meantime, an important part of a valuable reserve has been irretrievably lost.

Our correspondent goes on to say, "I cannot conclude without gratifying my national feelings by furnishing further proof of the fast-improving condition of the Canton de Vaud, by stating that the post-office, which for the three years 1804, 1806, and 1810, (I have no returns for the intermediate years,) brought in only 61,690 livres, produced for 1828, 1829, and 1830, 273,852 livres, although, during the latter period, government, with its usual enlightened liberality, made considerable reductions in the charges, (in some instances as much as fifty per cent.,) at the same time giving increased accommodation to the public.

"From 1803 to 1814 the customs produced annually, on an average, only 59,300 francs, whilst with a small increase only on the duties of some articles, they produced from 1815 to 1830, on an average, annually, 128,525 livres. The produce for 1831 was 173,521 livres."

Our correspondent assures us that all these statements "are grounded on official information." No one, not a native or immediately concerned in the affairs of the country, can rejoice more than we do at the progress thus stated to have been made by the Canton de Vaud.

* 315 miles of roads have been improved or constructed since 1803.

ABSTRACTS OF PARLIAMENTARY PAPERS.

MANUFACTURE OF PAPER.—A return has been laid before the House of Commons, which shows the weight of all the paper made in the United Kingdom, and the duty paid thereon, during the three years, 1831-2-3. It appears by this document that the following quantities were fabricated in those years in England, Scotland, and Ireland respectively, viz.:—

	1831 Pounds	1832. Pounds.	1833. Pounds.	Increase in 2 years.
England and Wales	51,149,069	52,923,096	55,912,774	4,763,705
Scotland	8,351,509	8,836,780	9,088,014	733,506

Duty returned on Exports.	£28,325	30,534	38,055	9,730

The proportion between the papers of the first and second class is as 3 to 1 in favour of the *first* class. About one-ninth of the whole quantity is manufactured in the metropolitan County of Middlesex. The next largest quantity is made in *Kent*, which produces somewhat more than one-tenth of the whole.

CUSTOMS DUTY.—The gross receipt of Customs Duty at the following ports of the United Kingdom, for the year ending 5th January, 1834, is:—

London	£8,692,898	2	7	Leith	£398,910	6	11
Bristol	1,083,323	4	6	Glasgow	166,913	3	3
Liverpool	3,733,132	0	1	Port Glasgow	161,894	5	10
Hull	624,057	7	11	Aberdeen	57,830	4	1
Plymouth	108,997	7	1	Dundee	48,608	4	8
Portsmouth	59,348	9	7	Dublin	654,754	19	7
Falmouth	21,491	17	0	Belfast	229,144	17	9
Dover	92,702	8	8	Cork	193,056	14	6
Newcastle	288,777	13	2	Limerick	117,783	18	1
Sunderland	81,610	4	4	Waterford	116,045	6	4

Greenock	459,425	9	7	Newry	43,426	19	7

MALT.—The number of bushels of malt imported or brought from England, Ireland, or Scotland, respectively, to each of the three countries, in every year from 5th January, 1831, to 5th January, 1834:—

Number of Bushels of Malt.

Years.	Imported into England		Imported into Ireland		Imported into Scotland	
	From Scotland	From Ireland	From England.	From Scotland.	From England.	From Ireland.
1832	6,901	87,103	708	2,305	1,008	
1833	20,474	64,353	5,245	2,944	2,387	1,814
1834	4,520	54,01[illegible]	296	2,516	2,278	2,120

BRITISH SPIRITS.—Total number of proof gallons of spirits distilled in the United Kingdom, with the amount of duty paid, during the year ending 5th January, 1834.

	Gallons.	Duty paid.
England	7,717,303	£2,893,988 12 6
Scotland	5,988,556	988,092 13 4
Ireland	8,168,596	1,361,432 13 4
Total for United Kingdom.		
Gallons	21,874,455—Duty	£5,253,513 19 2

THE NAVY.—Total number of officers in the navy on 1st January, 1834, distinguishing those employed afloat:—

	No. of each rank.	Employed afloat.		No. of each rank	Employed afloat.
Admirals	44	2	Commanders	867	59
Vice-Admirals	51	4	Retired Commanders	100	0
Rear-Admirals	64	5			
Retired Rear-Admirals	34	0	Lieutenants with the rank of Retired Commander	176	0
Retired Captains	9	0			
Captains	783	53	Lieutenants	3,160	372

Board of Health, Ireland.—The amount of the expenditure of the Central Board of Health for Ireland, from its formation in March, 1832, to its dissolution in May, 1833, was 2,581*l.* 7*s.* 1*d.*

Fish condemned.—The total number of fish seized and condemned as unfit for food, in the city or port of London, during the last three years, amounts to 492,538. This number comprises the various descriptions of fish commonly exposed for sale, salmon, turbot, cod, herrings, mackerel, lobsters, crabs, &c. In addition to this number, there were seized and condemned, 3,525 bushels of sprats and small shell-fish, and 126 kits of pickled salmon.

Northern Lighthouses.—The commissioners of northern lighthouses have given an abstract of their accounts for the year ending June, 1834. The receipts amounted to 34,037*l.* 10*s.*, and the expenditure to 29,345*l.* 13*s.* 8*d.* There was a debt from last year of 25,030*l.* 15*s.*, which is now reduced to 20,338*l.* 18*s.* 8*d.*

Expenses of Church Building Commissioners.—The expenses of the Church Building Commissioners for the year ending March, 1834, are as follow:—

Salaries	2,642 9 9
Rent and taxes	200 15 5
Various disbursements	764 9 4
	£3,486 10 0

Caledonian Canal.—The total amount of tonnage-rates levied from vessels navigating the Caledonian Canal, from May, 1833, to May, 1834, is 2,077*l.* 2*s.* 7½*d.* The expenditure, during the same period, amounted to 3,802*l.* 19*s.* 5*d.* The revenue of the canal has remained nearly stationary during this period; but the intercourse carried on by its means, between the ports of Glasgow and Inverness, has been nearly doubled.

Private and Joint-Stock Banks.—The aggregate amount of notes circulated in England and Wales by private banks and joint-stock banks, and their branches, between the 29th of March, and the 28th of June, 1834, is:—

Private Banks	£8,875,795
Joint-stock Banks	1,642,887

Assessed Taxes.—Statement of the number of persons who compounded for their assessed taxes, with the amount, during the years 1820, 1825, and 1830:—

	No. of Persons.	Amount of Taxes compounded for.
1820	47,689	£716,353
1825	60,575	485,363
1830	43,978	374,764

Cotton Goods and Sugar.—The quantity in value of cotton yarn, cotton goods, and refined sugar, exported from the United Kingdom, from the 5th of January to the 5th of July, 1834, is as follows:—

Cotton yarn	£2,348,655
Cotton goods	7,395,193
Refined sugar	421,215

Retired Allowances.—The amounts of retired allowances for 1833, are—

	£	s.	d.
Army	2,735,891	16	5
Navy	1,600,551	18	6
Ordnance	336,803	0	0
Civil departments	521,330	2	2
Total	£5,194,576	17	1

Grain.—Total quantity of foreign wheat that has paid the duty for consumption in Great Britain, under 9 Geo. IV. c. 60, since the act came into force in 1828, till the 5th of July, 1834, with the amount of duty, and the quantity of corn, meal, and flour, imported from British possessions out of Europe, with amount of duty:—

Foreign Corn, Meal and Flour.	Quantity. Quarters.	Duty.	Corn, Meal, and Flour, imported from British Possessions. Quantity. Quarters.	Duty.
Wheat	4,834,796	£1,605,414	419,594	£75,803
Barley	1,074,986	248,517	313	23
Oats	1,463,336	433,170	8,973	294

Oatmeal	6	2	1,843	78

Compensation to the Servants of the East India Company.—The following statement is abstracted from papers printed by order of the House of Commons:—The Court of Directors, with the sanction of the commissioners of the affairs of India, have resolved, first, that an offer of transfer to the civil establishment of India be made to each of the civil servants on the China establishment, and such of them as shall accept that offer shall be entitled to annuities from the Company of the amount allowed by the Civil Service Annuity Funds, viz 1000*l.*, provided that the aggregate residence abroad in the service as members of the China Factory, and as Indian servants, shall not in any case be less than twenty-two years; and, secondly, that in consideration of the present and prospective loss sustained by the China servants through the change of the scene of their service, the amount of fine and subscription which, if they were members of the Indian Annuity Fund, they would be called upon to pay upon becoming annuitants, be not required from them.

The court seems to think it probable that the tea inspectors will find beneficial employment in China on their own account. In this view they have ordered each of them, on their final relinquishment of the Company's service, a gratuity equal to one year's salary. The clerks and factory servants are to be discharged, and to receive each three months' pay as a gratuity.

In the Home Service a uniform proportion has been fixed as to the amount of compensation for all officers and servants in the several departments who have been ten years in the service. This is fixed for each at two-thirds of the salary and emoluments. Those who have been less than ten years in the service, are to be paid gratuities in the following proportion:—

For a less service than three years, one year's pay and allowed emoluments.

For three, and less than five years, two years' pay and emoluments.

For five, and less than eight years, three years' pay and emoluments.

For eight, and less than ten years, four years' pay and emoluments.

The court reserve to themselves the liberty, whenever farther reductions in the Home Service are determined on, to effect exchanges between persons in the offices ordered to be reduced, and persons in the offices to be retained.

As the reductions on the service may materially affect the fund for the benefit of the widows of officers, clerks, and others of the Home establishment, should that fund be hereafter inadequate to meet the payments provided for by the existing regulations, the court has determined that the difference shall be paid as compensation. And if the capital and incomes from interest and subscription should be more than sufficient for the permanent charge of pensions, the excess is to be appropriated, so far as it will go, to repay the Company the advances which they make under this arrangement with interest.

The scale of remuneration which was proposed by the Court of Directors for the maritime servants of the Company, has been since rejected by a majority of the proprietors, and the following substituted in its place:

All officers, being commanders, who have been ten years in the service, to be paid 250*l.* per year; chief mate 160*l.*; second mate 140*l.*; surgeon 140*l.*; third mate 100*l.*; purser 100*l.*; fourth mate 70*l.*; assistant surgeon 70*l.*; fifth and sixth mates 50*l.*; midshipman 30*l.*; and boatswain and gunner 25*l.* per year. Widows to have half their husbands' pensions during widowhood, and children the usual provision. Those who have not been ten years in the service to receive gratuities computed according to their rank and time of service. And reasonable compensation to be given to those commanders whose term of contract has not expired.

Compensation and retired Allowances of Exchequer.—The total amount of compensation and retired allowances charged upon the Fee Fund of the Exchequer, by virtue of the act of 23 Geo. III. c. 82, is, at present, 8323*l.*

Prosecutions for Political Libel, Sedition and Blasphemy.—There

have been one hundred and three individuals prosecuted in England for blasphemy, political libels, and seditious conduct, between the year 1821 and 1833. The number of informations filed by the Attorney-General during the same period, against persons accused of blasphemy and sedition, is ten. Of the one hundred and three prosecutions, fifteen were in the Court of King's Bench (one of the individuals was a female (Susannah Wright), sentenced to pay a fine of 100*l.*, to be imprisoned in the House of Correction eighteen months, and to give security for good behaviour for five years more); fifteen at the Old Bailey, and the remainder on the different circuits.

TRADE, STATISTICS, &c.

Italy: Military Force.—According to the most recent official documents, the military force of the independent States of Italy amounted to 27,490 men, without including the civic guards. These states, although under the Austrian influence, have their nominally independent governments and separate budgets. The military force is recruited by voluntary enrolments; and the advancement to the rank of officers is limited to persons of birth or consideration. On the 1st of April, 1834, the above force was thus proportioned:—

States of the Church	17,800
Grand-duchy of Tuscany	5,500
Duchy of Parma	1,380
Duchy of Modena	1,860
Principality of Lucca	800
——— Massa	100
Republic of St. Marino	50
Total	27,900

The artillery and the cavalry together, in the above States, does not exceed 3,400 men.

Annual Expenses of a Parisian.—A table has been drawn up by the Prefecture of the Seine, which ascertains the approximate and average value of the consumption of the several articles of food by a single inhabitant of Paris, of the middle class, in one year. The following are the results of this calculation:—

	£	s.	d.		£	s.	d.
Bread	2	8	4	Vegetables, and fresh and dried fruits	0	13	0½
Flour for other purposes	0	5	2¼	Salt	0	1	8½
Butcher's meat	2	19	3	Cheese	0	1	7½
Fowl and game	0	8	9	Olive oil	0	1	8½
River-fish	0	0	7	Vinegar	0	1	4½
Oysters and shell-fish	0	0	10½	Brandy and spirits	0	10	2¼
Fresh sea-fish	0	4	3	Wine	3	3	9
Salted sea-fish	0	1	8¾	Cider and perry	0	0	3
Fresh and melted butter	0	10	9½	Beer	0	0	6½
Eggs	0	4	8½	Sugar	1	0	10
Milk, cream, whey, and cream-cheese	0	8	2	Coffee	0	8	4
				Tea and cocoa	0	0	10
				Spice, honey, &c.	0	2	1
Water, six quarts per diem, of which three are paid for					0	3	11½
Total					£ 14	2	11½

To this list we must add the following expenses, incurred by each inhabitant:—

	£	s.	d.		£	s.	d.
Lodging	3	16	0	Expense of conveyance	0	9	7
Repairs of houses	0	18	4	Tobacco	0	5	5
Dress	2	18	8	Baths	0	2	10
Fuel	2	0	3	Charitable purposes	0	9	6
Lights	0	16	6	Presents	0	1	5
Washing	1	10	0	Theatres	0	5	11
Repair, or renewal of furniture	2	18	4	Expenses of lying-in	0	0	10
Education of children	2	6	5	——— children at nurse	0	3	1
Servants' wages, &c.	1	18	4	Physician and physic	0	9	8
Horses	1	4	6	Subscription to the public press	0	2	11
Carriages and harness	0	2	10	Imposts, taxes, &c.	5	13	4½
Grand Total					£ 42	17	8½

These details are, in part, drawn up from a general survey of the population of Paris, and the receipts and disbursements of that population, calculated according to official documents; in other respects, the statements are an approximate estimate.

French Taxation.—The direct taxes of France, in 1833, amounted to 211,847,373f. 3c.; the Department of the Seine, which pays the most, is stated at 9,384,371f. 26c.; that of the Seine Inférieure, the next, at 6,415,193f. 51c.; and the average for each department is 2 463,341f. 54c.

French Colonies.—Slaves.—The number of slaves emancipated in the four French colonies of Martinique, Guadaloupe, French Guiana, and Bourbon, between the end of the year 1830, and the end of May last, is 21,262.

Resources of Spain.—According to an official document drawn up by the Cortes in 1822, the following are the disposable resources of the country:—

Property of Establishments of Piety and Confraternity	540,000,000fr.
Ditto of Commanderies of Military Orders	108,000,000
Ditto of the Jesuits, remaining unsold	6,700,800
Ditto of the Inquisition, abolished	13,500,000
Ditto of Suppressed Convents	540,000,000
Ditto of the Secular Clergy, deduction made of one-tenth belonging to bequests	540,000,000
Ditto of the Crown, so far as disposable, and including the monopolised manufactories	27,000,000
Valley of Alcudia	4,800,000
Moiety of Communes (Baldios) of the Crown	540,000,000
Total	2,322,000,000fr.
Namely,	
In Ecclesiastical Property	1,750,200,000fr.
In Royal Domains	571,800,000

If doubts are entertained of the valuation of this property, the following facts would prove that it is far from being exaggerated. In 1820, property belonging to the convents of Malaga, Saragossa, Oviedo, and Valencia, was sold for 19,573,000 rials, or nearly five millions of francs; the valuation was only 8,695,000 rials. In Catalonia and Cadiz, the price realised was more than twice the amount of the valuation; and at Seville the increase was twice and a half. If we generalise this excess in value, it will be seen that now that the state of Europe is far more favourable to Spain than in 1820, the 1,750 millions, arising from disposable ecclesiastical property, may rise to more than three thousand millions. It should also be remarked, that the above table is far from containing the account of all the resources possessed by Spain in national property. It includes none of that belonging to the Crown, which is more valuable and extensive than any where else. It only disposes of one-half of the communes nominally possessed by the Civil List. Finally, it only gives 1,750 millions for the ecclesiastical property, whereas the valuation was made to amount to 3,125,000,000 by Cabarus on detailed research. Without in any respect disposing of this property, we may nevertheless consider it a part of the public wealth, which adds to the two thousand three hundred millions of disposable property, a guarantee of equal amount, securing the integral payment of the debts of the State.

PUBLIC PETITIONS.

POLITICAL RETROSPECT FOR SEPTEMBER, 1834.

GREAT BRITAIN.

FOR the purpose of forwarding the Irish Suppression of Disturbances Bill, both houses of Parliament met on Saturday, the 26th of July, the Commons in the morning, and the Lords at a later hour. In the former, the third reading of the bill was carried, after a short debate, by a majority of 82 to 21. The House divided again on the question, 'that the bill do pass,' when the numbers were, 60 for the motion, and 20 against it. In the evening, the bill was brought up to the House of Lords, and read a first time on the motion of Viscount Melbourne.

On Monday, the 28th, the bastardy clauses of the Poor Laws Amendment Bill were discussed at great length and with much animation in the House of Lords. The debate was followed by a division, when the numbers appeared to be, for retaining the clauses, 34, and for throwing them out, 13. In the House of Commons, after a discussion on the claims of the Calcutta bankers against the king of Oude, in which the conduct of the Board of Control, in ordering the claims to be paid by the East India Company, was complained of by Mr. Herries and defended by Mr. Charles Grant, the order of the day was read for the third reading of the Admission of Dissenters to the Universities' Bill. After a debate of considerable length the house divided, when the bill was read a third time by a majority of 164 to 75.

On the following day, the third reading of the Irish Disturbances Suppression Bill was moved in the House of Lords by Viscount Melbourne. It had been agreed that the debate on the measure should be taken at this stage. Besides the Premier, the Earl of Ripon, the Duke of Wellington, the Earl of Haddington, the Earl of Wicklow, and the Lord Chancellor, addressed the house; but the discussion turned almost entirely on the conduct of the government in abandoning the former bill; and it terminated without a division. In the House of Commons, at the morning sitting, the South Australian Colonization Bill was considered in committee, after a motion for its rejection had been negatived by a majority of 72 to 7. In the evening, on the Chancellor of the Exchequer moving that the House should resolve itself into a committee on the Irish Tithes' Bill, Mr. O'Connell moved an amendment that the bill should be committed that day six months. The original motion, however, after some debate, was carried, on a division, by a majority of 154 to 14. On the following evening, however, when it was moved in committee that the third clause should stand part of the bill, Mr. O'Connell, in place of the more complicated scheme of commutation therein proposed, moved an amendment, to the effect, that, in all cases, the tithe should be at once commuted on the principle of giving the landlord a bonus of 40 per cent. Lord Althorp opposed this amendment; but the House having come to a division, it was carried by a majority of 82 to 33. In consequence of this decision, the bill was re-modelled in conformity with the views which Mr. O'Connell and his friends had suggested. It was afterwards stated in the House of Lords, by Viscount Duncannon, that the modification of the measure thus adopted had been the proposition of a body of the Irish landlords; and his lordship at the same time stated, that, for his own part, he was glad his colleagues had been defeated in their resistance to it. The bill was further considered in committee on the 31st, after a resolution moved by Colonel Davies against making any payment in order to carry its provisions into effect out of the Consolidated Fund had been rejected by a majority of 78 to 14.

On Friday, the 1st of August, the second reading of the bill for the Admission of Dissenters to the Universities was moved by the Earl of Radnor; and the motion gave rise to a protracted debate. On a division taking place at near one o'clock in the morning, the votes in favour of the bill were found to be only 85, including 47 proxies, and those against it 187, of which 85 were proxies. It thus appeared, that had there been only a single member of the majority present in the house, he might have outvoted the whole array of his opponents.

This evening, after some more clauses of the Irish Tithes' Bill had been considered in committee, the Chancellor of the Exchequer explained to the House of Commons his plan for the re payment to the Bank of the debt of 3,671,700*l.* due to that establishment in October next. He proposed to make the payment by transferring to the Bank 3 per cent. stock to the amount of 4,080,000*l.*

At a morning sitting of the House of Commons on Saturday, several bills were advanced a stage. Among the rest, that for the colonization of South Australia was carried through committee.

On Monday, the 4th, the Poor Laws Amendment Bill was considered in committee in the House of Lords; and, in the Commons, after the report on the Irish Tithe Bill had been agreed to, the House having resolved itself into a committee of supply, several grants for miscellaneous estimates were voted without much discussion. Among them were a vote of 24,000*l.* to defray the expenses of the Municipal Corporation Commissions for England and Ireland, during the past year; another of 12,750*l.* for the re-erection of the Baptist and Wesleyan chapels which had been destroyed in Jamaica; and another of 20,000*l.* for promoting steam-navigation to India. The House of Commons Offices' Bill was also read a third time and passed, by a majority of 37 to 22.

On the 5th, the Warwick Borough Bill was thrown out in the Lords, on the motion of the Lord Chancellor; the Earl of Radnor, who had taken the charge of the measure

since the Earl of Durham left town, opposing that its promoters had not shown grounds sufficient to enable the House to proceed with it. The Commons, however, have since resolved, on the motion of Lord John Russell, that no writs shall be issued for the boroughs of Warwick, Hertford, or Carrickfergus, before the 20th of February next. The remainder of the evening was spent by their lordships in discussing a motion of the Marquis of Londonderry, for copies or extracts of correspondence or information relative to negociations for concluding a treaty between his Majesty, the Queen Regent of Spain, Louis Philippe, king of the French, and the Duke of Braganza, signed in London the 22nd of April, 1834. After the conduct of the government, in relation to Spanish affairs, had been attacked by the Duke of Wellington, and defended by Viscount Melbourne and the Marquis of Lansdowne, the motion was negatived without a division. In the House of Commons, after the Common Fields Inclosure Bill had been thrown out, on the motion for its committal, by a majority of 34 to 14, a short conversation took place on the Drunkenness Committee Report, which was brought up by Mr. Buckingham. The notion upon which the report seemed to proceed, that sobriety could be enforced by act of parliament, was received by the generality of honourable members with no little incredulity and ridicule. The motion, however, for printing the report was carried, on a division, by a majority of 63 to 31. The Irish Tithe Bill, the Foreign Enlistment Repeal Bill, and the South Australian Colonization Bill, were all afterwards read a third time and passed. The first-mentioned measure was warmly opposed by Mr. Shaw, and other honourable members; but they did not divide the House.

On the 6th, several bills which had passed the Commons were brought up, and read a first time in the House of Lords. The Marquis of Westminster deferred till next session his motion for abolishing the practice of voting by proxies. In the House of Commons, the Customs' Bill, the Assessed Tax Relief Bill, and the Beer Act Amendment Bill, were all read a third time and passed; and on the motion of Lord Althorp, it was resolved that a conference should be had with the Lords on the subject of the clause in the County Coroners' Bill, constituting the coroner's court an open court, which their lordships had struck out. The Lords, however, adhered to their amendment; on which the Commons declined to pass the bill, which is accordingly lost.

In the House of Lords, on the 7th, the report on the Poor Laws Amendment Bill was brought up and agreed to. In the Commons, Lord Althorp presented a message from his Majesty, recommending that measures should be taken to enable the proprietors of estates in Ireland, forfeited by attainder, and where the reversion or attainder is vested in the Crown, to bar such reversion or attainder. The Bribery at Elections' Bill, and the Roman Catholic Marriage Bill were withdrawn; the former, on the ground that the alterations made in it by the Lords were too extensive to be taken into consideration at that late period of the session: and the latter, in order that a more complete measure, including all descriptions of dissenters, might be introduced next session. The Lords' amendments on the Capital Punishments' Bill were agreed to. Lord John Russell then made the motion already noticed, respecting the several boroughs in which corrupt practices are alleged to have taken place. A division took place on that respecting Warwick, when the numbers were, 67 for the motion, and 18 against it.

On the 8th, the bastardy clauses, in the Poor Laws Amendment Bill, underwent another ample discussion in the House of Lords, on a motion of the Bishop of Exeter for their removal from the bill, which had previously been read a third time by a majority of 45 to 15. When the House again divided on the Bishop of Exter's motion, the numbers appeared to be, for the motion, 71, including 31 proxies; and against it, 82, including 40 proxies. An amendment was afterwards introduced into the bill, on the motion of the Duke of Wellington, giving the parish a claim upon the putative father of a bastard child, to the extent explained in a previous page in our abstract of the act. The bill was then passed. No business of importance was transacted this evening in the House of Commons.

On Monday the 11th, the second reading of the Irish Tithes Bill was moved in the House of Lords by Viscount Melbourne, and gave rise to a debate which was protracted till nearly two o'clock in the morning. The result was the rejection of the measure by a majority of 189 to 122. Of the peers present, 61 voted for the bill, and 85 against it. Lord Ellenborough, who led the opposition, declared in his speech, that had ministers adhered to the measure in the form in which it was originally brought forward, it would have received the support of himself and his friends. The circumstances which had led to the modification of the plan appear to have been partly the changes in the cabinet occasioned by the secession of Mr. Stanley and his friends and the subsequent retirement of Earl Grey, and partly a proposition made to the government by a powerful body of the Irish landlords. In the Commons this day, the Lords amendments on the Poor-Law Bill were agreed to, after which the House adjourned to Wednesday.

The Lords met on the 12th, when, among other measures which were advanced a stage, the South Australian Colonization Bill was carried through committee. On the following day, the report was agreed to, and their Lordships, after a conference with the Commons, also agreed to the restoration of the clause (the 18th) of the Poor-Law Amendment Bill, providing for the admission of dissenting ministers into workhouses, which they had formerly struck out.

On the 14th, after several bills (among others that for the colonization of Southern Australia) had been read a third time by their Lordships, and passed, the Lord Chancellor brought in a bill for reforming the mode in which the appellate jurisdiction of the House has been heretofore exercised. Of this bill, which was read a first time, and ordered to be printed, we shall take an early opportunity of giving an account. In the House of Commons, the Lords' amendments to the South Australian Bill, and to the Beer Bill, were agreed to: although Mr. Hume divided the House on the clause which had been introduced into the latter, giving constables the power of visiting beer-houses at all hours. The clause was carried by a majority of 29 to 12.

On Friday the 15th, his Majesty came in state to the House of Lords, and delivered a speech, in which he stated that he continued to receive from all foreign powers, assurances of their friendly disposition—that he had still to lament the continued postponement of a final adjustment between Holland and Belgium—that he had derived the most sincere and lively satisfaction from the termination of the civil war in Portugal, and that he rejoiced to think that the quadripartite treaty had materially contributed to produce that happy result—that events had, however, since occurred in Spain, to disappoint, for a time, the hopes of tranquillity in that country—that to these events he would, in concert with his allies, give his most serious attention—that the peace of Turkey remained undisturbed, and that he trusted no event would happen in that quarter to interrupt the tranquillity of Europe. His Majesty then, adverting to domestic questions, observed that he had had much satisfaction in giving his assent to the act for the amendment and better administration of the poor-laws, and that it would be his duty to provide, that the authority necessarily vested in the commissioners should be exercised with temperance and caution. The establishment of the new central criminal court, he trusted, would improve the administration of justice within the populous sphere of its jurisdiction, and afford a useful example to every other part of the kingdom. "To the important subject of our jurisprudence, and of our municipal corporations," proceeded his Majesty, "your attention will naturally be directed early in the next session." Having thanked the Commons for the supplies, he concluded as follows:—"It gives me great satisfaction to believe, that, in returning to your several counties, you will find a prevalence of general tranquillity, and of active industry, among all classes of society. I humbly hope that Providence will vouchsafe a continuance and increase of those blessings; and in any circumstances which may arise, I shall rely with confidence on your zeal and ability; and I rest satisfied that you will inculcate and encourage that obedience to the laws, and that observance of the duties of religion and morality, which are the only secure foundations of the honour and happiness of empires." The Lord Chancellor then intimated that the parliament was prorogued to Thursday the 25th of September next.

SPAIN.

We related in our last retrospect the mysterious re-appearance of Don Carlos in his native country. His proceedings since then have been reported in our own and the continental newspapers in the most contradictory manner. According to one party, he has been very successful, whilst another represents him as having failed in all his attempts. We have no very positive information from the scene of action to enable us to decide between the two; but as even his warmest partisans cannot claim for him any decisive blow, or important progress, we are inclined to believe his expedition will prove a failure. If his presence was of any value to his cause among the insurgents in the northern provinces, or the mal-contents in the rest of the kingdom, it would have been felt and produced its effects at once. But he has now been in Spain nearly six weeks, and after some paltry military operations, attended with little loss of life on both sides, matters seem to remain much as they were before he went there. The great talent of the Don appears to be in maintaining the mystery of his "whereabont.:" when he was in Portugal, nobody but his immediate adherents knew for some months in what part of the kingdom he actually was, or whether he was not concealed within the Spanish frontier; and since his last expedition, he has been equally happy in defying conjecture as to his precise places of abode. We need not therefore be surprised that some newspapers venture to say that he is at this moment at Paris, and that others *conjecture* he has never been in Spain at all. For ourselves, we think we may repeat an opinion we gave some six months back—that he is not a man likely to find his way to a throne through great difficulties.

The cholera has been more active than Don Carlos. At its breaking out in Madrid, where its progress was at first fearful, the ignorant and superstitious populace imagined that the public fountains had been poisoned by malignants, and rising most furiously in nearly every part of the city, destroyed a number of human lives. This ebullition is not the first of its kind by many, and, thanks to the popular ignorance in so many parts of the world, it is not likely to be the last. When the Spaniards held Lombardy and the kingdom of Naples, the plague visited those countries, where the people, the poor Spaniards created and propa-

Laws A[illegible] people thought the Spa[illegible] gated it by scattering pestiferous powders in the air, and in consequence of this belief a good many Spaniards were murdered. But this, to be sure, was some two centuries ago. In the present instance, however, considering the character the Spanish populace has borne, there is something remarkable in the choice of their victims, who seem all to have been monks and priests. Several monasteries were broken open, and altogether about seventy men are said to have perished by this madness. These riots lasted from the 17th to the 19th of July.

Notwithstanding her dread of the cholera and the popular disturbances, which was by no means peculiar to that princess, the Queen Regent came to Madrid, and the Cortes, as newly constituted, assembled on the 24th of July, the day previously appointed by a royal decree.

Her opening speech was long, circumstantial, and on the whole, satisfactory. The drawbacks were the continuance of civil war, and the financial difficulties of the country.

In announcing the amicable relations existing between her and her allies, the French and English kings, and the Queen of Portugal, she added,

"I could have desired that every other government had answered in like manner to the amicable disposition of the Spanish cabinet; but although none of them have manifested any intention or desire of interfering in our domestic concerns, some have delayed, to this moment, the recognition of my daughter as Queen of Spain. The laws of the monarchy have raised her to the throne—the will of the nation sustains her—reason and time will render due homage to the *conservative principle of legitimacy*."

After congratulating herself on the tried fidelity of the army, the Regent dwelt on the necessity of a prudent and severe economy, adding,

"Publicity—the intervention of the Cortes in all matters of expense, and in the imposition of contributions, will conduct us in a short time to the desired term of equalizing the ordinary resources of the nation with its necessities. This hope is the better founded, as it will be sustained *by an arrangement of the whole foreign debt, compatible with our actual* [illegible] supported by frankness and good faith, which are the principles of my government, as well as by an amelioration of the interior debt, and its progressive extinction, facilitated by the resources which will be applied to it with a prudent reserve, and after a profound examination."

An enumeration of the various reforms which have already been made in different branches of the administration, is followed by a passage which ought to be constantly present to that party in Spain who would build a new Rome in a day. "It cannot be concealed from your circumspection and prudence, that it is not possible to remedy in a few months the accumulated evils of many ages; and that the very desire of man to operate what belongs to time, has frequently led to a bad issue, and compromised the welfare of nations. The Royal statute has provided the cement—it belongs to you, illustrious peers and signors deputies, to concur that the edifice shall rise with that regularity and concert which are the only guarantee of stability and firmness."

Contemporary with the meeting of the Cortes was the detection of an ultra-liberal conspiracy in Madrid, at Tortosa, and Valencia, in which Palafox, the celebrated defender of Zaragossa (who had been created Duke of Zaragossa only a few days before), Van Halen, who seems to be half Spaniard and half Belgian, Alpuente, and some other well-known individuals were implicated. The object of this plot is said to have been the substitution of the essentially democratic Cortes of 1820, for that now established. As it appears, however, that several of the leaders arrested have been already set at liberty, we may conclude that the association was neither so dangerous nor so lawless as had been supposed by the Queen Regent's cabinet.

Both chambers of the Cortes have been much occupied since their assembling by the subject of the foreign relations of the country. M. Martinez de la Rosa has given in explanatory documents, consisting chiefly of the new treaty with the United States of America, fixing at 12,000,000 reals the compensation due by Spain to that power for injuries inflicted on her shipping and merchandise during the French occupation, and the prevalence in Spain of the Berlin and Milan decrees; the late quadruple alliance treaty; the diplomatic notes addressed by the Minister of Foreign Affairs to the Spanish ambassadors at Vienna, Berlin, and St. Petersburgh, on the subject of the delay on the part of the three northern powers in acknowledging the young [illegible] together with a like note addressed to the queen, Isabella; to the pope's nuncio at Madrid.

The Chamber of Deputies has also been engaged in examining the report of a committee appointed by the Minister of Justice, to prepare a new penal code. A finance committee has for some time been sitting every day, so that we may expect soon to learn the fate of the former Cortes' bonds, and the faith, or rather, perhaps, the degree of ability of the Spanish government towards the foreign creditors of the State.

A long, and, we think, scarcely necessary exposition of the abolition of the law excluding females from the throne, and of the new order of succession, together with statements of facts and correspondence between the late king Ferdinand, and his brother Don Carlos, has been submitted by ministers to the Chamber of Peers. These papers contain no facts that were not already well known, and offer no arguments that are the least likely to make any impression on the Carlist faction, or affect in any way the question now at issue between the infant Queen and the Pretender.

FRANCE.

The session of the French Chambers was opened on the 31st of July, by the King in person. In his speech Louis Philippe praised the liberal and moderate policy adopted by previous Chambers, and rejoiced that the national cause has been uniformly successful against those who have made criminal attempts against it. The effects of this were seen in the increasing prosperity of the country. In relation to the affairs of the peninsula, he said, "The internal dissensions of Portugal are over. I have entered with the King of Great Britain, the Queen of Spain, and the Queen of Portugal, into a treaty which has already produced the most salutary influence in favour of the re-establishment of peace in the Peninsula. Always intimately united with England, I am engaged in concert with my allies, by the present situation of Spain, where new difficulties have arisen, which

call for serious attention on the part of the powers which signed the treaty (the quadruple) of the 22nd of April." He described the aspect of affairs in the East as tranquillizing, and asserted, with emphasis, that every thing promises that the peace of Europe will not be disturbed.

The speech had a favourable effect on the Bourse.

There is, however, no appearance for the present of any reduction in the immense standing army of France, and the activity in the dock-yards and arsenal of Toulon still prevails. A small squadron, consisting of two frigates and a brig, has been sent to cruize off the northern coast of Spain, and it is said the large squadron for the Levant is in readiness.

Little other business has been done in the Chambers, except in the Deputies the verification of the election of its members, the nomination of its president and vice-president, and, by both, the voting of the usual address in reply to the King's speech. On Saturday the 16th of August, in the Chamber of Deputies, on the return of the deputation that had been to present the address to the King, his Majesty's reply was read, and then the Minister of the Interior announced, from a royal ordonnance, that the Chambers were prorogued till the 29th of December next.

It appears that it is impossible to keep together at this season of the year a number of deputies sufficient to form a Chamber. The period fixed for their re-assembling is, however, later than was expected.

Many newspaper writers both in France and England attach great importance to the nature of the deputies' address, which, by some of them, is considered as equivalent to a vote of censure on the ministry, and betokening a certain change in the cabinet. These, however, are rather speculations than facts. A more pleasing conjecture, and one which, if verified, will be of immediate advantage to the now allied countries, is, that in the Chamber of Deputies returned by the last election, there will be a majority of members in favour of the free-trade system, or at least a nearer approach to it than is acknowledged at present.

In a great many of the assemblies called *Conseils Generaux*, resolutions have been already adopted entreating the government to employ itself seriously, and without loss of time, to a revision of the Custom-House laws and tariff, with a view to a reduction of duties, and an entire removal of prohibitions on foreign commodities. The Minister of Commerce has announced that he is preparing important modifications.

PORTUGAL.

Don Pedro is said to be pursuing a rigid plan of economy, reducing not only the army and navy estimates, but retrenching the expenditure of the royal household.

Without taking into consideration the very near approach of the meeting of the Cortes of the nation, the Regent, who likes to do every thing himself, and of himself, decreed, on the 23rd of July, that the circulation of paper money should be suppressed and a currency in specie established.

According to Article 1 of this decree, "Paper money shall cease to be circulated after the 31st day of August next. After that period all payments shall be made in specie current in this kingdom."

By Article 2nd, from the 31st of August all holders of paper money may receive, at a discount of twenty per cent. (!) its amount in specie, from the Lisbon bank.

Articles 3 and 4 provide that the holders of paper money, who do not wish to exchange it in the mode pointed out in the foregoing article, may receive from the Public Treasury bonds for the nominal value, which will be payable in specie at the said Treasury within the first fortnight of the month of January, 1838, and will be received from the 1st of January, 1837, as current money for any payments in the departments of the Public Treasury. In addition to these arrangements, the holders of paper money are empowered to take from the Treasury certificates for the full nominal value, payable in specie, within the space of one, two, three, four and five years, and the two first certificates will be immediately receivable by government as current money in the sales of national property. (The property here alluded to is the confiscated monastic property, which, as we hinted last month, hangs heavily on hand.)

By Article 5, English sovereigns, from the 31st of August next, will pass as current coin at the value of 4180 reis, and the dollars of Spain and Mexico will circulate at the value of 870 reis.

But by Article 6, English sovereigns, and Spanish and Mexican dollars, are to be coined in and exchanged at the Mint for Portuguese coin, at the rate and value fixed by Article 5.

This decree, like that for the suppression of monasteries, and like so many others, was merely signed by Don Pedro and his favourite minister, Carvalho. Standing on the threshold of the constitution, the Regent has continued to act, to all intents and purposes, like an absolute king, and the nearer the inevitable meeting of the Cortes has approached, the more he has hurried to dispose of the great questions of government.

Though his last measure is unexceptionable in the abstract, inasmuch as a fixed and sound monetary system is preferable to a system of bank notes, particularly in a country like Portugal, where paper was ever fluctuating in value, still serious objections are made to the sudden and unconstitutional character of the provisions. The bankers and merchants, on whose outstanding operations, which were commenced under the old system, the new measure will operate retrospectively and most injuriously, are loud in their complaints against it, and assert, with great reason, that it is illegal, both in itself and in its source, the provisional Regent Don Pedro having no faculty to enact such laws without the concurrence of the Cortes. But in the same manner the monastic decree and twenty others are illegal.

Intelligence has just reached England of the meeting of the Cortes. The Chambers were opened on the 15th of August, by Don Pedro, who delivered a very long speech on the occasion. After congratulating "the worthy peers of the kingdom, and gentlemen deputies of the Portuguese nation," on the arrival of "the day of glory and happiness," he went into a very unnecessary history of his royal rights—his efforts in favour of a constitution, and his abdication of the throne of Portugal in favour of his daughter. This was followed by abuse of the Absolutists, whom he styles "a rebellious and fanatic faction; and of Don Miguel, whom he calls "an ungrateful and degenerate brother." He then described his own glorious exertions in council and on the field of battle, and his final miraculous success. In alluding to the means by which he found money for his expedition, he said, "I must not omit to state that the pecuniary resources, as indispensable as difficult to be obtained, were procured by a singular contract, in which the success of the enterprise was the only pledge, my signature the only surety. The zeal and the confidence of the party which gave, and that which received, were equally frank and unlimited."

In speaking of the foreign relations of the country, he said that the Queen's government has been formally recognised by England, France, Spain, Sweden, Belgium, and Denmark;—that *all other nations* are at peace with it;—and that he expected, from their justice, policy, and good faith, a speedy re-establishment of the ties which formerly united them with Portugal. He named none of the northern powers that have as yet withheld their recognition of Donna Maria: but with respect to the Papal government he was more explicit.

"The court of Rome," he said, "will certainly not be the last in taking so just and wholesome a resolution (*the recognition*), since we boast of not being the last to respect and venerate in its head the common Father of the Faithful and the centre of Catholic unity, to show we are indissolubly united by the sacred bonds of faith and religion."

Among his "many and very important measures," he took credit to himself for having given a new form to the judicial power, and to the public administration in its different branches—for having organized the army—for having erected Lisbon and Oporto into free ports, and made proper regulations for the extension, liberty, and security of trade—and for having suppressed "all the families and associations of religions of every denomination and order." On this head he was sufficiently vehement. He said, "These establishments, considered with respect to religion, were totally alienated from the primitive spirit of their institution, and almost exclusively governed by love of the temporal and worldly interests which they professed to despise; and, considered in a political point of view, they were like denationalized bodies, indifferent to the good or evil fortune of their fellow-citizens, and zealously serving a despotic or tyrannical government, if they expected from it favour and consideration. To their influence over individuals and

families, which was the more dangerous in proportion as it was secret, Portugal owes, in a great degree, the evils which it has just experienced. There are, indeed, in the individual members honourable but rare exceptions."

After alluding to the pains taken to establish and increase the public credit,—the result of which, he says, is that "the creditors of the state have been paid both in and out of the kingdom, with the most scrupulous punctuality; and the Queens' government has acquired a respectable name on the Exchanges of Europe, being equal in this point to the most prosperous and pacific nations;"—he said a very few words about the paper currency, which is to be extinguished by his recent decree.

After some further remarks about the assiduous and important labours his government had been employed in, he came to what he styled "the two principal objects which now call for, in preference, the attention of the Cortes" and which he recommended to their zeal. The first of these objects was put in the form of a query, and was this—

"Whether the regency ought or ought not to be continued during the remainder of the Queen's minority?"

The second object was—

"To take the proper steps that her Majesty may marry some foreign prince."

He said he expected that the Cortes, with their consummate wisdom and prudence, would "deliberate and decide upon both points with the discretion which may be expected from the union of so much knowledge, and the happy association of the most estimable virtues."

Towards the end of his speech he alluded to the re-appearance of Don Carlos in Spain—an event that would render necessary the maintenance of a stronger army than that contemplated for a time of peace.

In concluding, he recommended to the attention of the Cortes a great variety of subjects, among which are "Laws regulating the liberty of the press and the responsibility of the ministers and public officers;" "the organization of public instruction in all its branches;" the "pious and charitable establishments," and "laws for the protection and promotion of manufactures, commerce and arts, and of agriculture, which is the queen of them all."

The number of peers admitted into the Upper Chamber seems to be only fourteen, as no more could be found who had not acknowledged Don Miguel as King, or who could be held by the present Regent as noblemen imbued with the spirit of constitutionalism. But even this small body did not meet entire. According to the correspondent of the 'Times,' only ten out of the fourteen were present on this solemn occasion. The correspondent of the 'Morning Herald' says there were eleven. In the Lower Chamber only fifty deputies met! We certainly should have expected a fuller attendance in the latter case at least, and have been amused at the reasons assigned for the absence of so many members. The news-collector for the 'Times' says, plainly, "The reason in both cases, that all of them did not attend, is simply this,—their robes and court suits were not yet finished by their respective tailors." The 'Morning Herald's' "own correspondent" gives precisely the same reason, only being a more ambitious writer he expresses it in finer words, and lays the blame on other artisans besides the worshipful tailors of Lisbon.

SYRIA.

INSURRECTIONS, provoked, it is said, by the rapacity and severity of Mehemet Ali's government, have broken out in this country. The Syrians pretty generally received Ibrahim Pasha and the Egyptian army as liberators when they first advanced to drive the Turkish pashas from their territory, but it is probable that by this time many of them may have regretted the change of an oppressive, but a wavering and indolent government, for one whose policy may be somewhat more enlightened, but whose oppression is systematized and constant in its operation. Ibrahim himself seems to have committed the mistake of irritating, by his uniformity of plan and government, that singular, half-Christian and half-Mussulman, half-independent and half-tributary race, the Druses of Mount Lebanon, whom the Turkish pashas, knowing how little was to be gained by hostile conflicts with them, generally left undisturbed in their mountains to the enjoyment of certain exclusive privileges and immunities. The Druses are a fierce and warlike people, but from their numbers, their want of organization and military discipline, we question whether they are equal to the task, which some writers now confidently give them, of driving Ibrahim Pasha out of Syria. This commander may derive a sort of *prestige* from his name. Another Ibrahim Pasha, acting for Sultan Amurath III., fully succeeded in repressing the Druses, who at that time (towards the end of the sixteenth century) had descended from their mountains, and fallen on the plains of Syria.

Some reports we have seen in the newspapers, stating that part of the Egyptian army has sustained some reverses at the hands of the Druses, in the mountain-passes of the country, between Jerusalem and Nablous, may be correct enough, but we can scarcely credit the assumptions that the same victorious general and army that so lately marched from St. Jean d Acre to the neighbourhood of Constantinople, are on the point of being dispossessed of Syria almost by a single blow.

Indeed, what bears the character of an official document, has appeared at Alexandria, of a date almost as recent as the letters from Constantinople, announcing Ibrahim's critical position; and, counting the distance, intelligence from Syria must always be several days later in reaching the Turkish capital than Alexandria.

The document is in the form of a circular addressed to the consuls of the different European powers in Egypt, and it bears the signature of Boghos Joussouff, the minister and drogoman of Mehemet Ali. It is dated, Alexandria, 25th Fafar (the 25th of Fafar, or Saphar, corresponds to our 4th of August). The following are the important paragraphs:—

"Gentlemen,—I hasten to communicate to you the contents of a letter received from Ibrahim Pasha, dated 17th Fafar, 1250 (of the Hegira), the original of which was sent to Jaffa, but a copy of it reached the representative of the viceroy to-day by a courier from Damascus.

"The chiefs and inhabitants of the mountains of Nablous, Jerusalem, and Djebil Khalib, have come to implore pardon. The grace which they have asked has been granted to them; their submission, as on former occasions, received, and they have all returned to their homes."

CHRONICLE OF OCCURRENCES.

July 11.—Tula, one of the largest, handsomest, and most populous provincial capitals of Russia, was this day desolated by a dreadful conflagration, which broke out in a private house. Nine churches, six hundred and seventy private buildings, the wooden dwelling-houses of the numerous masters and workmen of the celebrated manufactory of arms, the tallow magazines, the fish market, and the butchers' market, were in a short time reduced to ashes.

— About the same period a destructive fire broke out at Moscow. It began in a private house, and taking the direction of the wind, communicated to three hundred others, which, being built of wood, were speedily consumed. Some buildings of stone were also destroyed. The damage is estimated at several millions of roubles. [Russian towns are built of such combustible materials, that the wonder is that such fires are not more frequent.]

24.—A farewell dinner, given to General Mina, at the Albion, was attended by all the principal Spaniards in London. Don Augustin Arguelles was in the chair, who passed a most eloquent and well-deserved eulogium on the past services of General Mina, and gave a brilliant sketch of the good he might yet confer on his country. None of the toasts excited greater enthusiasm than "A close and an eternal alliance between England, Spain, and Portugal."

27.—Earl Bathurst died at his house in London. He was Colonial Secretary for several years subsequently to 1824. The Order of the Garter, which he held, has been given to the Duke of Norfolk.

— Upwards of six hundred vessels (exclusive of boats) passed Greenwich Hospital, bound to the port of London.

29.—In consequence of the explosion of a steam carriage three miles from Glasgow, thirteen persons were more or less hurt; one of whom died from concussion of the brain, and another from fracture of the thigh.

August 1.—A public dinner was given at the Freemason's Tavern, to celebrate the termination of slavery throughout the British colonial possessions. The Earl of Mulgrave, the late governor of Jamaica, was in the chair, and the most active public supporters of emancipation were present, as were also several gentlemen of colour from the West Indies. The dissenters generally throughout the country celebrated the same event in their several

chapels. At Hull the first stone of the Wilberforce testimonial was laid.

— The blind man Edwards, and the other parties concerned in the remarkable affair with Mr. Gee, were this day brought up to take their trial at the Middlesex sessions. The trial lasted thirteen hours, and terminated in the delivery of the following verdicts and sentences:—John Edwards, guilty of conspiring to imprison Mr. Gee—sentence, two years' imprisonment in Newgate. Peter Lacassayne, guilty of a common assault—six months' imprisonment. Jeremiah Weedon, guilty of conspiring to imprison Mr. Gee—twelve months' imprisonment in the House of Correction. Maria Canning—not guilty. Subsequently a question at law was raised between the chairman of the sessions and the governor of Newgate, who refused to receive Edwards into the prison on the order of that magistrate.

5.—In the vicinity of Birmingham this evening, the whole line of the turnpike roads was inundated with the waters; and the meadows in the low lands presented the appearance of one vast lake. The valleys on the Warwick-road were almost impassable, in consequence of the height to which the flood had risen; the water, in many instances, rushing through the interior of the carriages, to the no little annoyance of the numerous passengers who were on their way to the Warwick assizes. Between Rowington and Hatton the road was still more completely inundated. The fields, in common with the turnpike road, were for some miles completely deluged; and the corn-crops, to the serious loss of the farmers, entirely laid waste. Near Radford a whole crop of turnips was washed into a neighbouring wheat field. At Saltsford, adjoining Warwick, the furniture of the first floors of the houses between the gas-works and the turnpike-gate was to be seen floating in the streets. The gardens in the neighbourhood were three feet under water; and the canal overflowing its banks, washed the stacks of coals situated in the wharfs into the public highway. A wall, forty feet in length and ten feet high, was likewise washed down by the flood. At Kenilworth, near the bridge, the water rose to the height of the second-floor windows of the houses; indeed, the country people from the higher part of the country state that a more tempestuous or destructive storm has not occurred in the memory of man. At the termination of the tempest, the roads, from the dust and upper material having been washed off by the heaviness of the rain, appeared like the dry channel of a river covered with white pebbles; and, from the ruggedness of the surface, in some places were absolutely unsafe for the travel of horses. This is merely a specimen of the effects of the flood in the midland counties. At the village of Glossop, near Manchester, some lives were lost on the occasion; and the total of the losses sustained in the Glossop Dale is computed at 20,000*l.*

— At the Chester assizes, two men, named Garside and Mosley, were indicted for the murder of Mr. Thomas Ashton, on the 3d of January, 1831. The murdered person was manager of a mill at the period when there was a dispute between the masters and men at Werneth. He was killed by a shot while passing through a lane on his way to the mill. The principal witness against the prisoners was the brother of Mosley, who was himself a party in the murder, but was admitted king's evidence against the others. It transpired on the trial that the prisoners had no personal ill-will to Mr. Ashton, but had undertaken the assassination in consideration of receiving 3*l.* 6*s.* 8*d* each—ten pounds for the three—from the Trades' Union, to which Mr. Ashton had become obnoxious. The prisoners were found guilty, and sentenced to death; but have not yet been executed in consequence of a dispute between the sheriffs of the county and those of the city of Chester, each party contending that the duty devolved on the other of seeing the sentence carried into effect. Meanwhile Scholefield, the man charged with having paid the money for the murder, has been apprehended, and inquiries are in progress which it is hoped will still further elucidate this most atrocious affair.

8. The foundation-stone of a new receiving-house of the Royal Humane Society was laid by the Duke of Wellington, in Hyde-Park.

11. At the Lancashire Assizes, a Mr. Driver obtained 500*l.* damages for the injuries sustained by the overturning of a mail-coach, the horses belonging to which had started away in the absence of the coachman, who had got down at the door of an inn without leaving any person in charge of the horses.

10. General Sir John Doyle, K.G.C.B., died in his 78th year.

— The Glasgow turn-out calico printers, after a nine months' struggle, have found it their interest at last to yield to their employers, and take work at whatever they can obtain from them. This strike has cost the employed 12,000*l.* to support the idlers.

14. At Dublin, in the great circular room attached to the Mansion House, a meeting of about 5000 persons, consisting chiefly of Protestant nobility and gentry, was held for the purpose of expressing their attachment to the Established Church, and their determination to face all peril in its defence. The Lord Mayor was in the chair.

16. At about half-past ten o'clock this night a fire broke out at Liverpool in the yard of Messrs. Clarke and Nixon, ship-builders. It appears to have originated in the stove, and as the place was surrounded by chips, boards, and dry timber, it quickly extended to a large house or shed at the extremity of the yard, filled with pitch, tar, cordage, and other inflammable materials. In less than ten minutes the whole place was on fire. A new ship, on which 5000*l.* had been expended, lay on the stocks alongside the shed, and the flames reached it, but were subdued by the engines, though badly supplied with water, before any considerable injury was done to the vessel. Before one o'clock all danger of further mischief was removed; but the fire was not wholly got under until after five o'clock on the following morning.

18. This being the day appointed by the master builders of the metropolis to offer the declaration against Unions to their men for signature, meetings of the operatives were convened in all parts of the town on Saturday evening, when it was resolved that the workmen should fetch away their tools early this morning. This resolution was carried into effect, and upwards of 10,000 are calculated to have struck on the occasion. Many of the men, finding the masters firm, have since returned to their work and signed the declaration; but in general, all extensive building operations are at a stand in the metropolis.

19. Mr. Hancock's steam-carriage, which ran between Pentonville and Finsbury-square during part of last autumn, has resumed its operations on the same road, and will now continue to ply regularly between Moorfields and Paddington. The carriage is capable of carrying ten or twelve passengers, besides the persons required in its management. The rate of travelling, exclusive of stoppages, is exactly twelve miles an hour. Great crowds were attracted to all parts of the route which the steam-carriage took to witness its performance, and great numbers went away disappointed at not being able to obtain a seat in it. Mr. Hancock has stated that it was rather his object to show the public that they might depend on his steam-carriage as a safe and steady means of conveyance, than to exhibit an extraordinary, and, as it would be on so crowded a road, a dangerous degree of velocity. The facility with which the carriage was managed, guided, and checked, is asserted to have been fully equal to that of the best driven horse-coach.

20. There was a general strike this morning among the artisans employed by Government. All of them were offered employment if they would sign a declaration that they did not belong to any Union. Only a very small number signed, and the rest have relinquished their work.

— Her Majesty the Queen returned to England from her visit to Germany, and disembarked at Woolwich, where she was received in the most flattering manner by many thousand spectators who were assembled to witness her disembarkation.

There is this year a great diminution of Irish labourers employed in getting in the harvest. We trust with the 'Globe,' that this augurs well for the state of home labour in Ireland, while it restores to the English labourer an advantage of which he has for many years past been deprived.

Several large seizures of machinery, about to be illegally exported to France and Holland, have been recently made by the revenue officers, and it is believed that the practice has been carried on to a very large extent.

The Right Hon. Thomas Frankland Lewis, John George Shaw Lefevre, Esq., and George Nicholls, Esq., have been appointed the Poor Law Commissioners for England and Wales. Mr. Chadwick has been appointed Secretary to the Board.

Railways.—The works of the Greenwich railway are more than half completed, the greatest difficulties connected with them having already been surmounted. The railway proceeds, according to the plan of Colonel Landmann, in an almost direct line from Bexley-place, Greenwich, between the Kent-road on the one side, and the river Thames on the other, and will terminate in the immediate vicinity of St. Thomas's Hospital, where the London entrance is to open; the distance will be rendered two miles shorter than it is by the present road communication. The grounds through which the railway will pass are nearly all occupied by market gardeners, and lie so considerably below the level of the points of communication that it was necessary, in order to obtain a plane, to erect a long train of arches in the intervening space on which to form a carriage-way. They are being constructed upon a principle of great strength, and running at an elevation of fifteen or twenty feet above the surface of the earth, with a secure battlement on either side. It is calculated that the carriages with their heaviest loading will perform the journey from London to Greenwich in the short space of ten minutes or a quarter of an hour; the foreign mails, by being landed at Greenwich, will arrive an hour sooner in London. Besides the railway, the Company are occupied in forming two lines of road from London to Greenwich, running close to the base of the work, and parallel with it—that on the one side being intended for equestrians, ordinary carriages, &c.; and that on the other (which is to be shaded with trees) for pedestrians.

The utmost activity prevails among the French engineers between Calais and Paris, in completing the surveys for a railway between those places, in connexion with the London and Dover Company.

A company is in course of formation for the construction of a railway from London to Norwich. The line is intended to be

through Romford, Brentwood, Ingateston, Chelmsford, Witham, Colchester, Ipswich, and Bury.

Notice is given in the papers of an application to Parliament next Session for a Bill authorizing the formation of a railway from London to York, by way of Bishop's Stortford, Cambridge, Peterborough, Stamford, Grantham, Lincoln, Gainsborough, and Selby, with branches to Bury St. Edmund's, Thetford, Norwich, Nottingham, Sheffield, Leeds, and Hull. This road, if formed, will be from 300 to 400 miles in length.

The old ship the Discovery, in which Captain Cook sailed round the world, was some time since removed from Woolwich, and is now moored off Deptford as a receiving ship for convicts.

At the great annual sheep fair lately held at Britford, near Salisbury, upwards of 80,000 sheep and lambs were sold; lambs fetching 30*s.*, ewes 34*s.*, and wethers 35*s.* each.

State of Trade in Lancashire.—The silk-weaving and dyeing in towns ten miles round Manchester have within the last three weeks manifested a better prospect: hands are now fully employed. Masters are wanting weavers of all sorts. No alteration in the wages has taken place within the last eighteen months. The fancy or figured weavers can earn from 14*s.* to 16*s.* per week, while the weavers of plain sarcenets cannot earn more than 10*s.* or 11*s.* per week. The cotton hand-loom weavers at Oldham, Ashton, and other neighbouring towns are fully employed, but at miserably low wages; the hand-loom weavers cannot earn on an average more than 6*s.* or 7*s.* per week. The cotton-spinning at Oldham, Rochdale, and Heywood, is very brisk; spinners can earn 24*s.* per week, but on an average not more than 22*s.* per week; power-loom weavers can earn from 10*s.* to 12*s.* per week, and some more The woollen trade at Rochdale and Rossendale is brisker; yet since last September a great number of hands have commenced working in cotton factories. The flannel business seems to be reviving, but wages are low. Woollen weavers cannot earn more than 9*s.* or 10*s.* per week, and spinners about the same.

Between the 15th and 31st ult. the number of deaths by cholera at Madrid amounted to 5231. The cholera has broken out with great violence at Gottenburg, in Sweden.

There have been extensive conflagrations of the forests of Lithuania and the north of Prussia, which probably have been caused by the very dry weather.

Last month the Emperor of Russia gave a gold medal set in diamonds, with the riband of St. Andrew, and a caftan of honour, to the elder Sultan of Orusk, Lieut.-Colonel Kunu Kuldscha Chu dai Mendin, while he was at St. Petersburgh, as a reward for his fidelity and attachment to the Russian throne; he also ordered a sum of 5000 rubles to be paid him from the imperial treasury. Another Sultan, Bulchar Saren, and several persons of inferior rank, received also gold medals and caftans of honour.

Belgium. Mons, Aug. 17th.—The trial of the persons implicated in the disgraceful riot, and destruction and pillage of property, that occurred at Brussels in the month of April last, has ended, to the great surprise of most people, in the acquittal of all the prisoners; who, between actors and instigators, amounted to seventy-seven. Two hundred and twenty-eight questions were read to the jury, who, after retiring for six hours, pronounced the accused not guilty on all and every the 288 questions. A subscription was opened at Mons, where the trial took place, to assist the prisoners set at liberty with the means of returning to Brussels.

Poland.—The *Frankfort Gazette* publishes a list of 450 Poles, whose property had been confiscated by the Russian Government in the province of Wilna alone. The court-martial sitting in Warsaw had condemned to death the five members of the Polish Revolutionary Government (including General Serzynecki). The only one of the five actually in Poland, however, is Vincent Niemojowski.

Poles in America.—An American paper states that the greater part of the Poles who were taken to New York by an Austrian frigate have resolved to settle together in the interior of the country. They intend not only to found a free colony for themselves, but to keep it open for their countrymen dispersed in Europe, who may perhaps be soon obliged to follow them. This plan is much approved; and they have sent deputies to Washington, to petition Congress to give them land and means to found a colony for themselves and their brethren. There is little doubt that their petition will be granted.

United States.—New York papers to the 17th of July have been received. During three successive nights the inhabitants of that city were kept in alarm by the mob, who proceeded to various acts of violence, one of which was the destruction of the house of Mr. Tra[illegible]nich they set fire to. The advocacy of the question of the immediate emancipation of the slaves and their intermixture with the whites appears to have been the cause of this ferment among the populace. On Saturday, the 11th of July, the riotous proceedings had entirely ceased, and energetic measures had been adopted by the civil and military authorities to prevent their return.

At the present moment, when the exportation of specie to the United States is an object of much interest, the following statement may be useful:—

	Dollars.
The importations of specie and bullion during the year ending Sept. 30, 1833, beyond the exports, amounted to about	5,000,000
From October 1, 1833, to June 11, 1834, over	10,000,000
Brought by emigrants not less than	2,500,000
Gold produced in the United States	2,500,000
Increase of bullion and specie since Jan. 1, 1833	20,000,000

The whole amount of specie in the country, previous to these importations, amounted by estimation to 20,000,000 dollars. Credit was partially recovering, and the banks discounted short notes rather liberally; but confidence was not sufficiently strong for transactions in long bills. Business is slowly improving, but freights at New York were still very dull.

Canada.—Canada papers to the 4th of July state that the number of emigrants which have arrived at Quebec to the 28th of June last amounted to 17,637. The emigration to the same province in 1833, was 10,399.

Papers to the 13th of July last state that a grand oratorio, the first ever known in Canada, was announced for the 26th at Quebec, under the patronage of the bishop and civil and military authorities; the proceeds to be appropriated to the support of the Emigrant Society. A vessel, name unknown, with 280 passengers, from the west of England, had been cast away, and only seven saved.

Jamaica.—By his Majesty's packet Spey, letters and papers have been received from Jamaica to the 30th of June inclusive. At that period the colony was very tranquil, though some few affected to apprehend the coming of the 1st of August, apparently without cause. In consequence of the rejection of several Bills by the Council and the Executive, the House of Assembly was prorogued on the 25th of June until the following day, when, after addresses and counter addresses to and from the House of Assembly and the Governor had been made, the Bills were reintroduced in an amended form, and were got through on the 28th, the House being expected at the above date to rise in a few days.

New South Wales.—The *Sydney Gazette* of the 13th February says, "The Launceston papers contain the most alarming accounts of the state of that part of Van Diemen's Land, from the almost daily outrages committed by armed bush-rangers. The outrages of these desperate banditti are not confined to nocturnal attacks on the lonely settlers, but are frequently committed in the open day, and in populous places—even in the very town of Launceston. Armed robbers show themselves in the streets, walk into people's houses, tie the inmates to chairs or tables, and then deliberately sit down to regale themselves in their presence! Why, in the worst days of bush-ranging here, we have had nothing like this; and yet, if the public journals at Launceston are to be credited, the authorities seem to be all but quietly looking on."

Sydney papers to the 4th of March mention that intelligence had been received from Norfolk Island of another mutiny, attended with the loss of several lives, in that settlement. The mutiny took place on the 13th of January. One hundred and seventy of the convicts engaged in it have been punished by being compelled to work in heavy chains.

Penang.—It is stated, in accounts from Penang, that a serious mutiny has taken place in his Majesty's 41st Regiment, at Moulemin. The grenadiers and light companies quitted their quarters with their arms and ammunition, and retired to the jungles in a state of open revolt; where, it is said, they were surrounded by a regiment of native infantry, and taken into custody.

The Indus.—Agra papers, of the 10th of March, state a report that Shah Shuja, the king of Cabul, had offered to open the navigation of the Indus, on condition that the Company would assist him in his war with the Ameers of Sinde.

Koords.—Letters from Erzeroom bring intelligence, that a caravan, with 680 loads of goods, chiefly English, had, on its way to Persia, been plundered by a Koordish tribe. After a short, but bloody engagement, the travellers and the troops that escorted them, finding further resistance useless, took to flight. Four hundred and fifty loads were taken by the enemy; the want of beasts of burden obliged them to abandon the rest.

Persia.—Accounts from this country mention, that the son of the late Prince Royal Abbas Meerza has been adopted as successor to his grandfather, the reigning monarch. This is deemed a favourable settlement for English interests. It was feared that a prince of an unfriendly family would have been selected.

THE COTTON TRADE.

In some preceding Numbers of 'The Companion to the Newspaper' we have given accounts of the present state of different branches of our trade and manufactures, principally founded upon the voluminous evidence appended to the Report of the Committee of the House of Commons of the session before last on Manufactures, Commerce, and Shipping. Our Fourteenth Number contained an article on the Shipping Interest, Number Fifteen, one on the Iron Manufacture; and Number Sixteen, one on the Hardware Trade. In the present paper we shall endeavour to present the substance of the most important statements to be found in the evidence on the subject of the Cotton Manufacture, now by far the greatest branch of industry prosecuted in this country. As in our former articles, we shall avail ourselves as we go along of the information afforded by other authorities, whenever that contained in the Report of the Committee may not be sufficiently full or precise.

The history of the cotton manufacture, interesting as it is, has been so often detailed, that it is probably familiar to nearly all our readers, and we shall only therefore, for more convenient reference, note down in their order its principal epochs.

The spinning and weaving of cotton, which appear to have been known in the East from the remotest ages, are supposed to have been for the first time practised in Europe about the close of the fifteenth century. It was probably more than a hundred years later before the manufacture was introduced into England. The first mention that has been discovered of its existence at Manchester, its most antient and still its principal seat, occurs in a tract published in 1641, the *Treasure of Traffic*, by Lewis Roberts. Roberts speaks of it as if it had been for some time established among the inhabitants of that town. He says, "they buy cotton-wool in London that comes first from Cyprus and Smyrna, and at home work the same, and perfect it into fustians, vermilions, dimities, and other such stuffs, and then return it to London, where the same is vented and sold, and not seldom sent into foreign parts, who have means at far easier terms to provide themselves of the said first materials." It is to be observed that cotton fabrics, the produce of the looms of the East, had been known and in use in this country, as well as in other parts of Europe, long before this period, and we even find mention repeatedly made in very ancient acts of parliament and other writings of cottons of domestic manufacture; but these were really made of wool, and received the name of cottons merely as being imitations of the foreign fabrics.

The English cotton manufacture made very slow progress for more than a century after the time when Roberts wrote. At the commencement of the last century the importation into the kingdom of cotton-wool scarcely exceeded a million of pounds annually. And down to about the year 1760, the manufacture, if it could be called by that name, was entirely carried on by weavers scattered over the country in cottages, who purchased what wool they wanted each on his own account, got it spun into thread by their wives and children, and plied their looms only during part of the day, the rest of which was spent in digging their gardens. About 1760, the system was begun by the Manchester merchants of distributing supplies of wool among the weavers by means of agents, who travelled over the country for that purpose at stated times. It is said, also, that it was not till this time that the fly-shuttle, which had been in use in the woollen manufacture for more than twenty years, was introduced into the weaving of cotton. Whenever the web exceeded a yard in width, the process of weaving employed two persons, who, standing on opposite sides of the loom, threw the shuttle to one another. There cannot be a more striking evidence of the backward and languishing state in which the business was.

But, in point of fact, no goods entirely composed of cotton had as yet been manufactured in England. In what were called cotton cloths, it was only the weft, or thread introduced transversely by the shuttle, that was of cotton; the longitudinal thread, or warp, was always of linen yarn. It had not been found possible to spin the cotton into thread sufficiently strong and hard for the latter purpose. The spinning, too, was entirely carried on by the distaff and spindle; the spinner drawing out only a single thread at a time.

This was so slow a process that, insignificant as the extent of the manufacture was, considerable difficulty appears to have been long felt by the weavers in procuring cotton-thread in sufficient quantities. So early as the year 1733, the ingenuity of a Mr Wyatt of Litchfield is stated to have been successfully exerted in obviating this inconvenience. He invented a machine for spinning many threads at the same time, which he put up both at Birmingham and Northampton; but his speculation seems to have eventually failed, and his contrivance to have been forgotten. From late researches it appears that, in conjunction with a Mr. Paul, he took out a patent in 1738 for his invention, the principle of which was in fact the same with that many years after proposed and put in practice by Arkwright, namely, the drawing out of the thread by means of two successive pairs of rollers, revolving with different degrees of velocity. In 1753, also, a Mr. Lawrence Earnshaw, of Mottram in Cheshire, is said to have invented a machine for the same purpose, which, however, he declined bringing into use, in the notion that it would deprive of their bread those who were then employed in spinning cotton on the distaff.

Soon after the year 1760, the manufacture of cotton cloths began to show a decided tendency to advance and extend itself. A demand for the goods sprung up both on the Continent and in America, and considerable quantities were exported to both these quarters. The supply of thread obtained from the distaff became more and more inadequate every day. At last, in 1767, the spinning-jenny, which at once enabled eight threads to be spun at the same time by a single individual, was invented by James Hargraves, a carpenter of Blackburn. It does not appear, however, that these machines were generally introduced for some time. Hargraves is said to have been driven out of Lancashire by the popular opposition to his invention, and

[WILLIAM CLOWES, Printer, Duke Street, Lambeth.]

to have died at Nottingham in poverty, after having been obliged to abandon the prosecution of it.

The contrivance of the spinning-jenny, however, was speedily followed by Arkwright's production of the greatly more important machine which, from water having been the power at first generally employed to set it in motion, he called the water-frame, or throstle. Arkwright himself acknowledged that he had been preceded by Hargraves in the spinning of cotton by machinery, but he claimed as his own the much more ingenious method of spinning a thread of any required degree of fineness by making the cotton pass in succession through two pairs of rollers, the second pair revolving three, four, five, or any other number of times faster than the first. He described this as the principle of his invention. Whether or no he was aware that the same principle had been applied thirty years before by Wyatt is doubtful. If he was aware of that fact, he seems to have been the only person of his day who knew it: for, although his claim to the invention of the apparatus in question was repeatedly contested in courts of justice and elsewhere, and his patent was at last overthrown by the verdict of a jury, who were induced to believe that the true inventor was a person of the name of Highs, or Hayes, the name of Wyatt was never mentioned in the course of the controversy. It is only very recently that Wyatt's patent has been discovered.

Arkwright took out his patent in 1769, and immediately, in conjunction with Mr. Need, erected his first mill at Nottingham. From this date the English cotton manufacture assumed altogether a new character.

Cloth was now for the first time woven entirely of cotton, the thread spun by Arkwright's machinery being strong enough to serve for warp as well as woof. This important innovation in the manufacture was introduced in 1773. The greater cheapness of production encouraged the consumption of the article both at home and abroad. Numerous factories were established in which Arkwright's frame was employed, at first in many cases by evasion or in open defiance of his patent; and at length, after the great trial in the year 1785, by which the patent he then held, the second he had obtained, was declared void, by any parties who thought proper so to invest their capital. After this event, also, the mule-jenny, a combination of Hargraves's spinning-jenny and Arkwright's water-frame, which had been some years before invented by Mr. Samuel Crompton, of Bolton, came into general use. Arkwright's patent had, of course, so long as it was held to be valid, prevented the adoption of an apparatus, one material part of which consisted of his protected invention. It is only by the mule that cotton thread of the finest qualities can be spun.

The extraordinary facilities that had been thus given to the spinning of cotton had not only raised that particular process, long in so rude a state, to a point of advancement equal to that which the process of weaving had attained, but had carried the former far beyond the latter. As for some time the difficulty had been to find thread enough to feed the looms, so now it seems to have been apprehended by some persons that it would be impossible to find a sufficient number of weavers to work the thread that was spun. Dr. Cartwright, the inventor of the power-loom, relates, in a statement which has been published of the circumstances that led to his invention, that, happening to fall into the company of some gentlemen of Manchester at Matlock, in the summer of 1784, one of them observed that, as soon as Arkwright's patent expired, so many mills would be erected, and so much cotton spun, that hands would never be found to weave it. In that case, indeed, the large quantity of thread would not long have continued to be produced, any more than bricks would continue to be made in greater numbers than were required for building, or than quartern loaves would continue to be baked if there were no mouths to consume them. The Manchester philosopher's notion, however, though somewhat curiously expressed, was not without meaning when properly understood. He intended to intimate merely that the extent and prosperity to which the cotton manufacture might be carried by the great improvements that had been made in the spinning process would be prevented or seriously impeded unless a method should be found out of weaving by machinery also. This great desideratum, as we have just noticed, was soon after supplied by the ingenuity of Dr. Cartwright. He took out a patent for his completed invention in 1787. Owing to a variety of unfavourable circumstances, however, it was not till about the commencement of the present century that his power-loom came into general use. It was extensively adopted as soon as it became public property by the expiration of his patent; and both the spinning and weaving of cotton are now, for the most part, effected by machinery. Many improvements, and some of them of great value, have, within the last thirty years, been made both upon the spinning frame and the power-loom; but these, in so rapid and general a sketch as this, we cannot notice.

We will now subjoin a few numerical statements respecting the extent of the cotton manufacture at different periods, which will afford a view of the progress it has actually made.

During the first five years of the last century the total quantity of cotton wool annually imported averaged only 1,170,881 lbs.

By the year 1720, the average annual importation had only increased to 2,173,287 lbs.

It was nearly fifty years before this comparatively small amount was doubled; for during the five years ending with 1775 the annual importation was only 4,764,589 lbs.

From this date, however, the increase has been progressive and rapid. The average importation for the five years ending with 1780 was 6,766,613 lbs.; and that for the next period of the same length 10,941,934 lbs. In 1784 the amount was 11,482,083 lbs.; and in 1785, the year in which Arkwright's patent was cancelled, it was 18,400,384 lbs. It never afterwards fell below this amount.

The following account of the annual imports in various years since 1785 is extracted from tables printed in Mr. M'Culloch's 'Dictionary of Commerce,' 2d edition. "These tables," says Mr. M'Culloch, "have been partly taken from official documents, and partly from the accounts of merchants of great experience. We believe they may be relied on as approaching as near to accuracy as it is possible to attain to in such matters."

Years.	lbs.	Years.	lb
1786	19,475,020	1812	63,025,936
1789	32,576,023	1814	73,228,000
1792	34,907,497	1815	96,200,000
1793	19,040,929	1816	97,310,000
1799	43,379,278	1817	126,240,000
1800	56,010,732	1818	173,940,000
1802	60,345,600	1823	183,700,000
1807	74,925,306	1825	244,360,000
1808	43,605,982	1827	264,330,000
1809	92,812,282	1831	280,080,000
1810	132,188,935	1832	270,690,000
1811	91,576,535		

According to the official tables published by the Board of Trade, the total quantities of cotton wool imported in 1831 and 1832 were, in the former year, 288,674,853 lbs., and in the latter, 286,832,525 lbs.

It is calculated by Mr. M'Culloch that the value of the cotton goods annually manufactured in Great Britain is now not less than 34,000,000*l.* sterling, and that the total number of persons directly employed in the different departments of the manufacture is about 800,000; to which may be added about 100,000 to whom it gives employment as engineers, machine-makers, iron-founders, smiths, joiners, masons, bricklayers, &c. The amount annually paid in wages to these different descriptions of persons is supposed to amount to 21,000,000*l.* sterling. In 1760 the entire value of all the cotton goods annually manufactured in Great Britain is estimated to have amounted only to 200,000*l.*

The different countries from which the cotton wool imported into Great Britain is derived, and the proportion of the entire quantity received from each, will be best shown by the following extract from one of the official tables published by the Board of Trade:—

Cotton wool imported into Great Britain from	In 1831. lbs.	In 1832. lbs.
United States of America	219,333,628	219,756,753
Brazil	31,695,761	20,109,560
Turkey and Egypt .	8,081,024	9,113,890
Other foreign Countries .	697,691	598,048
East Indies and Mauritius	25,805,153	35,178,625
British West Indies, the growth of . . .	2,228,927	1,708,764
„ Imported from Other British Possessions	172 758	331,664
	659,911	35,221
Total Quantities .	288,674,853	286,832,525

It appears, therefore, that of the whole quantity imported, above three-fourths are supplied by the United States. Before 1790 we imported none from America. Of the whole quantity of cotton-wool now exported from the United States, England takes considerably more than two-thirds. The finest cotton brought to this country is what is called the *Sea-island* cotton, which grows on the shores of Georgia.

According to the Official Tables, of the cotton imported into Great Britain in 1831 and 1832, there were re-exported in the form of wool, in the former year, 22,308,555 lbs., and in the latter 18,027,910 lbs. The quantities retained for home manufacture therefore were, in 1831, 273,249,653 lbs., and in 1832, 259,412,463 lbs. In an account printed by Mr. M'Culloch from 'Burns' Glance,' a tabular statement annually published at Manchester, and which he says is admitted to be drawn up with great care, the total quantity spun in Great Britain in 1832 is estimated at 277,260,490 lbs., producing, after making allowance for 1¼ oz. per lb. lost in spinning, 246,935,124 lbs. actually spun into yarn. Deducting from this quantity 24,338,217 lbs. for yarn spun in Scotland, there remains 222,596,907 lbs. as the total quantity of yarn spun in England. This is calculated to have been disposed of in the following manner:—

Exported in Yarn during the year .	71,662,850 lbs.
„ Thread . . .	1,041,273
„ Manufactured Goods .	61,251,380
Estimated quantity of Yarn sent to Scotland and Ireland . . .	5,700,000
Exported in mixed manufactures not stated in the above named articles, consumed in cotton banding, healds, candle and lamp wick, wadding, and loss in manufacturing goods . . .	12,000,000
Balance left for home consumption and stock	70,941,404
Total	222,596,907

The total export of British cotton manufactures in 1831 was of stuffs, 421,385,203 yards, of the declared value of 12,163,513*l*.; of hosiery, lace, and small wares, to the value of 1,118,672*l*.; and of twist and yarn to the value of 3,975,015*l*. Cloths and yarn, therefore, to the value of above seventeen millions sterling, or about half the entire quantity manufactured, are annually exported. The yarn is sent principally to Germany, Russia, the Netherlands, Italy, and the East Indies; and the hosiery and lace chiefly to the United States, the Netherlands, and Germany. The following are the countries to which the greatest quantities of the stuffs were sent in 1831:—

To the United States of America .	68,587,893 Yards.
East Indies and China . .	43,385,852
Germany	41,520,616
Italy	38,164,564
Brazil	26,271,527
Turkey and Continental Greece .	24,565,580
Portugal	23,377,245
British West Indies . . .	21,975,459
British North America . .	15,618,106
The Netherlands . . .	13,285,524
Chili	12,793,220
Mexico	12,150,426
Cuba and other foreign West Indies	11,569,441

The first witness examined before the Committee on Manufactures, Commerce, and Shipping, whose evidence referred especially to the cotton manufacture, was Mr. Kirkman Finlay. Mr. Finlay states that he was still engaged in business as a general merchant, both in London and in Glasgow:—that, until within the last few months, he had had establishments also at Liverpool, at Charlestown, in the United States, at New York, and at New Orleans;—and that he was connected with manufactories of cotton-spinning or power-loom weaving, at Catrine, in the county of Ayr, at Deniston in Perthshire, and at Balfron in the county of Stirling. His examination, taken on the 16th and 21st of May, 1833, extends over seventeen or eighteen folio pages. The following are the most important statements he makes in relation to our present subject.

The cotton manufacture he considers to be characterized by great activity and rapidity of sale, but by very moderate returns of profit. As to the general health of the trade, he says, "I think that the stocks on hand are inconsiderable; that the payments are good; that if there is any thing unhealthy, it arises from a practice which has greatly prevailed of late years, of the manufacturer making large consignments of his productions to foreign countries, and receiving bills in advance, and discounting those bills with monied persons in London and other parts of the country, which has led to a greater extension of the trade than otherwise would have taken place." This system, the witness afterwards states, began about 1820 or 1821.

With this exception, he considers the state of the manufacture to be sounder and more healthy than it was some years ago. As to the condition of the workmen he says,—"The wages of the establishments with which I am connected, and I believe generally throughout the country, are quite the same now as they were many years ago; the employment at such establishments is regular and constant: it never varies; the prices do not vary; every body is paid according either to the work done by the individual himself, or according to the work done in the particular loom in which he may work, according to the nature of the employment: and therefore, the wages in such establishments being quite the same as they were many years ago, when the prices of provisions were a great deal higher than they are now, it follows as a natural consequence, that the labourers must be much better off now in such employment than they were at almost any period I can name for many years back." In consequence of the improvement of machinery, a great deal more work is now done than formerly, but certainly with fewer hands in proportion to the amount of production; yet, taking all their establishments together, Mr Finlay adds, he and his partners had increased the number of persons in their employment.

Within his own experience, this witness says, profits in the business of cotton-spinning were highest about the year 1802; but before that time they had been even higher. Up to the end of the war in 1814, the manufacturers of this country had no foreign rivals to compete with. They have now to bear up against an active and formidable competition in France, Switzerland, Austria, and elsewhere. We have already, however, given the principal statements of Mr. Finlay and the other witnesses upon this particular point, in our paper on Trades' Unions in the twelfth Number of the 'Companion,' and therefore shall not repeat them here. Mr. M'Culloch, we may observe, in his *Dictionary*, argues that the apprehensions expressed in this evidence, that the British cotton manufacture will have difficulty in maintaining its ground against the competition of the Americans, Swiss, Austrians, French, &c., are quite destitute of any real foundation.

To the question, Do you know the disadvantages of manufacturing in Scotland as compared with this country? Mr. Finlay answers "I think that there would not be such a fact in carrying on every operation of the work in Scotland, for a time at any rate, as there is at Manchester and in Glasgow, in a particular kind of goods that are made in each. We find, in practice, that it is impossible, with all the knowledge and the opportunities that we have at Glasgow, to transfer from Manchester to Glasgow the manufacture of a particular article. Now at Manchester again, efforts have been made to manufacture particular articles that they make at Glasgow and Paisley, and it is found impossible to do them with the same advantage; and therefore, unless there are very great advantages in those other parts, I think it would be a very long time before they could do it just as well as it is done at Manchester and Glasgow, in all the variety of the manufacture; but then they may seize some particular kind of goods, and make that equally well, or perhaps better."

There has been a very great fall of price in cotton goods since the peace; but one chief cause of this is the fall in the price of the raw material. "American cotton-wool," says the witness, "which three years after the peace was 18*d*. a pound, is now about 6*d*.; and other cottons in proportion." Now, taking a very common article made of such wool, the price of the cloth manufactured out of a pound of wool will be from 13*d*. to 14½*d*. So that the price of the raw material, in this instance, enters into that of the manufactured commodity to the extent of not much less than one-half. Of course, in the finer fabrics, the price of the cloth must be much less influenced by that of the raw material.

The following questions and answers occur towards the close of Mr. Finlay's first examination:—"Do you think 50,000*l.* laid out in a cotton mill ten years ago, conducted with prudence and industry, could now be converted into 50,000*l.* again?" "I think that if 50,000*l.* had been laid out well, by judicious parties who manage their business properly, ten years ago, it would long since have returned that 50,000*l.*, and perhaps another 50,000*l.* also; and that therefore, if the person had exercised due economy, he would now be in possession of his cotton-mill for nothing." "Have you known many cases of prudent men embarking in the cotton trade in the last ten years, and doing well?" "I think there are very few people what is called doing well, that is, making much profit, in the cotton spinning at present: I consider that for the last two years there is a great diminution in the profit, and I trust it is a temporary diminution. I have seen a great many overthrows in the cotton manufacture: in 1788 I thought it was never to recover; in 1793 it got another blow; in 1799 it got a severe blow, and in 1803 again, and in 1810; and, at particular periods, one would have thought that it was never to extend again, but at every time that it received a blow the rebound was quite wonderful."

A great part of the evidence given by Mr. Finlay, on his second examination, is directed to show that the wages of persons employed in the different branches of the cotton manufacture are as high in this country as in the United States; but the point does not appear to be by any means clearly made out. What he afterwards proceeds to state upon the subject of hand-loom weaving is more valuable. "I think," he says, "that a grand mistake exists in supposing that the power-loom supplants the hand-loom universally; the power-looms erected in Scotland manufacture a kind of goods in general, which the hand loom weaver of Scotland was not in the habit of working at all; and therefore they are only partial substitutes for the hand-loom. Before the power-loom weaving was introduced at all in Scotland, about the year 1814 or 1815, the kind of goods generally manufactured by them were not made at all in Scotland, or, at least, very few of them; and the number of hand-loom weavers in Scotland now, I apprehend to be much more than the number of hand-loom weavers in Scotland at the time that the power-loom was first introduced. I would also say that the hand-loom weaver can work a great many things which it would not be the interest of any power-loom manufacturer to make, especially all the finest goods, fancy goods of all kinds." The wages, however, it is admitted, of hand-loom weavers in Scotland, are lower now than they were when the power-loom was first introduced. It is understood that it requires a very good hand, and very hard work, to earn from 6*s.* to 7*s.* a week. At some kinds of work their average gains have lately been much lower. The number of hand-loom weavers employed by the Glasgow manufacturers in 1832 is supposed to have been about 32,000. This is probably about three-fourths of the whole number in Scotland. Mr. Finlay's own opinion is both that their numbers are increasing, and that they must increase.

Some important information on the condition of the cotton manufactures, both of this country and of the United States, is afforded by the evidence of Mr. Joshua Bates, one of the partners in the house of Baring, Brothers, and Company. Mr. Bates is an American by birth, but has been carrying on business in this country since the year 1817. He considers the state of British manufactures, in general, to be at present in the highest degree satisfactory;—we say, at present, for, although it is about sixteen months since the evidence before us was given, the circumstances upon which the inferences of the witness are founded remain the same as they were. "To my view," he says, "there never was so secure and healthy a state of things, whether you look to the present state of things here, or to the probable state of things for several years to come, supposing that every thing remains tranquil here, and that there is nothing to shake public confidence."

The prices of cotton-wool in the United States, Mr. Bates considers are not yet so low as they will be. While the prices have been falling, the culture of the plant has been extending: and it is understood that even 3*d.* a pound is a price at which the planters can gain money in the Valley of the Mississippi. The freight upon the importation of cotton from America has been greatly reduced of late years. During the war it was 3½*d.* or 4*d.* a pound; "from Amelia Island, and other neutral places, it is now a halfpenny to five-eights, sometimes a farthing, according to the greater or less distance of the port from whence imported." And by the improved system of ship-building, the ship-owners are making money at these rates.

The cotton manufactories in America are chiefly in Pennsylvania and the States to the north of that. The wool is brought by water from New Orleans, and other southern ports, to Boston, Providence, New York, and Philadelphia; the freight being about half what it is to Liverpool. The American machinery Mr. Bates considers to be rather superior to the English; it is made of better iron. The cost, however, is a great deal higher; some facts mentioned by Mr. Finlay would imply that many articles cost twice the money they do with us, and some even more. Mr. Bates thinks it probable that a good deal of cotton-machinery goes from this country to the United States.

The cotton goods manufactured in America are principally coarse fabrics; and the manufactories are generally worked by water-power. The cloths exported are chiefly sent to South America, but sometimes also to Manilla and China, and even to Calcutta. They have also been sent to various parts of the Mediterranean. The witness is even of opinion that the American manufacturers might send, not cotton gowns, but coarse cotton goods, to be sold in London as cheap as the English themselves could.

The next witness, part of whose evidence bears upon our present subject, is Mr. James Cook, of the firm of Trueman and Cook, colonial merchants. This gentleman, in the course of his examination, produces a letter from Mr. Henry Holdsworth, of Glasgow, containing the following statements:—"Every branch of trade and manufacture may be said to be in full health and vigour. The town itself is rapidly improving. The operatives and labourers are well employed, and wages are very generally even higher, compared with the prices of provisions, than in the good old times of war. I exclude the hand-loom weaver, whose miserable pittance would not indeed be the means of a wretched existence, were it not materially assisted by the employment found for his children in the factories. In the meantime preparations for extension of the cotton manufacture are in full activity. My own friends have just completed another large mill, and will immediately commence working; others are doing the same, and some large mills, which have not been occupied, are falling into the hands of new owners. By various successive improvements, large quantities of cotton are worked by the same power at decreasing expense, and the lower qualities are rendered more efficient, so that our India cotton is becoming of more importance."

The export trade in English cotton manufactures had become, according to Mr. Cook, duller than usual, but still the manufacturers of Manchester and Glasgow were in a state of prosperity. Being asked, how he reconciles these two facts, he answers:—"It is in consequence of the immense increase of the home consumption of the country. I have a list of the exports of yarn and twist, showing a falling off in those two important branches, and in printed calicos also, yet there is an increase in the delivery of cotton of more than 17 per cent.; and I have stated that it arises from the internal consumption." He afterwards says, in reference to this increase of delivery:—"It is true that a manufacturer may buy cotton, and take it into his warehouse, and not use it, and then it is no test of an increase; but it is notorious *now*, that the quantity in the country, in dealers' hands and in the hands of manufacturers, never was so inconsiderable, and that the increase in the deliveries is actual and *bonâ fide*."

Some interesting information on the subject of the American cotton manufacture is to be found in the evidence of Mr. Timothy Wiggin, now a foreign banker in London. Our limits, however, will only permit us to quote the following statement:—"I think great care has been used in the United States to preserve the morals of females who work in their factories. It was thought by the founders of those establishments to be very important to take care of the morals and characters of the females so employed, as such labour could not be procured if the employment were disreputable; such females would not leave home if they supposed that their character would suffer in any way whatever. I understand that a young woman working in one of these manufactories is considered more respectably employed than when she remains in her father's family engaged in housework, and the work that is generally per-

formed in agricultural districts." Mr. Wiggin does not profess to be able to explain the contrivances that have been employed to produce the result here described; if they are really found effectual, although the consideration which appears to have suggested them does not operate in this country, they ought, as far as possible, to be adopted here also on higher motives. The most complete account of the cotton manufacture of the United States which the Report contains is given in the evidence of Mr. James Kempton, who was twice examined by the Committee; but the details into which he enters are too numerous to be abstracted. He states that the great proportion of the machinery used in the American factories would wear out sooner than that used in the English, owing to more wood being employed in the former. A list of prices which he gives confirms the statement as to the much higher cost of machinery in America than here quoted above from the evidence of Mr. Finlay. From inquiries made by a Committee of Congress, it appeared that the capital invested in machinery and buildings in the cotton manufacture in all the principal manufacturing States, which are the eastern and some of the middle States, amounted to 8,461,476*l.* sterling. To that sum it was thought might be added a third or a fourth more for the other parts of the Union. Within the district over which the inquiry extended, the number of spindles was found to be 1,246,503; the number of power looms, 33,000; the number of males employed, 18,539; the number of females, 38,927; and the number of children under twelve years of age, 4691. What the witness calls "the average wages," by which we suppose he must mean the entire sum paid as wages calculated from an assumed average, is stated at 2,087,400*l.* There are some other items in the account, but they are stated in such a way as not to be intelligible.

Some interesting information was communicated by Mr. Kempton, on his second examination, respecting the provisions made by the laws of the United States for the education of the children employed in factories. The following statement is curious, if correct:—"In this country," says the witness, "the girls tend two power-looms. I have asked manufacturers why they do not tend more, they have said that if they tended more they could not turn off so much. This objection would apply with more force to those in the United States, as they pay less wages and more for machinery. In America our girls tended generally four power-looms, some for years tended five power-looms, and some tended six power-looms for some time, and each of those power-looms turned off more cloth than I have found any power looms turn off in this country. Those girls tending six power-looms turned off forty yards per day of three-quarter cloth, at forty-five shoots per inch. I think the girls in America would manage four power-looms as well as those here do manage two. I found that those who tended six power-looms turned off as much in an hour at each loom as those that attend two power-looms here." It is probably in this way that we are to explain the assertion of Mr. Finlay and others of the witnesses, that wages in the cotton manufacture are higher in England than in America—an assertion which certainly seems incredible enough while left without any explanation. The fact appears to be that more money is paid in this country than in America to the spinner for the same quantity of work; but as the American spinner does more work than the English in a given time, the wages of the former are still as high as, or higher than, those of the latter. Mr. Kempton attributes part of the superior expedition of the spinner in America to the machinery employed there, which he thinks is better adapted than ours for the fabrication of the coarser descriptions of goods.

The next witness to whose evidence we shall advert is Mr. Henry Houldsworth, cotton-spinner, at Anderston, near Glasgow. This witness says that, from his own experience, he conceives cotton-spinning in Scotland had yielded little or no profit for three years past. He is not, therefore, we presume, the Mr. Henry Houldsworth, of Glasgow, whose letter, describing the trade as in so high a state of prosperity, was produced by Mr. Cook. As to the condition of the workmen, Mr. Houldsworth says, that although their wages have been nominally reduced since 1815, there has been no real reduction, inasmuch as they are paid by the piece, and the improvements that have been made in the machinery have enabled them to do more work in the same time than they did formerly. Their condition, therefore, the prices of provisions having so much fallen, must be upon the whole considerably improved. The great improvements in machinery, however, that have of late years been made in Manchester, have only been slowly adopted in Scotland. In Glasgow they chiefly spin the coarse numbers, from number 50 downwards. The nominal price of machinery, the witness allows, is reduced within the last twenty years, but the workmanship, he says, has increased at least fifty per cent., so that the trade of the machine-makers is not so good a one as it was. Then, as for the effect upon the manufacturer, "at present," he adds, "we are spinning twenty per cent. more upon the same number of spindles than in 1815, and at the same time the present mode of spinning requires fifteen per cent. more machinery in order to effect that improvement in quality which enables us to do this extra quantity." The price of coal, however, has in this interval fallen from twenty to thirty per cent.

Mr. Houldsworth thinks the hand-loom weavers are not so numerous in Glasgow as they were. "I cannot say," he continues, "that the condition of the hand-loom weavers is, generally speaking, very desperate apparently; they look decent, but, from the small wages they get, they must be very badly off." Their wages he states as ranging from 6*s.* or 7*s.*, to 12*s.* or 14*s.* a week. Those that make the highest wages work at least fourteen hours a day.

The next witness is Mr. William Graham, junior, of Glasgow, whose business comprehends both the spinning and weaving of cotton. He describes both branches as in a state of great depression at Glasgow. The main cause of this he considers to be the competition of both the American and the continental manufacturers. The duty on flour, Mr. Graham also states, falls very heavily upon the English manufacturer. In his own establishment, where about 25,000 lbs. of cotton are spun and manufactured in the week, the duty on the flour used comes to about 600*l.* or 700*l.* a year. Upon this matter Mr. M'Culloch, in his 'Dictionary,' remarks,—"The consumption of flour in the manufacture is much greater than any one not pretty well acquainted with it would readily suppose. The average quantity required for each loom is estimated at four lbs. per week, making the total annual consumption in England and Wales 42,301,584 lbs. or 215,824 barrels of 196 lbs. each!" The number of looms at present employed in England and Wales is supposed to be nearly 204,000. More flour, Mr. Graham states, is used in the courser than in the finer manufacture.

Women's wages, in the power-loom weaving, are described as averaging 8*s.* per week. The spinners, working sixty-nine hours in the week, earn from 35*s.* to 42*s.* clear of all deductions. From the trouble, however, occasioned by the combinations of the men earning these high wages, Mr. Graham and his partners, as well as other manufacturers, contemplated the introduction into their factories of the self-acting mule, which has been in use at Manchester since 1826. In this way they would be able to dispense with the spinners altogether, retaining only the two piecers whom each spinner has under him, and giving one of them a couple of shillings more than he received from the spinner.

A good many English cotton stuffs, it seems, have been sent abroad of late years, filled up with a paste of clay or some other material. This practice seems to have been introduced soon after 1814. In some markets, according to Mr. Graham, goods with a little of this filling are preferred. The practice, however, he acknowledges, has been abused to a great extent in white bleached goods. Foreigners into whose hands such goods have fallen, discovering after a while that the appearance of strength and thickness produced was fallacious, have naturally become prejudiced against stuffs of English manufacture generally. Yet the practice, the witness has no doubt, is increasing with the increase of trade. "We fill," he says, "a great many of our goods. In some markets they sell readily, and if we sent them without the clay they would not buy them at all." The expense of putting in the clay he describes as very trifling; the difference in the expense of bleaching cannot exceed 1½*d.* or 2*d.* a piece.

One statement made by Mr. Graham, who has known the trade since 1810, affords a curious illustration of the effects produced by the improvements that have been made in the cultivation of the plant on the one hand, and in the spinning and weaving machinery on the other. He remarks, that there are many articles of cotton manufacture which you can buy finished now for less money than you paid for the weaving of them formerly.

As to the general state of the business, he says—"I think, if the legislature will let us alone, there is no fear of the prosperity of our manufacture; I mean if they will take the taxes off the raw material, and do not interfere with the hours of labour; but if they do that, they will ruin us." The duty on foreign wool, imported from any part of the British dominions, is at present, and has for some time been, only 4*d.* a cwt. On foreign wool it was 5*s.* 10*d.* a cwt. from 1831 till 1833. But on the 17th of May in that year, a few weeks before Mr. Graham was examined, an act was passed lowering this duty to 2*s.* 11*d.* The loss to the revenue which this reduction would occasion was estimated at 300,000*l.* per annum.

[To be concluded in next Number.]

MONOPOLY IN THE SUPPLY OF SALT TO INDIA.

Both the manufacture and the sale of salt in India have been hitherto monopolized by the Company's government, which from that source draws more than one million and a half of its revenue. The salt in Bengal is made in what is called the Sunderbunds, being a low unhealthy tract of country at the mouths of the Ganges and the Hoogly, where the workmen, called the Molunges, are sometimes swept away in thousands by an inundation of the sea, and the produce of their labours for the season carried along with them. The article thus obtained is of the very worst quality, and even were it sold at its natural price would be very dear. But its cost to the consumer is immensely enhanced by the monopoly. In the interior of the country the purchaser often pays for it not less than ten or twelve times the prime cost, which is itself calculated to amount to about 16*d.* the bushel. He pays, therefore, 15*s.* or 16*s.* the bushel, of which exorbitant price little more than a fifth part forms the profit of the government. The rest consists of successive additions made in the passage of the commodity from dealer to dealer. Considering the low remuneration of labour in India, this price may be looked upon as making salt a luxury too expensive to be consumed at all by the great mass of the inhabitants. Accordingly, the quantity they generally consume is extremely small. The insipid vegetable food to which they are confined would require, to prevent it from being both insipid and unwholesome, a liberal addition of this condiment; and there can be no question that they frequently suffer severely from the privation to which the government thus subjects them. In the course of the session of parliament before the last, Mr. Wilbraham, the member for Cheshire, moved in the House of Commons, the addition of a clause to the new bill respecting the government of India, for putting an end to this monopoly. The speech by which he introduced his motion contained a great deal of curious information respecting the English salt mines. "The principal part of the salt of England," he said, "is made in the valley of the Weever in Cheshire. The rock salt, which is dry, from the vast caverns in that county, is principally exported to strengthen the brine which other nations use for their refineries. Other counties, such as Staffordshire, Worcestershire, &c., produce salt, but the greatest part of the salt for exportation, if not the whole, is made in Cheshire, and is conveyed by the Weever, which communicates with the Mersey, and consequently with Liverpool. This has long been a flourishing trade, and has tended much to enrich that part of the country. The facility of the manufacture has much increased from the ready and cheap supply of coals; and I am assured that the brine-springs are inexhaustible. . . . The cost of production of the Cheshire salt—the finest in the world—is about 3½*d.* or 4*d.* per bushel. . . . The vessels which come from India are always laden with heavy and bulky articles, such as indigo, rice, tobacco, tea, sugar, spices, &c. Our returns from this country are of a light nature, consisting of British manufactured goods; and though I know a good deal of cotton twist and even cotton piece goods are exported, still they do not occupy one half, or one quarter the space which the goods occupy in coming from India. Hence heavy goods are much desired for an outward bound vessel." Mr. Wilbraham then proceeded to show that after paying all charges and freight to Calcutta at the rate of 1*l.* per ton, the best salt could be laid down there at 1*s.* per bushel. But, he added, it might even be exported as ballast. Upwards of eighty thousand tons of Cheshire salt are annually so exported from Liverpool in the vessels of the United States of North America.

It is probable that the prohibition against the importation of salt into India will not be allowed to continue much longer, but that the article will be admitted on payment of a moderate duty, a plan by which there is every reason to believe that the government will obtain fully as large a revenue as it now draws. In the course of the debate on Mr. Wilbraham's motion, Mr. Grant admitted that the salt-tax was altogether indefensible, and one the permanent continuance of which could not be contemplated. "When I have admitted," he added, "that it is impossible to justify the principle of the tax, I trust that it will rather be considered as a question of time to get rid of it, and substitute some other less oppressive mode of raising the revenue." The government both at home and in India, he stated, had agreed that the tax should be removed, and were desirous of carrying into effect Mr. Wilbraham's views.

For the salt sent to India from England a return might be obtained in the exportation to England of sugar from India. The sugar at present manufactured in the latter country is certainly inferior in quality to that furnished by our West India colonies, but it is equally certain that this inferiority is not owing to the effects of soil or climate, which are as favourable to this branch of industry in India as in the Antilles. It would be more correct to attribute the difference to the illiberal regulations of the East India Company, which have kept the manufacture in the hands of incompetent natives, wanting alike in skill and capital, and to the equally illiberal and indefensible regulation of our own government, which has loaded the inferior sugar of India with a higher rate of duty than is charged upon the superior production of the skilful and wealthy planters of the West Indies. It does not need much of the spirit of prophecy to foretell that this invidious distinction must shortly cease.

In fairness to the East India Company we should state, that the monopoly in the manufacture and sale of salt did not originate with their government, but existed in India long before the commencement of their sway. It is a difficult matter in every country, even those the most enlightened, to bring about the substitution of one tax for another, although the alteration would be attended by a considerable amount of relief to the inhabitants; but this difficulty is greatly increased among a people who are so wedded to ancient customs as the inhabitants of Hindostan, and such a change may be considered, as regards them, to be next to impracticable. On the other hand, we conceive that so long as the necessity exists for raising a large revenue, there is not any article better fitted for the purpose than salt. The error has been, not so much in the nature of the tax as in its exorbitant amount, and in the oppressive means which have been used for its collection. There can be little question that had the business of salt-making in India been left to individual enterprise under regulations similar to those employed for the collection of the excise revenue in England, while, at the same time, the trade was left entirely free, and importation from England allowed under a fair rate of duty, the Company might, as we have already said, have realized as great or even a greater amount of revenue, while the price of an article which is certainly a necessary of life in India, would have been kept sufficiently low to bring a supply of it equal to his wants within the reach of every individual in the country.

Independently of the evidence afforded by many analogous cases, that in fiscal arithmetic 2 and 2 do not always amount to 4, we have a direct proof of this fact in the very case of the salt duty in India. The rate of this duty was raised in 1828 in the proportion of 105 to 75, by which means, if the consumption had remained stationary, the revenue would have been increased by the sum of 1,026,000*l.* per annum; while on the contrary, the treasury experienced an actual reduction in the two following years, amounting to more than 340,000*l.*, or upwards of 170,000*l.* per annum. In the face of this fact, which is furnished by the accounts of the East India Company, laid before a committee of the House of Commons in 1832, it would be absurd to argue, as some of the Company's servants have attempted to do, that the consumption of salt in India is not limited by the monopoly price below the wants and desires of the inhabitants. It appears, on the contrary, highly probable, from the testimony of several intelligent

witnesses who were examined before the Committee of the House of Commons, which sat in 1832 to inquire into the affairs of the East India Company, that if, instead of the great addition made in 1828 to the rate of the salt duty, an equally considerable reduction had been granted, the actual receipt, from increased consumption, would have been more advantageous to the Company's treasury; while the difference in that case to the comfort of the inhabitants would have been exceedingly great, much greater than would be imagined by most persons in this country, where the diet of the people is not confined, as it is through the greater part of India, to an insipid vegetable.

Experience has always shown, that whenever governments take upon themselves the functions of manufacturers or traders, and clothe themselves with privileges as monopolists, the public is badly served, and the evil to the consumers is out of all proportion greater than the advantages derived by the governments. It is a fact, that in France, where the trade in, and the manufacture of, tobacco is the subject of a close government monopoly, the revenue which it yields is not equal in amount to that collected in this kingdom, although the population of France is much greater than our own, and the habit of using tobacco is far more general, while its price to the consumer is higher than in England. In India, the quality of the salt furnished by the Company is described as being exceedingly bad; so bad, that the higher classes, who can afford to do so, are in the habit of refining it for their own use; and it is notorious, that notwithstanding the obstacles opposed by its bulk, the article is smuggled to a very great extent, in defiance of the numerous body of police officers maintained by the Company, solely for the purpose of checking this illicit trade.

On the Coromandel coast, salt is formed very rapidly and abundantly upon the rocks by solar evaporation: and the temptation to the poor inhabitants to possess themselves of a necessary of life, thus offered to them by the hand of nature, must be almost irresistible. If, however, one of them should be detected in the act of gathering a handful of salt for his own use, he is immediately subjected to a heavy penalty. What heart-burnings must it not occasion to the natives to see this coveted production destroyed by the hired-servants of their foreign conquerors, in order to maintain the revenue by means of which their yoke is perpetuated! It would prove an interesting inquiry, and one which might afford an instructive lesson to many governments, could we determine the amount of misery that has been occasioned to communities through the mistaken views of their rulers on the subject of finance. It is a curious fact, and one which we would have the present governors of India to bear well in mind, that the feelings of disaffection by which the French revolution of 1792 was occasioned, were supposed to have been in no small degree derived from the intolerable oppression attendant upon the administration of the salt monopoly in that kingdom.

Parliament has thought it advisable, upon the recent renewal of the East India Company's charter, to incapacitate that body from pursuing commercial objects; and thus with the intention of securing the undivided attention of the directors and their servants to the good government of the eighty millions of subjects under their rule. Will it not then be absurdly anomalous to continue to that body the right of retaining perhaps the very worst feature in their commercial character—their monopolies of salt and opium? We are aware of the difficulties which attend the adjustment of this question, and would not have even a beneficial alteration undertaken rashly and without due consideration; but we know also, from experience, how prone persons in high stations are to stave off the consideration of difficult questions, and how necessary it therefore is that their attention should be continually recalled to their examination; a course which appears the more needful in this case, inasmuch as the desired reform has to contend against the influence of parties personally interested in perpetuating the evil.

TONNAGE OF SHIPS.

Report of the Committee appointed by the Lords' Commissioners of the Admiralty, at the request of the Lords of the Privy Council for Trade, to consider of the best mode of measuring the Tonnage of Ships.

IT is our boast, that in this country, science, in all its various branches, is cultivated with a degree of success, at least as great as that attained among any other people; and we are equally disposed to attribute the attainment of our proud position among the nations of Europe to our naval superiority. Under these circumstances it must appear a singular fact, that so important, and so apparently simple a matter as that of the rule established by law for the admeasurement of the capacity of shipping, should have been left to the present day in a state the most barbarously and absurdly incorrect that can well be imagined.

The method at present in use in Great Britain for computing the tonnage contents of shipping was established by the Act 13 Geo. III. c. 74, which provides, that "the length of the vessel shall be taken in a straight line along the rabbet of the keel of the ship, from the back of the main stern-post to a perpendicular line from the fore-part of the main stem under the bowsprit; that the breadth of the vessel shall be taken from the outside of the outside plank in the broadest part of the ship, either above or below the main wales, exclusive of all manner of double planks that may be wrought upon the sides of the ship. From the length taken as above, subtract three-fifths of the breadth, the remainder shall be esteemed the just length of the keel to find the tonnage: then multiply this length by the breadth, and that product by half the breadth, and, dividing by 94, the quotient shall be deemed the true contents in tons."

It would be difficult to bring forward any chain of reasoning as the grounds upon which this formula was adopted. It is said that the rule was given by a committee from the Trinity House appointed for the purpose, and that their method of proceeding in the execution of their commission was this:—They attended the loading of a ship with a general cargo, consisting of various goods, some light and others heavy; and when they considered the vessel to be sufficiently loaded, and with ample space still left for stores and for the accommodation of the crew, they held the quantity of cargo taken on board to be the tonnage of the ship, and taking her length and breadth, they thereupon founded their rule. In thus proceeding, they were, perhaps, one step in advance of the Chinese, who affect to determine the burden of ships by simply measuring the distance between the main and mizen masts. It may be doubted, however, considering that a correct computation may be as easily made by one as by the other method, whether the greater simplicity of the Chinese mode does not entitle it to the preference. To render the principle of the English method sound and good, it would be absolutely necessary that all ships should be built upon exactly the same model, and then the simpler method of the Chinese would be equally sound. Seriously, it is quite inconceivable, how persons occupying a station which pointed them out as being sufficiently enlightened to be entrusted with such a task, should have overlooked so material an element towards computing its contents, as the *depth* of the vessel; and it is equally hard to account for the blind negligence of the legislature, which could adopt and embody in an act of parliament, a recommendation which was so palpably ridiculous.

The practical consequences resulting from the adoption of so absurd a rule have been very seriously mischievous. A great part of the charges to which trading ships are liable are computed upon the tonnage measurement borne upon their registers, and it has, therefore, been an object with owners of ships to give such a form to them as would enable them to carry the greatest possible amount of cargo, while their registers should bear the smallest amount of tonnage. Under this system, the greater part of our merchant vessels are the most unsightly in Europe; and what is of far more consequence, sail badly, and are exceedingly unmanageable in bad weather and on a lee-shore. As to the first of these qualities—that of sailing it is notorious, that while a vessel of American build is to be found in port, not one of our merchants or manufacturers will ship a bale of goods in any ship of English build, it being, of course, a great object that consignments should reach their places of destination with all possible expedition, not only that advantage may be taken of the state of markets, but also to ensure those quick returns which are so essential to profitable commerce. Goods put on board an American vessel in Liverpool for New York will usually have arrived at their destination, have been sold, and the remittances in payment be half-way across

the Atlantic before an English vessel that may have sailed from the same port at the same time will have reached America. This, it will be acknowledged, is a serious evil; but the bad qualities of our merchant vessels as sea boats, an evil which is altogether owing to the plan followed for their admeasurement, cause far more serious disasters. We have been assured by a gentleman much connected with shipping in the northern part of the kingdom, and who takes considerable interest in this question, that if it were thought advisable to petition the House of Commons on the subject, he should have no difficulty in procuring such a petition, very numerously signed, and where every petitioner should stand in the relation of a widow or orphan to persons whose lives have fallen a sacrifice to the unmanageable qualities of what are called "burdensome" ships, in situations where vessels built of a different form would have been perfectly safe.

The evils attending the present state of the law have been long well known, nor is this the first attempt that has been made to remedy them. A Committee, of which Dr. Young was Chairman, and Messrs. Davies Gilbert and Kater were members, was appointed by the Admiralty in 1821, to consider the question of the measurement of the tonnage of ships; and after the examination of about fifty ships, of different sizes and descriptions, declared it as their opinion, that the weight of goods which a ship is capable of carrying, exceeds the measurement tonnage, on an average, in the proportion of four to three. This Committee proposed a method of measurement and computation, which would have considerably diminished the errors of the present system; but their recommendation was not adopted, and it has been understood that the reason for this neglect was founded upon the admission, that the proposed method did not ensure absolute mathematical correctness,—the Government of that day preferring to continue a system universally acknowledged to be absurdly erroneous, rather than to make what at least would have been a considerable approximation to the truth, and by which the motives which have rendered our commercial marine a disgrace to the country would have been removed. The old system has since been continued, and we cannot doubt that it would be found to involve a startling censure upon the parties chargeable with this supineness, could any correct estimate be formed of the loss of capital and of human life which have been the result.

The Report now before us was drawn up by a Committee, the constitution of which affords sufficient assurance that the subject has been thoroughly examined, and is ably handled. The signatures of the accomplished Chairman, Mr. Davies Gilbert (who was a member of the Committee of 1821), and of Captain Beaufort, the able hydrographer to the Admiralty, attest that the important question submitted to them has undergone a complete investigation, both scientific and practical. Their Report was presented to the House of Commons as long ago as last February, and we had indulged confident hopes that the Session would not have been allowed to close without the passing of an act, by which the methods recommended by such competent authorities would have been made to supersede the disgraceful system now in force. In these hopes we have been disappointed, but we trust that the importance of the subject will ensure for it the early and efficient attention of the President of the Board of Trade in the ensuing Session.

We now proceed to give a short analysis of the Report. Rejecting the principle adopted by the Trinity House Committee, as already explained, it is now recommended to take the *whole* capacity of the hold as the fairest standard of measurement, and to ascertain that capacity by means of *internal* measurements. In order to obtain the necessary data, the Committee obtained the dimensions and actual capacities of a considerable number of vessels, of various sizes and forms, as well as an account of the several methods of admeasurement employed in foreign countries. They further received communications on the subject from many practical and scientific gentlemen conversant with shipping, and, after a careful examination of the relative merits of the plans submitted, they determined upon recommending the adoption of the following rule for the measurement of vessels for register tonnage:—

1. Divide the length of the upper deck, between the after part of the stem and the fore part of the stern-post, into six equal parts.

2. *Depths.*—At the foremost, the middle and aftermost of these points of division, measure in feet and decimals the depths from the underside of the upper deck to the ceiling at the limber strake.

(In the case of a break in the upper deck, the depths are to be measured from a line stretched in a continuation of the deck.)

3. *Breadths.*—Divide each of these three depths into five equal parts, and measure the inside breadths at the following points, viz.—at one-fifth and at four-fifths from the upper deck of the foremost and aftermost depths, and at two-fifths and four-fifths of the midship depth.

4. *Length.*—At half the midship depth measure the length of the vessel from the after part of the stem to the fore part of the stern-post.

5. Then to twice the midship depth add the foremost and the aftermost depths, for *the sum of the depths.*

6. Add together the upper and lower breadths at the foremost division, three times the upper breadth and the lower breadth at the midship division, and the upper and twice the lower breadth at the after division, for *the sum of the breadths.*

7. Then multiply the sum of the depths by the sum of the breadths, and this product by the length, and divide the final product by 3·500, which will give the number of tons for register.

8. If the vessel have a poop or half-deck, or a break in the upper deck, measure the inside mean length, breadth, and height of such part thereof as may be included within the bulk-head; multiply these three measurements together, and dividing the product by 92·4 the quotient will be the number of tons to be added to the result as above found.

9. In order to ascertain the tonnage of open vessels, the depths are to be measured from the upper edge of the upper strake.

10. If it be required to find the real capacity of a vessel, multiply the total register tonnage by 92·4, which will give the contents in cubic feet.

In recommending the adoption of this rule, the committee expressly state, that it is not intended to show the real capacity of the vessel, though bearing towards it nearly the same proportion which would result from the average of a large number of cases, on the application of the old and imperfect rule; for it appears to the committee, that the annual return of registered tonnage has been so long employed as a comparative index of the increase or decrease of British shipping, that it will be highly expedient to preserve the relative value of this index, as far as possible, unaltered. In order to accomplish this object, the committee have had recourse to *an arbitrary divisor.*"

With all possible respect and deference for the opinion of the committee, we cannot allow the propriety of this adoption of an arbitrary mode of computation in a case of this importance, and when the true mode can as readily be applied. This partial continuance of the old error, which resulted from the faulty mode of computation, requires some more weighty argument for its justification than has been put forth by the committee. Surely it would not be difficult for the public officer charged with the duty of making the return of registered tonnage, to explain in his tables the amount of the difference occasioned by the adoption of the correct method, and by this explanation the value of the return as a comparative index would be preserved, while the registers of ships would be made to exhibit a true statement of their capacity. The present arbitrary divisor is recommended, because it will furnish a result similar, on the average of a large number of cases, to that furnished by the present absurd rule. The average amount of error is, therefore, found to be in the proportion which the proposed arbitrary divisor bears to what should be the true divisor, and by a very simple computation of this kind the whole advantage proposed by the committee could be secured, without any departure from accuracy. The committee might have used as an argument in favour of the employment of their arbitrary divisor, or rather against the adoption of a true divisor, that as the real tonnage of ships is greater than that now shown by their registers, this would be to subject vessels newly measured to heavier charges for tonnage duties, lights and harbour dues than are paid by ships measured according to the old plan. This evil, which would only

be temporary, might be effectually remedied by a clause in the act of parliament declaring the proportion in which those charges shall be paid by vessels newly measured, and which, as already explained, should be in the ratio which the proposed arbitrary divisor bears to the true divisor.

It is a recommendation of the committee "that as all British vessels have been constructed on the faith of the permanence of the present law of tonnage, so the tonnage of every vessel now registered shall be allowed to remain unchanged, unless application be made by the owner to have it re-measured according to the new process." This recommendation is perfectly just; but we apprehend that, if the suggestion we have ventured to make regarding the payment of dues should be adopted, shipowners, in most cases, would have no inducement to abide by their present erroneous measurements, and thus uniformity might be attained at an earlier period than is likely to be ensured by the recommendation of the committee.

The committee further recommend "that, in registering the tonnage of steam vessels, instead of deducting the length of the engine-room, according to the present mode, an allowance shall be made of one-fourth of the whole tonnage, as obtained by the rule given;" but a remark is added to the effect that the tendency of every improvement being to diminish the space occupied by the engine, some legislative provision might now be made to enable his Majesty's government to alter the allowance of this proportion hereafter.

Our space will not admit of the insertion of the recommendations offered by different parties to the committee, or of the measurements and computations which they have given in the Appendix to their Report; neither would these particulars be interesting to our readers generally. Nautical men, and students of naval architecture, will however find much to interest them in a careful perusal of the whole Report.

NEW POST-OFFICE ARRANGEMENTS.

Among the many evidences of social improvement afforded by the present times, may be mentioned the great and growing desire of spreading useful information, as a powerful means of advancing the happiness of the great family of mankind. This desire, which is every day growing in force, and stimulating more and more both individuals and collective bodies, has not been without its good effects upon the governments of France and England. We have already had occasion to notice (see 'Companion,' vol. i. pp. 64, 93) the arrangements concluded in this spirit by those two governments, whereby the post-office communications between the respective countries have been facilitated and made more frequent. We may further mention the exchange that has been made of their records by the legislative bodies of both nations, and also the convention which provides for the gratuitous transmission to either country, of all the literary productions of the other. This arrangement, the effect of which will be to place in the Public Library at Paris, and in the British Museum, copies of all works published in the two countries, will serve to exhibit, in the most useful manner, the scientific and intellectual progress of each, and this knowledge cannot fail to be greatly and permanently useful to the instructed classes, and through them to the people generally. A further step in this march of liberal improvement has been very recently made by our government in the removal of one-half of the duties chargeable on the importation of foreign books into the United Kingdom. But a still more important advance has been effected by the Act of the last Session (cap. 44), which regulates the conveyance of printed newspapers by post between this country, the British colonies, and foreign parts.

Under the provisions of this Act, which comes into operation on the day when our present Number is published, any newspaper, duly stamped, may be forwarded, free of postage, from any general post-office in the United Kingdom to any of his Majesty's colonies and possessions beyond the seas; and on the other hand, newspapers printed and published within such colonies or possessions may be forwarded by packet-boats to Great Britain or Ireland, and delivered by the general post within the United Kingdom free of the duty of postage.

By the Act 6 Geo. IV. c. 68, stamped newspapers might be sent to the colonies through the post-office upon payment of one penny half-penny each; and colonial newspapers might be received through the general post at a rate of three-pence each. This was a considerable reduction of the previous expense, which, although very heavy to the colonial purchaser of English newspapers, produced nothing to the revenue, as all the newspapers then forwarded through the post-office to the colonies were franked by certain privileged officers, who made a charge to those whom they thus accommodated.

The fourth section of the new Act regulates the transmission of newspapers to and from foreign parts. As it makes its own precedent, we are desirous of stating its provisions fully and accurately, and we do not think that we can do this better than by quoting the words of the Act.

"IV. And be it further enacted, that from and after the said 1st day of October, 1834, it shall and may be lawful for his Majesty's postmaster-general for the time being, and his deputy and deputies in Great Britain and Ireland, to receive at any general post-office printed newspapers liable to the stamp duty, and duly stamped for conveyance by packet-boats from Great Britain and Ireland to any port out of the United Kingdom, other than his Majesty's colonies and possessions, and to forward the same accordingly free of the duty of postage; and that newspapers printed in any kingdom or state beyond the seas, other than his majesty's colonies and possessions, and brought into the United Kingdom by packet-boats, shall and may (if printed in the language of the foreign kingdom or state from which the same shall be forwarded, but not otherwise), be delivered by the general post within the United Kingdom free of the duty of postage: provided always, that before any newspapers to or from any foreign port shall be permitted to be conveyed or delivered free of postage, under the provisions of this clause, satisfactory proof shall have been laid before the postmaster-general for the time being that printed newspapers sent from Great Britain or Ireland, addressed to any person or place in any foreign kingdom or state, are allowed to pass by the post within any such foreign kingdom or state free of postage, and also that newspapers addressed to any person or place in Great Britain or Ireland from any such foreign kingdom or state are allowed to pass by the post within such foreign kingdom or state free of postage; and it is hereby further declared, that as to every newspaper put into any general post-office within Great Britain or Ireland for conveyance by packet boat, addressed to any person or place in any foreign kingdom or state in which printed newspapers from Great Britain or Ireland shall not be allowed to pass by the post free of postage, it shall be lawful for his Majesty's postmaster-general for the time being (until such satisfactory proof shall be laid before him as aforesaid), and his deputy and deputies, for the use of his Majesty, his heirs and successors, to demand, have, receive, and take for the conveyance of every such printed newspaper to any foreign port the sum of twopence, to be paid when the same shall be put into the post-office; and as to every newspaper addressed to Great Britain or Ireland, and brought into the United Kingdom from any foreign kingdom or state in which such printed newspapers shall not be allowed to pass by the post free of postage, it is hereby declared that it shall be lawful for his Majesty's postmaster-general for the time being (until such satisfactory proof shall be laid before him as aforesaid), and his deputy and deputies, to and for the use of his Majesty, his heirs and successors, to demand, have, receive, and take for the conveyance of every such newspaper by the general post the sum of twopence on delivery thereof by such post to the person to whom the same shall be addressed, over and above and in addition to any postage charged thereon by any foreign post-office, provided every such paper be printed and published in the language of the kingdom or state from which the same shall be forwarded."

The fifth section of the act provides for the re-imposition of the rate of twopence upon each newspaper sent to or brought from any foreign country, whenever it shall be deemed expedient by the Lords of the Treasury to do so; a provision no doubt intended to meet the case of the previous re-imposition by such foreign country of rates of postage upon newspapers received from or addressed to persons in the United Kingdom.

In all cases, newspapers, in order to be entitled to the benefit of the provisions of this act, must be sent in covers

which are open at the sides, and permission is given to the officers of the post-office to examine whether attempts are made to take an unfair advantage of this indulgence by writing or making marks upon the cover or upon the paper itself, or by enclosing or concealing any other paper within the same, or by attempting to pass papers from the United Kingdom which are not duly stamped, or to introduce any into the kingdom which are not in the language of the place whence they are forwarded. In such cases it is provided, with regard to papers going out of the kingdom, that at the discretion of the post-office they may either be detained or charged with the duty of letter postage, and in the case of newspapers brought into the kingdom, that they shall be charged with treble the duty of letter postage. Another restriction in the act provides that every newspaper sent out of the kingdom through the post-office shall be put into a receiving office in Great Britain or Ireland within seven days after its date of publication; and where this rule shall be infringed, permission is given to the post-office either to detain the papers or to charge them with the full rates of letter postage.

By a clause in the act it is expressly declared that any person is at liberty to send printed newspapers to or from places beyond the seas in any manner they may find practicable or convenient, without confining themselves to the channel of the post-office.

Another provision of the act may be made very advantageous to the conductors of periodical works which are not required to be stamped. The postmaster-general is empowered to compound for the transmission of such works by the post, on payment of a fixed yearly sum for each publication, subject to the same rules and restrictions as are established for the transmission of newspapers, and which we have already detailed.

There is every reason to expect that this liberal measure will be met in a corresponding spirit by the governments of France and of other continental nations, so that the inhabitants of each country may receive the journals published in the others at the same price which they cost to subscribers in the countries whence they are transmitted.

At present and until the heavy stamp duty chargeable on English newspapers shall be removed, their cost is so far beyond that of the continental journals that we cannot expect any great number of our daily papers will be required by our neighbours; but we may confidently predict that, whenever this obstacle shall be removed, the means thus opened to the inhabitants of foreign countries, for obtaining an acquaintance with the institutions of our country and the character of its people, will be productive of the happiest effect in removing prejudices, and in drawing closer the social ties which should bind together the different members of the European family.

REPORT OF THE COMMISSIONERS OF ECCLESIASTICAL REVENUE INQUIRY.

To the KING'S *Most Excellent Majesty.*

YOUR MAJESTY having been pleased to issue a Commission under the Great Seal, dated the twenty-third day of June, in the second year of your Majesty's reign, authorizing and directing the Commissioners therein named to make a full and correct Inquiry respecting the Revenues and Patronage belonging to the several Archiepiscopal and Episcopal Sees in *England* and *Wales* to all Cathedral and Collegiate Churches, and to all Ecclesiastical Benefices (including Donatives, Perpetual Curacies and Chapelries), with or without Cure of Souls, and the Names of the several Patrons thereof and other circumstances therewith connected; and your Majesty having been further pleased, on the expiration of the said Commission, to issue a second Commission, extending the period within which the Commissioners were required to make their final Report, and authorizing them to extend their Inquiries to the Islands of *Jersey* and *Guernsey*, and the *Isle of Man*:—

We, your Majesty's Commissioners, whose hands and seals are hereunto set, humbly report to your Majesty, that in obedience to your Majesty's commands, we have proceeded to execute the duties committed to us.

In prosecuting our inquiries, we have, from the extent and complexity of the various matters to be investigated, encountered many difficulties, which, though not unexpected, necessarily required a considerable length of time to surmount.

We believe that we are now in possession of materials sufficient to enable us to make a full report to your Majesty on all the topics within the range of our Commission; but to arrange and digest into a tabular form so large a mass of returns, comprising so many different heads of information, and thus to present a distinct view of the whole revenues of the Church and their distribution, has been a work of no ordinary labour, which, though nearly completed, must still occupy some further time.

It would have been more satisfactory to us to have awaited the period when we could have completed our task by a final Report; but we are impressed with a conviction that it is expedient to lay before your Majesty, without delay, a statement of the total income of the Church, and of the manner in which it is divided between the archbishops, bishops, corporations aggregate and sole, and the incumbents and curates of benefices.

The total amount of the gross annual revenues of the several archiepiscopal and episcopal sees in England and Wales is one hundred and eighty thousand four hundred and sixty-two pounds, affording an average of six thousand six hundred and eighty-three pounds; and the total amount of the net annual revenues of the same is one hundred and sixty thousand one hundred and fourteen pounds, affording an average of five thousand nine hundred and thirty pounds.

The total amount of the gross annual revenues of the several cathedral and collegiate churches in England and Wales, together with the separate gross annual revenues of the several dignitaries and other spiritual persons, members of cathedrals or collegiate churches, is three hundred and fifty thousand eight hundred and sixty-one pounds, and the total amount of the net annual revenues of the same is two hundred and seventy-two thousand eight hundred and twenty-eight pounds.

The total number of benefices with and without cure of souls, the incumbents whereof have made returns to our inquiries, omitting those which are permanently or accustomably annexed to superior preferments, and which are included in the statements respecting those preferments, is ten thousand four hundred and ninety-eight; the total amount of the gross annual revenues of which benefices is three million one hundred and ninety-one thousand nine hundred and fifty pounds, affording an average of three hundred and four pounds; and the total amount of the net annual revenues of the same is three million three hundred and ninety-three pounds, affording an average of two hundred and eighty-five pounds.

The total number of benefices with and without cure of souls in England and Wales, including those not returned to us, is ten thousand seven hundred and one; the total gross income of which, calculated from the average of those returned will be three million two hundred and fifty-three thousand six hundred and sixty-two pounds, and the total net income thereof will be three million fifty-eight thousand two hundred and forty-eight pounds.

The total number of curates employed both by resident and non-resident incumbents returned to us is five thousand two hundred and eighty-two, whose annual stipends in the aggregate amount to four hundred and twenty-four thousand seven hundred and ninety-six pounds, affording an average annual stipend of eighty pounds; and the total amount of the stipends of curates, if one hundred and two be assumed as the proportionate number on the benefices not returned, and the same be calculated on the average of those returned to us, will be four hundred and thirty-two thousand nine hundred and fifty-six pounds.

From a scale which we have prepared of the benefices with cure of souls returned to us, it appears that there are two hundred and ninety-four, the incomes of which are respectively under fifty pounds; one thousand six hundred and twenty-one of fifty pounds, and under one hundred pounds; one thousand five hundred and ninety-one of one hundred pounds, and under one hundred and fifty pounds; one thousand three hundred and fifty-five of one hundred and fifty pounds, and under two hundred pounds; one thousand nine hundred and sixty-four of two hundred pounds, and under three hundred pounds; one thousand three hundred and seventeen of three hundred pounds, and under four hundred pounds; eight hundred and thirty of four hundred pounds, and under five hundred pounds; five hundred and four of five hundred pounds, and under six hundred pounds; three

hundred and thirty-seven of six hundred pounds, and under seven hundred pounds; two hundred and seventeen of seven hundred pounds, and under eight hundred pounds; one hundred and twenty-nine of eight hundred pounds, and under nine hundred pounds; ninety-one of nine hundred pounds, and under one thousand pounds; one hundred and thirty-seven of one thousand pounds, and under one thousand five hundred pounds; thirty-one of one thousand five hundred pounds, and under two thousand pounds; and eighteen of two thousand pounds and upwards.

The number of sinecure rectories returned to us, and which sinecure rectories are included in the number of benefices above stated, is sixty-two; the aggregate gross annual revenues of which amount to eighteen thousand six hundred and twenty-two pounds, affording an average of three hundred pounds, and the aggregate net annual revenues of the same amount to seventeen thousand and ninety-five pounds, affording an average of two hundred and seventy-five pounds.

We regret that it is not at present practicable to offer a full explanation of the various items which compose the difference between the gross and net amounts; but, to prevent misapprehension, we think it advisable to observe, that no deduction is made from income on account of payments to curates, nor for the reparations of episcopal residences, or of glebe houses and offices, nor on account of payments of rates and taxes for the same, nor has any deduction been made on account of arrears due at the time of making the returns, or of any payments not being of a compulsory nature.

The returns of income have been generally made upon an average of three years, ending December the thirty-first, one thousand eight hundred and thirty-one.

Received this day of June, 1834.

CHIMNEY SWEEPERS ACT.

THE Act, 28 Geo. III., c. 48, for the better regulation of chimney sweepers and their apprentices, being deemed insufficient for its object, a new act has been passed in the late session, of which the following are the most important provisions:—

No child under ten years of age is to be apprenticed to a chimney sweeper; and all chimney sweepers who take apprentices are to be householders. The indentures of boys under ten years of age are to be void, unless executed prior to the passing of the act; and apprentices under fourteen are to be designated by a brass plate on a leathern cap, under a penalty, exigible from their masters, of not more than five pounds nor less than forty shillings: there are also penalties on chimney sweepers employing boys under fourteen, not apprentices: and persons persuading or compelling any one to ascend a chimney-flue for the purpose of extinguishing fire, may be indicted for a misdemeanour.

With a view to prevent or restrain the cruelties hitherto so common, it is provided, that all binding or assignment of children as apprentices to chimney sweepers, shall only take place with the consent of two justices of the peace. Boys are not to be let out on hire: but before being bound as apprentices, they may make trial of the business for any period not exceeding two months; and if, on being brought to be examined, they should express their reluctance to be bound, the justices of the peace are to withhold their assent to the signing of the indentures. *The streets are also not to be hawked or called, as they have been, by chimney sweepers, under a penalty of forty shillings.*

But the most important provision of the act, in so far as the public are concerned, is the eighteenth section, which relates to the future construction of all chimneys and flues. It is enacted, that in every chimney and flue which shall be erected or re-built after the passing of the act, the withs and partitions shall be of brick or stone, and at least equa half a brick in thickness; every breast, back, and with, or partition, is to be of sound materials, and the joints of the work well-filled in with mortar or cement, and rendered or stuccoed within; and every chimney or flue of greater length than four feet out of any wall, not being a circular chimney or flue of twelve inches in diameter, must be in every section not less than fourteen inches by nine; nor shall any chimney or flue be constructed with an angle less obtuse than one hundred and twenty degrees, while every salient or projecting angle is to be rounded off four inches at the least. The penalty on the builder for violation of these provisions is *one hundred pounds*. Chimneys or flues, however, may be built at angles with each other of ninety degrees, they having proper doors or openings not less than six inches square.

FRIENDLY SOCIETIES AMENDMENT ACT.

ON the 30th of July last, an act was passed, entitled "An Act to amend an Act of the Tenth Year of his late Majesty, George the Fourth, to consolidate and amend the Laws relating to Friendly Societies." The act which is thus amended (the 10 Geo. IV., c. 56), was passed on the 19th of June, 1829. An abstract of its provisions may be seen in the 'Companion to the Almanac' for the year 1830.

The 10 Geo. IV., c. 56, established and defined the objects for which Friendly Societies may be formed. These were, the mutual relief and maintenance of the members, their wives and children, or other relations, in sickness, infancy, advanced age, widowhood, or any other natural state or contingency, of which the occurrence is susceptible of calculation by way of average. The amendment act *extends* these objects, by including the *nominees* of members, and adds, "*for any other purpose which is not illegal.*" But it provides, that when the rules of a Society furnish relief in any other cases than those of sickness, infancy, advanced age, widowhood, or other natural state or contingency, then *the contributions for such purpose shall be kept separate and distinct*, or else the expenses *defrayed by extra subscriptions of the members at the time such contingencies take place.*

Sections 4, 6, and 7 of 10 Geo. IV., c. 56, relating to the sanctioning and filing of rules of friendly societies, are repealed. In their stead, it is provided that two transcripts of all rules, signed by three members, and countersigned by the clerk or secretary, are to be transmitted to the barrister-at-law for savings banks, in England—to the Lord Advocate, or his depute, in Scotland—and to the barrister appointed by the Attorney-General, in Ireland, according as the societies are in either of the three kingdoms. The barrister, &c. is to certify both transcripts; one is to be returned to the society, the other to the clerk of the peace; and the justices are, as a matter of course, to confirm the rules. The clerk of the peace is to file the transcript transmitted to him, the rules being binding when certified by the barrister. This amendment simplifies and facilitates the former method of obtaining a legal sanction to the rules of friendly societies. It was formerly in the power of the justices to withhold their assent, if they did not think that the rules proposed could be adopted with safety to all parties.

Section 20 of the former act provided that "the executors, administrators, or assignees of bankrupts or insolvents, shall pay money due to friendly societies before any other debts." This is repealed; and it is enacted that executors, &c. of officers of friendly societies are to pay money due to the society before any other debt, *within forty days after demand.*

Section 30, which provided that the "funds of any friendly society may be subscribed into a savings bank," is also repealed; and it is provided that the funds of friendly societies may be deposited in savings banks, subject to the operation of the 9th of Geo. IV. c. 92, entitled, "An Act to consolidate and amend the laws relating to Savings Banks," except so much as *restricts the amount to be invested by any society*, which restriction is repealed.

Sections 35 and 36 of the former act, requiring clerks of the peace to transmit certain returns relating to friendly societies to the Secretary of State, and imposing the penalty of forfeiture of privileges on any friendly society which did not make the returns, are repealed.

The returns of sickness and mortality are to be made to

the barrister or advocate by whom the rules have been certified, and by him transmitted to the Secretary of State.

If the rules of a society direct reference, in case of dispute, to arbitration, and the society refuse to grant arbitrators, justices of the peace may determine the dispute; and in case a member is expelled, the arbitrators or justices may order him or her to be reinstated, or award a compensation out of the society's funds.

Members of friendly societies may be witnesses in any cause respecting the property, &c., of any enrolled society. No fee is to be paid for oaths taken before magistrates, in order to obtain payment of sick money. Letters to and from barristers are to be free of postage; and provisions of former statutes are to continue in force as to societies established under them, until they shall conform to the provisions of 10 Geo. IV. c. 56, as amended by the present act, although they may not have conformed to them within the time limited. Also, if a society enrolled under acts repealed by 10 Geo IV. c. 56, be desirous of altering their rules, it may be done in conformity to that act.

KNIGHTS OF THE BATH.

A RETURN respecting the Knights of the Bath has been printed by order of the House of Commons, containing an account of the several sums charged against them, under the heads of salaries, fees, or emoluments of any description. The following is an abstract:—

Since 1812 there has not been any formal installation in Westminster Abbey; but the Sovereign has been pleased to issue warrants, dispensing with the rites and ceremonies directed by the statutes, and granting to the Knights-Grand-Crosses all the privileges which would have belonged to them if actually installed. But in the year 1820, a statute was issued by his late Majesty, George the Fourth, declaring the liability of the Knights-Grand-Crosses to the payment of the fees on their nomination to the order, and ordaining that the fees incidental to installation should be paid by every Knight-Grand-Cross whose installation should be dispensed with, in the same manner as if he had been personally installed, according to the prescribed rites and ceremonies.

The last ten Knights-Grand-Crosses who have been nominated to the order, have (with the exception of Lord Ponsonby, who is absent on the king's service at Constantinople) paid their nomination fees. These fees, in the case of each knight, amount to 164*l.* 17*s.* 2*d.* They are apportioned as follows:—

	£	s.	d.
To the Dean of the Order	22	6	8
Genealogist	22	0	0
Bath King of Arms	22	0	0
Registrar	22	0	0
Secretary	22	0	0
Gentleman Usher	22	0	0
Messenger	18	13	4
Bath King of Arms, for the book of statutes	6	13	4
Secretary, for notice of election	6	13	4
Seal of the Order to the book of the statutes	0	10	6
	£164	17	2

The Dean of Westminster, as such, is Dean of the Order. He has no salary; and the above sum of 22*l.* 6*s.* 8*d.*, which is payable to him on the nomination of a Grand-Cross, is divided between the dean and prebendaries of Westminster, according to their ancient practice of dividing the fees. The dean and chapter also receive, at the installation of each knight, the sum of 6*l.* 11*s.*—viz., offering at the altar, 5*l.* 10*s.*, and for redemption of the sword, 1*l.* 1*s.*—which is given to charitable purposes. The knight also gives to the alms-men 10*s.* 6*d.*

The Genealogist and Bath King of Arms hold their offices by letters-patent. Their salaries, exclusive of fees, are—

	£	s.	d.
Genealogist, and Blanc-coursier Herald	103	8	4
Bath and Gloucester King of Arms	102	17	6

The offices of Registrar and Secretary are held by one individual: the united salaries amount to 150*l.* 15*s.*

The Gentleman Usher of the Red Rod, as such, holds also the office of Brunswick Herald, under letters-patent. He receives a salary of 93*l.* 6*s.* 6*d.*

The Messenger of the Order has a salary of 34*l.* This officer, being by the statutes directed to collect and distribute the fees, receives, in addition, five per cent. from the other officers.

The second and third classes of the Order of the Bath—viz., the Knights-Commanders and Companions—are charged, according to a regulation made when the order was enlarged, in 1815, the following fees: a Knight-Commander, 21*l.* 19*s.*; and a Companion, 6*l.* 17*s.* 8*d.* These fees are apportioned as follows:—

Knight-Commander.

	£	s.	d.
For his escocheon, or plate of armorial ensigns, to be affixed in Westminster Abbey	8	0	0
For banner, emblazoned in silk, to be placed over the plate	5	10	0
Recording the pedigree of family, &c.	7	8	0
Copy of the rules and ordinances	1	1	0
	£21	19	0

Companion.

	£	s.	d.
For escocheon, or plate	3	0	0
Recording military services in the books	2	16	8
Copy of Rules	1	1	0
	£6	17	8

In addition to the Bath King of Arms, there is an officer of arms attendant upon the Knights-Commanders and Companions. There is also a secretary; but neither of these officers has any salary or fee.

In the event of a Knight-Commander not having his family pedigree previously entered in the College of Arms, he has to pay, in addition to the fees of 21*l.* 19*s.*, the sum of 3*l.* 18*s.* 8*d.* to the officer of arms, whose business it is to record it.

HOUSE OF COMMONS' LIBRARY.

REPORT of the Standing Committee appointed on the 26th day of February last to assist Mr. Speaker in the direction of the Library; to whom were referred all matters relating thereto.

The Right Hon. the Speaker.

Sir Robert Harry Inglis.	The Lord Advocate.
Mr. Spring Rice.	Mr. Williams Wynn.
Sir Robert Peel.	Mr. Warburton.
Mr. Littleton.	Lord Viscount Clive.
Sir Henry Hardinge.	Mr. Stewart Mackenzie.
Dr. Lushington.	Mr. Wm. Ewart Gladstone.
Mr. Goulburn.	Mr. Tooke.
Mr. Frederick Shaw.	Colonel Fox.

Your committee feel great satisfaction in commencing their Report, by stating to the House the arrival of a large and valuable accession of books to their collection, as a present from the French government. The House will recollect that, in furtherance of a recommendation of the select committee of 1832, the journals and a set of papers printed by order of this House were transmitted to France, as the commencement of an interchange which it was considered desirable to establish and to maintain with the government of that country, with respect to the papers and journals ordered to be printed by the administrative and legislative bodies of the two kingdoms. The volumes, the receipt of which is now announced to the House, form the first return which has been made to England.

Your committee congratulate the House on the advantages derived by the enlargement of the space allotted to the library subsequently to the Report of 1832; by which Report, indeed, a still more considerable enlargement had been recommended. The library is now so much more frequented than at any former period, that the original room would probably have been crowded to a degree which would have rendered it comparatively useless.

The catalogue has been re-arranged; a measure rendered necessary by the great increase of books purchased in consequence of the recommendation of the select committee of 1832, and is now ready for publication.

A general index to the bills, reports, and accounts and

papers which have severally been ordered to be printed by the House of Commons from 1801 to 1832 has been printed, pursuant to the recommendation of the same committee. The general utility of such index, indeed, its absolute necessity, has been felt by almost every member who takes part in the business of the House. Your committee recommend that Messrs. Hansards be directed to pursue the same plan for the formation of a general index to the sessional papers printed by order of the House, as that followed by the librarian in regard to the general index to the journals; so that, at any period, when the papers ordered to be printed by the House shall have assumed such a bulk as to be difficult of reference by annual indexes, a similar publication may be ready for printing; and thus when such convenience may be deemed expedient, the delay otherwise incident to the completion of a general index may be found to have been avoided.

Considerable progress has been made in the index to the local and personal acts; the completion of which index was also recommended by the committee of 1832. It is probable that by the close of next session it may be in such a forward state as to be ready for the press.

The value of the arranged series of reports from 1801 to 1826 has been so generally appreciated, that your committee have directed that this series should be completed to the end of the present session. As in these reports (to quote the words of the committee of 1832) 'there is much valuable information rendered unavailable, from the absence of any means of reference to the appendixes thereto, your committee recommend that an index to such materials from 1800 to the close of the present session be compiled, similar to that subjoined by Messrs. Hansards to the collection of reports dated prior to 1800, and printed in 15 vols. folio.' This index, extended to the present session, might be accompanied by such notices of the reports themselves as would form a general means of reference to the whole series, comprehending not less than 200 volumes.

Your Committee are induced to state, that by a recent arrangement all papers presented in pursuance of orders or of addresses to the House, are deposited in the library during the current session, in order to facilitate access to such as are not at once ordered to be printed. This regulation is particularly offered to the attention of the House, as the ready inspection afforded by this arrangement may frequently either prevent the printing papers which do not contain the information sought, or may present the opportunity of abstracting from bulky returns all which may be necessary for the use of the House. This plan, it is hoped, has already had some effect in diminishing the quantity of printing.

Your Committee have come to the following resolutions in respect to the future management of the library, and of the rooms appropriated to it:—

1st, That no other committee, except the Committee of Privileges, be, under any circumstances, permitted to sit in the library.

2d, That no strangers be, under any circumstances, permitted to be in the library, from the time when Mr. Speaker takes the chair to the rising of the House; peers not being included in this restriction, nor strangers under special permission in writing from Mr. Speaker.

3d, That memoranda of works which members may think desirable for the House to possess, be entered in a book to be kept for that purpose by the librarian; and that no book be received into the library except such as may be presented by or through his Majesty's government, or through the Library Committee.

The reasons against the present almost indiscriminate admission of strangers are obvious: the library, instead of being restricted to its legitimate purposes, has sometimes been used for the assembling of deputations: and with respect even to individual strangers, it is difficult to enforce the existing rule (which directs, that parties introduced by one member into the library, shall leave the rooms with him), since they have often addressed themselves to other members, with whom they were unacquainted, for the purposes of requesting permission to continue in the rooms under their sanction: and, there is reason to believe, that the conversations incident to the admission or the presence of strangers, is itself an inconvenience to the majority of members; since, without reference to any other consideration, the rooms, notwithstanding the enlarged accommodation lately given, are sometimes scarcely sufficient for members themselves. Your Committee have directed that a copy of these rules be left with the messenger of the library, and that he be directed to enforce the same.

The Select Committee of 1825, which recommended the building of the existing library, determined also, in the plan on which they decided, that the librarian should have some accommodation in part of the proposed building. This arrangement was not adopted, a different plan altogether being preferred on other grounds entirely irrespective of the expediency or inexpediency of granting this accommodation to the librarian.

In consequence of the necessary attendance of the librarian from the hour of ten in the morning till the final rising of the House, at whatever hour that may be; and of the library not being closed during the recess of parliament, except for the period of two months, during a portion of which time his presence is likewise necessary; it is the opinion of your Committee, that apartments or a house in the immediate vicinity should be provided for his residence, partly as a reasonable convenience on account of the severity of his duties, and partly to insure his presence at any moment when his attendance may be considered necessary, such accommodation being afforded to the librarian of the House of Lords, for similar reasons.*

Your Committee, in closing their First Report to the House, feel it to be their duty to express their entire satisfaction with the conduct of Mr. Vardon, as librarian; his diligence, punctuality of attendance, and efficient discharge of all his duties in that office, having contributed greatly, in their judgment, to the public usefulness of the establishment.

ORDERS IN COUNCIL RELATIVE TO THE CHINA AND INDIA TRADE.

THESE orders, issued by his Majesty in conformity with the provisions of the late Acts for the regulation of the government and trade of India, are four in number, as they appear in a return printed among the parliamentary papers; but the fourth merely goes to rescind the second. The first, which is dated 9th Dec., 1833, prescribes regulations for the government of the king's subjects at Canton. It is ordered, that all the powers and authorities which, on the 21st of April, 1834, shall be by law vested in the supra-cargoes of the East India Company, over the trade and commerce of the port of Canton, shall be thereafter vested in the superintendents for the time being, appointed under the Act of Parliament which declares the trade free. The various regulations, penalties, and forfeitures enforced by the East India Company's supra-cargoes are to continue in operation under the superintendents, unless specifically interfered with or abolished by the Act of Parliament. The superintendents are to compile and publish these regulations for the information of all concerned; and on the arrival of any British ship or vessel at the port of Canton, are to cause a copy to be delivered to the commander or principal officer.

This order is declared to be provisional, and only to continue in force until further arrangements can be made.

The second order, bearing the same date (9th Dec. 1833), related to the imposing of duties on tonnage and goods in British ships trading to Canton, but, as has been mentioned above, it has been set aside by a subsequent order.

The third order, also of 9th Dec., 1833, creates a court of justice at Canton. By the act for regulating the trade to China and India, it is provided that it shall be lawful for his Majesty in council to create a court of justice, with criminal and admiralty jurisdiction, for the trial of offences committed by his Majesty's subjects within the dominions of the Emperor of China, and the ports and havens thereof, and on the high seas within one hundred miles of the coast of China; which court may be held at Canton, or on board any British ship or vessel in the port of Canton.

The practice and proceedings of this court, it is declared in the present order, are to be similar to what obtains in the Courts of Oyer and Terminer, and gaol delivery, in [illegible] land, regard being had to difference of local circumstances. Trials are to take place before the chief superintendent for the time being, and a jury of twelve men, [illegible] learned—if are to be examined, *viva voce*, in open court, [illegible] opinions for [illegible] for them, not according to the [illegible] ople, but according to the [illegible] for this purpose. [illegible] sts, which may,

* The Committee on Official Houses have

and most probably will, be contrary to that of the people at large. The best security for a government like this, for the legislature, for the crown, and generally for the public peace and public morals, is, that the whole community should be well informed upon its political as well as its other interests; and it can be well informed only by having access to wholesome, sound, and impartial publications. Therefore they will and ought to read the news of the day, political discussions, political events, the debates of their representatives in Parliament, and of the other house of Parliament; and on not one of these heads can any paper be published, daily or weekly, without coming under the stamp law; consequently the people at large are excluded, by the dear form in which alone the respectable publishers can afford it, while they pay the duty. They can only have it in a cheap form by purchasing of publishers of another description, who break the revenue-law by paying for no stamps, and also break all other laws by the matter they publish. If, instead of newspapers being sold for 6*d.* or 1*s.*, they could be sold for 1*d.*, I have no manner of doubt there would immediately follow the greatest possible improvement in the tone and temper of the political information of the people, and therefore of the political character and conduct of the people. It is my decided and deliberate opinion, from very long and anxious consideration, that the danger is not of the people learning too much, but knowing too little. It is no longer a question whether they shall read or not; it is no longer a question whether they shall be instructed or not; it is no longer a question whether they shall be politicians, and take part in the discussions of their own interests, or not; that is decided long ago. The only question to answer, and the only problem to solve, is, how they shall read in the best manner; how they shall be instructed politically, and have political habits formed the most safe for the constitution of the country, and the best for their own interests. I can devise no other means than making that accessible at a cheap rate which at present they must have at a rate they cannot afford, without having it bad as well as cheap. I wish to give it them both cheap and wholesome.

"Would, in your Lordship's opinion, increasing the severity of the law against unstamped periodical works have a tendency to suppress them?—I think, if it had a tendency at all, it would be a contrary tendency; I think it would be *brutum fulmen* if it were made a capital felony, as I have seen it not very wisely proposed in some quarters; no jury would convict at all. You cannot discover them, and they will never convict them.

"Has it fallen under your Lordship's observation whether taking off the stamps from newspapers would seriously injure the revenue?—That is undoubtedly the great difficulty, and I have reason to think that is one of the two only difficulties which prevent the measure from being adopted; the other is the apprehension, that when this impediment is removed, there will spring up an unlimited increase of penny publications of a profligate description, on political and religious subjects. My opinion decidedly is, that no such consequence would ensue; a great number would spring up, and a great number would speedily fall. An established newspaper has a great advantage over the new comer; the 'Morning Chronicle' or 'The Times,' the 'Morning Herald' or the 'Morning Post,' coming down to 3*d.* would have infinite advantages over any other; they have possession of the field; the proprietors are men of credit, and I am sure they are actuated by a feeling too liberal to wish to put forward their claims to anything like monopoly. But in the next place, though a great number of new papers would arise, I cannot conceive that more libellous, blasphemous, or obscene publications would or could arise than exist at present; for those publications have already been established, and the tendency of the change could only be to raise a competition against those publications, that is, the competition of respectable writers. At present I should say those publications have a better chance than they could under a law abolishing the stamp; for at present they have the means of excluding, by their lawless habits, respectable men from all competition with them; they have therefore the benefit of the stamp; the others do not wish to run the risk of a breach of the revenue laws, and therefore abstain from that competition; so that the stamp operates to narrow the competition, and so give the lawless trader a monopoly in the market of blasphemy, treason, and ribaldry. I hold it to be as clear a proposition as any in finance, that if you abolish the stamp on newspapers, instead of increasing the facility to set up libellous publications, you greatly lessen it by increasing the number of good publications, and by destroying the monopoly in the hands of reckless men, who neither mind the old law of the land nor a breach of the stamp laws. Then, the other observation to which my attention is directed is a very material one. I cannot give so decided an answer to that—namely, the injury to the revenue; but after much attention, my opinion is, that there would be no very material injury to the revenue. In the first place, there would be a great increase of publications, that must of course increase the amount of the excise on paper; but that which is at present a great injury to commerce, the expense of advertisements, would be greatly diminished; for the increased number of papers would tend beyond all question to diminish the price of advertising. No newspaper at present can avoid exacting, and according to the amount of circulation of these great London publications they do exact, large sums for inserting advertisements. The stamp is now only 1*s.* 6*d.*; it is not, consequently, this tax which obstructs advertisers; but if you take a paragraph to a well-circulated newspaper, they make their own bargain; they take a couple of guineas for an advertisement of one size, and a guinea or half-a-guinea for a very small advertisement. No doubt taking away the stamp may perhaps not be very beneficial to those great newspapers, but I think they would gain in other ways as much as they lost in this; and at any rate I must look to the interest of the consumer, and not of the grower. In America, where no stamp exists, the proportion of newspapers to the population is twenty or thirty to one more than in this country; and in the Norman islands in this Channel, where they have no stamp, it is fifteen to one. We should have papers in something of that proportion; I think that it would tend to diminish the expense of advertisements, and therefore greatly increase the revenue derived from thence; nobody will grudge the 1*s.* 6*d.* expense to government.

"Have not those persons who have had the monopoly of the newspaper circulation, who have circulated their papers without stamps, all failed, while those who have circulated their papers with stamps have almost all succeeded?—I believe so; and I am happy to think that is the case. I found that of the great number I have referred to, in six months there were not more than a very few; but then I must say this in fairness, that where one goes down another rises up; for the thing which prevents such a newspaper going on is the Stamp-office account, which is heavy, being a ready-money account, and they are not able to meet it. So far as the carrying it on depends upon their own exertions they can get on, but the Stamp-office exacts ready-money most rigorously. They have no doubt a ready-money trade to meet that; but then they buy a greater number of stamps than they can sell; they may buy 500 stamps and sell 250 papers, and that is a dead loss; therefore those persons are constantly starting new papers who have no stamps to burden them. I have seen a great number of these papers officially; as I have sometimes been asked whether they ought not to be proceeded against; and the first thing I look at is the number, whether it is No. 50, or No. 10,000; but they seldom come to 100; they are generally under 50; and hence it follows, as they are weekly publications, that they have not often lasted out the year.

"There is a disregard of property by these persons, who are in the nature of smugglers.—They are persons almost as reckless of their own interests as of the rights of others.

"Your Lordship has had some experience of the state of mind of the labouring classes of the people of England. Supposing good matter, wholesome matter, put before the people, and at the same price, and no lower and no higher than bad matter—blasphemy, obscenity, and so forth—does your Lordship's knowledge of the education and state of mind of the people enable you to say which they would prefer?—I have not a doubt about it. It is in vain to say that some persons would prefer obscene matter, and some ribaldry, and some blasphemy: it would be but an insignificant portion of the whole country. The bulk, who are innocently and morally disposed, are more or less respectable, and would be ashamed to bring this trash to their cottages where their wives and children are; nay, I believe that they would not desire to read it themselves. I have had much intercourse with the people of all ranks, from the lowest to the middle ranks; I never entertained the least fear of them, even when most excited; I never have

known things in a state in which I had any fear of the people, either of their morals or their loyalty, or their peaceable disposition, which is natural to Englishmen; and those only can be afraid of them who, unfortunately for both parties, are exceedingly ignorant of the people. Those who know them as much as I do, must know that they are very much the reverse of an object of dread, or distrust, or suspicion; that they are generally morally and peaceably disposed, and I should say very much disposed to respect and submit to those above them. Even the trades' unions do not offer, to my mind, any material exception; for I believe they have in many cases had grievances to complain of, and that they have erred in not taking the right way to get redress, by trusting to selfish, dishonest leaders, and by being imperfectly informed upon their own interests. I state my opinion as the result of a large practical experience, having had an intimate knowledge of the people in every way, and the more I have known, the less apprehension I have had about them. I have therefore not a doubt in answering the question in the affirmative. I must also add, that I am quite certain if the stamp were taken away, where we circulate useful information to the extent of thousands, we should circulate useful information to the extent of millions; for we have been trying to get useful publications not only into parts of the country where men are gregarious—the manufacturing districts, in which they naturally and easily read—but into farm-houses and cottages, where the case is different. The great difficulty is to get the peasants to read—first, because they do not work together; and next, because people working in the open air are sleepy when they come home; but in long winter nights, when they are not so hard worked, and have much more spare time, it is particularly desirable that they should not have recourse to beer-shops or to bad publications. It would be of great advantage if we could furnish them with publications that have a tendency to make men good members of society, rather than those which are now propagated and are read by great numbers, teaching them that the most infamous of characters—a man, for instance, who is about to be executed for the foulest murder—from the moment he becomes converted to some particular spiritual doctrine, is safe from retribution in another world. I cannot conceive a more pernicious doctrine; and all which is said about absolution in the Catholic church is not one whit worse, even in its abuse, and I know it is very much abused. Those publications which are in farm-houses, to my knowledge, for want of better, teach that if a man commit murder, and will only afterwards become a fanatic, he is in acceptance with Heaven, and his murder forgiven him! If a man can have in his cottage, at a cheap rate, accounts of the debates, which they look to with great interest, and which it is their duty as well as their interest to read,—the proceedings in courts of justice, which they also are delighted with reading,—if, in addition to these departments, commonly called the news of the day, we could circulate four pages more, which could be done for a penny without that pernicious stamp duty, we might give the cottager for a penny a newspaper with wholesome general information, which might be of use to him in various ways, besides giving him all the intelligence of the week. I am quite certain that this would be the effect of repealing the stamp."

PARLIAMENTARY ABSTRACTS.

East India Accounts.—In the 'Companion' for August, we gave an abstract of the revenues and charges of India, for four years preceding the year 1833. We now give an abstract of the last annual account, made up to 1st May, 1834, with some additional particulars respecting compensation to the Company's servants, &c.

Annual Account made up to 1st May, 1834.

Receipts.	£.	s.	d.
Political and Territorial branch:—viz., Bills from India on account of supplies to the public service, net produce of bullion received from India and China, &c.	1,028,732	13	4
Commercial branch:—viz., Company's Goods, Charges and Customs on private trade, and numerous other items	6,888,817	2	8
Realization of Commercial Assets	1,881,492	14	1
Balance in favour, 1st May, 1833, (exclusive of Duty on Tea)	2,460,048	1	1
Total	£12,259,090	11	2

Payments.			
Territorial:—viz., Bills of Exchange from India for principal and interest of India Debt, Military, Civil Establishment, &c. &c.	2,806,777	12	11
Commercial:—Customs, Freight, Charges General, &c.	3,679,411	8	1
Paid into the Bank of England, for the formation of the Security Fund, for the redemption of the Company's dividend	2,000,000	0	0
	£8,486,189	1	0
Balance in favour, 1st May, 1834, (exclusive of Duty on Tea)	3,772,901	10	2
Total	£12,259,090	11	2

Estimate of the Receipts and Disbursements of the Home Treasury of the Company, for the year, 1st May, 1834, to 1st May, 1835:—

Receipts.	£.	s.	d.
Balance of Cash (exclusive of Duty on Tea) Amount expected to be realized from commercial assets within the year, Remittances from India through his Majesty's Government, &c. &c.	8,213,821	0	0
Disbursements.			
Charges, Customs, &c, including Extraordinaries, Compensations, St. Helena, &c. &c.	6,016,838	0	0
Balance in favour, 1st May, 1835	2,196,983	0	0
	£8,213,821	0	0

Statement of the Debts and Assets of the Company, made up to 1st May, 1834:—

Debts.	£.	s.	d.
Debts classed under the head of territorial and political	6,226,005	0	0
N.B. There are claims in dispute, which, if adjudged against the Company, would add to this balance a sum of 200,000*l.*			
Debts classed under the head of Commercial	662,987	0	0
Home Bond Debt, charged upon the revenues of India, by the 9th sec. of the 3 and 4 Will. IV. c. 85, principal and interest	3,538,654	0	0
Total Debt	£10,427,646	0	0

Assets.			
Assets, Political and Territorial:—viz., unshipped Stores, Bills of Exchange drawn in the Company's favour unpaid, value of East India College at Haileybury, and Seminary at Addiscombe, floating property, &c.	586,972	0	0
Commercial:—Balance of Cash, Goods sold, not paid for, value of Ships, Sloops, East India House, and Warehouses, &c. &c.	16,877,073	0	0
Security, or Guarantee Fund of the Company, value of Stock, and amount of Cash	2,031,502	0	0
Total Assets	19,495,547	0	0
Total Debt	10,427,646	0	0
Excess of Assets over Debts	£9,067,901	0	0

Compensation.—In addition to the particulars given in last month's 'Companion,' relative to compensations and pensions, we add the following, abstracted from a parliamentary paper, which had not then been printed. The Company's *hoymen*, who are to be discharged, are to receive pensions on the following scale:—

To those having served 10 years, and less than 15,	6*s.* 0*d.* per week.
15, and less than 20	7*s.* 0*d.* ditto.
20, and less than 25	8*s.* 0*d.* ditto.
25, and less than 30	10*s.* 6*d.* ditto.
30, and less than 35	11*s.* 0*d.* ditto.
35, and upwards	11*s.* 6*d.* ditto.

To those hoymen who have served less than ten years, the following gratuities are to be given:—

To those whose service exceeds 6 years	50*l.* each.
Less than 6 years, and more than 2	30*l.* ditto.
Under 2 years	20*l.* ditto.

The seamen of the Company's pilot-sloop, *Diligence*, on being discharged, are to receive pensions and gratuities as follow:—Those who have served ten years, pensions of 6*l.* each per annum, and the remainder, gratuities of 15*l.*, 5*l.*, and 2*l.* 10*s.*, according to the length of their services.

The housekeepers' establishment, in Leadenhall Street, is re-

duced to two. The two housekeepers who retire are allowed pensions of 75*l.* and 50*l.*

Savings' Banks and Friendly Societies.—The sums received and paid on account of Savings' Banks and Friendly Societies, in Great Britain and Ireland, from 6th August, 1817, to 20th November, 1833, inclusive; made up pursuant to 9 Geo. IV. c. 92, s. 48.

From Aug. 6, 1817, to Nov. 20, 1833.	Amount of all sums received from Savings' Banks and Friendly Societies, including interest placed to their credit.	Amount of all sums paid to Savings' Banks and Friendly Societies, including interest.	Amount of interest received by the Commissioners.	Amount of interest paid to Savings' Banks and Friendly Societies.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.
Great Britain	21,219,912 18 4	6,857,825 2 2	5,401,114 16 4	6,404,700 0 4
Ireland	3,331,577 13 7	1,953,322 2 0	346,143 8 5	427,365 11 0
Total .....£	24,551,490 11 11	8,811,147 4 2	5,747,258 4 9	6,832,065 11 4

The sums paid in, and drawn for, by the trustees of Savings' Banks and Friendly Societies, in Great Britain and Ireland, from 9th February, 1833, to 1st March, 1834, amount to:—Principal paid in, 1,100,999*l.* 8*s.* 9*d.*; Principal drawn, 588,591*l.* 2*s.* 3*d.*

Russian-Dutch Loan.—An account of the sums paid and applied within the year 1833, on account of the Russian-Dutch loan:—

1833. Dr.	Interest in Florins.	Total in Florins.
Jan. 1. To balance due this day		20,750,000
June 30. To half a year's interest on 250,000 florins, the amount of sinking fund paid 4th July, 1833 . .	6,250	
Dec. 31. To one year's interest to this date on 20,500,000 florins, remaining due after payment of 250,000 florins sinking fund on the 4th July, 1833 .	1,025,000	
Florins .	1,031,250	20,750,000
1833. Cr.		
July 4. By amount of remittance to Messrs. Hope and Co. of Amsterdam, agents of the Russian government . . .		250,000
By half a year's interest on 250,000 florins	6,250	
Dec. 24. By amount of remittance to Amsterdam of one year's interest at 5 per cent. on the 20,500,000 florins due	1,025,000	
By balance due on 1st Jan. 1834 .		20,500,000
Florins .	1,031,250	20,750,000

The amount of the preceding remittances, according to the rate of exchange when the remittances were made to Amsterdam, was in sterling money	£106,770 16 8
Paid Mr. Pemberton, as agent, for paying the Russian-Dutch loan	300 0 0
	£107,070 16 8

Stationery and Printing.—Statement of the several arrangements made by the Treasury, in 1830, 1831, 1832, 1833, and 1834, in regard to the charges made by the king's stationer in Ireland, the king's printer in England, the printers for the two Houses of Parliament, and by the king's printers and stationers for Scotland; and in regard also to the expense of printing at the printing press of the Excise Office. This is the title of a parliamentary paper, of which the following is a brief abstract:—

King's stationer in Ireland. Arrangements were made in the beginning of the year 1830, with Sir A. B. King, the king's stationer in Ireland, for the surrender of his patent, and for placing the supply of stationery under the control of the Stationery Office in London. For the three years preceding the surrender of the patent, the annual expense was 22,263*l.*, and during the three years which followed, it did not exceed 7488*l.* annually.

At the beginning of the year 1831, an inquiry was instituted into the expenses of printing for the Government Offices and the two Houses of Parliament. It appeared that the parliamentary printers supplied the paper required, and added the expense of commission to the first cost. It was, therefore, directed by the Treasury, that the paper should thenceforward be supplied by the Stationery Office, and a saving has been effected in consequence, during the two years which have succeeded the arrangement, to the amount of upwards of 32,000*l.*

Arrangements were entered into with the king's printers for Scotland, for the surrender of that part of their patent which conferred the right of supplying the public departments in that country with acts of parliament, stationery, printing, and binding. This negociation has been completed, and the supply of the articles hitherto furnished under the patent was transferred from the 1st January, 1834, to the Stationery Office, London. The annual amount of the supplies under the patentees had been 10,500*l.*; but the vote for this head of service, in the present session, was only 4500*l.*, and as it is supposed that this will completely cover all charges, it is estimated that the saving effected will amount to 6000*l.* yearly.

The whole of the charges made for the different descriptions of printing work, have undergone revision, which has been a work of difficulty and complexity. A new adjustment of prices has been effected, by which, during the sessions 1832 and 1833, a saving was accomplished on the charges for printing the votes and proceedings of the House of Commons, to the extent of 40 per cent. The effect of the new arrangement on the bills of the king's printers for the House of Lords, and of the printers for the House of Commons, during the same period, was only partial; but on their accounts for the present session, it will effect a saving of 20 per cent. on those of the former, and 25 per cent. on those of the latter.

The arrangements that have been made will considerably reduce the cost of acts of parliament, both to the government offices and to the public at large. Indeed, all acts of parliament, of whatever dates, will now be procured at one-half of the former prices. The acts of parliament promulgated in 1832 amounted to 1,088,141 sheets, and were charged at the old prices at 12,295*l.* 17*s.* 1*d.* The acts promulgated in 1833 amount to 1,100,877 sheets, and were charged, according to the reduced scale of prices, at 6335*l.* 7*s.* 1¾*d.* This shows a saving of 5960*l.* 9*s.* 11¼*d.*, notwithstanding an increase of upwards of 12,000 sheets.

Other regulations have been established, and arrangements entered into, for further reductions: such as the transfer of the printing work of the Customs, Post Office, and Ordnance Office at the Tower; to the private printing establishment of the Excise Office; and the stopping the practice of purchasing articles of stationery, printing, and binding, for the use of the public departments, from private retail tradesmen, who charged double the price at which they could be procured by the Stationery Office. Papers, also, which are presented to parliament by command of his Majesty, are to be printed under the superintendence of the Stationery Office, which will effect a saving of 25 per cent., even upon the reduced charges.

Soap.—The gross revenue derived from soap, from the time of the reduction of the duty until 5th January, 1834, in Great Britain, is 617,015*l.* 9*s.* 11*d.*

Loans of Exchequer Bills for Public Works.—There have been allotted for public works, by three different acts of Parliament, the sum of 4,500,000*l.* Of this sum 200,000*l.* is to be deducted for Ireland, leaving 4,300,000*l.* to be distributed in Great Britain, of which 4,230,350*l.* has already been appropriated, leaving in the hands of the commissioners, 69,650*l.* to meet applications to the amount of 385,300*l.* The sum appropriated has been apportioned as follows:—

Canals, rivers, drainage . .	£1,298,100
Harbours, docks . . .	308,000
Bridges, ferries	214,300
Fisheries	33,700
Waterworks	27,000
Roads and railways . . .	905,400
Improvement of cities and towns .	701,050
Collieries and mines . .	303,700
Churches and parish relief . .	69,700
Colleges	108,000
Law courts, gaols, asylums, &c. . .	241,400
	£4,230,350

There has been received on account of principal £1,907,677 11 4
Interest 820,899 14 10

£2,728,577 6 2

The principal outstanding, repayable by instalments, and transferable with interest, from time to time to the Exchequer, amounts to 2,226,372*l.* 8*s.* 8*d.*

TRADE, STATISTICS, &c.

Popular Representatives.—The first admission of burgesses and citizens into Parliament occurred with ourselves, as is generally believed, in 1265; the period when deputies were first admitted from the imperial towns into the German Diet, was the year 1293; and the earliest admission of civic representatives into the States-General dates in France from the year 1303. Spain, however, took the lead very considerably in this respect; for we find the admission of deputies from towns in the Cortez of Castille, mentioned as early as in the year 1188. For instance, the Cortez held at Burgos, by Alphonso VIII., consisted of 2 archbishops, 2 bishops, 13 nobles, and 50 *majores* deputed from the various cities and towns in Castille.

Bank of England.—Liabilities and Assets of the Bank of England, on the average of the quarter, from the 3rd of June to the 26th of August, inclusive.

Liabilities.	
Circulation	£19,147,000
Deposits	15,384,000
	£34,531,000

Assets.	
Securities	£28,679,000
Bullion	8,272,000
	£36,951,000

Post Office Steam-Vessels.—A Parliamentary Paper states that there are 24 steam-vessels in the service of the Post Office, which are thus stationed:—4 between Liverpool and Dublin, 300 tons each, and 140-horse power; 6 between Holyhead and Dublin, 235 tons each, and 100-horse power; 4 between Milford and Waterford, 189 and 237 tons, and 80-horse power; 2 between Portpatrick and Donaghadee, 110 and 130 tons, and 40-horse power; 3 between Weymouth, Jersey and Guernsey, 154 and 156 tons, and 40-horse power; and 5 between Dover, Calais, and Ostend, of 119 tons each, and 40 and 50-horse power. These perform 2293 voyages annually, and consume 30,000 tons of coal.

Oaths.—A Return, laid before the House of Commons, states the number of oaths taken before the Board of Customs, in 1830, to be no fewer than 101,595, and before the Board of Excise 194,612.

French Specie.—A table of the circulation of specie in France, between the years 1661 and 1832, presents the following facts:—

		Francs.
1661, under the Ministry of	Colbert	600,000,000
1708,	Nicholas Desmarets	800,000,000
1754,	De Sechelles	1,600,000,000
1780,	Necker	2,000,000,000
1797,	Ramel	2,200,000,000
Empire,	Mollien	2,300,000,000
1828, Restoration		2,713,000,000
1832,		3,583,000,000

French Clergy.—According to the 'Royal Almanack,' the clergy of France, on 1st January, 1834, were classed and numbered as follow:—Titulary and honorary canons, 1121; rectors, 3241; assisting priests, 24,517; curates, 6289; chaplains, 449; almoners, 943; *prêtres habitues*, 439; priests, directors of seminaries, 1158; total clergy in active service, 40,447.

Population of Wurtemberg.—According to the last census taken in Wurtemberg, the population amounts to 1,578,140 souls, of whom 768,365 are males, and 809,782 females. There are 484,376 Catholics, 1,082,233 Lutherans, 1,338 of the Reformed Church, and 10,670 Jews. Wurtemberg contains, upon an average, 4394 persons for each square mile.

Army of Wurtemberg.—The army of the small kingdom of Wurtemberg consists of 6,977 men as a peace establishment, and 17,349 upon a war footing. It is recruited both by constrained and voluntary enlistment. All the soldiers are eligible to any advancement which may be merited by long and honourable service, or by brilliant actions in time of war. The army is at present organized as follows:—

	Peace.	War.
General Staff	106	142
Infantry, eight regiments	4,440	11,792
Cavalry.		
Staff	11	3
Body Guards	168	180
Chasseurs	50	80
Four regiments	1,416	2,700
Artillery.		
One regiment	522	1,175
Train	132	1,127
Pioneers and Staff of the Quartermaster-general	70	140
	6,977	17,349

The kingdom of Wurtemberg furnishes 13,955 men to the forces of the Germanic Confederation, of which 3,139 form the reserve. These troops are commanded by a general-officer of the nation, and form a division of the 8th Corps of the federal army.—*Mémorial Encyclopédique et Progressif des Connaissances Humaines.*

Specie (United States).—The amount of specie imported into the United States, between the 1st of December, 1833, and the 12th of August, 1834, is 12,653,691 dollars 82 cents; the amount exported is 950,815 dollars 85 cents. This is exclusive of what has been brought in by passengers, or in any other way not entered in the manifests of vessels.

Episcopal Statistics (United States).—Since the Revolution, there have been 30 bishops; 14 are dead, and 16 are now living. Of this number 3 were consecrated in England, 1 in Scotland, 1 by Bishop Provost, and 25 by Bishop White. There are 65 students in the general theological seminary. The Missionary Society has 8 missionaries in the United States, and 2 in Greece. A mission is to be established in China. The number of clergy has increased during 40 years, between 1792 and 1832, from 192 to upwards of 600. In the diocese of New York, the number of clergy is 183, and the congregations 190.

Coinage in India.—The total value of the coinage at the four mints, Calcutta, Benares, Furukhabad, and Saugur, for the period of 31 years, has been 53,322,000 rupees. When the establishment of the New Calcutta Mint was arranged in England, in 1820, it was calculated that a daily coinage of 200,000 pieces would provide for the whole currency on that side of India. That calculation has been found not at all excessive; for the coinage of the Bengal presidency, for the last 18 years, has been 150,000 per diem for 200 working days, and that exclusive of copper money, which would add, in value, nearly 50,000 pieces.

Trade of New South Wales.—The *Sydney Herald* states that 209 vessels, of all classes, employing 3749 men, arrived at the colony with cargoes during the year 1833; and that 192 vessels, employing 3323 men, had been engaged in exporting the produce of the soil and of the fisheries to the mother country and Van Diemen's Land.

PUBLIC PETITIONS.

The Select Committee on Public Petitions have issued during the session forty-seven Reports, the last of which is dated August 15, 1834. The following enumeration gives the entire number of the petitions, with the amount of signatures in each case.

	No of Petitions.	No of Sigs.
Parliamentary.		
For Vote by Ballot	21	21,652
For Triennial Parliaments	3	1,332
For elucidation of the Reform Bill	4	341
For repeal of the Legislative Union between Great Britain and Ireland	462	538,978
Ecclesiastical.		
In support of the Church of England	1,184	155,783
——— ——— Scotland	61	21,839
——— ——— Ireland	320	52,909
Against separation of Church and State	336	49,051
For ditto	63	72,274
Protestant Dissenters, for Relief	1,134	352,910
Against their Claims	495	35,212
Universities Admission Bill	24	2,564
Against ditto	445	41,810
For alteration of Lay Patronage (Scotland)	246	110,699
Against ditto	12	337
For relieving the Bishops from sitting in the House of Lords	5	1,307
Against Tithes (Ireland) Bill	10	10,067
Tithes, for abolition	421	367,032
———, for alteration	10	1,028

	No. of Petitions.	No. of Sigs.
Tithes, Stay of Suits	2	129
———, Commutation Bill, against	6	718
——— on Fish	2	212
For better observance of Lord's Day	722	157,419
For Lord's Day Observance Bill	354	46,994
——— (Scotland)	29	17,798
For Relief of the Jews	13	36,180
Glebe Houses (Ireland)	5	175
Taxes.		
For repeal of the Corn Laws	37	152,819
Against alteration of	148	32,787
For repeal or amendment of Sale of Beer Act	103	16,303
For alteration of	35	50,962
Against Sale of Beer Act Amendment Bill	65	21,007
Spirit Licenses, against increase of duty	17	946
Malt, for repeal of duty on	120	26,508
Against Poor Laws' Amendment Bill	172	16,157

POLITICAL RETROSPECT FOR OCTOBER, 1834.

GREAT BRITAIN.

THE temporary cessation of legislative proceedings and party contests by the rising of Parliament has left little to make up the political history of the past month.

The most important event in the domestic politics of the month has been the festival held at Edinburgh on Monday, the 15th, in honour of Lord Grey. Probably no minister, in the zenith of his power, ever before received so magnificent a tribute of national regard, as has been paid on this occasion to one who has not only retired from office, but retired from it for ever. The popular enthusiasm manifested both at Edinburgh and wherever else anv of his majesty's ministers have shown themselves since h vorogation of parliament, is a curious commentary on the statements of certain of the London newspapers, who, for some time past, have been day after day assuring us that the recent proceedings, both of the government and the legislature, had excited, all but universally among the people, only feelings of disappointment and indignation.

There has been in the course of the month a good deal of party agitation in Ireland, carried on both by speechifying and through the press. Mr. O'Connell has addressed his countrymen in several long letters; and the members of the Orange, or, as they seem now to prefer calling themselves, the Conservative party, have assembled in considerable force at meetings in Dublin, and delivered themselves of large quantities of very hot and turbulent eloquence in support of order and religion. Meanwhile the Marquis of Downshire has announced his intention of taking upon himself the payment to the clergy of the tithes due from his estates; and a considerable number of other landlords, among whom are several Catholics, have followed the example thus set.

The 'London Gazette' of the 18th of September contains the details of some hostile operations in which the forces of the East India Company had been engaged in March and April last against the Rajah of Coorg. They ended in the complete reduction of this petty potentate, and the annexation of his principality to the dominions of the Company.

SPAIN.

THE discussions in both Chambers of Cortes cannot be accused of having been deficient in animation. The opposition or liberal party has formed in great strength, and has, on one or two occasions, out-voted ministers. Martinez de la Rosa's cabinet is consequently said to be shaken and

about to fall. Whilst admitting the reasonableness of some of the objections to ministerial measures taken by the liberals, it strikes us that the party, as in former times, is somewhat over vehement, impatient, and theoretic, and that it does not sufficiently bear in mind the general sense and feeling of the Spaniards—a people about the least fit in Europe, for sudden changes. The Spaniards are but in their rudiments, and the liberals would treat them as if they were accomplished and natural scholars in political wisdom. We hope, however, that the lessons of experience will not be wholly lost—that it will be remembered that ultra-liberalism contributed almost as much as ultra-royalty to the downfall of the Constitution of 1820, and retarded the progress of national freedom for ten years.

On the 14th of August, Moscoso, the Minister of the Interior, laid a Report on the Condition of the Country before the Cortes. His picture was in some respects rather flattering than correct, but a stricter representation might have been impolitic at the moment, as encouraging enemies and dispiriting friends.

It was made the subject of a severe attack by the opposition, who afterwards accused him of retaining declared Carlists in the subaltern places in his department, to the great embarrassment and injury of the good cause all over the kingdom.

On the following day, the Minister of War presented his official report, which was received with general satisfaction. He stated that since the death of Ferdinand, the military force had been nearly doubled, and that now, including provincials and militia, the Queen has 115,000 men in her service. After reading his report, he informed the Chamber that he had received favourable dispatches from Rodil, importing that Don Carlos had been driven from Navarre to Biscay, and was expected every hour to give up the hopeless contest. The Minister of Marine was under the painful necessity of exposing the miserable, dilapidated state of the Spanish navy. This picture was a most melancholy one. Even so late as 1818, Spain counted sixty-five sail—her fleet now only amounts to twenty-two! Ferdinand bought eight Russian ships, but instead of being kept in a state of efficiency, they were allowed to rot. There are only three ships of the line, and one of these is scarcely sea-worthy. There are four frigates, all old except one, and three sloops of war. The remainder are small craft. The arsenals and dock-yards are in ruins, and unprovided with the materials of naval architecture, &c. There is a want of proper officers, sailors, ship-builders, and of all classes essential to the creation and management of a navy. Such is the present condition of this once great maritime power.

On the 28th of August, the Procuradores or Commons agreed in a petition which may be considered as the basis of a Spanish Bill of Rights. The following are the heads of the twelve articles of which it consists:—

Art. 1. Insures and protects individual liberty.

Art. 2. Establishes the liberty of the press, without a censorship.

Art. 3. Enacts that no Spaniard is to be arrested, prosecuted, or punished, except by proper course of law.

Art. 4. That ex-post-facto laws and special commissions are to be abolished.

Art. 5. That a Spaniard's house is to be sacred.

Art. 6. That the law is to be equal to all Spaniards—not meaning, however, hereby that the privileges of the Proceres or Peers are to be interfered with.

Art. 7. That all Spaniards are to be eligible to places, both civil and military, without any exclusion on the grounds of their not being nobly born.

Art. 8. That all Spaniards shall equally pay taxes, in proportion to their means.

Art. 9. That confiscation be abolished, and property declared sacred;—the two following obligations remaining however in force: 1, that fines legally imposed are to be paid; 2, that individuals are to give up their property to the state in case public utility should require it, on their receiving a just indemnification for the same.

Art. 10. That public functionaries shall be held responsible for all acts against the freedom and rights of individuals.

Art. 11. That ministers shall be responsible.

Art. 12. That the militia urbana (or national guard) shall be increased and organised throughout the kingdom, in conformity with regulations which shall be discussed and approved of by the Cortes.

Government would have modified some of the clauses, but were beaten on every division.

On the 30th and 31st of August, the Procuradores were occupied with a plan proposed by government to extinguish or greatly alter the quarantine and sanitary regulations, and in discussing the subject of the Voto di San Jago. This voto, or vow, which is, in fact, a tax paid to the clergy in certain districts, originated in a legend. Ten centuries back, a Christian king of Castile, was made victorious in a great battle with the Moors by the assistance and personal presence of St. Jago (James, the apostle). In his gratitude the king vowed that Spain should thenceforward pay an annual tribute to the apostle, to be raised on the agricultural produce of the country. The priests of course claimed for the apostle, and an imposition, peculiarly irksome, it appears, from the way in which it was levied, has continued down to our days.

Martinez de la Rosa declared his scepticism as to the legend, but was anxious to preserve the vested rights of the church entire. He and his colleagues would have granted other allowances of a certain limited extent to those who had hitherto divided the voto revenue among them, but they were out-voted, and the tax abolished without compensation, by a large majority.

On the 30th of August, there was laid on the table of the Proceres or Peers, the unanimous report of the commission, confirming the project of the ministry for the exclusion of Don Carlos and his heirs for ever. The peers, on the 3rd of September, came to a vote on the subject, without any division. One peer only, the Count de Taboado, declined voting—he said his personal obligations to Don Carlos prevented him.

An additional article was proposed by the Marquis de Quadalcazar, to prohibit the return to the country of Don Carlos and all his line male, and was carried by the same majority. The House was very thinly attended. The peers agreed to the proposition, that such of their body as were in the kingdom, and did not take their oaths and their seats within one month, and those out of the realm within two months, should forfeit their rights as peers. It should appear, however, that the two terms have been extended to three months for the recusant or dilatory peers at home, and to four for those who happen to be abroad.

The Finance Committee, to which we alluded in our last number, and the proceedings of which have been watched by many in France and in this country, with much more anxiety than all other Spanish measures and events, was at length delivered of its report on the 11th of August. The majority, of five to four, advised the recognition of the Cortes' loans from 1820 to 1823, or from the rise to the downfall of the last constitution; and the entire rejection of the French loans, as well as of the debt to France secured subsequently to 1823, by treaty. The minority, on the other hand, would have recognised all the debts—the Ferdinand loans, as well as those raised by the Cortes: and this, as it appears to us, would have been both more just and more politic.

On this point we are of course at variance with a large portion of our *enlightened* newspapers, who applaud and uphold a decision which will embarrass the march of the Spanish government, and which is altogether at variance with the established practice of nations. The government *de facto* is the only government that the money-lender can look to. *Now* it was represented by Ferdinand—*now* by the Cortes—*now* by Ferdinand again—and *now* again by the Cortes; but in this alternation the pecuniary and other obligations of the governments for the time being could not be affected. These governments might change, and utterly pass away, but the country remained responsible for the obligations of one and all of them. That the country should remain in this position of responsibility, is essential to the existence of international relations of all sorts. By doing away with it, after the fashion of the majority of this finance committee, we should introduce confusion into every department of European affairs: treaties—commercial, or of whatsoever nature—might be overturned at every change of a cabinet; the evils inflicted by war, invasion, or seizure of property, might pass without indemnity, if one government were allowed to insist that because those evils were not inflicted by itself, but by another government that preceded it, the country that had been represented both at home and abroad by *both* these governments, was not liable under the one for what had been done under the other. But the court of Spain and the cabinet, as now constituted, in

the recent arrangement with the United States of America, have been obliged to allow this always existing responsibility of the country, and to a most painful, and, we should think, *almost to an extreme extent*. By this new treaty, Spain engages to pay twelve millions of reals, as compensation for injuries inflicted on American shipping and merchandise on the Spanish coast, during the forcible and odious occupation of the Peninsula by the French, and the imposition therein of the Berlin and Milan decrees. In short, the country is made answerable even for what was done in it under a foreign usurpation! In the same manner, the Bourbons of Naples have paid the Americans for the seizures and detentions ordered by Joseph Buonaparte and Murat, who had driven them (the Bourbon dynasty) from Naples to Sicily, and kept forcible possession of their throne. Surely, therefore, it becomes contradictory and absurd to plead the non-responsibility of Spain with regard to loans raised by King Ferdinand. The transactions differ in many points, but the principle that ought to regulate them is the same. When Ferdinand denied the faculty of the Cortes (an illegal, rebellious body, in the estimation of his party), to contract debts in the name of the nation, and when he refused any settlement with the holders of the Cortes' bonds, a general outcry against his injustice ran through the liberal press of Europe. Precisely the same arguments that were used *then* against Ferdinand may be turned *now* against the majority of the Constitutional Committee. We repeat, that the country remains responsible under all governments and circumstances, and that any attempt made to destroy this liability, whether proceeding from liberals or absolutists, will be equally odious, and in the end futile.

The civil war in the north still lingers on—in a succession of marches and counter marches, skirmishes and indecisive battles. The Queen's general, Rodil, has succeeded in clearing most of the passes of the Pyrenees and valleys running into France; and altogether, it appears *probable* (and we can say no more) that the insurgents are weaker now than they were when Don Carlos first joined them.

PORTUGAL.

DON PEDRO was confirmed in the Regency by the Chamber of Peers, on the 25th of August. Thirteen peers out of the fifteen (all that had as yet taken their seats) voted on the subject, nine being in favour of his continuing to head the government, and four against it. His royal prerogative being thus legalized by the Cortes, he proceeded at once to create twenty-four new peers.

In the lower house it was decided, by a majority of sixty-seven to twenty-seven, that the young queen Donna Maria, should be united to a European prince, and that the faculty of choosing her husband should remain with her father, the regent.

The minister of finance, Silva Carvalho, has presented his official report to the Chambers: it was well received, as the prospect he drew of the resources of the country was exceedingly flattering. Carvalho was afterwards attacked in the lower house by some members who seem to have had more patriotism than financial knowledge, and who complained of his having contracted loans with foreigners, when he ought to have given his own countrymen the benefit of such transactions as lenders. The minister's reply was certainly to the point: he told them that his countrymen lacked either the power or the will to lend—or both; that even after the triumphant entrance of the liberating constitutional army into Lisbon, he could not borrow so much as two hundred thousand pounds from the Portuguese bankers and merchants of the capital, and that he was therefore forced on the foreign money market.

It was announced on the 8th of September, that the supplies of gold (rendered necessary by the alteration in the currency) that had already been received at Lisbon were quite sufficient for the present.

Don Miguel seems likely to have the advantage of that best of all correctives to men of his stamp—viz., poverty. The Cortes have determined to consider as an authentic document a certain protest, which has appeared in Miguel's name, against the treaty he signed after his surrender, and previously to his departure from Portugal. As he is therefore held to have broken his part of the agreement, the other party, being no longer bound to keep theirs, will make him no payment on account of the pension for which the Don stipulated. His brother, the regent, has been for some time in a very precarious state of health.

On the whole, the debates of this new Portuguese Cortes have been rather deficient in interest. We observe that some of the correspondents to our daily papers complain of a want of "good speakers" among the members. These Englishmen are possibly not the best judges of Portuguese oratory, and *good speaking* is not the thing most needful. Had it been so, the poor Neapolitan parliament of 1820-1, instead of being the laughing-stock, would have been the admiration of Europe. But the same reporters tell us some things that bear most unfavourably on decency and constitutional dignity: as, for example, that the mob admitted into the galleries hiss and hoot the members obnoxious to them—and that the said members, instead of turning to the speaker and demanding a clearance of the galleries, are apt to turn round to the mob and address them. These scenes disgraced and hurried the downfal of the last Portuguese Cortes. May they be stopped in time to prevent the discredit, if nothing worse, of the present.

FRANCE.

DURING the recess of the French Chambers, and the state of tranquillity which seems happily restored to the country, there is little to relate of our nearest neighbour. The French creditors of Spain in the loans rejected by the Spanish committee, have petitioned Louis Philippe, praying him to interfere and obtain the recognition of their claims. The King's reply was, that he had directed his ambassador at the court of Spain to make strong remonstrances, as had been done by the minister of England. This petition was numerously signed.

We regret to say that the license of the French newspapers, and the imprudent prosecutions of them by Government, still continue in full force.

Confining ourselves as we do in this brief retrospect, to the notice of events that are not only well authenticated, but likely to produce important effects, we have little to add this month. Both in the east of Europe and the north, speculation might indulge in a vast field; but the only positive facts seem to be, that in the former part of the world the Sultan has prepared a naval force, the destination of which is unknown, and that there has been one more unsuccessful attempt at an insurrection in Greece; whilst in the northern corner the King of Holland has at last dismissed to their homes the schuttery (or militia), who are described as being none the better for three years' estrangement from their ordinary, industrious callings.

CHRONICLE OF OCCURRENCES.

March, 19. Bombay papers to this date state the interesting fact, that the first native who had ever acted as one of his Majesty's justices of the peace, took his seat on the bench, at the opening of the Quarter Sessions in that city.

April, 10. The peace of India has been disturbed by the revolt of the Rajah of Coorg. After a skirmishing but severe warfare of upwards of a week, between the British forces under Colonel Lindesay, and those of the Rajah, the latter were defeated on all points, and the prince himself surrendered unconditionally. He is to be deposed, and his dominions annexed to the Company's territories.

The following is the grand total of the loss of the British in killed and wounded:—Europeans, 14 commissioned officers, 139 non-commissioned, rank and file. Natives—2 commissioned officers, 144 non-commissioned, rank and file and dressers. Total, Europeans and natives: 16 commissioned officers, 283 non-commissioned, rank and file and dressers.

August, 1. Leghorn was opened as an entirely free port, by the cessation of the duty of one per cent. upon merchandize by sea.

17. Osman Noureddin Pasha, the Egyptian Admiral, who last winter quitted the service of Mehemet Ali for that of the Sultan, died of the plague at Constantinople. The superiority which travel, study, and experience, had given to this person, causes his loss to be severely felt by the Sultan, from whom he had received many marks of high favour.

20. The cholera is committing fearful devastation in Sweden.

Out of a population of 23,000 in Gottenberg, it has swept away nearly 2000; and the mortality at Stockholm, and in other towns, has been in a corresponding proportion.

The Spanish General Moreno, who appears to have left England (to which he came with Don Carlos), from the fear of being called to account for the murder of Mr. Boyd, was arrested by the police at Paris. He will be conveyed to the Swiss frontier and there discharged from custody.

22. This day a serious affray took place at Chatham, between some soldiers of the 88th, and a number of sailors and other persons. It arose from an assault, stated to have been made the preceding day by the military upon the people, who were enjoying themselves on the Chatham lines after the races. We do not learn that any person was killed on either occasion; but many were more or less wounded—a few very badly. The inhabitants of the town have held a public meeting on the subject, and have since applied successively to the colonel, to the commander-in-chief, and to the Secretary of State for the Home Department, with the view of procuring the discontinuance in Chatham of the practice of private soldiers wearing side-arms when off duty. They have not succeeded in their object; but it is evident that something must, ere long, be done to preserve unarmed people from the intemperance of armed men.

23. Don Miguel and suite were publicly insulted by the populace at Parma; at which their stay was therefore very short.

27. Several of the principal Jews in London presented a handsome piece of plate to Sir Robert Grant, previously to his departure for Bombay, as a testimony of their gratitude for his exertions in behalf of the British Jews.

Two ruffians were brought before the magistrates of Hatton Garden Office, on the charge of stabbing two respectable females in Plumtree-street the previous evening. Mr. Rogers fined one of the men 5*l.* and the other 20*s.*; a sentence, the inadequacy of which has been very strongly animadverted upon in the papers.

While the Cameleon, a large revenue cutter, was lying-to off Dover, she was run down by the Castor frigate (Lord John Hay), then on its way from the Downs to Portsmouth, and going at the rate of from 12 to 14 knots an hour. The cutter went to the bottom; and of 19 persons on board, only five were saved. As it was broad day-light, and the cutter was perfectly in sight, this distressing accident was attributed to the culpable neglect of the watch on board the frigate, the officers of which were, on the 5th of September, brought to trial before a court-martial at Plymouth. The trial terminated at one sitting, and the sentence of the court was, "that the loss of the Cameleon was occasioned by her coming in collision with the Castor; that it would not have occurred had a proper look out been kept; that a proper look out had not been kept on board the Castor; that the fault was that of Lieut James M'Cleverty, the officer of the watch at the time of the accident; and that therefore he was, by the judgment of the court, dismissed his Majesty's service; and that Captain, the Right Hon. Lord John Hay, the remaining officers and the crew of the Castor, were acquitted."

28. A meeting of shopkeepers, resident in the western district of St. Pancras, was held at the 'London National Labour Exchange,' Charlotte-street, Fitzroy-square, to take into consideration the case of the operative builders now out of employment in consequence of the strike. The resolutions passed on the occasion stigmatized the conduct of the masters, and pledged the meeting to assist the workmen through their struggle. T. S. Duncombe, Esq., M. P., was in the chair.

The manufacturers of Rheims, in France, having lowered the wages of their workmen, many of the latter refused to work at the new prices. On the 26th, a considerable number repaired to the town-hall to petition the local authorities on the subject. The magistrates addressed the workmen, advising them to return to their employments: many of them promised to do so, and the crowd quietly dispersed. But on the following day they again assembled, and resolved to compel the workmen who were not of the combination to leave their work. This intention was prevented by the military, who arrested several of the ring-leaders. This day many of the men returned to their work, and public tranquillity appeared to be restored.

29. At the Dublin Sessions' Court, a man named Thomas Malone was sentenced to three months' imprisonment for unlawfully taking away from a churchyard a dead body, with intent to dispose of it for money. This is believed to be the first prosecution under Mr. Warburton's act.

— The mill-house and granary of the Lochrin distillery, near Edinburgh, were destroyed this afternoon by a fire produced by the friction of the mill-stones. Ten thousand pounds is the estimated value of the property destroyed.

— Re-appearance of cholera in the north of England; but not in nearly so serious a form as two years since.

— Two mineral springs have lately been discovered at Harrowgate.

September 1. The coal-porters, whose strike has perhaps been attended with more circumstances of individual violence than any other, returned to their work. Their fund had become so nearly exhausted, that the allowance to each man was reduced to 4*d.* a day.

2. Donna Francisca, the wife of Don Carlos of Spain, and sister to Don Pedro and Don Miguel of Portugal, died this afternoon at Alverstoke Rectory, near Gosport. The immediate cause of her death is variously stated.

3. A struggle at Manchester against the halfpenny church-rate terminated this evening in the refusal of the rate, by a majority of 7019 to 5897. Great excitement prevailed at Manchester during the contest, which was a very warm one. A somewhat similar opposition to the grant of a church-rate in the parish of Clerkenwell, London, terminated on the 8th, in favour of the rate, by a majority of 700 to 385. Subsequently, at Wakefield, the amendment for a threepenny rate instead of a ninepenny one, which was required, was negatived by a majority of 864 to 694.

— The trial of "the great will cause" at Lancaster, before Baron Gurney, which lasted ten days, terminated in a verdict for the defendant, Mr. Wright, whose claim to the property, amounting to 7000*l.* a-year, bequeathed by the late Mr. Marsden, was disputed by Admiral Tatham, the heir-at-law, on the ground of the mental imbecility of the testator.

— Slight shock of an earthquake at Portsmouth, which occasioned a good deal of apprehension, but did little damage.

— The stone-masons at Newcastle struck early in September—not for higher wages, but because the masters persisted in employing men who were willing to work on terms which were not approved of by the unionists. The masters have determined not to employ in future any men who belong to the union.

4. Mr. Duncombe, M.P. for Finsbury, was bound over, himself in 500*l.* and two sureties in 250*l.* each, to keep the peace towards Mr. Fraser, the bookseller, to whom he had sent a challenge, in consequence of certain imputations on his private character, which had appeared in 'Fraser's Magazine.'

— Matthew Quin, a soldier belonging to a regiment stationed at Chatham, was sentenced to transportation for life for insubordinate and threatening conduct to his serjeant and officers, one of whom he threatened to shoot. Another private of the same garrison has been sentenced to three years' imprisonment and hard labour. We trust that these precedents of civil punishment for military offences will hereafter be followed, to the exclusion of such instances of severe flagellation as have recently excited so much disgust.

5. A private soldier of the Coldstream Regiment of Guards was drummed out of that corps this morning, in the Wellington Barracks, St. James's Park, for repeated misconduct.

— The Sessions commenced at the Old Bailey with the usual formalities. Extensive alterations have been made in the Old Court to meet the access of business which the Central Court Bill will bring to the Old Bailey. The inconvenience of the new arrangements of the interior produced very general complaint from every person engaged in the court. The New Court is also to undergo alterations; and the erection of a third court is understood to be in contemplation.

9. A meeting of small masters and workmen in the building trade, and of other persons interested in the question in dispute between them and the extensive masters, took place in the theatre of the Mechanics' Institute;—T. S. Duncombe, Esq. M. P., in the chair. The bearing of the speeches and resolutions was chiefly against the monopoly exercised by the extensive masters and contractors. Mr. Robert Owen, who was present, said he was an enemy to all monopoly; but did not see what good would result from such proceedings as the present. The fault was not with the masters but with the system; and, in his opinion, there was not a man present who would not be a monopolist if he could. This plain-speaking was not well received by the audience. We feel that in this *strike* there are extenuating circumstances which scarcely apply to any other which we have had occasion to record; but it has given us much pain to find that such an institution as the Mechanics' Institute, should in any way mix itself up with such questions—even so far as by the loan of its theatre for a public meeting on the subject. A very large proportion of the men who originally struck have now obtained employment without subscribing to the conditions demanded by the extensive masters. It is said, that not more than between 2000 and 3000 now remain unemployed, out of about 14,000 who struck at the commencement of the dispute.

— This evening a respectable man, a native of Germany, named Steinberg, residing in Southampton Street, Pentonville, committed suicide, after having destroyed the woman with whom he cohabited, and four children, of which they were the parents. This crime appears to have been the result of greatly embarrassed circumstances, and it produced a strong sensation in the metropolis.

10. The Old Bailey Sessions terminated. Seven men were sentenced to death:—three for robbery on the person; one for stealing a letter from the Post Office; two for receiving a bank-note from the above letter; and one for maliciously wounding. Eleven were sentenced to transportation for life; ninety-one for seven years; and others to various terms of imprisonment.

11. In the Insolvent Debtor's Court an insolvent was sentenced to three months' imprisonment for contracting debts without reasonable or probable means of paying them.

13. Sir John Leach, the Master of the Rolls, died of erysipelas

seen in motion for either agricultural or manufacturing purposes; the land is well cultivated; there is every appearance, in short, of life and industry. But after you have crossed the Ebro and have advanced into Castile, the cottages and gardens disappear, the fields lie uninclosed, the villages, few and far between, look melancholy and desolate; hardly any trees are to be seen; the roads are neglected and insecure, and the *posadas* or resting-places (they can hardly be called inns) are proverbially wretched.

The Señorio of Vizcaya, or Biscay Proper, is the most western of the three provinces. It extends for about sixty miles along the coast of the Atlantic. Its principal towns are Bilbao and Orduña; it reckons besides twenty more small towns, seventy-six villages and hamlets, and about 145,000 inhabitants. It is a mountainous country, and the numerous streams descending from the highlands turn about 600 mills. There are numerous iron-works, although most of them on a small scale; and in most of the villages are manufactories of iron-ware, locks, muskets, bedsteads, horse-shoes, &c., which they export to the interior provinces of Spain. The principal iron-mines are those of Somorrostro, west of Bilbao. There are coal-mines in the neighbouring province of Asturias, at Gijon and Aviles, but the coal on the spot is double the price of English coal at Newcastle. The iron trade of Biscay has much declined of late years, owing to several causes—the interruption of the intercourse with South America, the suspension of the works in the royal dock-yards, and the additional duty of ten per cent. *ad valorem* levied on iron in bars since August, 1819, besides which the custom-house duties on its introduction into the other Spanish provinces are twenty per cent. more. Tanning is another branch of Biscayan industry, and fishing and navigation also give employment to a great number of the inhabitants. Biscay produces some corn, and abundance of fruit, especially grapes, from which good wine is made. The land is not naturally fertile, but is rendered productive by assiduous labour. The mountains abound with timber trees. Game is plentiful, and the sea abounds with fish. Most of the lands are cultivated by the proprietors themselves, and the rest by tenants who pay rent generally in money, and to the amount of about one-third of the produce.

We find señores and condes, or lords and counts of Biscay, mentioned in history as early as the eleventh century; they were elected by the states or assemblies of the provinces; and it would appear that they acknowledged the kings of Leon and Castile as their suzerains. We find that Alonso VI. appointed a count of Biscay as his governor for the neighbouring province of Guipuzcoa. In the thirteenth century the powerful family of Haro began to hold the lordship of Biscay by order of succession, and after it the house of Lara, who were connected by intermarriages with the family of Haro. Marriages also took place between these families and the royal houses of Castile and of Aragon, which however did not prevent frequent ruptures and wars. At last Pedro I. of Castile, called "The Cruel," invaded Biscay after the death of Count Nuño de Lara; he barbarously put to death the relatives of the deceased, and took possession of the Señorio. His brother Henry having defeated and killed him, succeeded to the throne of Castile in 1369, and he appointed his son Don Juan, afterwards King John I., Lord of Biscay. Don Juan was himself descended from the Lara family through the female line. In 1371 Don Juan made his entrance into Biscay, and solemnly swore to maintain the liberties and laws of the country. Ever since Biscay has remained annexed to the crown of Castile, whose kings have always respected its franchises, and the Biscayans have proved, on their part, loyal subjects to the crown.

The *fueros*, or laws and constitutions of Biscay, were not originally a code framed by the assembly of the states under the famous tree of Guernica, as some writers have fancied, for it is proved that the Biscayans borrowed, on several occasions, from the fueros of Logroño and other places out of their own country. But in the struggles between various pretenders to the lordship, various charters and privileges had been granted, when, in 1342, Don Juan Nuñez de Lara, and his wife, Doña Maria Diaz de Haro, in the general assembly at Guernica, agreed to thirty-seven articles which were presented to them, and which defined the relations between the señor and the people, and also regulated the administration of justice. These articles were afterwards sworn to by the Infante Don Juan already mentioned, who gave besides, in January 1372, a fresh charter, recapitulating all the old fueros or laws of the country. The judicial legislation, however, was still partly written and partly consuetudinal or traditional; some of the laws applied to the whole country, others to peculiar districts only; and this state of things continued till 1452, when a general code was formed, which being afterwards recast and enlarged by a commission of learned men appointed by the Junta, was presented to Charles V. in 1526, and was immediately confirmed by him, as it has been since by all his successors. The most essential points of the constitution of Biscay are the following:—Biscay has its legislative assemblies called "Juntas Generales," which meet every two years, or oftener if required. Every *pueblo*, township or village, has a vote, and sends one or more *apoderados*, literally "entrusted with powers," to the Junta. At the appointed time they all meet round the tree of Guernica, near the village of that name, between Bilbao and Bermeo. The permanent deputation, the corregidor and syndics, seat themselves on a bench under the tree, and the secretaries verify the writs of each of the representatives. After this ceremony and a short prayer, they adjourn to a spacious hall in a neighbouring convent, founded by an ancient corregidor of the Señorio, where the portraits of the old lords of Biscay, till its annexation to the crown of Castile, are seen looking down upon them from the walls. In the sacristy of the adjoining church are the archives, which however, it seems, contain no very ancient documents. The juntas hold their sittings with open doors, and no one is refused admittance. The decorum of these assemblies, chiefly composed of rustics, is said to be admirable. The juntas enact laws and regulations for the order and welfare of the country; they listen to all messages from the king, and decide on the answer to be returned; they examine the accounts, vote the supplies, and elect the officers of the state, namely, the two deputies, the regidores, and the syndics, who are generally from among the chief people of the country. The corregidor is appointed by the king, and he and the two deputies and syndics constitute the permanent deputation, or the administrative and executive power, which resides at Bilbao, and which forms also a judicial court of appeal from the local magistrates. Each pueblo or village has its own alcalde or magistrate, who is appointed by the *ayuntamiento*, or municipal council of the place, which administers the revenues of the commune, and employs them for local purposes, laying afterwards the accounts before the corregidor or his lieutenant, on his annual visit round the country. The general accounts of the country are made out by the permanent deputation, which lays them before the next general junta for examination.

The supreme tribunal is that of the Juez Mayor de Vizcaya, who is appointed by the king, and who, with his *oidores* or assistants, holds a distinct court in the Chancellery of Valladolid, both for criminal and civil matters. The natives of the three Basque provinces cannot be tried before any other court.

By their fueros or constitutions the people of Biscay pay no other taxes to the king but those they paid to their former lords, and which consist of a small house tax, a duty on iron wrought in the province, tithes upon certain lands, and a tribute from the towns. No other taxes, such as excise, customs, stamps, licenses, &c., exist in Biscay. Foreign goods pay no duty on introduction except certain fees levied by the consulate and municipality of Bilbao. There is no line of custom-houses between the three Basque provinces and the French frontiers. The Spanish custom-house officers are placed on the inner limit between the provinces and Castile. For the same reason Biscay does not belong to any of the administrative intendencies into which Spain is divided for fiscal purposes. The junta, however, in cases of urgent request from the king, grants *donativos* (free gifts) for the service of the kingdom, the amount of which they raise by assessment among themselves. With regard to military matters, the three Biscayan provinces have their own militias for the security of the country, and they defend themselves in case of war against foreign invasion. No Spanish troops are, at least by law, allowed to be garrisoned in the country, and the provinces furnish no recruits to the royal army. But Biscay has always supplied the Spanish navy with numerous volunteers, who were reckoned among the best seamen of Spain. In consequence of all this, there are no royal offices of administration in Biscay, except that of the couriers or mails.

Since 1820 there is a Captain General, or military chief, residing at San Sebastian, in the province of Guipuzcoa, and

whose jurisdiction in military matters is considered to extend over the three Basque provinces.

The clergy of Biscay have very moderate incomes; the Abbot of Zenarroza, the richest in the province, has not quite 200*l.* a-year. In general, the Biscayans are not rich, but few of them are very poor; they are frugal and laborious; honest, cheerful, and courteous without flattery; easily managed by kind treatment, but obstinate and inflexible if they feel themselves wronged. Gonzalo de Cordoba, the great captain of the sixteenth century, used to say that he would rather be a keeper of lions than have the charge of refractory Biscayans. These people are derided by the other Spaniards as being boastful; they pride themselves on their antient independence, and not without some reason; it is also one of their privileges, that a native of Biscay is reckoned as noble, *hidalgo*, in any other parts of Spain.

The King of Spain styles himself Señor (Lord) of Biscay, and his dispatches are addressed "to my very noble and very loyal Señorio and County of Vizcaya," and are forwarded to the permanent deputation of the state.

The other two provinces, Guipuzcoa and Alava, do not differ materially in their institutions from Biscay; they enjoy nearly the same liberties, have each their juntas, quite distinct from, and independent of, those of the former. They are styled, however, *provincias*, and not Señorio, as Biscay is. The inhabitants are of a kindred race, and speak the same language. Guipuzcoa, the smallest of the three, though the most populous in proportion, borders immediately on France, from which it is divided by the river Bidassoa. It has two towns, St. Sebastian and Tolosa, sixty-five smaller towns or villages, about 200 parishes, and 135,000 inhabitants. It has some good harbours; that of Pasages is one of the finest in Spain. The Guipuzcoans have always been the boldest navigators of Spain; they at one time monopolized the Newfoundland fishery, until the treaty of Utrecht deprived them of this great branch of trade. They discovered the Canary Islands, the Philippines and the Marianas. The country of Guipuzcoa is very mountainous; it has iron mines and iron works, like Biscay.

Guipuzcoa acknowledged at one time the kings of Navarra as its suzerains. But Alonzo VIII., of Castile, in his wars against Navarra, having conquered the neighbouring province of Alava, Guipuzcoa submitted voluntarily to him, Alonzo confirming at the same time the antient liberties, fueros, and customs of the country, which were afterwards compiled into one volume, and approved of by Henry II. of Castile, the successor of Peter the Cruel, above mentioned.

Guipuzcoa is divided into townships and villages, called *universidades* and *alcaldias*, every one of which sends one *procurador* "representative," to the junta, which meets once a year. The junta appoints four Deputies General, one of whom holds the executive power, but the four assemble twice a year, to consult together on public affairs. There is also a corregidor appointed by the king for three years. He is the high judicial authority, and presides over the junta, but has no vote in it; he is also the medium of communication between the king and the local authorities. The corregidor and the deputation reside by turns at St. Sebastian and at Tolosa. The alcaldes are elected by the *ayuntamiento* or common council of each town and village, and they judge suits in the first instance; appeals lie from them to the corregidor. The roads in this province are the same as in Biscay, being maintained at the expense of the country: the high road from Bayonne to Madrid crosses the province. The police is good, and crimes are of rare occurrence.

Alava, the third Biscayan province, lies to the south of Guipuzcoa, and borders on Old Castile and Navarra. It is almost entirely enclosed by several ramifications of the Pyrenees, and its boundaries are strongly marked. Alava contains one city, Vittoria, 72 small towns or villages, 434 communes, and 93,000 inhabitants. The fine valley called the *Concha de Alava*, about 20 miles long and 10 wide, is the most fertile part of the province. The province is divided into six *quadrillas*, which contain in all 53 *hermandades*, or communities, and every one of these sends its *apoderados*, or representatives, to the general junta, which assembles twice a-year. The junta appoints a deputy general, who resides at Vittoria, and is changed every three years. He executes the orders of the junta; he is the supreme judge, as well as military chief of the province, and to him all messages from the king or ministers are addressed. He presides over the junta, but has no vote in it. Every hermandad elects its own alcalde, or magistrate, for one year. The people of Alava cannot be taxed by the crown, any more than those of the other two provinces, but they pay a yearly sum of 1,700*l.* as an equivalent.

In former times the juntas of Alava, called "de la Confradia del campo de Arriaga," consisted of the nobles, the *ricos hombres* or gentry, and the clergy, presided over by the Bishop of Calahorra, and even the ladies of Alava had seats in the junta. They elected four alcaldes general for one year, one of whom was the chief justice. They also elected a señor or count, who was their military leader. Sometimes they elected one of the infantes of Castile, sometimes the Lord of Biscay, at other times a nobleman from the neighbouring states. No king exercised sovereignty over the land, except in the town of Vittoria, which was considered as subject to the crown of Castile. Alonso VIII. having conquered Alava, appointed Diego Lopez de Faro count of the province, and his descendants after him. At last, in 1332, the people of Alava renounced formally their right of appointing their señor, and in the time of Alonso XI., of Castile, acknowledged the King of Castile for their perpetual lord. They at the same time "renounced the juntas of Arriaga, and made themselves *realengos*, or royal." Such is the expression of the Spanish chroniclers, which seems to mean that they submitted to the royal jurisdiction, instead of the baronial and clerical jurisdictions under which they had before lived. Alonso at the same time granted them a charter declaring them "free from all taxes, they and their properties for ever." From that time the actual division of the country into *hermandades*, and the form of the present juntas, seem to date.

Such are the institutions under which the Biscayan provinces have lived for ages past, and which have been respected by the most absolute monarchs that have reigned over Spain. The despotism of the Philips, the Charleses, and the Ferdinands, was hardly felt by the Biscayans. At the epoch of the first French revolution, in 1793, the French republicans, fancied from the vague notions they had of the Biscayan independence, that it would be an easy matter to detach those provinces from Spain, and that the inhabitants would willingly join the great republic, "one and indivisible," the frontiers of which would by this means have been extended to the Ebro. But the Biscayans preferred retaining their privileges under the protection of the crown of Spain, to being merged into an immense republic, and losing thereby their nationality and their actual provincial liberties. The conduct of the Biscayans, on various occasions since that epoch, is explained by the same feelings. They opposed Napoleon's invasion; on the return of Ferdinand they recovered their franchises, and remained therefore quiet. The Cortes of 1820 wanted to assimilate their country to the rest of Spain, and to subject them in every respect to the central administration; they therefore revolted against the Cortes, and assisted in the overthrow of the constitution of that epoch; and now having been threatened by the queen's government with the abolition of their fueros and juntas, and with the establishment of custom-houses, provincial taxes, a general police, the conscription, and all the other burdens which weigh on the rest of Spain, they have followed the banner of Don Carlos, expecting from him, in case of success, the maintenance of their privileges. Ignorant or careless of general politics, they see nothing in all this but the immediate interest of Biscay. Were the Basque provinces to be confirmed by the present Cortes in the possession of their local liberties, which perhaps might not be incompatible with their allegiance to a central constitutional government, such a measure, we believe, would lead more than any other to the pacification of the country, and the end of a lamentable struggle in which a spirited and free-minded people find themselves involved under the banners of absolutism.

These last remarks apply equally to Navarra. That country has retained, though in a more limited degree than Biscay, its separate administration, and fueros or laws. The Cortes or legislative assemblies of Navarra date of the twelfth century; they are composed of three *brazos*, or estates, namely, the nobles, the clergy, and the *universidades* or towns, which are thirty-four in number. The crown of Navarra was at first elective. The old kings of Navarra, who were possessed of territories also on the French side of the Pyrenees, were constitutional sovereigns. Don Juan Labrit having sided with Louis XII. against Ferdinand the Catholic, the latter sent an army into Navarra, took Pamplona, and drove Don Juan beyond the Pyrenees in 1512. The

rest of the country submitted, and Ferdinand promised to maintain their fueros and liberties. The Cortes continued to meet once a-year, being convoked by the viceroy in the name of the king. By degrees, they have been convoked less frequently, and only on particular occasions, but they have never been suppressed. There is a permanent deputation elected by the Cortes, from the three estates of the kingdom; their business is to maintain the laws and protect the interests of the country; they can lay on or take off certain taxes, allow or prohibit the exportation of grain, grant letters of naturalization, &c. The viceroy, on taking possession of his office, swears before the deputation to respect the privileges of the kingdom. There is a Consejo Real, which is the supreme court of justice of Navarra, and which resides at Pamplona: its members are appointed by the king. In the towns and villages the *alcaldes ordinarios*, or local magistrates, are appointed by the *ayuntamientos*, or common councils. The natives of Navarra are not amenable to any tribunal out of their country.

Navarra pays the rentas generales, which the Basque provinces do not pay, and which include customs, stamps, post-office, and the royal monopolies of salt, tobacco, and gunpowder; but it is not subject to the provincial taxes, which are the most burdensome, and it pays an annual fixed contribution in lieu of them.

In conclusion, the privileges of Navarra are more circumscribed than those of the three Basque provinces; still they are sufficient to constitute a separate administration, and to ensure certain rights to the people. The *fueros*, or laws, of Navarra are nearly the same as those of Aragon. The population of Navarra is about 290,000. In the present civil war, all the northern districts, which may be called the highlands of Navarra, consisting of the upper valleys of the great Pyrenean chain and its numerous ramifications, and the inhabitants of which speak the Basque language, have taken the same side as their neighbours of Biscay.

With regard to the municipal administration of the towns and villages generally in all Spain, it ought to be observed that it was once everywhere free and elective, as it is still in Navarra and Biscay. All the heads of families of any one town elected their alcalde and the *regidores*, or aldermen, and other municipal officers. These being presided over by the alcalde, formed the *ayuntamiento*, or municipal council. All the members of the ayuntamiento were renewed at fixed times, according to the custom of each place. The alcalde was the political as well as judicial head of the place; to him all orders from the government were addressed, and he, with the other members of the ayuntamiento, assessed the inhabitants in their share of the taxes, contributions, and other services required by the state. The ayuntamiento likewise administered the communal property and revenues, regulated the expenditure, maintained the police, inspected the charitable foundations, &c. The authority of the alcalde was very great, and was respected by the ministers, and by the king himself. In course of time, however, disputes occurred in various towns between the candidates for the municipal offices: reclamations were sent to Madrid, and the king, to settle the question, appointed the alcalde, and by degrees also the regidores and other members of the ayuntamientos. Under Philip IV., during the administration of the famous Count Duke Olivares, the treasury being in great want of money, the minister sold to the highest bidder the offices and dignities of the state: and among the rest, the seats in the ayuntamientos of the towns, which then not only became permanent during the lives of the holders, but passed to their heirs and descendants. The king also, by another innovation, appointed for each of the principal towns a corregidor with a fixed salary, who was a member of the law profession, and was not a native of the place, as the alcalde and regidores were, and this new magistrate took away from the alcalde the judicial authority, and appropriated it to himself. The alcalde and the regidores retained only the administrative and civil functions. These changes, which took place in the first part of the seventeenth century, totally altered the municipal system in Spain, at least in the towns; and, taken along with the suppression of the Cortes of Aragon, Catalonia, and Valencia, at the beginning of the eighteenth century, they serve to explain that complete absolutism which we have seen existing in Spain in our days, but which is, after all, of a modern date. The Cortes of Castile, being reduced by Charles V., as we have said above, to a mere shadow, (the procuradores of certain cities,) were assembled by the king only on rare occasions, such as to acknowledge the heir to the throne, and then dismissed without entering into any further deliberations. There was, however, at Madrid, a permanent deputation, called "deputacion de los reynos," consisting of members from the different provinces and chief towns, who were appointed by the respective ayuntamientos, and who enjoyed a salary. This deputation was consulted by the king or cabinet on the occasion of any new ordinances, and especially of any new tax or impost to be levied, and it may be easily supposed that they were not found, in general, an obstacle to the wishes of the crown. This was done, it seems, to save appearances, as the fundamental written laws of Spain positively said that the king could not impose any tax without the consent of the Cortes. But under Charles IV. and the favourite Godoy, at the beginning of the present century, the minister of the day, in causing a new edition of the *Recopilacion*, or collection of the laws of Spain, to be printed, deliberately tore out the leaf on which the obnoxious law stood recorded, and the reprint appeared without it. This was too barefaced an act to pass unnoticed, even in Spain, and it probably contributed not a little to the clamour which was raised against Godoy, and the subsequent events of 1808.

The late Ferdinand VII., not long before his death, made a change in the formation of the ayuntamientos, which was a step towards a restoration of their original independence. He doubled the ayuntamientos, allowing the existing members to remain for life, but ordering that an equal number of new members should be elected by the householders from among those who paid a certain rate of taxes, and that they should be renewed from time to time, according to the old elective forms.

The changes we have stated as having taken place at various times in the formation of the municipal council of the towns have not affected, however, the villages and rural districts. There the places of alcalde, &c., not being an object of ambition, have remained elective as of old; the crown has not meddled with them; and the spirit of independence exiled from the cities has taken refuge among the rural population, which constitutes the bulk and the main strength of the Spanish nation. The Spanish peasantry have not, in consequence, felt the full weight of despotism; and any one who has resided some time in the rural districts of Spain must have seen that the look, bearing, and address of a Spanish peasant are anything but the look, bearing, and address of a slave. The difference between their appearance and that of their Portuguese neighbours is very striking. The Spanish peasantry have been styled the finest in Europe, and we think with some reason. This may serve to explain, better than the commonplace remarks about superstition and priestly influence, why the Spanish peasantry have shown themselves little inclined to innovation. They did not feel the same want of it as the people of the towns. They knew of no authority but their alcalde, who was one of themselves, and elected by themselves; and their *cura*, or parish priest, who, generally speaking, was to them like a father. Of king, minister, or captain-general they knew but little, and still less of any political system or machinery of the government.

THE COTTON MANUFACTURE.

No. II.

IN treating of this subject, if we were to confine ourselves to ascertained and undisputed facts, our task would be a very short one. The number of such facts properly belonging to a general account of the present condition and prospects of the cotton manufacture (descriptions of the mechanical processes, and the other technical details, being of course excluded) is extremely limited. The statements we have already given from official documents, or other sources of acknowledged authority, of the quantity of the raw material imported, the proportions in which it is obtained from different foreign parts, the description, amount, and value of the produce annually manufactured, and the manner in which it is disposed of, would nearly exhaust all the information of this character which it is possible to furnish. But all this would leave many matters of the highest interest untouched, and would afford only a very meagre and unsatisfactory exposition of the state of the great branch of industry about which we are writing. In order to present

anything like a view of it in all its parts and relations, it is necessary to add to the few more distinct details that admit of being exhibited in figures, much, that to a great extent can only as yet be considered matter of opinion, and as to which, indeed, the opinions of the most intelligent persons, and of those having the best opportunities of observation, still differ more or less widely. In regard to particulars coming under this latter head, the only plan that we can well follow is to give so much of the testimony of the various authorities as seems of any value or moment, that by comparing one statement with another, where they disagree, the reader may form his own judgment. The multiplicity of minute points which are thus referred to, is so great, that we have found it impossible to arrange them under any convenient number of separate titles; and in analyzing, therefore, the voluminous evidence appended to the Report of the Committee on Manufactures, Commerce, and Shipping, we have in general, as the simplest and most intelligible method, contented ourselves with taking the various topics, as to which the witnesses are examined, in the order in which they there occur. We believe that a more correct impression of what the evidence really amounts to, is conveyed in this way, than if it were cut up, and the fragments displaced from their original and natural position, in an attempt to readjust them on some principle of greater regularity.

The next witness to whose evidence we shall proceed, is Mr. George Smith, one of the partners in the firm of Messrs. James Massey and Son, cotton-spinners, and hand-loom calico manufacturers, at Manchester. Mr Smith had raised himself by his own exertions to his present condition, from having been originally a workman. The general bearing of his evidence is directed to make it appear that the different branches of the cotton trade are at present declining and unprofitable.

The firm have no power-looms, but are extensively engaged in the hand-loom calico manufacture, employing altogether between 1300 and 1400 hands. The witness states the result of calculations which he has made to be, that in 1820, they had for labour, expenses, and profit, at making one piece of calico, 4*s.* 1½*d.*; in 1821, 4*s.* 5½*d.*; in 1822, 3*s.* 9¾*d.*; in 1823, 3*s.* 6½*d.*; in 1824, 3*s.* 1½*d.*; and in 1825, 2*s.* 11*d.* In 1826, in which year they began to spin their own yarn, they had for the labour of spinning, expenses, and profit of one piece of calico, 2*s.* 3¾*d.*; in 1827, 2*s.* 2*d.*; in 1828, 2*s.* 1*d.*; in 1829, 2*s.* 2*d.*; in 1830, 2*s.* 1½*d.*; in 1831, 2*s.* 0½*d.*; in 1832, 1*s.* 10½*d.*; and in May 1833, 1*s.* 9*d.* These last-mentioned sums are obtained by deducting the cost of cotton and weaving from the prices for which the goods sold. They constitute, therefore, if we rightly understand the statement, the gross profits on the article, or the whole difference between the sum received for it by the manufacturer, and that which he had expended in purchasing the raw material, and in paying the wages of the spinner and the weaver. They do not therefore exhibit the rise or fall of the net or real profits on the capital employed, which will depend, besides, on the quantity of work that can now be done, as compared with that which could be done formerly in the same time, and with the same outlay in machinery and other expenses. The same remark is applicable to another statement of the witness, which goes to show that the cost of cotton deducted from the price of twist, which left the manufacturer 10½*d.* in 1818, only left him 3½*d.* in the first half year of 1833. It is quite possible, nevertheless, that the same capital might be making more ample returns in the latter period than it did in the former. It is perfectly evident, at least, that the decline of 66 per cent. in prices cannot be taken as a measure of the decline of profits.

Mr. Smith afterwards acknowledges that, although he considers the trade in cotton-spinning to have been generally unprofitable since 1826, it has not been universally so. "I think," he says, "that those houses which labour under the disadvantages of having to purchase the material on credit, or who have old machinery, have not got a profit." This is no more than might be expected to be the case. It is simply what must happen, be the general state of the trade what it may. The manufacturer who is obliged to purchase his material on credit, cannot in the nature of things contend on equal terms with him who carries on business with a more adequate supply of capital. Neither can the instrument of inferior, cope with that of superior productive power. The ordinary rate of profit, in a case where there is no monopoly, and competition is perfectly free, being necessarily regulated by the lowest cost of production, those who are so circumstanced as not to be able to command this lowest cost, must of course fail to realize the ordinary profit. But the evidence of the witness, when he is more closely examined upon this point, is after all, to say the least of it, extremely loose and inconclusive. He admits that in spinning, he and his partners, working with machinery of modern erection, and constructed upon the best principles, have derived a small profit every year since they commenced that department of the manufacture; and he afterwards states that he thinks both spinning and power-loom weaving had been profitable down to the middle of the preceding year, in all cases where the two branches were carried on together. It has accordingly, he adds, become usual of late years to unite the two.

In their manufacture of hand-loom calicoes, Mr. Smith allows that his house have generally made a profit. A considerable portion of his evidence is occupied with details as to the manner in which this branch is conducted. He and his partners, as already mentioned, had in their employment last year about 1200 hand-loom weavers, some of whom were men, but the greater part women and children. From the 1st of January to the 29th of June, they had manufactured 97,688 pieces of calico, on which they had paid in wages 6,224*l.* 17*s.* 4*d.*, being at the rate of 4*s.* 3*d.* per week to each person employed. There being upon an average two looms in each family, the entire earnings of the family may be taken as usually amounting to about 8*s.* 6*d.* in the week. Children become capable of managing a loom at the age of ten or twelve, and at fourteen or fifteen Mr. Smith conceives a boy will do more than half as much as a man. He calculates that, counting men, women, and children, there may be about 30,000 weavers in the district comprehending the north part of Lancashire and the north part of the West Riding of Yorkshire. He afterwards estimates the total number of hand-loom weavers in England and Scotland at 200,000. He gives the following table of what he calls the average prices paid per piece of a certain description of cloth for hand-loom weaving from 1802, having premised that no improvement has during that period been made in the loom, by which the weaver is enabled to do more work than formerly in the same time; so that, except in so far as the labour of women and children has been substituted for that of men, the prices afford a correct measure of the amount of earnings in each year. The average in

At the end of July, 1833, the price was advanced to 1*s.* 6*d.*

Many additional particulars respecting the earnings and the general condition of the hand-loom weavers are also to be found in the evidence of Mr. William Stocks, junior, of Huddersfield, Mr. James Grimshaw, of Barrowfield, near Colne, in Lancashire, (who reckons the whole number of operatives of this description in the kingdom at about 250,000,) Mr. Joshua Milne, of Crompton, near Oldham, and other witnesses; but as their statements merely go to confirm the undoubted fact of the low rate to which wages have descended in this particular department of the cotton manufacture, it is unnecessary to attempt any analysis of the mass of details which they present. We shall only extract a table given in by Richard Needham and William Pilling, hand-loom weavers at Great Bolton, of the prices that have been paid in the month of June in each of the last thirty-eight years, for weaving what is called 6-4ths 60 reed cambric, 120 picks in one inch, which it is stated forms

a sort of standard regulating all the plain fabrics in the cotton-trade. This table may be compared with that quoted above from the evidence of Mr. Smith, in so far as the latter extends. The object of both is to exhibit a measure of the progressive decline of the wages of weaving; and it is stated than one such piece as that referred to in the table below is as much as a man can finish in a week, working "as hard as any man in any other trade;" so that the price put down against each year may be taken as the week's wages of the weaver for that year. From this sum, however, is to be deducted threepence in the shilling, which he has to pay for winding, size, and loom-rent. In 1795 and 1796 the piece measured only twenty yards; since then it has measured twenty-four yards. The witnesses say that although the sizing is better now than it was in 1800, and also the twist, in the opinion of some, yet they cannot weave a piece in less time now than they could do then:—

We now come to the evidence of Mr. William Rathbone Greg, of the firm of Messrs. Greg and Sons, cotton-spinners and power-loom manufacturers at Bury, and various other places in Lancashire and Cheshire. The Messrs. Greg employ, at their different mills, about 1900 hands in all, and spin about 60,000 pounds of cotton per week, being at the rate of 3,000,000 per annum. This is about 1¼th per cent. of the entire quantity spun in the country, and is believed to be more than is spun by any other house in the trade. In a visit which he had paid to some districts in Derbyshire, Mr. Greg found hand-loom weaving carried on to a considerable extent in some of the villages by the females of the family, where the men were employed in the lead-mines; and he was told by the cottagers themselves that their earnings at the loom were from 9*s.* to 11*s.* per week. "I went to a good many of their cottages," says the witness, "and saw their condition. Those that I saw were remarkable for their healthy appearance, to a degree which I could not have believed possible, compared to the heavy time they stated they worked. One girl that I saw, who said she had been working fifteen hours a day, was the very picture of health." He states also that at Kendal there had recently been, and so far as he knew there continued to be, up to the time at which he was giving his evidence (the beginning of August, 1833), so great a demand for hand-loom weavers of cotton goods, that many of the men employed in their mill at Lancaster, when they proposed to work short time, had gone, and many more had threatened to go, to hand-loom weaving at Kendal. In ordinary circumstances, however, the transference is in the opposite direction. "The power-loom factories," says Mr. Greg, "have, to a very considerable extent, given employment to hand-loom weavers. I have myself, at the mill near Bury, had frequent applications from hand-loom weavers; and, where my own arrangements permitted, I have taken them in, partly from consideration of their condition, and partly because they made the best hands. At another establishment near Macclesfield we have employed them a good deal as dressers; and, generally speaking, I prefer taking the hand-loom weavers for the power-loom weaving to taking workmen from any other occupation." He adds, that the same thing is usually done by other mill-owners. It is found that men from the age of twenty-five to forty make the best weavers, especially for fustian goods.

This witness adverts to a difficulty of a peculiar kind, which is experienced from the natural desire of the persons employed in manufactories to escape from the lower to the higher departments of the work, at which more money may be earned. "The piecers," he says, "generally endeavour to get wheels if they can, and if not, both there and in the carding, they are very desirous to get employment as weavers, to such an extent that I have made a rule that no person employed in the previous processes shall go to weaving, because otherwise they would be all for going, and I should have the preparation-rooms entirely empty." He mentions that having recently wished to turn out a number of young hands, and to replace them with older piecers, he had sent to Bolton, Oldham, and other places, to procure them, and found it impossible; he was told that there was a great demand for all hands except mule-spinners, and that those might be had in any quantity. In fact, the improvements which are constantly making in the machinery used in the various departments of the cotton manufacture, bringing the combination of dead wheel-work every day nearer to the condition of a living and intelligent agent, are enabling us to dispense with skilled, and creating employment for comparatively unskilled labour, in such a manner as to form one of the most remarkable and interesting phenomena attendant upon the progress of this great branch of our national industry. Upon this head, however, we shall at present only remark that the course which the manufacture has taken in this respect has been undoubtedly the most fortunate thing that could have happened for the hand-loom weaver. It has lent him a helping hand in two ways—both by opening a new occupation for himself into which he has peculiar facilities of entering, and also by enabling him in many cases to eke out his own scanty earnings by those of the younger members of his family, for whom the cotton-mill is providing more and more employment every year. Mr. Greg intimates that it is becoming difficult to procure a sufficiency of hands for the mills. "At Bollington," he says, "we have had considerable difficulty in procuring piecers; and at Bury I have lately made great exertions to procure water spinners, and I have only been enabled to do it to a limited extent."

The only other witness examined before the Committee on Manufactures, to whose evidence we shall refer, is Mr. James Thomson, calico-printer, at Primrose, near Clitheroe, in Lancashire. Mr. Thomson, who employs about 800 men, women, and children, considers the print trade to have been, from about the beginning of 1832, in a much more prosperous state than during any portion of the preceding four or five years. "There is," he says, "a more steady demand, and fair remunerating prices; there is better employment for all the persons engaged in it." Up to the year 1831 a duty of 3½*d.* per square yard was levied from all printed calicoes of whatever quality. The absurdity and oppressiveness of this exaction were almost without parallel. In the first place, such were the cost of collection and the charges for drawback on exportation, that while the gross amount of the tax exceeded 2,000,000*l.*, the net amount which found its way into the Exchequer scarcely reached 600,000*l.* Then, there was the strong objection that, owing to the distinction of the quality or value of the prints being entirely disregarded, the tax, which formed a comparatively small addition to the price of the finer articles, fell with most disproportionate and burdensome weight upon the coarser sorts,—in other words, was a light tax upon the goods consumed by the rich, and a heavy tax upon the goods consumed by the poor. Every tax, indeed, must be lighter to the rich and heavier to the poor; but this actually amounted to a much larger per-centage upon the same sum when expended by the latter, than when expended by the former. In addition, however, to these obvious considerations, which gave irresistible force to the demand for the repeal of this duty, Mr. Thomson describes some other effects that have followed its removal, which afford so striking an illustration of the indirect mischiefs such imposts are apt to produce, that the passage well deserves to be quoted at length. Being asked if any collateral advantages have arisen from the repeal, he says,—"In the first place, it gives to the consumer the article from thirty to forty per cent. cheaper than it could be had before; for instance, a very useful and respectable dress can be had for half a crown for a poor woman, which would have cost nearly four shillings before the repeal of the duty. I consider that the

advantage to the consumer is not merely the amount of the duty, but it goes even beyond that, for the manufacturer has been greatly benefited by the repeal in other respects. The competition between the fraudulent manufacturer and the honest one, which was very injurious, and which it appears greatly exceeded what we ourselves suspected, is now done away. The advantage of being freed, in a manufacture requiring great skill, and often possessing important secrets, from daily and hourly supervision, is important, for it is well known that many improvements have been carried off from manufactories by the officers. There is also the advantage of being perfectly master of your own time, and of your own apparatus. We can print now at any hour that we receive the order, whereas before we were often obliged to wait for the arrival of the officer to measure cloth; and we can pack our goods the moment they are ready, without being obliged to wait till they have stamped them, an operation that was attended with extreme inconvenience and delay; in fact, we wonder now how we have supported the chain that we wore so long. There is also another advantage; needy persons very often printed calicoes, and exported them, in order to raise a capital by the drawback. These were sent to markets often for which they were quite unsuited; and there again arose very ruinous competition with the honest merchant; goods sent unfit for the market, and obliged to be sacrificed, affecting very grievously the prices of other goods; so that altogether we consider the advantage arising from the repeal of the duty to be very considerable." Since the repeal of the duty, Mr. Thomson adds, there has been a very visible increase in the demand, especially for the cheap goods which are worn by the lower classes.

In a subsequent part of his evidence, the witness gives the following sketch of the history of calico-printing in this country: — "Its origin dates from about the year 1690, when a small print-ground was established on the banks of the Thames, at Richmond, by a Frenchman, who in all probability was a refugee after the revocation of the edict of Nantz. The first large establishment was at Bromley-hall in Essex; it stood No. 1 in the Excise books when the duty was first imposed, showing that it was at that time the most considerable manufactory of printed calicoes near London. There was a lead pump there some years ago, when it was still a manufactory of printed calicoes, with the date 1710 upon it. The trade gradually increased in the neighbourhood of London, and about the year 1768 or 1769 it was carried into Lancashire, where it is now one of the great and leading branches of the cotton manufacture." It is supposed that there are now not less than 230,000 individuals employed in, and dependent upon, the print trade*.

The first interference of the legislature with the trade went to impose — not a duty, but a penalty, upon the fabrication of calicoes. "The wear of Indian calicoes printed in Britain, both in apparel and household furniture," says Anderson, in his *Origin of Commerce*, under the year 1721, "was at this time become so universal, as to be a great detriment and obstruction to both the woollen and silk manufactures of the kingdom. This had occasioned several riots and tumults of the weavers in London, &c. It was therefore found necessary to redress a grievance in which so many thousand families were greatly interested. An act of parliament was therefore passed in this seventh year of King George I. cap. vii.—'to preserve and encourage the woollen and silk manufactures, &c.,' which absolutely prohibited the wear thereof, under the penalty of 5*l.* for each offence on the wearer, and of 20*l.* on the seller." It was in this same session, we may remark, that another act was passed, absolutely prohibiting the wearing of buttons or button-holes made of cloth or other stuff, with the view, also, (as it was expressed) of encouraging the consumption of silk and mohair yarn. The prohibition against printed calicoes was so far relaxed in 1736, that they were permitted to be worn, provided the warp was entirely of linen—a description which would comprehend all cotton cloths then manufactured in England, and would exclude only such as were imported from India. At last, in 1774, soon after the fabrication of cloths entirely of cotton had been introduced in this country, the prohibition was wholly repealed, and instead of a penalty upon the wearing of calicoes, a duty, as already mentioned, was imposed upon every square yard which should be printed. The duty was, at first, 3*d.*, and was raised to 3½*d.* in 1806.

As illustrating the fall that has taken place in the prices of prints, Mr. Thomson mentions that an article which in 1795 cost 2*s.* 3*d.* a yard, may now be bought for about 8*d.*; and that the cloth for which he had paid a guinea the piece in 1811 may now be bought for 7*s.* or less. This fall of price he attributes to the great degree in which the mechanical processes and the skill of the manufacturer have been improved, and to the great reduction in the cost of the raw materials. Of course, the same causes which have brought down the price of cotton goods generally, must have contributed to reduce those of printed calicoes.

The witness complains of the duties on oils, and on dyeing drugs, particularly that on madder, as forming now the chief impediments to the further extension of the printing trade. Both these classes of duties have been materially reduced since this evidence was given. The duty on madder, which a few years ago was 18*s.* per cwt., was reduced last session from 6*s.*, which it then was, to 2*s.* per cwt. The former duty, Mr. Thomson affirms, had entirely destroyed one branch of trade—the dyeing of Turkey-red yarn, in which the quantity of madder employed was so considerable, as to form at least 60 per cent. of the cost of production. The Turkey-red yarn consumed in Russia is English yarn, but it is dyed at Elberfeld; and even that which is required for our own consumption in this country is beginning to come from the same place; the English yarn is sent out to Elberfeld to be dyed, and then brought back to England.

In the course of his evidence Mr. Thomson gives some interesting information on the subject of patterns. The expense of employing artists for the invention and production of new patterns, forms, he says, a very important charge in the large printing establishments. These artists have generally served an apprenticeship as drawers in the manufactory. There are, however, only about half-a-dozen houses in the trade that go to the expense of preparing original designs. The others are in the habit of merely copying the patterns produced by the larger establishments as soon as the short protection of three months, which is all that the present law allows, has expired. They not only in this way escape all the expense of producing the design, but they also avoid the risk and occasional loss attendant upon the production of patterns which do not happen to suit the market; they select for imitation only such as have had a great run and are sure to sell. Mr. Thomson intimates that the manufacturers by whom the patterns are originally produced, would be satisfied if the term of the protection were extended to six months. It is difficult to see upon what principle such a claim can be resisted; for it amounts to no more than a demand, on the part of the producers of the new designs, that another set of persons should not be allowed to seize upon what is of right their property, at least until its value has been in some moderate degree depreciated. To the question, Do you consider that we are before or behind the French in the invention of tasteful patterns? Mr. Thomson answers, "It is difficult to give an opinion upon that. One of the first calico printers in France left London one or two days ago; he came here expressly in search of ideas for next spring; he has visited all the shops in London, and has gone home well satisfied. I went to Paris three weeks ago for the same purpose." He had stated before, in reference to the manufacture generally, as carried on in the two countries, that the French are greatly inferior to us in mechanical skill and in manual dexterity—that they produce much less in the same time than we do—and that even in the matter of chemical skill and knowledge, although the science of chemistry is cultivated by every calico printer in France, and there is not a ground without its laboratory, or without its working chemist, whose business it is to carry on experiments with a view to improve the processes (which in England is the case only on some of the more important grounds),—yet the fact is, that during the last thirty years the chemical discoveries affecting the manufacture which have been made in England, are much more important than those which have been made in France. As to any superiority which the French may have in regard to brilliancy of colours, "they enjoy," says Mr. Thomson, "that advantage which a superior climate gives them, but that is [the] only one; they can expose their cloth with more certainty; they have a finer sun than we have; and in the fine muslins, where great beauty of execution is so important, they certainly have an advan-

* Macculloch's 'Dictionary of Commerce,' (2d edit.) p. 213.

tage." He adds, however, that after all, he does not attach any great importance to these circumstances.

We have now presented, with as much fulness as our limits would permit, all that is most material in the statements respecting the various branches of the cotton trade to be found in the evidence taken before the Committee, confining ourselves, however, principally to the distinct facts mentioned by the different witnesses, and leaving for the most part unnoticed the mere opinions and speculations in which some of them indulge. The mode of examination pursued by a Parliamentary Committee, though often successful in extracting much highly valuable information, is subject to certain disadvantages which prevent the evidence obtained by means of it from being relied upon in all respects with perfect confidence. The witnesses, in the first place, are generally known partisans of some particular class of opinions, who either spontaneously present themselves to support their own views, or are sought out and brought forward by some member of the Committee of the same way of thinking. Their testimony, therefore, is to be taken with the abatement necessary in the case of that testimony which is given not without some degree of partial purpose. But even supposing the witness to be free from any party bias, the circumstances in which his evidence is given make it almost impossible that it should deserve to be, in all respects, depended on as correct. Many of the questions which he is asked are of course unexpected, and his answers, therefore, must often be only the hasty suggestions or vague recollections of the moment. There can be no doubt that many both of the opinions and the statements as to matters of fact which are drawn forth in these circumstances would have been materially modified, if the witnesses had been allowed more time for deliberation, and could have made the necessary inquiries before expressing themselves on points with which they were not perfectly acquainted.

A Commission is an instrument of investigation much more efficient than a Committee. By means of a commission the facts of a case may, in general, be examined not merely through the medium of testimony, but by direct inspection. The testimony that is received consists usually of answers deliberately prepared to queries for the consideration of which ample time is given. These answers serve to check one another, so that neither error nor misrepresentation on the part of any individual among those by whom they are returned is likely to pass unnoticed. The information, moreover, for which a commission trusts to testimony, commonly consists of details which admit of being stated either in figures, or in some other form nearly as precise; so that all vagueness of statement, and most of the other ordinary chances of error, are precluded.

The late commission which was appointed by his Majesty to collect information in the manufacturing districts, as to the employment of children in factories, and as to the propriety and means of curtailing the hours of their labour, have in their several reports presented a vast mass of interesting and valuable information on the subject of the cotton manufacture. Their report, entitled "Supplementary Report, Part I.," in particular, contains by far the most minute and authentic details on various points of this subject that have ever been laid before the public.

We shall, in our next Number, proceed to abstract the substance of the most important among the papers appended to this report, and shall have particularly to direct attention to the preface by Mr. Cowell, explanatory of the tables extracted by Mr. Stanway from the returns to certain forms circulated among the manufacturers of the Lancashire district. We shall, of course, confine ourselves to those parts of the papers that relate to the cotton manufacture.*

FREE TRADE IN TEA.

THE act which opened the tea trade was passed on the 28th of August, 1833, and came into operation in April of the present year; from which period it has been lawful for any of his Majesty's subjects to carry on trade with any countries beyond the Cape of Good Hope to the Straits of Magellan.

Whilst the monopoly of the East India Company existed, the quantity of tea put up for sale was evidently not measured by the demand or the wants of the population; for we find that in 1824 very nearly the same quantity was brought forward as in 1801, although the population had increased in the mean time three millions and a half. The competition amongst the buyers to obtain their portion of this inadequate supply raised the price of tea 25 per cent., and in some instances 50 per cent., above the price at which it was put up by the Company, which price was what they considered a remuneration for the cost. Meanwhile the Company, looking to their own immediate interests, were accustomed not to declare for sale more tea than they could sell at those extravagant rates; but the nation suffered in the ratio of their inordinate gains. The abuse at length excited public attention, and, in deference to the loudly expressed opinion of parliament and the people, the quantity of tea put up for sale was gradually increased from twenty-six million to thirty-two million pounds per annum. The larger quantity found ready purchasers, at a reduction in price, it is true, of about 10 per cent., but without any diminution of the revenue, and most probably, also, without loss to the aggregate profit of the Company. It might naturally be supposed by those who have not investigated the power of consumption which exists in this country at prices affording a mercantile remuneration to the producer and importer, that the consumption of coffee would have diminished in the ratio of the increased consumption of tea; but how stands the fact? About the period at which the Company put up for sale the larger quantity of tea, Mr. Huskisson reduced the duty on coffee from about 200 per cent. to 100 per cent.: at the former duty the consumption was eight million, and at the latter the consumption now exceeds twenty million pounds per annum.

The effect of the monopoly of the East India Company, however, was not confined to the home consumption of tea. So long as the quantity supplied by the Company was inadequate to the home consumption, the consequent high price drove foreigners to seek for supplies at a cheaper rate, and to import it for themselves, or through the medium of the United States. The prices of tea at Hamburg and New York were, on the average, 50 per cent. lower than in this country. If, instead of the state of things which actually existed, the peace of 1815 had found this country with a free trade to China, the supply of tea to the continent might possibly have devolved to our merchants. In the first or second year after the peace, the orders from Holland were so large in one sale, that tea sold dearer than at any period of the war. As soon, however, as the Dutch could import tea for themselves, we heard no more of their purchases at the East India Company's sales.

Such was the state of the tea trade when the expiration of the East India Company's charter called upon Parliament to provide for the collection of the duty to be levied on tea, when the importation should be thrown open to individuals in every part of the kingdom. Under the management of the Company it was levied *ad valorem* on the prices at their quarterly sales, and collected by the Company with trifling expense to Government. Under the new order of things this system was impracticable, and it became necessary to transfer this branch of the revenue from the Excise to the Customs. A fixed scale of duty was therefore to be selected; and it was proposed that for the future the duty on Bohea should be 1*s.* 6*d.* per lb. instead of 96 per cent.; on the middling qualities of black and green, 2*s.* 2*d.* per lb.; and on the fine descriptions of black and green, 3*s.* per lb. in lieu of the 100 per cent. *ad valorem* on those sorts. It was not until the third reading of the bill in the House of Commons that any serious opposition was attempted by the trade to the proposed scale, and although so late in the session, Ministers acceded to the desire for a select committee on the tea duties. The report of that committee is as follows:—

"Resolved, that it would be manifestly unjust to the merchants who have ordered teas from China to alter the laws, so far as to affect the duties on teas so ordered, and therefore any change, supposing such desirable, could not take effect for some time to come; and as experience of the working of the present law must be had before the next session of parliament, your committee are of opinion that it is advisable to receive the benefit of such experience before the legislature determines upon the expediency of any prospective alteration in the duties on tea."

* In our former article on the Cotton Trade, in the last two sentences of the paragraph referring to the evidence of Mr. K[illegible], ('Companion,' p. 197, col. 1,) the term "spinner" has b[illegible] times inadvertently used for "weaver."

From the minutes of evidence, printed by order of the committee, there appears to exist a great difference of opinion upon the question, whether officers of customs can discriminate between the better qualities of low teas and the inferior qualities of high-priced teas; but this difference, like many others, appears to turn chiefly upon the meaning which each party affixes to the same terms.

It is also asserted by the opponents of the scale, that its professed object in imposing a lower duty on tea chiefly consumed by the poor, will not be obtained; but upon the most attentive consideration of the evidence, it appears to us that their deductions are based upon the prices, of which they only have any experience, under the system of monopoly, and which cannot be admitted as a criterion of what prices probably will be under the free-trade system.

It is impossible to foretell, with certainty, the whole of the consequences which may follow the throwing open a trade of such vast extent, but we can hardly doubt that the ultimate result must be a reduction in prices. The capital of England has, in many instances, supplied foreigners with the means of carrying on the trade in tea, and the same funds, and as much more as may be required, will be forthcoming for our own benefit. In that case, it may be expected that the scale of duties adopted by Government will furnish the lowest tea at 6*d.* per lb. cheaper; the middling qualities as cheap, and the higher qualities 1*s.* per lb. dearer than a fixed duty on all sorts of 2*s.* per lb., for which the trade contended.

Two cargoes of tea have already arrived in the Thames from Sincapore, to which the commodity had been brought by Chinese junks; another cargo has just arrived in the Clyde from Canton direct, with, it is understood, a good assortment of the various qualities. Several private sales have been held in London, at which the prices ranged rather higher than at the East India Company's sale in June, notwithstanding that another Company's sale is to take place in December. These prices cannot, however, be considered as any criterion for the future, as larger arrivals are daily expected, and the tea will, of course, be immediately brought into consumption. It will no doubt be some time before the public derive the full advantage in the reduction of price consequent upon the free trade.

If we now turn our attention to the prospects of increased exports to China in exchange for tea, here, also, we may anticipate, in course of time, very important effects from the new arrangement. The exports of the Company were very trifling: remittances from India in money, or the raw products of our possessions there—such as cotton, pepper, &c.—supplied the funds for the purchase of tea, and will continue to do so in a large proportion. Supposing, even, that the increased quantity of tea which we shall require should be provided for by the same means, without any great addition to our direct exports, the advantage to our commerce and manufactures would not be the less; because a demand for the productions of India, from whatever quarter, will furnish the natives with the means for the purchase of our manufactures, the consumption of which is only limited by their power of obtaining them. But without the gift of prophecy, there is no hazard in predicting, that in a few years a more intimate knowledge of the wants of the Chinese will open an extensive field for our manufactures, knowing, as we do, that no people under the sun are more keenly alive to their own interest. At present our intercourse with China is confined to one port—that of Canton, situated at the extremity of the empire, and without the facility of water-carriage enjoyed by many of the other provinces. It has been ascertained that the people in the northern portions of that vast empire are quite as anxious to encourage our intercourse with them as the people of Canton, from interested motives, are to prevent it. It is natural, however, to suppose that the mandarin, or governor, of Canton, will be induced, for the sake of the advantage which he personally derives from our intercourse, to increase the facilities and reduce the port charges upon our vessels.

REPORT OF THE SELECT COMMITTEE ON THE SEWERS OF THE METROPOLIS.

The state of the drainage and sewers of a city so vast as London must always be a subject of very great importance. In all crowded communities, the health, the happiness, and the morals of the public are liable to be affected to a large extent by the want of cleanliness and free ventilation; and the truth of this has been at times fearfully demonstrated in the visits of pestilence and disease. The subject engaged the attention of a Committee of the House of Commons during the last Session of Parliament; and their Report, accompanied by minutes of the evidence taken by them, has since been printed. The document forms a folio volume of considerable bulk. We shall, in the present paper, give an abstract of the evidence contained in it, as far as our limits will permit.

The metropolis and adjacent districts, within a circle of ten miles from the Post Office, are divided into seven Trusts or Boards of Commissioners, for the purpose of maintaining the sewers, gutters, ditches, streams, watercourses, &c., in their respective districts, each having a separate and independent jurisdiction of its own. Five of these commissions are administered under local acts, but two of them take as their guide the old law of sewers, dated so far back as the 23rd of Henry VIII. In the administration of these commissions there are numerous defects, arising from the system under which they operate, and which, notwithstanding the spread of civilization and the great increase of improvements in the metropolis, do yet operate most unfavourably, and produce inconveniences and losses which are severely felt by the inhabitants generally.

The provisions of the old law of Henry VIII. are quite inadequate to the complicated wants of modern times. The only thing which appears to have been in the contemplation of the legislature at that early period, was the surface-drainage; and yet, singular as it may appear, this law, up to the present day, cripples the powers of the commissioners, and retards beneficial improvements and alterations. Equally unsuited to modern times is the want of publicity and responsibility, which characterizes the system established by the old statute. No real responsibility can possibly exist, where the right of the rate-payers to inspect the accounts is not admitted, and where the actions of the commissioners cannot be controlled by those whom they tax. These defects, coupled with the want of uniformity in the administration of the law, and the want of combination in Boards acting independently of each other, call loudly for remedy. Of this want of uniformity and of combination, striking and forcible instances are given. A man having property in Finsbury and in Westminster, or in the city and the Tower Hamlets, will find himself under the operation of different and contrary rules, and may be led, from a knowledge of the regulations of the one district, to violate those of the other. A single instance will demonstrate the injury and inconvenience produced in consequence of the want of combination. Part of the sewage of the Holborn and Finsbury district is conducted through the city into the Thames. The sewers of that district having been greatly improved and enlarged, the volume of water carried to the river became so great as to render the sewers of the city inadequate to carry off their contents, which, in addition to the waters from the high lands of the neighbouring trusts, were absolutely forced back into the houses, from the quantity which occupied the main sewer, and thus, after each fall of rain, the houses in the vicinity of the river were regularly inundated. This has now been remedied at a great expense to the City of London district, and by dint of much time and labour; but if anything like combination had existed, the improvements of the one Board of Commissioners would not have been injurious to the other, and much inconvenience and heavy expense would have been avoided.

The principle on which the sewers' rates are collected is simply this—that all houses are liable to them which either receive a benefit from the sewers or avoid a damage. Now, as either directly or indirectly all are benefited by the surface-drainage, all are liable to pay the rates. This was a fair principle so long as the surface-drainage of the town was alone contemplated; but with the increase of civilization, the sewers have become applicable to many other purposes, conducive to the convenience and health of the public, in addition to the surface-drainage; and it appears unjust that the same rate should be levied upon houses enjoying the advantage of an underground communication with the sewers, and upon houses which possess no such advantage. Nor have the Boards acting under the old law the power of making additions to such houses, for that law does not authorize them to make rates for the construction of new sewers, or for covering in old open sewers, nor does it

enable them to compel builders to provide new districts with proper access to the main lines of sewers, or to rate old property for the construction of new sewers in districts where there are none at present, even in cases in which the consent of a majority of the householders interested might be obtained.
